The cadres, workers and public servants must be educated to not only thoroughly achieve reduced spending in production, distribution and circulation but even in the lives of each individual and family; expenditures, use and purchasing must be planned in order that each person has a responsibility to the state in solving the present difficulties.

Effective methods are necessary to promote the campaign of placing money in savings accounts; improve organization and formulas for serving and providing favorable conditions to those placing their money in these accounts; and precisely carry out the system of encouraging the people to place their money in savings accounts.

Inspect and ascertain sources for collecting and preserving cash funds, carry out good tax collection in the collective and individual economic areas and collect these taxes precisely in accordance with policy, to a full amount and in a prompt manner.

Balance sources of receipt and expenditure requirements and assure sufficient cash for goods purchasing, payment of wages and subsidies for cadres, workers and public servants. Calculations must be made to balance the municipal fiscal budget but first of all to balance money and goods in each district, precinct, village and production unit; balancing receipts and expenditure requirements.

The organization of purchasing to ascertain good sources and sales to collect money must be well-resolved. Every specific method of financial management must be used to increase receipts and limit expenditures aimed at achieving receipt and expenditure balance, especially cash receipts and expenditures; with efforts to restrict and rapidly halt increased cash expenditures.

4. Strengthen market management, take control of the market and stabilize prices. Resolutely maintain the prices and gradually reduce the prices in the free market to a rational level. The Municipal Party Committee and Municipal People's Committee must firmly supervise prices; and responsible sectors must rapidly complete the industrial and business registration and formulate instructions for marketing cooperatives with especially the private merchants posting their prices.

Financial, banking, commercial, public security and judiciary sectors must have specific plans and firmly coordinate with each other in order to achieve good market management, resolutely resist fraud and tax evasion and severely punish and prosecute speculators and smugglers.

5. A plan is necessary to consolidate and expand the socialist commercial business network consisting of both state-operated commerce and cooperatives active in the purchasing, retail and wholesale and service areas in order to strive for true control of the market, to provide a large part of the retail sales goods requirements of the consumer, especially essential items such as grain and food, to revise distribution formulas and sales locations and avoid trouble and create favorable conditions for the consumer.

Stores and stands must be formed immediately to supply exclusive goods with exclusive capital and accounting to sell goods at the supply price (nine items) to the troops, cadres, workers and public servants.

Propaganda and education must be widely intensified among the party organizations and people, causing everyone to correctly understand and to work precisely in accordance with the spirit and theme of the directive and resolution of the Political Bureau on improving distribution and circulation; to clearly recognize the production, distribution and circulation situation of the city; and to resolutely comply with the policies and methods set forth in the resolution of the Standing Committee of the Municipal Party Committee.

Uphold vigilance, take precautions against, discover and thoroughly destroy every plot and destructive action in the political and economic sense and the distortions and psychological warfare of the enemy.

Concerning the leadership and supervision of party committee and local administrative echelons and the activities of mass organizations, the resolution of the Standing Committee of the Municipal Party Committee stated: every agency, organization, echelon and sector and all cadres and party members must fully recognize that stabilizing the lives of the laboring people and first of all the lives of the armed forces and workers and public servants is their primary mission in order to have full responsibility in the mission of production development supervision, organizing purchasing to grasp good sources and distribution, perfecting cadre organization and expanding the socialist commerce network organization and in balancing money and goods and the fiscal budget of the local area.

Party committee and local administrative echelons and executive committees of organization from the municipal to the primary level must directly lead and supervise compliance with the directive and resolution of the Political Bureau and the resolution of the Standing Committee of the Municipal Party Committee; and sectors and echelons must all have plans for specific implementation which is closely coordinated with achievement of other resolutions of the Municipal Party Committee.

The Municipal People's Committee formed the policies and methods in this resolution into stipulations of the local administration in order to supervise achievement from the beginning of June 1981.

Municipal committees and party and group party affairs committees and organizations but first of all the Municipal Training Committee have formulated plans for disseminating thorough understanding and propagandizing this resolution among the party member cadres and each individual among the people. Economic committees of the Municipal Party Committee have followed and inspected achievement of the resolution; while simultaneously discussing with precinct and district party committees assignment of effort to committee member echelons and cadres in their own committee to follow achievement of the resolution in the precincts, districts and primary level production and business units within the scope of each committee's responsibility. The Organization Committee of the Municipal Party Committee and local administrative organization committees have joined with the economic committees of the Municipal Party Committee in urgently promoting a plan of perfecting the organization of the commerce, financial, banking, commodity price, etc. sectors.

Members of the Municipal Party Committee and the Standing Committee of the Municipal Party Committee must follow, inspect and supervise achievement of this resolution in the precincts and districts as previously assigned.

In the districts and precincts, the organization committee secretaries and chairmen and the chairmen of finance and commerce bureau committees must have specific plans on organizing and supervising primary level marketing and production units and arranging sales points; and specific responsibility must be assigned to each and every party committee member to join commercial and banking (or financial) cadres responsible for several primary level production units to regularly ascertain the production, products, delivery and sales situation and to promptly discover obstacles requiring solution in order to assist the district and precinct party committees in leading and supervising or discovering and making proposals to the Municipal Party Committee and Municipal People's Committee.

EDITORIAL INDICATES WAY TO STABILIZE MARKET PRICES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 11 Jun 81 p 1

[Editorial: "Continue to Struggle to Stabilize Prices"]

[Text] Recently, under the influence of speculators, hoarders and bad reactionary elements bent on launching psywar rumors and also because of the temptation to make a quick profit, most small traders have in turn raised the prices of many types of goods, causing a fictitious fluctuation in the city market situation. Many of them have resorted to concealing goods and then selling them in small quantities to put pressure on buyers. The life of cadres, manual and office workers and the laboring people in general--which has been beset with difficulties--is now faced with new, undeserved ones even before the party and state starts implementing the policy of increasing their salaries and allowances to stabilize their life.

In view of this situation, on 6 June 1981, the Municipal People's Committee made known a number of important measures aimed at striving to manage the market, opposing speculation and price hike and foiling all schemes and psywar allegations of the reactionaries in order to immediately pull the "free" market prices down on a par with those in force on 1 June 1981. Many localities in the city have taken positive action: Some markets have successfully implemented the regulation on the posting up of price lists and on sale according to the published prices. In the 11th Precinct, state food shops and marketing cooperatives have intensified the purchase of pork and brought larger quantities of it to markets for regular sale. The Ninth Subward in the Third Precinct has been able to maintain the selling price of pork applied over the last 9 months. The 21st Subward in the 1st Precinct slaughters 2 or 3 hogs a day. Aware of the reactionaries' scheme, a number of small traders have joined the market management boards in their effort to stabilize the market to prevent sudden price hikes.

To date, there are indications that the "free" market has been gradually stabilized though the prices of many kinds of goods are still high. This initial result has shown public opinion that the recent price fluctuations on the "free" market were basically fictitious. On the other hand, this result convinces us that success will be achieved if the state and the laboring people join forces to resolutely conduct a struggle to uniformly manage the market by simultaneously taking three types of measures--educational, administrative and economic.

Since the incipient result obtained over the past few days is not really secure, we must neither adopt a subjective attitude nor slacken vigilance. Bad elements including speculators, hoarders and reactionaries will concoct numerous schemes to oppose us and to undermine the laboring people's life which the party and state have just worked out a sound policy to stabilize. Complex developments will certainly take place in the unorganized market.

At present market management is still showing a number of weak points such as the slowness of many localities in carrying out the principal price control measures, the insufficient attention paid to the education of small traders, the unsatisfactory management of prices in various markets and the inadequacy of the task of providing information and grasping the state of prices at the grassroots level, which has made it impossible to satisfactorily meet the requirements of leadership.

There is now an urgent need to continue to struggle to stabilize the market and to try by all means to prevent sudden price hikes which will cause more difficulties to the laboring people.

Right now, we must consider it highly important to maintain prices in various markets by getting to fully know the volume of goods and their wholesale and retail prices, by instructing small traders to register and publish prices and to sell goods according to the price lists and by simultaneously and severely deal with violations of regulations. Along with these tasks, it is necessary to rapidly strengthen cells and sectors dealing in specific goods and to motivate small traders in each cell to share in the common responsibility for price management. In the organizational field, markets must be quickly built up into adequate administrative-economic units to help make price management more effective, stabilize the market and satisfactorily maintain political security and social order. Meanwhile, the people must display the highest vigilance and promptly uncover speculators, dishonest traders, rumormongers and psywar promoters so that the administration may take appropriate measures to punish them very severely. In carrying out this campaign, activities must be closely coordinated with those of mass organizations, especially the Women's Union chapters, to educate and motivate small traders--for the sake of the common interests of society and their own legitimate ones--to self-consciously and strictly implement the market management regulations and to participate in the task of stabilizing prices.

To stabilize prices, our key task is still to intensify the purchse of goods and the control of their sources. Along with stepping up the purchase of agricultural and good products, commercial units--especially those at Level 3--must plan to organize the purchase of industrial goods including small industry and handicraft products manufactured by cooperative and private installations.

By firmly adhering to the spirit of the Political Bureau directive on the continued implementation of Resolution No 26 and by strictly carrying out the policies and measures set forth by the Municipal Party Organization and administration to ensure execution of this directive, we will certainly be able to gradually master the market, to stabilize life and to promote production development.

PRICE GOUGING BY PORK DEALERS DENOUNCED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 10 Jun 81 p 1

[Article by Q.V. in "Market Stories" Column: "Profit or Loss?"]

[Text] On 6 June, customers denounced two small traders in Cay Gon market (11th Precinct) for selling pork at exorbitant prices: Me Truong Thi Y, charged 5 dong more than the listed price for each kilogram of lean pork and Ms Ly Ash N, overcharged as much as 10 dong.

In the presence of the District Market Management Board, the pork dealers team subsequently held a meeting to examine this case of price gouging. According to the team head, on that day the team members pooled capital to buy 50 kgs of big chunks of pork from An Lac market (Binh Ghanh) and shared it out among themselves for resale. The purchase price was 35.6 dong per kilogram. After carving out the meat and selling it at the price set by the precinct authorities, the team members made a reasonable profit. However, due to a lack of mutual control and to competitive sale, the two traders named Y, and N, unilaterally raised the price to make more profit. The head and deputy head of the team admitted that they had neither reminded the team members of the need to apply the fixed price nor supervised them on that score. On hearing the logical arguments of the other female members of the team, Ms. Y. and Ms. N. expressed regret for their wrong action.

Above are two of the many cases of illegal price hike by small traders which were recently judged and fined. At a time when the people's life was still beset with difficulties, female small traders--who were also laborers--should have helped maintain prices. On the contrary, a number of them followed the bad elements' advice and sought ways to raise prices. Though making a profit is the objective of commercial dealings, overcharging buyers to make a profit like Ms. Y, and Ms. N. will do more harm than good. This is because though earning a profit of a few dong more, the families of female small traders would have to bear the consequences if the prices of all other commodities soared up simultaneously. This means that the profit would be outweighed by the loss!

PRICE POSTING REDUCES FREE MARKET PRICES

Haiphong HAIPHONG in Vietnamese 11 Jun 81 p 2

/Article by Manh Tuong: "Managing Sat Market by Listing, Posting Prices"/

/Text/ During the last part of May and first few days of June, the free market price situation in Sat Market was slightly confused. The stand owners told each other, "The cadres, workers and public servants will soon receive double grain subsidies. We must also increase our prices. We can't wait any longer." There were also a few cases in which peddlers from Hanoi came down to carry off goods. Therefore, prices rose rapidly: poor rice at 10 dong per kilogram and lean pork at 70 dong per kilogram. Gold Star bicycle tires were 200 dong each. Dong Anh bicycle chains were 160 dong each. Market cloth was 30 dong per meter, etc. A number of gullible individuals, believing in the absurd statements, spent their money on even broken radios, poor television sets, monosodium glutamate mixed with sugar, counterfeit bicycle chains, etc.

This situation could not be allowed to continue.

Complying with the directive and resolution on circulation and distribution of the party and state, the Hong Bang Precinct Party Committee and People's Committee initiated prompt methods. Concerning the free market at Sat Market, the Finance and Pricing Committee coordinated with commercial agencies, market management, public security forces and the Sat Market Management Committee to arrange for all businessmen to list and post prices. Initially, self-posting and registration of prices to the businessmen was an arduous struggle. The Sat Market Management Committee stipulated that from 3 to 6 June, all stands must have price list signs. However, by 9 June, only 700 of the total 1,100 businessmen had posted prices. This does not include the 300 displaying their wares on both sides of the road into the market who have no business registration. Naturally, they evade taxes, refuse to list prices and continue to jack up their prices. A few examples are listed below: businesswoman Pham Thi D. was visited many times by the cadres but still refused to list her prices. She has a license for selling scrap metal and secondhand goods but even trades in bearings, needle valves and many types of vehicle parts and brand new engines! Pham Van O. registered to sell scrap metal but trades also in batteries and radios. The cadres urged him to list his prices but O. refused and also quarrelled with the tax cadres while they were performing their mission.

On the afternoon of 9 June, we took a stroll around Sat Market. Many of the businessmen had posted their prices. Merchants selling sundry goods, clogs and sandals, glass mirrors and fruits and vegetables all had signs with their prices in large numbers in front of their stands. In the dry goods section, besides the general prices banner, there was also a small price sticker on each sugar, peanut and vermicelli item. In the scrap iron and metal goods section with 100 stands, only one had a price sign hanging.

At a fabric stand, a financial cadre asked, "Why does this stand have no price sign?" The owner searched through the piles of old clothes and took out a small price list written on the paper from a student's notebook.

At a refreshment stand, the owner said that he had posted his prices immediately after the order was publicized and pulled a piece of cardboard from a drawer with a few words and number scribbled by hand!

Actually, since the posting of prices began on 5 June, the prices of goods have had a tendency to halt and on many goods to go down. According to the price markers at the end of May, delicious rice has dropped from 11 to 9 dong per kilogram; lean pork has dropped from 70 to 60 dong per kilogram; Gold Star bicycle tires have dropped from 200 to 180 dong each; bicycle chains have dropped from 160 to 130 dong; capons have dropped from 50 to 45 dong per kilogram; beans and peanuts have dropped from 23 to 20 dong per kilogram, etc. A family tool merchant said, "Listing and posting prices to the seller is also advantageous in that the purchase price does not rise and in alleviating competition which drives the prices up!"

From initial results of price posting, inspection at the Sat Market has indicated that although the price of a number of products has dropped, there are actually many products on which the price is still too high. The federated cooperative section selling dry goods has dozens of stands but everyone has excessively high prices. Nevertheless, when four sections brought their price lists to the precinct pricing and finance committee, they immediately received the word "approved" and a signature and seal. We believe that this matter has weaknesses because these are the prices which the businessmen have listed themselves without careful inspection or comparison. We discussed this case with Tran Cong Tich, Chairman of the Hong Bang Precinct Pricing and Finance Committee. Tran Cong Tich admitted the weaknesses and further informed us that the prices set by the businessmen themselves are generally still high. In the near future, concentrated methods are necessary in efforts to reduce the prices of products consistent with their quality and use value.

USE OF CREDIT SUGGESTED IN ECONOMIC COOPERATION WITH FARMERS

Ho Chi Minh City TIN SANG in Vietnamese 16 Jun 81 p 3

[Article by Yen Dong: "Economic Cooperation with the Mekong Delta Provinces"]

[Text] Groups of sampans loaded with rice plying the rivers and canals and one truck after another travelling the roads into the west to transport agricultural products, these have been the colorful and living images of the Mekong Delta provinces during the past several seasons of bumper harvests.

The Mekong Delta: Surpluses and Shortages

Our farmers at many places are very enthusiastic about still having a significant quantity of paddy, rice and other agricultural products, such as beans, sesame and so forth for themselves after fulfilling their obligations. By selling only 10 gia of rice they can earn roughly 2,000 dong and earn 1,500 dong for selling 100 kilograms of green beans.

Although they have a significant amount of paddy, rice and other agricultural products and some money, farmers are still in need of many items:

--Industrial goods, such as cloth and medicine;

--Building materials to build housing, livestock pens and storehouses;

--Gasoline, oil and so forth;

--Wooden furniture, such as tables, chairs, beds, cupboards and so forth;

--Agricultural machines, farm implements, cultivators, metal tools, electric generators and so forth;

--Equipment for storing and processing grain, bags, milling machines and so forth;

--Chemical products, such as insecticides, laundry powder, soap and so forth;

--Electrical fixtures;

--Cultural products, such as books and newspapers, especially press materials.

Due to the shortage of consumer goods, persons who have money, if they do not purchase gold to make themselves wealthy, only spend it wastefully. As a result, the cost of living at some places in the provinces is higher than in the city: a jar of meat costs 10 dong and coffee costs 4 dong per cup. This year's "local goddess" festival at Sam Chau Doc Mountain attracted large numbers of pilgrims, which illustrates, to some extent, the "rather high" standard of living of the western region.

A comrade who works in the grain sector in one of these provinces, expressing both optimism and worry, said the following to me: "We might not be hungry anymore but if we lack the products needed for production and for daily needs, even the most conscientious of farmers will squander their money as the son of the Mandarin Bac Lieu did..." The shortage of the products mentioned above in the various provinces can be resolved through cooperation with the city.

Ho Chi Minh City and the Possibilities for Economic Cooperation

In a speech on the situation, guidelines and immediate work taks of the city, Mai Chi Tho, chairman of the City People's Committee, stated: "With the provinces of the Mekong Delta and eastern Nam Bo, with Hanoi and so forth, we have been and are developing comprehensive cooperation in the fields of production, circulation, distribution, exports and imports."

Our city, in view of its position as an international trade center and industrial center, is capable of exporting agricultural products and importing petroleum products and machinery and capable of producing industrial goods for supply to the various provinces.

The difficulty in establishing economic cooperation with the provinces is that if only cash is used to purchase agricultural products, the amount of money spent will be very large and will cause prices to soar. In addition, how could so much money be obtained? On the other hand, if we want to use imports that meet the requirements of farmers, we must have foreign currency and, in order for the industrial sectors to produce ample products to trade for agricultural products, foreign currency is also needed in order to import supplies and raw materials. Thus, how can we promptly obtain a large quantity of agricultural products for exportation in order to have the foreign currency with which to import goods?

Suggested Ways To Mobilize Capital

It will be difficult to break the vicious cycle mentioned above. The best way to do so is to mobilize all the people to participate in export-import activities in order to develop the economy.

Of course, mobilizing all the people to participate in export-import activities must not simply involve appeals to patriotism in order to develop the economy, but must involve clearly explaining the benefits to be derived from this participation and the harm caused by failure to participate.

In my opinion, the mobilization of capital for the economic cooperation program can be carried out in the following ways:

1) Issuing 3 to 6 month letters of credit or purchasing products on credit under contracts: farmers who have agricultural products and want to contribute to the export-import cooperation program will be issued a letter of credit; this letter of credit will be exchanged for import goods or industrial goods when these goods arrive in the province. If they wish, farmers can also be paid in cash with interest. Farmers can choose among the following: allowing their agricultural products to spoil due to the shortage of means for thoroughly storing them, selling their agricultural products to private merchants for immediate cash and then being forced to purchase imports at high prices or accepting a letter of credit of the economic cooperation program in order to exchange it for necessary imports.

Private corporations, enterprises and installations within the city that have products that can be exchanged for agricultural products may also participate in the program by selling industrial goods on credit and accepting a letter of credit to be exchanged for agricultural products or imported raw materials, supplies or commodities in the same way letters of credit are used for farmers.

2) Borrowing unused supplies and products of corporations and enterprises in order to exchange them for agricultural products: once agricultural products have been exported and foreign currency has been earned, these supplies will be returned through imports.

3) Borrowing money from the bank and savings funds and utilizing the unused, idle money of each circle of the population.

4) Purchasing goods from foreign merchants on credit.

In an article entitled "Improving Distribution and Circulation with a View Toward Stimulating Production and Stabilizing Living Conditions," General Secretary Le Duan directed:

"As regards the collective and private economic sectors, it is necessary to accelerate the purchasing of agricultural, forestry and marine products on the basis of heightening the awareness of farmers with regard to fulfilling their obligation to pay taxes and sell products to the state, improving the purchasing policy and mode of purchasing and tightening the economic and political alliance between manual workers and farmers."

Establishing good economic cooperation between the city and the provinces will make a positive contribution to improving distribution and circulation and developing production in accordance with the directive of the general secretary and will gradually enable the foreign trade sector and the home trade sector to take the sources of goods from the hands of private merchants.

NOTICE ON DISTRIBUTION OF SUPPLIES IN HO CHI MINH CITY

Ho Chi Minh City TIN SANG in Vietnamese 21 Jun 81 p 1

[Article: "Notice on the Regulations and Method of Distribution for Nine Products at Supply Prices and Six Products at Stable Prices"]

[Text] The City Commerce Service recently issued the following notice on the regulations and method for supplying commodities in 1981 throughout the city: the products supplied under ration standards and at supply prices presently consist of nine different commodities: grain, soy sauce, meat, fish, sugar, fuel, MSG, clth and soap-laundry powder. Vegetables are being supplied at subsidized prices, consequently, they are not governed by ration standards.

The products supplied at stable prices but not under ration standards to cadres, manual workers and civil servants consist of the following six: bicycle spare parts (tires, tubes, chains and sprocket wheels), rush mats, cloth for rainwear, small fans, thermos bottle liners and tea.

Rationed goods are being supplied to the following persons: the armed forces, the shock youth forces; the guerrilla self-defense forces within the subwards and villages; the cadres, manual workers and civil servants at state and joint public-private agencies, schools, hospitals and enterprises who are on the job, retired or are not on the job because they have lost the ability to work and who receive monthly subsidies; and cadres, manual workers and civil servants who are sent for training, who are eligible under the ration standards of their subwards and villages.

The dependents of cadres, manual workers and civil servants will also be sold fresh fish, sugar, fuel and cloth at supply prices. Separate ration standards exist for war invalids and the children of war dead who are directly supported by the state at schools, stations, camps and nursing homes as well as for such persons as the persons at transformation camps and human dignity camps.

The Commerce Service will distribute these products on the basis of product purchasing books and through the network now being organized. Supplying actual products is an important requirement of the commerce sector. In cases in which difficulties are encountered and it is necessary to sell substitute products under ration standards, the commerce sector will supply the stipulated quantity at the stipulated price or make payment in cash to compensate for the different if no product is available.

The Sale of Cloth in 1981

In 1981, according to the directive of the Ministry of Home Trade, the state will sell to each cadre, manual worker and civil servant 2.50 meters of cloth and 2 meters of cloth to their dependents at supply prices. The types of cloth being sold at supply prices are common types of cloth, such as fine cloth, poplin, khaki, coarse cloth, silk and so forth.

MEASURES TO IMPROVE DISTRIBUTION, CIRCULATION DISCUSSED

Hanoi NHAN DAN in Vietnemese 20 Jul 81 p 1

[Editorial: "A Favorable First Step"]

[Text] Continuing to improve distribution and circulation is an important condition for promoting production growth, stabilizing and ameliorating the people's existence, and stabilizing the economic and financial situation. Carrying out the new directives and resolutions of the Party and State in the fields of distribution and circulation has achieved good initial results.

Efforts to ensure the supply of essential goods in planned quantities and at stable prices, along with food allowances for workers, civil servants and cadres contribute to reducing difficulties for wage earners, particularly in cities and zones of industrial concentration. Many localities have begun to expand business activities, and to implement measures on market management, goods inventory, price posting, control over business registration, collection of industrial and commercial taxes, and the fight against speculation and smuggling, etc. The above measures have the effect of helping state commerce secure more goods, prevent bad changes in the market, and make prices stable and prone to go down moderately but definitely in bumper-crop regions. Work and struggle units now can draw a number of experiences from more than a month of work. A common conclusion is that branches, localities and basic organizations must carry out synchronized measures in a resolute, continuous and flexible way so as to create a meaningful and comprehensive change.

In continuing to implement correctly the policies of distribution and circulation, the decisive factor is to step up production and concentrate goods in the hands of the state for distribution and utilization in accordance with plans, principles and regulations. Only production growth can guarantee income for laborers as well as financial and monetary revenue for enterprises, localities and the state budget. Correct distribution stimulates production and ever-growing production is the conditions for stabilizing distribution and existence. It is because of good crops that new policies can be favorably implemented. Building on the impact of distribution and existence. It is because of good crops that new policies can be favorably implemented. Building on the impact of distribution work and on new business methods, we should do our utmost to step up production of the summer-autumn crop, and the 10th-month crop, to prepare for the winter crop, and to boost consumer goods production.

The initial progress in production and distribution proves that the policies and measures already implemented are correctly oriented and that we can overcome difficulties and better exploit existing capabilities. However, this progress is just a beginning; many aspects of the campaign still lag behind, and objective difficulties are still numerous. The entire party and our entire people must strive more to do their level best to alter the economic situation and living condition. Many labor capabilities, lands, and material and technical bases have not been properly exploited. Many consumer goods production units have not operated at capacity although they can use domestic raw materials. Many sources of commodities, which can be mobilized, still are under the control of the free market because of improper organization and division of responsibilities. The delivery of products and coordination between the three interests still display many negative phenomena.

The tasks of managing commerce, the market, prices, and finance and currency are closely interrelated. The organs in charge have the common responsibility for the timely removal of doubts and obstacles from the distribution and circulation process so as to help production and business activities achieve high efficiency. Since conditions for goods production are still low and imports are limited, state commerce and socialist commerce in general must do even more to control goods for ensuring supply of essential goods to salaried laborers. Therefore, sale formulas and selling prices must be fully in line with common policies. We must block and firmly prosecute the bad practice of distributing goods to store employees rather than to costomers, and of conspiring with speculators to slyly channel state commodities into the unorganized market at the expense of consumer interest. Expanding the distribution network, socialist business activities and the services network constitutes a sine qua non condition for correctly carrying out the housewifely function of society and market management. Past progress generates momentum for future advances. Nevertheless, a tremendous and unyielding effort must be made in order to stabilize the situation and turn over a new leaf.

'NHAN DAN' ON CONTROL OF PRECIOUS ELEMENTS

BK211625 Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 3

[Article by Pham Ngoc Phong, officer of the Vietname State Bank: "Unify Control of Gold, Silver, Platinum and Diamonds"]

[Summary] Gold, silver, platinum and diamonds are precious state assets. The state uses these precious metals and stones as national reserves and as a kind of foreign currency for financial settlements with the outside world. Our people traditionally use these precious metals as jewelry. This is a legitimate requirement. "But evil and bourgeois elements trying to evade reeducation have stockpiled and use gold, silver, platinum and diamonds for speculating and blackmarketerring. They have used these precious materials to rig markets and to export and import goods illegally. Counterrevolutionary elements have used precious metals and stones as a means to carry out sabotage activities against the revolution and to undermine public order and security."

"Unifying control of gold, silver, platinum and diamonds, as stipulated in Decision No 39-CP of the Cabinet Council--now known as the Council of Ministers--is aimed at:

"1. Protecting the country's precious assets and supervising the people's legitimate ownership.

"2. Unifying the trade, export and import of these precious metals and controlling their processing in order to meet the people's legitimate requirements for gold, silver, platinum and diamonds and to avert speculation and illegal trade, export, import and fraud involving the above metals. This will facilitate market management, stabilize currency and prices, serve socialist transformation and encourage the establishment of new production relations.

"3. Guiding the people in the economic use of and insuring the meeting of all requirements for gold, silver, platinum and diamonds for production and scientific research."

Gold, silver, platinum and diamonds, whether they be in the form of jewelry, coins or solid bars, are subjected to control.

The state recognizes the people's legitimate and lawful ownership of gold, silver, platinum and diamonds. This includes the storing, transportation and trade of these substances.

Gold, silver, platinum and diamonds in the form of jewelry are authorized unlimited transport within Vietnam. However, to facilitate control by responsible authorities, those carrying gold, silver, platinum and diamonds above the following limits must obtain a permit from the State Bank:

--Gold or platinum: 37.5 grams
--Silver: 375 grams
--Diamonds: 3 carats or 0.600 grams

Those carrying gold, silver, platinum and diamonds in unprocessed or half-processed forms must obtain a permit from the State Bank.

In areas inhabited by ethnic minorities, such permits can be obtained from the provincial people's committees concerned with the consent of the Vietnam State Bank.

"With regard to trade and transfers, in order to manage markets and prices, those who own gold, silver, platinum and diamonds and who no longer want to keep them for their own use are authorized to resell them to state-owned gold corporations or shops at a reasonable price to be fixed by the state for each specific period. The selling of gold, silver, platinum and diamonds on the free market is prohibited."

The state bans all use of gold and silver for speculative hoarding or for financial settlements.

Gold ores dug out from underground deposits must be declared to the State Bank. The export and import of gold must be carried out in accordance with the state law now in force.

All citizens, religious organizations and resident aliens must declare all quantities of gold, silver, platinum and diamonds in their possession in order to obtain a certificate for use and storage. "After making such a declaration, the state will not confiscate nor will it take these metals from their owners through compulsory sales."

The state guarantees that all declared quantities of gold, silver, platinum and diamonds will be certified and the names of their owners will be withheld.

Unifying control of gold, silver, platinum and diamonds is a policy aimed at protecting our country's precious assets and the legitimate property ownership of the people. This will also contribute to managing currency and the market, and maintaining public order and security.

ECONOMIC PLANNING, TRADE AND FINANCE

BRIEFS

NEW ECONOMIC ZONE RESETTLERS--Some 74,924 people from various provinces and cities in the Red River delta and in former Zone 4 were sent to build new economic zones in the central highlands and the Nam Bo region over the first half of 1981. These included 15,500 people sent to various rubber and coffee plantation zones, 27,700 to various rice-growing state farms in the Mekong River delta and 18,600 to various cooperatives and production collectives for participation in opening new lands and cultivating various kinds of grain crops. Between now and the end of the year, the country will be sending 65,000 laborers to various coffee and rubber plantation establishments in the central highlands and an additional 174,000 people including 24,000 laborers to a number of rice-growing state farms and cooperatives in the Mekong River delta. Some 67,000 among the above 65,000 laborers and 174,000 people will be taken from the northern provinces. [BK280145 Hanoi Domestic Service in Vietnamese 0400 GMT 25 Aug 81]

BETTER DISTRIBUTION OF WORKFORCE--During the past 5 years--1976-80, more than 840,000 persons have left Ho Chi Minh City for their native places or for resettlement in new economic zones in nearby provinces. However, shortcomings and weaknesses still prevail in the task of building new economic zones. This includes improper planning of economic and social development programs and loose management in production. Thus the people's daily life in various new economic zones is faced with numerous difficulties. In the next 5 years--1981-85, efforts will be concentrated on distributing the workforce to work in various agricultural zones, especially specialized cultivation zones, short-term industrial crops and forestry and fishing. Ho Chi Minh City will continue sending its labor force to work at the Song Be state rubber plantation, the Di An Dam in Dong Nai Province, the Vung Tau-con Dao natural gas zone, the Lam Dong bauxite zone and the Dac Nong forest site in Dac Lac Province. This is aimed at developing and exploiting local potentials and natural resources in order to help build suburbs in coastal areas, and in creating firm interdependent relationships between industrial and natural resources zones, and between export and import sectors. AGRICULTURE REPORT FOR 10-20 AUGUST

BK211300 Hanoi Domestic Service in Vietnamese 2300 GMT 20 Aug 81

[Review of agricultural news for the past 10 days]

[Summary] "Since the beginning of the 10th-month rice crop the country has planted almost 2.5 million ha or over 300,000 ha more than the same period last year. Northern provinces and cities have planted nearly 1.3 million ha while southern provinces planted more than 1.2 million ha."

To date the northern provinces and cities have basically completed their 10th-month rice transplanting. They are now tending the ricefields and they have weeded more than 50 percent of the cultivated area in the second and third phases. Thanks to the recent tropical depression and typhoon No 5 the northern areas have sufficient water for cultivation. However, there has been a shortage of fertilizer in some areas. As a result, localities should strive to provide to agricultural cooperatives with sifficient fertilizer for a better yield of the 10th-month rice.

"Southern provinces to date have planted more than 1.2 million ha of 10th-month rice, almost 60 percent of the planned area. Thanks to recent regular rainfall, in many areas the pace of transplanting was quicker than last week." Provinces in Tay Nguyen have planted more than 90 percent of their plan norms, while provinces in eastern Nam Bo planted only 30 percent of the planned area. Since there is one more month to go, southern provinces should strive to complete their 10th-month rice area to make up for the shortfall in their winter-spring and summer-fall crops.

"Along with transplanting the 10th-month rice, southern provinces and cities have harvested more than 20 percent of the transplanted area. Tien Giang and An Giang Provinces harvested between 30-40 percent of the planned area."

Noteworthy is the continued appearance of harmful insects in the north. "To date, more than 400,000 ha of 10th-month rice--or over 200,000 ha more than the past 10 days--have been ravaged by harmful insects. On the average, more than 20,000 additional ha have been damaged each day."

To minimize the damage, various localities have established committees for eradicating harmful insects and, together with the Vegetation Protection Department, they have regularly inspected ricefields to discover the appearance of these insects during their nascent stage in order to eradicate them promptly.

Although between 70-80 percent of the ravaged rice area has been sprayed with insecticide, there is a tendency for harmful insects to spread further.

"At present Hai Hung, Hai Phong and Quang Ninh Provinces are experiencing massive damage in various areas. Localities are therefore required to continue their campaign of eradicating harmful insects to avoid further damage, especially during the period between late August and early September."

Regarding vegetable, subsidiary and industrial crops, to date the country has planted more than 400,000 ha or over 3,000 ha more than the same period last year.

With respect to animal husbandry, many localities have vigorously developed their hog raising. In Thai Binh Province alone, its hog population has increased to 320,000. Other provinces have also made considerable increases. "Noteworthy is the occurrence of cattle anthrax in Son La, Lang Son and Thanh Hoa Provinces. These localities must, therefore, promptly prevent the rinderpest from spreading to other provinces."

In the days ahead, localities must concentrate their efforts on carrying out the following main tasks:

The northern provinces, especially those hard hit by recent typhoon No 5 must quickly overcome its effect and promptly resume production. They must also pay special attention to eradicating harmful insects, especially brown leafhoppers, to prevent them from causing massive damage to ricefields. Localities must formulate plans to help possible waterlogged areas should heavy rainfall continue in the days ahead. They must also prepare a sufficient amount of seed and fertilizer for the winter crop cultivation.

Southern provinces must quickly harvest the summer-fall rice and accelerate their grain obligation task. They must integrate all facilities, material and the work force to transplant the entire 10th-month rice area during mid-September and take appropriate measures to prevent cattle from possible rinderpest.

CSO: 4209/470

AGRICULTURE MINISTRY LAUNCHES EMULATION DRIVE

BK270753 Hanoi Domestic Service in Vietnamese 1100 GMT 21 Aug 81

[Text] The Ministry of Agriculture has recently launched an emulation drive for achievements to greet the Fifth VCP National Congress throughout the agricultural sector.

The main objective of this drive is to concentrate efforts on supervising and fulfilling the immediate agricultural work. This includes the completion of the cultivation plan norms, the caring for of the 10th-month rice, the urgent harvest of summer-fall rice and preparations for the success of the 1981 winter crop and the 1981-82 winter-spring crop.

Regarding the 1981 winter crop, the ministry urged various localities and cooperatives to formulate plans and make preparations to immediately ensure sufficient seeds, fertilizer and to create other favorable conditions for the cultivation of from 350,000 to 400,000 ha with the proper crop cultivation pattern, which includes from 150,000 to 160,000 ha of sweet potatoes, 80,000 ha of potatoes, from 40,000 to 50,000 ha of corn, 16,000 ha of soybeans, 4,000-5,000 ha of tobacco, 65,000 ha of assorted vegetables and beans and an additional 350,000 ha of duckweed.

In the 1981-82 winter-spring crop--the first crop of the 1982 agricultural production program, localities must widely apply the product-based contractual system, complete the managerial work, satisfactorily exploit the labor and land potential and the available material and technical bases in order to develop agriculture comprehensively, especially rice, subsidiary and industrial crops and animal husbandry.

Concerning technical work, the ministry called for the improvement of the material and technical bases to serve production concretely. This includes an improvement in the water conservancy work, the increase in drafting power, seeds and equipment and the establishment of a good foodstuffs storage system.

In addition, localities must continue accelerating the agricultural production movement and the application of fertilizer, especially organic fertilizer. Due to the expansion of extensive cultivation, the increase in cultivated areas and the limited production of chemical fertilizer, localities must pay special attention to the production and application of organic fertilizer and must regard it as the main source of fertilizer. They must also mobilize all work forces of the agricultural sector to serve local and grassroot units effectively and strive to improve their organizational, managerial and supervisory abilities in the process of production.

The agricultural sector is bending all its activities toward serving the grassroot production front, thus together with the local and grassroot units, they are contributing to stirring up the seething labor production surge in order to strive to score great and outstanding achievements to greet the Fifth VCP National Congress so as to build firm bases and help our nation's agriculture to advance firmly toward the large-scale socialist production.

INTERVIEW WITH NGUYEN NGOC TRIU

BK251541 Hanoi NHAN DAN in Vietnamese 31 Jul 81 pp 2, 4

[Interview with Minister of Agriculture Nguyen Ngoc Triu by NHAN DAN--date not given; passages within slantlines denote boldface type as published]

[Text] /Question/: As the Council of Ministers has issued a resolution on the /Mekong/ River delta, can you, Comrade Minister, tell us about the major features of agriculture in this region?

/Answer/: The Mekong River delta is the largest delta region in our country. Compared to the Red River delta, the Meking River delta is 2.2 times larger in natural land and 3 times in arable land. There is a possibility of turning most of the nearly 4 million hectares of natural land in this region into arable land. The rice area alone has accounted for 2.24 million hectares of the arable land in the region--nearly half (48 percent) the total rice area in the entire country.

The Mekong River delta is abundantly provided with favorable natural conditions--such as vast land, fertile soil, high temperatures and ample sunshine--and is almost free from typhoons. The region is also provided annually with a relatively large amount of rainfall together with an abundant source of fresh water and an enormous volume of alluvium from the Mekong River network for crop cultivation and so forth. With these existing favorable natural conditions, we can develop this region into a comprehensive, productive, multi-faceted and stable agricultural structure.

Great difficulties, however, still exist. At present, production still depends heavily on natural conditions and the area of land affected by acidity, alkalinity and waterlogging remains large. The water conservancy network has just taken shape and the construction of various projects to prevent salinity and to flush out acidity and alkalinity and counter flash floods has just begun. Soil improvement has been conducted on only a small area. There is a great shortage of establishments at the grassroots level and the number of industrial installations supporting agriculture--such as electricity, machinery, processing, construction materials and communications and transportation in particular--is still too small. Agricultural transformation still has not been carried out on a large scale while the distribution of the population is uneven and usually concentrated along the river banks, roadsides and canal banks. The district and grassroots levels play an important role but they still have not yet measured up to expectations.

Some of these difficulties can be quickly overcome but some will take more time and have to be gradually surmounted.

Generally speaking, however, it is obvious that the Mekong River delta has very great potentials for the development of agriculture, forestry, fishery, industry, export... If we can satisfactorily develop these potentials, we will be able to achieve extraordinary agricultural development in the region. According to our long-range planning, we may be able to eventually increase rice output to tens of millions of tons, raise the hog population to about 10 million and boost the production of other agricultural products such as soybeans, jute, and so forth, to hundreds of thousands of tons. There also are many favorable conditions for the region to realize its considerable potentials in the development of industry and export.

For this reason, with regard to the Mekong River delta, the long-range guideline is to build it into a developed agroindustrial economic zone, a task to be closely combined with the transformation of production relations and the building of a new socialist countryside. This is to ensure the speedy and steady improvement of the people's material and cultural life and the satisfactory fulfillment of the obligation to contribute to meeting the country's basic needs.

In the plan for the next 5 years, 1981-1985, the Council of Ministers, fully imbued with the resolution of the Ninth Plenum of the Party Central Committee, has decided: "/On the front of agricultural production, we must concentrate on guiding and make adequate investments for the exploitation of the Mekong River delta's considerable potentials so as to build it into the foremost key grain and food-producing zone of the entire country/."

To carry out this policy, during the next few years, we must concentrate on the following main tasks in exploiting the Mekong River delta:

Firstly, we must concentrate our efforts on /stepping up the production of grain and food/, especially rice, so as to make an important contribution to resolving the food problem for the entire country.

Second, we must strongly develop the production of /agricultural products for export and raw materials for industry/, concentrating on a number of principal crops such as soybenas, jute, sugarcane and other special crops concentratedly planted in a number of areas such as pineapple, banana, and so forth. We must develop the production of subsidiary food crops and promote the raising of hogs, ducks, fish, and other animals.

Thirdly, we must further strengthen /the material and technical base/ of agriculture to support our immediate tasks and simultaneously create conditions for vigorous development in subsequent years.

Fourthly, we must /achieve the socialist transformation of agriculture/ by using appropriate forms of organization and consolidate and build more state farms.

Fifthly, we must closely combine production development with /improving the people's living conditions/, developing culture, gradually enhancing public welfare and building a new countryside.

According to this guideline, in production we must attach importance to both crop growing and animal husbandry; satisfactorily carry out all three tasks of intensive cultivation, multicropping and opening new land; and strive to vigorously and comprehensively develop agriculture in the Mekong River delta. This is an extremely important targeted program for the development of our country's agriculture under the 1981-1985 5-year plan.

/Question: We talked a great deal about potentials in the past. Now we are talking about potentials again. Is there any difference between now and the past with regard to potentials?/

/Answer/: It is true that we have talked a great deal about potentials before and that we are now talking about the same thing again, but the difference is that the realities of our struggle in production during the last 5-year plan period have helped bring these potentials into sharper focus. Of course, we cannot yet see all the potentials of the Mekong River delta. It is noteworthy, however, that we have gradually seen the factors which restrict these potentials and now we know what to do to "unleash" them.

In agriculture, some potentials may be immediately exploited, but there are also some others which must only be gradually exploited and which require certain conditions for them to be realized.

In recent years, all the echelons, sectors and people in the Mekong River delta have made many efforts to achieve a significant development in agriculture. They have expanded multicropping and opened more virgin land, increasing the rice area by hundreds of thousands of hectares and the rice output by more than 1 million tons over 1975. This was an important achievement. More important still, however, was that the practice of production has provided us with a better understanding of and a great deal of experience in establishing crop growing schedules, developing crop cultivation patterns, planning the allocation of rice varieties, determining cultivation processes, practicing intensive cultivation, carrying out multicropping, organizing the opening of new land, and so forth. Many localities have fruitfully practiced multicropping and intensive cultivation. Thanks to our initial successes in realizing and taking advantage of the favorable aspects of the weather and climate, especially water in the rainy season; in appropriately allocating rice varieties and adopting crop planting schedules; in preserving and logically using water; in using more high-yield, short-term rice varieties, and so forth. Nearly all localities in the region previously grew only one rice crop per year--the 10th-month crop. Now, many of them grow two or three crops and achieve a yield of 4-5 tons per hectare in the newly added winter-spring and summer-fall crops. The cultivation of leguminous plants, especially soybeans, has been developed successfully in many localities. The cultivation of sugarcane, reed, pineapple, banana and many other vegetables and subsidiary food crops has also been increasingly expanded. The building of rice-producing state farms has achieved good initial results. The movement to raise hogs for manure and to produce and use stable manure, compost and green manure has been developed initially. The material and tec-nical base has also been expanded. The agricultural organizational, managerial and leadership standards and skills of the districts and grassroots units have been enhanced. The various policies providing incentives for production have produced initial effects, and so forth. These are concrete results and potentials which have turned and are turning into realities. This shows that if we work well we will be able to exploit the considerable potentials of this region more rapidly, more comprehensively and more efficiently. Therefore, it will not do if we talk about developing the Mekong River delta without analyzing its potentials. If we only talk about these potentials without creating realistic and favorable conditions for their exploitation, however, we will never be able to translate them into realities.

/Question: We used to talk a great deal about norms but little about measures. This time we are going to deal with measures, but are they specific and drastic?/

/Answer/: Norms are a concrete manifestation of the goals of economic policies and of given plans. In order to ensure fulfillment and overfulfillment of these norms, it is decisively important for us to adopt specific and practical measures and to provide guidance for the satisfactory implementation of these measures. As President Ho said: "Norms are important, but measures and determination are respectively 10 and 20 times more so." This remark is evidence of the importance of the adoption of measures and the determination to implement these measures satisfactorily in order to attain prescribed norms.

The exploitation of the Mekong River delta under the 1981-85 plan requires us to deal simultaneously with many major measures such as those involving designs and plans, the building of material and technical bases to serve production, the agricultural transformation in and the building of districts, the redistribution of labor and the boosting of labor productivity, as well as those concerning policies, organization and cadres and so forth. Here I want to cite only a few essential problems:

/First,/ we must carry out agro-forestry projects urgently and satisfactorily in accordance with plans. We must examine and revise projects of each district and each province in conjunction with the preparation of the five-year and annual plans, and must go ahead with preparing specific plans for each small area and each production establishment. Based on this, we will reorganize production structures, crop cultivation patterns, the systems of crop rotation, intensive cultivation and multicropping, and the patterns of animal husbandry, crop varieties and animal species. We will determine appropriate steps to be carried out by each area, and will link animal husbandry with crop cultivation and agriculture with industry, communications, transportation, distribution, circulation, cultural and social development and so forth. In planning, alongside with solving urgent economic requirements, we must pay attention to maintaining long-term profits and to protecting and improving ecological environments further. We must manage and use land in accordance with plans, satisfactorily carry out surveys, classification, registration and utilization of land and put an end to the wasteful use of land and so forth.

/Second,/ we must satisfactorily carry out all technical measures designed to serve production. In the years to come, the primary requirement is for us to take maximum advantage of the economic and natural conditions and the concentration of existing material and technical investments to step up intensive cultivation and multicropping and to open new lands in order to boost agricultural production by another step, especially the production of rice and soybeans. (The comrade minister also dealt with many measures involving water conservancy, crop varieties, fertilizer, mechanization, and vegetable and veterinary protection, particularly applied to the Mekong River delta.)

We must step up scientific and technical researches and quickly apply advanced technology in production in conjunction with practical experiences obtained by the masses.

/Third/, we must attach importance to building the infrastructure, developing communications and transportation and expanding the distribution and circulation network in support of production. These are very important factors directly bearing on production. Plans must be formulated soon for gradually building an efficient communications and transportation system in the Mekong River delta, especially the system of highways, piers, cargo handling facilities, warehouses, and so forth, so as to connect this region with the major economic centers. We must improve and satisfactorily organize the collection and purchase of agricultural products and the procurement of materials for production and construction and consumer goods for the people, especially those who live in areas far from communication axes and in newly developed economic zones. Plans must be devised for developing industrial establishments specializing in the processing of agricultural food products and exportable goods, and so forth. We must develop the construction materials industry to meet the demands of capital construction including the construction of production installations, public facilities and houses for the people. Measures must be devised to strengthen and develop the power grid so as to satisfactorily support production. Exports must be promoted to finance the importation of more materials and equipment for agriculture.

/Fourth/, we must further carry out the redistribution of the labor force and improve labor productivity. Under the current 5-year plan, we must satisfactorily develop and use the local source of manpower in the immediate future by redistributing the labor force in the Mekong River delta and strive to ensure that each laborer works 200 man-days a year. At the same time, we must formulate plans to bring in laborers from other localities to reinforce various state farms, to carry out capital construction and to provide more manpower to any area which needs it.

In reorganizing and redistributing the labor force, we must pay attention to promoting the establishment of brotherhood between the provinces, districts, villages, state farms, production installations, and so forth, in the Mekong River delta and other regions, thereby creating favorable conditions for laborers moving into a new locality to quickly stabilize production and life.

/Fifthly/, we must satisfactorily, actively and steadily carry out the socialist transformation of agriculture and strive to achieve within a relatively short period of time cooperativization in the Mekong River delta by using the production collective as the main form of organization. We must simultaneously attach importance to building a management system for production collectives and cooperatives, raising their management standards and strengthening and promoting their role.

The guidance over production development, the transformation of old production relations, the establishment of socialist production relations and the strengthening of the material and technical base for agriculture must be closely coordinated with the building of a new socialist countryside. New countryside building plans and especially population distribution plans must be consistent with production plans. The people must be supplied with necessary dwelling house construction materials through the two-way exchange system and guided in house building according to plan. Plans must be formulated for the building on a priority basis of public facilities such as hospitals, schools, day-care centers, kindergartens, cultural houses, wells, latrines, and so forth. Attention must be paid to the development of education, culture, art and literature, thereby gradually improving the spiritual life of the people, especially in newly developed areas where they are still facing many [problems].

/Sixthly/, we must satisfactorily resolve the problems of organization, cadre, policy and district building. These are very decisive factors. Along with satisfactorily training, fostering and using the existing contingent of cadres, we must quickly improve it both qualitatively and quantitatively so as to ensure the fulfillment of the tasks which the Party Central Committee and government have entrusted to all echelons and sectors in the Mekong River delta. We must attach the utmost importance to satisfactorily implementing the existing policies while amending and perfecting them as well as promptly promulgating policies designed to provide incentives for production in this region.

These principal measures--if their implementation is closely guided and satisfactorily organized--will certainly bring about new changes in production and life in the region.

/Question: Although the Mekong River delta is the number one key zone of the entire country, it has few cadres while the Ministry of Agriculture and a number of other ministries in the north have too many key cadres. Even when these cadres are sent to the Mekong River delta, it is only for a short stay. Is there any change in this matter this time around?/

/Answer/: As one of the sectors bearing the principal responsibility for the implementation of the Mekong River delta exploitation program, the agricultural sector has sent thousands of engineers and management cadres to the region to carry out surveys, zoning, planning, enterprise designing and scientific research, to build hundreds of state farms, to open new economic zones, and so forth. Leading cadres of the Ministry of Agriculture and various departments and institutes as well as many scientific and management cadres have devoted much time to studying and guiding the activities of their units in the Mekong River delta. The contingent of scientific and technical cadres working in various provinces and districts has also been strengthened. These efforts, however, have obviously not been sufficient to meet demands.

In our opinion, in organizational and managerial work as well as in agricultural scientific research, able key cadres are highly needed for essential work in the various central organs. The agricultural sector, however, has some characteristics which set it apart from the other sectors. The main battlefront of agricultural production is the localities, the grassroots units, the ricefields and the animal farms. For this reason, cadres in charge of leading and guiding agriculture and those specializing in agricultural science and technology are required to keep in close contact with the localities and grassroots units and to deeply engage in actual production work. This is in order to enable them to study and discover the demands created by production and to guide efforts to promptly meet them. As the foremost key grain and food-producing zone for the entire country, the Mekong River delta justifiably requires more cadres and guidance. At present, many units and many key cadres of the agricultural sector have not yet adequately met this requirement. Most of the cadres are concentrated in the administrative apparatus at the central level and not a few of them are afraid of visiting grassroots units or going on missions far from home. If these cadres have to go down to grassroots units, they just do it in a perfunctory manner, keeping their trips short and refusing to deeply engage in the work of these units to study and help resolve their concrete and practical problems. A number of key cadres has also not yet fully met their responsibilities to the Mekong River delta. Some cadres currently working in this region are not really doing their duties in full confidence, a fact which has limited their working abilities and the effectiveness of their activities. These are highly unwelcome phenomena which must be overcome. Of course, in the present situation, the living conditions of cadres working in grassroots units, especially in new economic zones, are very difficult. Concerning this matter, we would like to suggest that the state and upper-echelon organs concerned pay attention to creating, and resolve it so as to create favorable conditions for our brother and sister cadres to perform their duties well while serving in grassroots units.

In execution of the resolution of the Ninth Plenum of the Party Central Committee and resolution 148-CP of the Council of Ministers, the Ministry of Agriculture has assigned to its key cadres the responsibility to devote abundant time in promptly studying, checking, supervising and guiding the operations of their units in the Mekong River delta. The Ministry of Agriculture will continue to send cadres as warranted to strengthen the organizations and contingent of cadres currently working in the region. At the same time, it will step up the training of local cadres.

/Question: Would you, Comrade Minister, please tell us what the various sectors and mass organizations should do to actively contribute to the program designed to ensure the fulfillment of the objective of developing agriculture in the Mekong River delta?/

/Answer/: Agricultural production is an activity involving many sectors. In the conditions of our country, agricultural production has been determined as the primary task and as the basis for achieving socialist industrialization. This calls for a high concentration of the forces of the entire country so as to create necessary conditions for agricultural production to develop strongly, comprehensively and steadily.

The Mekong River delta is the foremost key zone of the entire country. It has considerable potentials, but its agricultural production is still in the early stage of development. There are still many difficulties regarding production, technical means and political and social life. This requires even greater and very comprehensive joint efforts by all echelons and sectors in implementing the Mekong River delta development program. The water conservancy sector, together with the agricultural sector, has recently made efforts to study and initially meet many demands of production. The Vietnam Institute of Science, the State Capital Construction Commission, the Ministry of Defense, banking and financial organs and many other sectors have also actively contributed to implementing the Mekong River delta development program. The Ho Chi Minh Communist Youth Union has launched a movement named "Assault youth for establishing brotherhood with the taking the lead of Mekong River delta rice farms," and so forth. These efforts, however, have not yet been well coordinated and are still hampered by difficulties in certain respects.

In many fields of activities--from production, distribution, circulation and economic-technical facilities to organization, management and welfare--we presently have many demands which need to be promptly met. If the cultivation season comes but we do not have enough gasoline and oil, our trucks and machines break down and spare parts are lacking, then how can we keep on schedule? There have been cases in which the people, following their harvests, sold grain and foodstuffs to the state but delays in collection and purchase, unsatisfactory storage and lack of transportation caused waste and even a lot of troubles for the people. In many state farms and cooperatives where our cadres and people have gone to open new land and to build new economic zones, many difficulties and trials have been overcome, initial results have been achieved and production has been fruitfully carried out. The production and living conditions of the cadres and people in these places, however, are very difficult and capital and material supplies are slow in coming. The information and liaison services in support of leadership and command have also encountered many obstacles. These are problems which must be resolved not by the agricultural sector alone but by well-coordinated efforts of all sectors and localities.

The resolution of the Council of Ministers has affirmed that the Mekong River delta agricultural development plan is a /uniform program with several major objectives/. It has also stressed that all sectors and echelons must uphold their responsibilities for guiding and organizing the implementation of this program and that, simultaneously, they must closely coordinate their activities with those of various localities. On its part, the Ministry of Agriculture is working with the localities and sectors concerned to promote the implementation of the program. Under the centralized and unified guidance of the Standing Committee of the Council of Ministers, the Ministry of Agriculture earnestly wishes to work in close coordination with all sectors and mass organizations so as to organize, together with the localities concerned, the successful implementation of this important program. Concerning the specific programs of other sectors, we would like to suggest that NHAN DAN interview the comrade ministers in charge of these sectors.

CSO: 4209/470

MEETING VIEWS FOOD PROCUREMENT IN SOUTH

OW201035 Hanoi Domestic Service in Vietnamese 1430 GMT 17 Aug 81

[Text] The Council of Ministers on 11 and 12 August held a meeting in Ho Chi Minh City of chairmen of people's committees of provinces from Thuan Hai southward and of officials concerned of ministries and related sectors in the central government to assess the results of food production and procurement for the 1980-81 10th-month rice crop and the 1981 winter-spring crop and discuss the task of food production and procurement in the southern provinces for the current period until the end of the year. Comrade Do Muoi, alternate member of the Political Bureau and deputy chairman of the Council of Ministers, presided over the meeting.

The comrade minister of food presented a report on the results of food production and procurement in provinces from Thuan Hai southward during the past 8 months, that is, from December 1980 to July 1981. As for production, according to the report of the General Department of Statistics and the Agriculture Ministry, the southern provinces sowed and transplanted on more than 1.7 million hectares, attaining an output of 21.3 quintals per hectate for the 1980-81 10th-month rice crop. As for the winter-spring crop, these provinces sowed and transplanted on 390,810 hectares, attaining an output of 30.5 quintals per hectare.

In general, for the whole region, the area of the 1980-81 10th-month rice crop and winter-spring crop this year increased by 160,000 hectares while production increased by 530,000 tons compared to last year. The nine provinces of the Mekong delta alone achieved an increase of 467,000 tons.

As for food procurement, southern Vietnam by the end of July achieved 65 percent of the annual plan after readjustment; this includes agricultural taxes amounting to 72.4 percent of the annual plan. The nine provinces of the Mekong delta alone achieved 67.7 percent of the annual food procurement plan.

Area and sector leaders discussed and unanimously agreed with the assessment of the food and agriculture ministries on the results of food production and procurement in the past. They stressed the initial experiences gained in their respective areas and sectors in organizing food production and procurement. They also made suggestions to the state on further studying policies concerning investments in agricultural production and in building material bases in support of food procurement in the Mekong delta provinces, concerning prices and concerning current procedures in organizing food purchases.

The delegates from the various localities also discussed in detail the task of food production and procurement during the coming summer-fall and 10th-month rice crops and expressed full agreement with the tasks and targets of food production and procurement assigned by the central government for the current period until the end of the year. Specifically, in the field of production, the localities must care well for the summer-fall rice crop area under cultivation; they must additionally sow and transplant short-term rice on recultivable areas of the winter-spring or the 10th-month crop and at the same time actively fight drought and harmful insects, ensuring that the target area of the summer-fall and 10th-month rice crops will be surpassed and their yield will be higher than those of previous years.

As for food procurement, the various localities must satisfactorily achieve their targets in collecting taxes and debts, settling two-way contracts in coordination with purchases according to agreed prices and ensuring that a volume of food is obtained equal to half of that procured since the beginning of the year.

Summing up the results of the meeting, Comrade Do Muoi, on behalf of the VCP Central Committee and government, enthusiastically praised the peasants, cadres, workers and personnel of the various localities and sectors for their efforts and achievements in production, in guiding production and in the procurement and transport of food in the recent past. He also pointed to the shortcomings that still exist in food production and procurement, stressing the shortcomings in implementing policies on guarding material supplies and food at times of purchase, loading and unloading and transportation. He urged the localities and sectors to strive to comprehensively learn from experiences and rapidly multiply good examples to ensure that procurement work will achieve greater results in the time to come.

He also analyzed the importance of the Mekong delta in food production, its fundamental advantages in terms of geographical and climatic conditions and the party's and state's concern for this main rice region. He pointed out that food production is a task of strategic significance to the building and defense of the Vietnam socialist fatherland. In view of their important location and fundamental advantages, the various provinces must in 1981 concentrate more efforts on agricultural production. First, they must strive to fulfill and overfulfill the production targets for the summer-fall crop and the 10th-month rice crop.

In food procurement, the various provinces must give primary attention to collecting taxes and debts in a fair and rational manner and in accordance with policy. They must resolutely collect all taxes from those who are capable of paying them and collect all debts incurred by households during previous seasons.

While collecting taxes and debts, they must satisfactorily settle two-way contracts by ensuring that the quantity of paddy collected matches the amount of materials supplied by the state. At the same time they must step up efforts in exchanging material supplies directly for paddy and making purchases according to agreed prices. They must correctly apply the policy on prices and on measures of purchasing and selling food and material supplies in accordance with the various periods and areas. They must pay utmost attention to the procurement of subsidiary food crops. At present, procurement, distribution and use of these crops are not yet satisfactory and this has greatly hampered subsidiary crop production. The Food Ministry has the responsibility of purchasing subsidiary crops in the regions and mapping out plans to use them effectively.

Along with fulfilling the norms of food procurement, the various provinces must pay due attention to guarding against damage and losses and to assuring the quality of paddy and rice.

Referring to measures aimed at successfully implementing this year's food production and procurement plan, Comrade Do Muoi urged the various localities and sectors to still better perform the task of teaching cadres, party members and peasants their obligation in food production and food contribution so that everyone willingly makes his best contribution to meeting the food requirements at present; to consolidating and improving the procurement system to ensure that it is made up of cadres and personnel who are professionally competent, possess good qualities, maintain close contact with production and with the peasants and satisfactorily serve production and procurement; to improving purchase and sales methods on the basis of assuring the interests of the state and the peasants and consolidating the worker-peasant alliance; to better performing the task of completely controlling the market; and to fighting speculation and hoarding in the food sector.

BUREAUCRATISM CAUSES LOSS OF 3,000 TONS OF FERTILIZER

Hanoi NHAN DAN in Vietnamese 18 Jul 81 p 3

[Article by Le Trung and Pham Van Thanh, Central Committee Agriculture Department: "Apatite Wasted"]

[Text] Those passing through Ninh Binh City were grieved to see at the Ha Nam Ninh Agricultural Supply Corporation storehouse nearly 3,000 tons of apatite exposed to rain and sun, some of the fertilizer flowing into the river and roadway, even blanketing the railway. Following a rainfall, tens of tons of fertilizer belonging to the state were lost, causing considerable waste. We asked the storehouse keepers and were told, "The apatite stock was part of a 1980 allotment for the corporation to fulfill its plan, but now the factory has urged us to move the apatite out to use the storehouse for newly-produced goods; that is why we must dump apatite over here." Formerly, apatite was delivered directly to the districts but later, when the fertilizer was allotted, the provincial agricultural supply corporation no longer delivered it, forcing the districts to come there to receive it. The districts have not come and the undeliverable apatite is piling up there. The storehouse keeper also deplored the fact that each rainfall washed away tons of apatite. During the coming rainy season, all the apatite will certainly be washed away.

To produce a ton of apatite requires a large amount of labor and raw materials (for extraction, transportation and bringing the ore to the factory for processing) and finally the end product is being dumped there and allowed to flow into the river. Don't managers and responsible people at the Ha Nam Ninh Agricultural Supply Corporation know this in order to take measures to manage, distribute and use that apatite on things that help with production?

BRIEFS

BEN TRE RICE PLAN--Various districts in Ben Tre Province have been making rapid progress in tilling land and transplanting the 10th-month rice after the harvest of the early summer-fall rice crop. The entire province has sown seed for the 10th-month rice crop on almost 6,500 ha--enough for transplantation on 75,000 ha. The province's agricultural supply sector is striving to supply the various districts with over 300 tons of chemical fertilizer for use in addition to organic fertilizer in the hope to achieve an average per-hectare yield of 25-30 quintals. [Hanoi Domestic Service in Vietnamese 1100 GMT 24 Aug 81]

HAU GIANG RICE--As of 20 August, Hau Giang Province had reaped 20,000 ha of summer-fall rice, covering 27 percent of the cultivated area. Along with reaping the ripening rice, the provincial peasants have actively tended the late plantings of summer-fall rice and protected them from possible typhoons and flash floods. The province has also procured 5,000 tons of grain in discharging its grain obligation for the summer-fall crop. [Hanoi Domestic Service in Vietnamese 1100 GMT 25 Aug 81]

PHU KHANH RICE--As of 15 August various localities in Phu Khanh Province had transplanted the 10th-month rice on almost 7,000 ha--a 17-percent increase over the same period last year. The provincial peasants are now striving to finish transplanting 20,000 ha of 10th-month rice on schedule. [Hanoi Domestic Service in Vietnamese 1100 GMT 21 Aug 81]

AN GIANG RICE HARVEST--As of 19 August, An Giang Province had reaped the summer-fall rice on 50,000 ha, covering more than 45 percent of the cultivated area, and recorded an average yield of 3 tons per hectare. Along with reaping its summer-fall rice, in the early days of August the province procured more than 10,000 tons of paddy, fulfilling 20 percent of its grain obligation quota for the summer-fall crop season. This figure brought the total amount of paddy procured since the beginning of the year to 21,000 tons. [Hanoi Domestic Service in Vietnamese 1100 GMT 22 Aug 81]

CUU LONG DROUGHT, RICE--Due to the recent prolonged spell of sunshine, more than 10,000 ha of summer-fall rice and 10th-month rice seedlings in Cuu Long Province have been subjected to drought. The Provincial Party Committee and People's Committee have guided all sectors and echelons to assist the hard-hit localities in controlling drought. Along with combatting drought, the province has also devised a plan to prevent waterlogging in the districts lying on the banks of the

Tien and Hau Rivers. [Hanoi Domestic Service in Vietnamese 2300 GMT 21 Aug 81] As of 20 August, Cuu Long Province had reaped the summer-fall rice on more than 15,000 ha, with many localities scoring a per-hectare yeild of 4-6 tons. Also by the same date the province had planted 70,000 ha of 10th-month rice, fulfilling 40 percent of the area plan. Along with their rice planting efforts, the local peasants have actively discharged their grain obligation to the state. In the early days of August the province delivered to state granaries 5,500 tons of grain, bringing the total amount of grain procured since the beginning of this year to 117,000 tons or 84 percent of the annual target. CONCENTRATED WORK FORCE BUILDS CEMENT FACTORY, POWER PLANTS

Hanoi NHAN DAN in Vietnamese 20 Jul 81 p 1

[Article: "Concentrate Work Force to Build Important Projects"]

[Text] At the construction site of the Bim Son Cement Factory, the Federation of Machine Assembly Enterprises is concentrating its forces and means on an urgent emulation wave to assemble and put in place the last 700 tons of equipment of production line 1. The federation dispatched trucks into Hai Phong port to haul hundreds of tons of equipment piling up there, and concentrated hundreds of skilled workers from assembly units to help each other with construction work. Cadres and workers of Assembly Combine 45 and crane units of Assembly Combine 1 in close coordination with Soviet technicians, organized work in three shifts, concentrating on assembling and setting the last tons of equipment of the remaining construction categories such as cement silos, clinker silos, machine plant, coal storehouse, packing plant, etc....

In 10 days of emulation in early July, the machine assembly units assembled and set up nearly 200 tons of the remaining equipment of production line 1.

The units taking part in construction of the Pha Lai Thermal Power Plant have speeded up the construction tempo of main categories of the project.

In June, the work site concentrated its construction force combining mechanized and manual labor to dredge 4,000 cubic meters of mud and pump up from foundation pits 15,000 cubic meters of water accumulated by heavy rains at the circulatory pumping station. As a result, the project has poured more than 2,200 cubic meters of concrete faster than expected, forming the body of the pumping station and various work decks from 4 meters below ground level to 3.2 meters above ground level.

The entire work site has dug and built 843,850 cubic meters of earth and stone, poured 20,314 cubic meters of concrete, built 8,835 square meters of wall of various kinds; assembled and set 3,164 tons of iron and steel, assembled 3,740 m of pipe of various kinds, and built 16,500 square meters of covered enclosures. Constuction Corporation 18 has hauled a large quantity of cement, bricks and stone, and received handicraft equipment to serve construction. Machine Assembly Enterprise 69-1 has assembled 9 cranes of different kinds, including the BK 1000 crane, which was for the first time assembled and set up in our country.

In April 1980, construction work started on the 220 kv, 65 km-long power line with 123 pylons from Ha Dong to the work site of the Hoa Binh Hydroelectric Power Plant on the Da River. The entire equipment has been furnished by Soviet aid. In phase 1 only the 33 km-long Ha Dong-Xuan Mai portion was completed. In the past 2 months, to make an achievement to salute the 5th Party Congress Vietnamese cadres and workers [working] day and night and shoulder to shoulder with Soviet technicians have overcome all difficulties in hauling supplies and equipment across a mountainous and jungled terrain with many heights, rivers and springs. The power station designed to receive 110-35/6 kv power has been completed and has begun to carry electricity.

INCREASES IN ELECTRICAL GENERATING CAPACITY

BK260740 Hanoi Domestic Service in Vietnamese 2300 GMT 23 Aug 81

[Text] Implementing the resolution of the Fourth Party Congress, the electricity sector has, within the framework of the 1975-81 5-year plan, increased capital construction work to boost its power generating capacity by 160,000 kw and produced 17.5 billion kw of electricity, including 1.275 billion kw for agriculture, or 20 percent of the total power supply to the various sectors.

Despite difficulties concerning capital, supplies and equipment, immediately following the liberation of the south, the sector invested 51 percent of its capital in the restoration and expan sion of the various existing power facilities and in increasing the capacity of both power sources and carrier networks, thus taking an initial step toward overcoming the serious imbalance between sources and carrier networks that existed for many years.

The sector has restored the design capacity of eight power plants. Major power plants in the north--such as the Thac Ba, Ninh Binh and Uong Bi power plants that were destroyed by the U.S. aggressors--have resumed normal operation. The Uong Bi power plant has been expanded with its capacity increased by 55,000 kw.

In the south, restoration work has been completed on the Can Tho power plant and, particularly, complete repair work has been done on the Da Nhim hydropower plant, bringing its capacity from 120,000 kw to 160,000 kw with an increment of 200 million kw in power output and a savings of 60,000 tons of oil every year.

SEVERE PUNISHMENTS PROPOSED FOR PROMOTERS OF DEPRAVED CULTURE

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 11 Jun 81 p 4

[Article by Le Dinh, of the 18th Subward, Tan Binh District, in "Saigon People's Tribune Column: "There Must Be Appropriate Punishments"]

[Text] Recently, I attended a meeting with speeches at the Tan Binh District Club.

I was petrified on hearing a speaker tell about the amount of depraved and reactionary cultural products which had "infiltrated" a number of households in the district.

Though the actual figures were not quite great, I felt sorry because I am a local citizen.

It is clear that over the recent past we have slackened vigilance so that our ideological and cultural enemies have had a free hand to do harm.

Some families have stored, recorded, printed, used and disseminated rock music and perverse and reactionary books, newspapers and films including pornographic ones. Some households have also prevented and caused difficulties to the task of controlling depraved culture.

Since every household has children, what do the abovementioned families think of the future of their own children if the latter are allowed to assimilate those "sugar-coated poisons"?

Having been invited to attend an open trial of a houshold charged with accommodating prostitutes and smuggling, I found that the sentences passed were too light. The law should have meted out more appropriate punishments to those people in the same way it dealt with the instigators of the recording, printing, storage and circulation of depraved cultural products. No matter whatever the motives, their acts amounted to lending a helping hand to the enemy in his plot to revive and spread the neocolonialist culture.

It is suggested that the administration at all levels severely punish the abovementioned criminal acts.

FORMER PUPPET PARATROOPER CONVICTED OF WRITING DIRTY BOOKS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 11 Jun 81 p 4

[Article by Trinh Sat [Scout] in "Saigon's Many Faces" Column: "Cultural Parachuting"]

[Text] The total number of books and newspapers confiscated from shelf No 60 in the secondhand books market, Dang Thi Nhu Street, 1st Precinct, was 232.

At first sight, this number did not seem important, But Trinh Sat [Scout] would suggest that you cast a glance at the classification list to have an idea of the destructive power of these "directional time mines."

They were not many--only 232.

They included 17 depraved books intended for children, 34 nonsensical cartoon books for teenagers, 24 books of the "playboy" kind and five "music for the youth" books of various types. The remainder was composed of "Maoism" books (printed in the years between 1954 and 1960), five or seven miscellaneous brochures and especially two hand-written books entitled "Diary of My Life."

Can you say whose life is "my life"?

--It is the life of Bui Dinh Ha, the owner of shelf No 60 and a paratrooper in the former puppet armed forced.

Did the author relate the days when, with a "red beret" on his head and an M-16 in his hand, he was engaged in the "resistance against the country to save the U.S."?

--No, he was not so stupid as to do so because he was not a madman.

This paratrooper had fallen into a hopeless situation. However, with their traditional lenience and generosity, our people mercifully helped him stand up and saved him from the fate of a mercenary. Instead of rendering thanks, he continued to stir hatred.

Bui Dinh Ha stubbornly and recklessly "parachuted" once again to attack the people and sabotage the revolution. But this time he no longer wore a red beret and a motley suit and especially was not armed to the teeth like in the days he dropped on villages allegedly to "kill the communists" but actually to shoot and kill our people during mop-up operations.

Instead of abandoning the former criminal path, Bui Dinh Ha now "self-consciously" participated in another battle--on the ideological and cultural front and on a battlefield without gunshots! But how many of us know how many of our fellow countrymen, comrades, children and younger brothers and sisters have been sacrificed?

Acting in his so-called "Diary of My Life" as an assault soldier to kill people without physically wounding them, Bui Dinh Ha wrote with his own hand about dirty lust; he resorted to various tricks to stir up concupiscence, to steer 12- and 13-year-old girls toward sexual passion and to arouse their curiosity about pleasure.

In the same blunt, nauseating language, former puppet soldier Bui Dinh Ha bent his head and confessed that he was also the author of other hand-written books such as "A Rebellion Between Two Complexions," "A Minute of Pleasure" and "The Life of a 15-Year-Old Virgin."

Nor could Bui Dinh Ha mellifluously deny his sins under the pretext that in trying to make money, he had acted unintentionally ["voo tinhf," which also means literally "without love"--hence, "indifferent(ly)"]. But Bui Dinh Ha was so full of "love"! He was now propagating that kind of colonialist and imperialist "love" to instill it among the people.

The enemy of our nation and class has thus resumed "parachuting" on the cultural front to massacre our people!

'TIN SANG' CEASES PUBLICATION AFTER FULFILLING ITS TASK

Ho Chi Minh City TIN SANG in Vietnamese 30 Jun 81 pp 1, 7

[Article by Nguyen Thach and Loc Nam: "TIN SANG Has Fulfilled Its Task"]

[Text] In the afternoon of 29 June 1981, the meeting that marked the end of the political task of TIN SANG was held at its headquarters. Le Quang Chanh, member of the Municipal VCP Committee and vice chairman of the People's Committee of Ho Chi Minh City; many representatives of committees, sectors, newspapers and radio station of the city; and all workers and staff members of TIN SANG attended the meeting.

Publisher Ngo Cong Duc, on behalf of the entire staff of TIN SANG, presented the intention to cease publication as of 1 July 1981 (see the text of his speech in this issue).

On behalf of the Municipal People's Committee, Le Quang Chanh declared acceptance of Ngo Cong Duc's above-mentioned proposal. He noted: "After having struggled for nearly 6 years in a situation that offered many new advantages and at the same time created many difficulties and complexities, TIN SANG has by now properly fulfilled its historic task. Along with other newspapers in this city it has made a remarkable contribution to the job of using propaganda, encouraging and guiding the masses toward taking part in the restoration, construction and defense of the land; has helped the masses to understand fully the line and policies of the party and state; and at the same time has reflected the feelings and aspirations of a segment of the masses for the responsible organs to know. For the staff of TIN SANG, the last 6 years was a stage of committing itself for the fatherland, for the defense and construction of the city on its way to socialism; a contribution to be proud of; and at the same time a road section full of hardship and challenge."

Le Quang Chanh added: "As the 7th year after the liberation has started, it is time for the city to observe the principle of the press as carried out by all of the true socialist countries, i.e., the press must be subordinate to party organizations and revolutionary mass organizations. Unity of will and unity of voice and action on the part of the people as a whole are now more than ever extremely necessary."

The vice chairman of the Municipal People's Committee emphasized: "All the workers and staff members of TIN SANG, who have long chosen to be fully committed for the fatherland and the people, in the time to come will continue to devote all of their energy to this heavy and glorious undertaking by doing work suitable for their specialized capabilities and personal situation in other mass communication organs, as well as in the economic and cultural organs and units of the revolution...."

Finally, Le Quang Chanh affirmed: "The basic spirit in every policy of the party and state which the city's VCP Committee and People's Committee always understand is to remain perfectly loyal now as before and not to forget the contributions everybody has made to the fatherland, the city, etc."

Then Ho Ngoc Nhuan, the editor in chief of TIN SANG, sincerely thanked the party for the special care it had been giving to the TIN SANG collective for the last 6 years. On behalf of all workers and staff members of the newspaper he promised that "every member of the TIN SANG collective will continue to struggle in the best way possible for fulfilling every task assigned by the party and state."

The meeting ended with a cordial tea party in the club of the newspaper.

PUBLISHER BIDS FAREWELL AS 'TIN SANG' CEASES PUBLICATION

Ho Chi Minh City TIN SANG in Vietnamese 30 Jun 81 pp 1, 7

[Message to readers from Ngo Cong Duc on behalf of the TIN SANG collective: "TIN SANG Has Fulfilled Its Task"]

[Text] Dear readers,

Six years ago, after the day the country had been totally liberated, in the atmosphere of joy and enthusiasm of the first days of victory, in the spirit of eagerly making contributions to the country, we, back from abroad, and Ho Ngoc Nhuan and a number of friends at home applied for permission to publish the new edition of TIN SANG. The birth of TIN SANG, the presence of a private newspaper under the socialist regime, was not much the interest in the background of the old TIN SANG but rather an expression of the unchanging great national unity spirit of the Vietnamese communists in the new stage of the entire country being independent and reunified and moving toward socialism.

Nobody among us, from the very first days, entertained the idea of building this newspaper into a private possession, an independent voice and a characteristic not to be changed, but instead we considered it a tool of the regime and an appropriate means entrusted to us so that a number of people could contribute to the country.

The party had adopted a policy of great unity to create favorable conditions for everybody, in an appropriate way in each period and in each case, anyone having good will and the willingness to contribute to the national construction, to be present in the collective of patriots. TIN SANG was a proof of the party's great unity policy. Its birth also involved a historical mission in the first few years of the transitional period, a political mission that every one of us understood it was our task to carry out.

In the effort to improve ourselves, to struggle for greater understanding and to ceaselessly learn from the party, colleagues and collective, everyday we wanted to do a good job and to bring to our readers a truly useful newspaper, a newspaper that lived with its readers and moved forward along with the people's momentum.

That daily constructive effort, the work of all of us in all sections operating on a continuous basis 24 hours a day for nearly 6 years, was a very great one. We are very proud of that effort and our contributions and cannot help feeling grateful about the concern and care of the party, our colleagues, associates and readers -- a precious support that greatly contributed to our success.

We cannot help feeling grateful about the teachings and reminders of the party each time we encountered some shortcomings. We deeply regret having made mistakes, which were due to our political immaturity, professional failures and poor knowledge, and we sincerely offer our apologies.

Our choice is to contribute to the construction of a prosperous socialist Vietnam.

To serve the fatherland and socialism -- whichever task that is suitable and can contribute the most to the country we are ready to accept.

In the situation of the country encountering difficulties and many challenges and with the requirements of a revolutionary movement in which the country as a whole is on the offensive in all fields, we believe that there must be solidarity and unity of action, a concentration of total energy to defeat any enemy from without, to destroy the very roots of the reactionaries' sabotage and to dissipate pessimistic ideas and vacillation, and that we unify our will and concentrate our efforts to strongly defend the fatherland and to successfully build socialism.

Having understood the country's present political need and having seen the advantage of a new arrangement to concentrate our total energy under the party leadership, we requested permission to cease the publication of TIN SANG and all of us are now waiting for a new arrangement to accept a new task.

On behalf of the entire staff of TIN SANG, we convey to our readers everywhere and our friendly colleagues and associates this message: we have fulfilled the task of serving a segment of the population of the newly-liberated area in the first years of the new period, which the party organization and administration of Ho Chi Minh City had assigned to us. We now say thank you and bid you goodbye.

As we part, you readers and we members of the TIN SANG staff both have sad feelings. But we part here in order to meet again at a new place, on the common front of our socialist fatherland.

Socialism will surely succeed!

LE QUANG CHANH SPEAKS ABOUT CLOSING OF 'TIN SANG'

Ho Chi Minh City TIN SANG in Vietnamese 30 Jun 81 pp 1, 7

[Text of speech by Le Quang Chanh, member of the Municipal VCP Committee and Vice Chairman of Ho Chi Minh City People's Committee]

[Text] Dear comrades and ladies and gentlemen,

After having consulted with and received the agreement of the representative of the Municipal VCP Standing Committee, Publisher Ngo Cong Duc, on behalf of the TIN SANG collective, has just presented the request for TIN SANG to cease publication beginning on 1 July 1981.

On behalf of the People's Committee of Ho Chi Minh City, I declare acceptance of the proposal which Publisher Ngo Cong Duc has just made in the name of the TIN SANG collective. On this occasion, as the representative of the Municipal VCP Committee and the Municipal People's Committee, I would like to say a few words to the TIN SANG collective.

After the day the city and the South were liberated, to respond to the needs of the political task in the new situation, the presence of TIN SANG has been necessary in a specific stage.

After having struggled for nearly 6 years in a situation that offered many new advantages and at the same time created many difficulties and complexities, TIN SANG has by now properly fulfilled its historic task. Along with other newspapers in this city it has made a remarkable contribution to the job of using propaganda, encouraging and guiding the masses toward taking part in the restoration, construction and defense of the land; has helped the masses to understand fully the line and policies of the party and state; and at the same time has reflected the feelings and aspirations of a segment of the masses for the responsible organs to know.

For the staff of TIN SANG, the last 6 years was a stage of committing itself for the fatherland, for the defense and construction of the city on its way to socialism; a contribution to be proud of; and at the same time a road section full of hardship and challenge. The old enemy colluding with the new enemy of the nation have been fully exploiting every one of our difficulties. Negative phenomena in society and within the managerial machinery have not ceased to affect every one of us. Through these challenges, although there were some problems within TIN SANG, the majority of its staff still continued to heighten their patriotism and to overcome difficulties in order to fulfill the task assigned by the party organization and administration of the city.

On behalf of the city's VCP and People's Committees, I warmly praise the achievements and efforts in the last 6 years of TIN SANG and its staff.

Dear comrades and ladies and gentlemen,

As the 7th year after the liberation has started, it is time for the city to observe the principle of the press as carried out by all of the true socialist countries, i.e., the press must be subordinate to party organizations and revolutionary mass organizations. In the last 6 years the enemy of the nation was seeking every means to sabotage and hamper our national defense and construction. But our people were still moving forward and repeatedly defeated all enemy plots. Not only have they refused to draw the lessons of defeat from the last 6 years but the enemies are colluding with each other to continue to sabotage and hamper our people's progress. Unity of will and unity of voice and action on the part of the people as a whole are now more than ever extremely necessary. Therefore, to carry out correctly the principle of socialist press at this time is an urgent need.

In addition, our city also needs to have a satisfactory arrangement for the local newspaper network to suit the present national newspaper network. As the "Regulation on organization of local newspapers" issued by the Department of Propaganda and Training of the Central Committee on 15 October 1980 indicates, "every province and municipality has a newspaper of the party organization.... Other than the party newspaper no other newspapers can be published by organs and mass organizations of provincial and municipal level.... Ho Chi Minh City alone, with its economic, political and cultural position and large population, can publish many newspapers." In our city, in addition to the party organization newspaper, SAIGON GIAI PHONG, and its Chinese edition, both being dailies, there are TIN SANG, six weeklies and two fortnightlies. This reality demands that rational adjustment be made.

The end of the historic role and task of TIN SANG after its 6-year presence and the fulfillment of its task in a specific stage actually originates from the objective needs of the situation of the country and city and is even more suitable for its own subjective situation.

Dear comrades and ladies and gentlemen,

Although TIN SANG has fulfilled its historic task, all members of its staff, from the publisher and editor in chief to workers in the service sections, have not yet completed their task. As they have long chosen to be fully committed for the fatherland and the people, they will surely devote all of their energy to this heavy and glorious undertaking by doing work suitable for their specialized capabilities and personal situation in other mass communication organs, as well as in the economic and cultural organs and units of the revolution, etc. The Municipal People's Committee will do its very best within its responsibilities and capacity to help all of you to have stable jobs.

The Municipal People's Committee is also very much concerned about the income and material living of you all, who have had relatively high wages. Until now, to help TIN SANG to operate properly, the central and municipal administrations have been supplying it with such strategic materials as gas and oil, newsprint and some building materials in the same quantities and at the same supply prices as granted to all organs and state-operated enterprises, and with grain, foods and other essential items for all its staff members, and at the same time freeing it from any obligation to contribute to the state budget, including any forms of taxes.

For the time being, according to TIN SANG's bylaws, "all of TIN SANG's assets are used to develop the daily newspaper and to serve the livelihood of its staff members. If for any reason TIN SANG no longer operates, these assets will belong to the state." However, to respond to the need for ensuring your relatively stable living, the Municipal VCP and People's Committees have made this decision: the state will not take possession of but return to the TIN SANG collective all of the newspaper's capital (except the real estates) so as to help you to stabilize your living and at the same time to maintain a sort of allowance fund for you while you wait for new jobs or to get some differential pay in the initial period after you get a new job and if your income is lower than before.

The common situation of the country and our city still faces many difficulties. However, the basic spirit in every policy of the party and state which the Municipal VCP and People's Committees always understand is to remain perfectly loyal, now as before, and not to forget the contributions everybody has made to the fatherland and the city, to do their best to care about stabilizing and improving the standard of living of the working people.

I hope that all of you further develop your proud contributions, struggle with confidence and relentlessly and train yourselves more everyday in the new challenges so as to score greater achievements in the new task.

TABLE OF CONTENTS OF BOOK ENTITLED 'VIETNAMESE CRIMINAL LAW AND THE RIGHT OF COLLECTIVE OWNERSHIP OF THE WORKING PEOPLE'

[Book by Huynh Ngoc Chi entitled "Vietnamese Criminal Law and the Right of Collective Ownership of the Working People"; published by the Ho Chi Minh City Publishing House, 8,150 copies printed at the Tri Thuc Moi Printing Plant]

[Text] Publisher's Note

Socialist law is an effective tool in protecting the right of collective ownership of the working people, supporting socialist construction and abolishing the exploitation of man by man.

In past years, in Ho Chi Minh City and the provinces of the South, reactionary laws were promulgated by the puppet regimes from Ngo Dinh Diem to Nguyen Van Thieu to protect the interests of the traitors and country-robbers. The reactionary constitution and laws of the puppet regimes were anti-communist in content and suppressed patriots.

When the South was liberated, socialist law replaced the reactionary law of the old puppet regime. However, the effort to propagandize and disseminate socialist law has been very limited, consequently, our people have not had an opportunity to gain much of an understanding of socialist law. This small book is only designed to introduce to readers a number of fundamentals concerning criminal law and, at the same time, present a number of specific crimes with which everyone is concerned.

Le Duan, general secretary of the party, said: "To insure that the law is respected and scrupulously implemented, we must make every effort to propagandize and educate the people so that they clearly understand the law, clearly understand the rights and obligations of persons who exercise ownership.... We must publish small books of a general nature in order to widely disseminate the law among the people..." (Le Duan: "Upholding the Right of Collective Ownership and Building a Strong and Solid State," Su That Publishing House, 1978, pp 72-73).

We hope that readers will contribute their opinions concerning the contents of the book so that the publishing of books designed to provide an understanding of socialist law is always improved and meets the requirement of "strengthening the socialist system of law," which was set forth in the resolution of the 4th National Congress of Delegates of the Party.

April 1979
The Ho Chi Minh City Publishing House

Editor's Note

At present, in Ho Chi Minh City and the provinces of the South, the struggle against violations of criminal law and social ills is extremely important and pressing.

On the other hand, our personnel, cadres and people also want to understand socialist law, especially the specific codes of criminal law, in order to have a legal basis for the struggle against violations of the law that harm the interests of the state, social order and the life and property of the people.

In order to meet the above mentioned requirement, we have compiled this small book.

The specific crimes presented in this book are based on various legal documents that are not in effect throughout the country.

In order to widely support the working people, this book is general in nature and does not delve into general theory or specialized legal matters.

In compiling this book, we were guided by the opinions of Le Duan, general secretary of the party, as set forth in his book "Upholding the Right of Collective Ownership and Building a Strong and Solid State" published by Su That Publishing House in 1978. We also refer to the book "A Number of Universal Legal Matters" by a group of editors published by the People's Supreme Court in 1962 and the book "Understanding Vietnamese Civil Law" by Vo Tho and Vu Duc Chieu published by Pho Thong Publishing House in 1976. At the same time, we had the collaboration of Nguyen Van Hoi, deputy head of the Ho Chi Minh City People's Organ of Control.

This is the first printing of this book and its capabilities are limited. It is sure to contain many shortcomings and it is our hope that readers will contribute their opinions to us concerning the contents of this book so that the dissemination of socialist law can be improved.

We extend our sincere thanks to those who have worked with us.

Huynh Ngoc Chi
The Legal Committee of Ho Chi Minh City

Vietnamese Criminal Law and the Right of Collective Ownership of the Working People

The Nature of the State and the Law of Vietnam:

The Birth and the Class Nature of the State and Law (p 11)

HANOI'S REVIEW OF EVENTS FROM 16 APR-15 MAY 1981

Hanoi VIETNAM COURIER in English Jun 81 pp 32, 31

[Text]

APRIL

16. On the occasion of the 35th National Day of the Syrian Arab Republic, Acting President Nguyen Huu Tho and Prime Minister Pham Van Dong send a message of congratulations to their Syrian counterparts. The message expresses Vietnam's resolute support for the just struggle of the Arab Peoples against the Israeli Zionists

– A mass meeting is held in Hanoi to celebrate the 6th anniversary of Kampuchean National Day.

– Discovery in Ba Don (Binh Tri Thien province) of several dexterous stone tools and potteries. These findings are thought to date back to the later neolithic age, some 4,000 years ago. This shows that the people of Ba Don settled there very early and lived on rice agriculture.

17. Le Duan, General Secretary of the Communist Party of Vietnam, sends a message of greetings to Erich Honecker on his re-election as General Secretary of the Socialist Unity Party of Germany.

– Addressing the Non-Aligned Coordination Committee's Ministerial Conference on Namibia, Ambassador Ha Van Lau, head of the Vietnamese delegation, condemns the apartheid regime in South Africa, and protests against the US and other western countries' schemes to prolong South Africa's illegal occupation of Namibia.

18. On the occasion of the week of International Solidarity with Palestinian Political Prisoners, the Vietnam Committee for Solidarity with Afro-Asian Peoples sends a message to the PLO expressing its solidarity with and total support for the Paleestinian people in their struggle for basic national rights.

– *Vietnam News Agency* flatly rejects allegations by a spokesman of the Thai Army on 16 April that Vietnamese forces "used toxic gases in Oddar Meanchay province."

– A meeting to celebrate the one thousandth anniversary of Vietnam's victory over the Song invaders is held in Hanoi by the City Committee of the Vietnam Fatherland Front, the Hanoi Municipal People's Committee and the Vietnam Institute of History.

21. An agreement on economic cooperation between the Polish Academy of Science, the Vietnam Institute of Science and the Vietnam Committee for Social Science for 1981–1985 is signed in Warsaw.

– *Vietnam News Agency* issues a statement rejecting allegations by the Department of Foreign Affairs of the Supreme Command of the Thai Army that Vietnamese troops "fired artillery into Thai territory", and asserting that the policy of the SRV is to "strictly respect the independence, sovereignty, territorial integrity and security of the Kingdom of Thailand."

22. Signing in Havana of a Vietnam–Cuba ten-year agreement on cooperation in science, education, culture, arts, health care, sports, broadcasting, news and the press.

23. A film entitled *Long Van Tu Hoi*, depicting the Vietnamese struggle against the French colonialists and the US imperialists, wins first prize at the Lille documentary film festival. It was produced by Le Lam, a Vietnamese resident in France.

– A spokesman of the Vietnamese Foreign Ministry issues a statement on the situation in Lebanon, expressing the Vietnamese people's support for the Palestinian and Lebanese peoples' right to self-defence against the aggressive acts and intentions of Israel and the US in Lebanon.

24. The Swedish Socialist Childrens' Organization donates 15,000 *kronors* to Vietnamese children. The money was collected by Swedish children in a campaign of solidarity with Vietnam's national reconstruction.

– Representatives of Vietnam, Laos and Kampuchea at a tripartite meeting held in Vientiane issue a press communiqué concerning:

– world support for the proposals of the conference of foreign ministers of three Indochinese countries held in Ho Chi Minh City on 28 January 1981;

– the erroneous Resolution 35/6 of the UN General Assembly;

– acceptance of the proposal for regional consultations issued by certain ASEAN countries.

25. Vietnam takes part in the Spring Interparliamentary Conference held in Manila from 21 to 25 April 1981.

– Inauguration of the 8 March crèche in Lang Son, built with assistance from the Communist Party of Sweden and capable of caring for 150 children.

26. 97.78 per cent of the total number of registered voters went to the polls for the SRV National Assembly (7th Legislature), 496 out of 614 candidates were elected to the National Assembly.

27. Opening of the Second Congress of Third World Economists. Prof. Dao Van Tap, Director of the Institute of Economics and head of the Vietnamese delegation, joins the presidium of the conference.

– Phoune Sipaseuth, Deputy Prime Minister and Foreign Minister of the People's Democratic Republic of Laos, pays an official and friendship visit to the Republic of Indonesia at the invitation of the Indonesian Foreign Ministry.

29. Construction of the Dau Tieng reservoir (in Tay Ninh province) with a total capacity of 1,450,000 cubic metres begins with the assistance of the International Development Agency of the World Bank, the OPEC Special Fund, the Kuwait Fund for Arab Economic Development and Holland.

– The Swedish Parliament approves a budget of 365 million *kronors* of aid to Vietnam in fiscal years 1981–1982.

30. The jury of the Vietnamese Writers' Association decides to award the "1980 Literature Prize" to two works. The first is *Duong toi thanh pho* (Approach to the City), a long poem by Huu Thinh, and the second is *Rat nhieu anh lua* (Fire Lights) a collection of stories and memoirs by Hoang Phu Ngoc Tuong.

– Projects for the "Restoration of Hue City" by a group of four fourth-year students of the College of Architecture under the guidance of Vu Dai Hai win a special prize at the 11th architectural competition on the occasion of the 14th Congress of the International Union of Architects to be held in Warsaw in june 1981

– A high-ranking delegation of the Communist Party of Vietnam, led by General Vo Nguyen Giap, Political Bureau member and Deputy Prime Minister, leaves Hanoi for Vientiane to confer the Sao Vang (Yellow Star) Order, Vietnam's highest distinction, upon Kaysone Phomvihane, Prime Minister of the People's Democratic Republic of Laos.

MAY

2 Hanoi: Signing of a non-refundable aid agreement for 1981 and a trade agreement between Vietnam and Kampuchea.

3 Havana: Signing of a cooperation agreement for 1981–85 between the Vietnamese Ministry of Labour and the Cuban State Committee for Labour and Social Security.

– A delegation of the Vietnam Peace Committee, headed by Professor Pham Huy Thong, Presidium member of the Committee, pays a visit to Nicaragua at the invitation of its Nacaraguan counterpart.

– An international conference for solidarity with the Kampuchean people was held in Phnom Penh from 30 April to 3 May. It adopted a statement denouncing the genocidal crimes of the Pol Pot-Ieng Sary-Khieu Samphan clique and praising the achievements of the Kampuchean people over the past two years. The statement also vehemently condemns the Beijing authorities for their collusion with the US imperialists and other reactionary forces in undermining Kampuchea's reconstruction.

– The Hoc Mon garbage fertilizer plant built with Danish aid on the outskirts of Ho Chi Minh City has begun operating.

– At the invitation of the Vietnam Committee for Solidarity and Friendship with the Peoples of Other Countries, a delegation of the Yemen–Vietnam Friendship Association pays a visit to Vietnam from 4 May to 12 May.

5. Vietnam takes part in the Plovdiv International Fair (in Bulgaria) for the first time with such traditional wares as lacquer, bamboo and rattan objects, woollen carpets, ceramics...

6. At the invitation of the Ministry of Higher and Vocational Education of Vietnam, a delegation of the University Institute of Mozambique led by its director Fernando Ganhao paid a friendship visit to Vietnam from 29 April to 6 May.

– A spokesman of the Foreign Ministry of Vietnam issues a statement strongly condemning the Chinese authorities for their continued armed provocations and their crimes against the Vietnamese people in the Vietnam-China border areas

– The Thaelmann Pioneers Organization (GDR) donates 3 million *marks* to the Vietnamese Pioneers collected from their "Copybooks for Vietnam" campaign.

7. A delegation of the Arab Baath Socialist Party of the Syrian Arab Republic, led by Mohamed Sareha Hermasi, member of the party's national leadership, pays a friendship visit to Vietnam at the invitation of the Central Committee of the Communist Party of Vietnam.

– The Central Committee of the CPV sends a message of greetings to the Romanian Communist Party, on the occasion of its 60th founding anniversary.

– Construction begins on the Can Tho – Soc Trang 110kv high tension line, the most important power line in the Mekong delta.

– A delegation of the Confederation of Finnish Trade Unions (SAK), led by its Secretary Touyo Hemppi, pays a visit to Vietnam at the invitation of the Vietnam Federation of Trade Unions.

9. The Electoral Council of the People's Republic of Kampuchea holds a press conference to announce the results of the general elections: 117 out of the 148 candidates are elected to the Kampuchean National Assembly.

11. Phoune Sipaseuth, Deputy Prime Minister and Foreign Minister of the People's Democratic Republic of Laos, pays an official visit to Malaysia at the invitation of Malaysian Foreign Minister Ahmad Rithauddeen.

14. The SRV Government decides to confer the Ho Chi Minh Order, Second Class, on the Ho Chi Minh Vanguard Pioneers Organization on the occasion of its 40th founding anniversary.

— The Government of the Kingdom of Belgium decides to donate 10,000,000 Belgian *francs* to help flood-and storm-stricken areas in Vietnam.

— Deputy Director of Department I of the Lao Foreign Ministry, Ky Kham, delivers a note to the Chinese chargé d'affaires in Vientiane protesting against China's repeated attacks and intrusions in Luong Nam Tha province, in northwestern Laos. The note demands that China put an end to its armed provocations which infringe upon the independence, sovereignty and territorial integrity of the People's Democratic Republic of Laos.

15. The CC of the CPV sent a message of greetings to the CC of the Communist Party of Czechoslovakia on the occasion of its 60th founding anniversary.

— At an international photo competition organized on the occasion of the 10th anniversary of COMECON's Coordinated Programme, 4 photos from the *Vietnam News Agency* are awarded prizes.

— Phoune Sipaseuth, Deputy Prime Minister and Foreign Minister of the PDR of Laos, pays an official visit to the Philippines from 15 to 17 May, at the invitation of the Filipino Foreign Minister Carlos P. Romulo.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SEVERAL HANOI WARDS PROMOTE MARKET MANAGEMENT PRACTICES

Hanoi HANOI MOI in Vietnamese 27 Jun 81 pp 1, 4

[Article by Tran Dinh Tai: "Heightening Market Management, Hoan Kiem Ward Uncovers Many Speculators and Counterfeiters; Dong Da Ward: Women Post Prices"]

[Text] Hoan Kiem Ward is promoting market management work by implementing seven proposals made by the Standing Committee of the Municipal Party Committee. The ward is providing closer guidance than before. Subwards report conditions daily to the ward.

As of 22 June, the ward had 2,773 merchants who had not registered; 5,419 families had registered prices, 5,158 had posted prices. Since the beginning of the month nine wards—Dong Xuan, Cua Nam, Hang Bo, Hang Bai, Hang Bong, Cua Dong, Trang Tien, Tran Hung Dao, Chuong Duong Do--tried...[1.5 lines indistinct] Cua Nam Subward tried 101 cases and collected 1,716 dong. Besides the above violations, the subwards investigated and arrested a number of speculators and merchants who were selling goods managed by the State. Cua Dong Subward had two cases: Nguyen Van Trong, of 18A Cua Dong, was in possession of 500 kilograms of firecracker explosives (50 kilograms of finished products) and 130 sets of fuzes; Tran Thi Xuyen, of 5 C Thanh Street, had 16 types of Western Drugs, weighing a total of 25 kilograms, and 750 cans of fake "Gold Star" medicinal ointment. At the time of the investigation, three people came to buy medicine. In a house in Cua Nam Subward were 200 dollars and 30 kilograms of monosodium glutamate.

Hang Dao Ward discovered that beer was being made and falsely labeled in houses from 24 to 26 Hang Dao Street. Seized were 60 bottles with brand labels, 100 bottles without labels, 34 kilograms of beer labels, and 36 kilograms of bottle caps.

Hang Bo Subward apprehended Do Thi Vuong, of 15 Hang Ga, for hoarding 400 meters of various kinds of synthetic polyester material, and Tran Thi Thien, of 80 Hang Bo, for possession of 1200 meters of foreign cloth and 237 packages of "Summit" cigarettes. The management board of the Dong Xuan/Bach Qua market seized 400 sets of falsely labeled batteries and 16 falsely labeled tires being sold in the market by peddlers.

Implementing the Policy of Posting Prices

From 5 to 20 June, the Dong Da Women's Association, in conjunction with the trade bureau of the ward, met with 230 women merchants and 51 women in charge of women's association cells to hold clear discussions about the circulation and distribution policy, posting prices, and selling at posted prices. The women discussed these matters and agreed that they were necessary to stabilize living conditions. The women brought up a number of points and proposals for fervent application, like:

—posting prices and selling at those prices
—weighing and measuring accurately
--being cheerful and pleasant with customers
--not losing solidarity in the market

The women will meet again each month to hold a critique on their progress toward implementing these things.

Ba Dinh Ward Public Security Participate in Market Management

During the past 20 days the Ba Dinh Public Security Force, coordinating with the various sectors and levels, directed the economy police unit, crime unit, and public security posts to participate in market management teams in subwards and, with the various sectors, agencies, and enterprises to inventory State property. This occasioned the discovery that Doi Can Bean Corporation was missing 3,000 kilograms of beans, which were carried away as concealed assets, and that Thuy Khue Leather Goods Factory was missing 10,000 dong worth of leather goods.

Informed by the people, public security agents employed professional techniques to investigate and break ten cases of using public office to misappropriate assets of the State; they confiscated 10 kilograms of gold, 1,000 kilograms of polyethylene plastic, 180 liters of gasoline, 4,000 kilograms of iron and steel, 15 kilograms of counterfeit monosodium glutamate, 8,000 meters of antenna wire for television, 120 kilograms of cement, four bicycles, and various other items. They also solved a number of criminal cases.

Exploiting the successes they have had, the Ba Dinh Public Security Force is pulling out files on four cases and checking them over preparatory to bringing them to trial.

DEATH PENALTY IMPOSED IN FOOD STAMP COUNTERFEITING CASE

Hanoi HANOI MOI in Vietnamese, 28 Jun 81, p 4

[Article: "Death Penalty Imposed on One for Printing and Circulating Counterfeit Food Stamps"]

[Text] Within 3 days (from 25 to 27 June), the Municipal People's Court held a trial and sentenced a counterfeit ring for printing and circulating counterfeit food stamps.

On 13 March 1980, public security agents arrested Nguyen Xuan Tuyen, 36 years old, a resident of #8, A2 B, the Tan Mai Workers' Quarter, Hai Ba Trung Ward; Tran Duc Tu, 55 years old, a resident of #9 Doan Ket Lane, Kham Thien; Nguyen Thi Hop, 40 years old, a resident of #25 Lane 293, Bach Mai. The agents caught them red-handed, with all the equipment used for counterfeiting food stamps, in the kitchen of Tuyen's residence. Captured evidence consisted of two sets of plates for printing 5-kilogram ration stamps, eight cans of printer's ink of various colors, two presses, two paper cutters, a ruler, a magnifying glass, 80 pieces of white paper 1.8 meters wide, and 500 5-kilogram food stamps already printed.

Food stamps for nearly 40 tons of food, counterfeited by the Tuyen ring were sold in Gia Lam, Son Tay, Tu Son, Bac Ninh, and Hoang Lien Son areas by Le Thanh Than, Le Cuong, Tran Thi Van, and Nguyen Thi Hong.

Here we have an organized crime ring which, with meticulous and clever planning, counterfeited and circulated a large number of food stamps. Clearly, these illegal activities were of a nature to seriously damage State property, cause great harm to the policy of supply and distribution of foodstuffs. Nguyen Xuan Tuyen was a dangerous ringleader who masterminded the secret printing of food stamps in his house and oversaw the distribution operation. He had had a prior conviction (3 years imprisonment), and his declaration in this trial was in very bad faith attempting to conceal the truth in order to cover up for his accomplices.

Citing the seriousness of the case and all the criminals involved, the court passed the following sentences:

--Nguyen Xuan Tuyen: the death penalty plus a fine of 40,000 dong.
--Tran Duc Tu: 18 years' imprisonment and a 20,000-dong fine.

--Nguyen Thi Hop: 18 years' imprisonment and a 6,000-dong fine.
--Le Thanh Nhom: 6 years' imprisonment and a 7,400-dong fine.
--Le Cuong: 3 years' imprisonment and a 1,200-dong fine.
--Tran Thi Van: 2 years' imprisonment and a 600-dong fine.
--Nguyen Thi Hong: 4 years' imprisonment (commuted, due to a repentant change in attitude and because of having small children) and a fine of 4,000 dong.

EVEN POL CADRE CAUGHT BUYING BLACKMARKET POL

Hanoi LAO DONG in Vietnamese, 25 Jun 81, p 7

[Article by Bach Thao: "Stop POL 'Leaks'"]

[Text] Recently, in one day from 9:00 am to 3:00 pm, the Nguyen Trung Truc Subward Public Security Post (in Hanoi), when tipped off by the people, managed to make arrests in three cases of illegal sale of POL supplies. The sellers were all workers or soldier drivers of state trucks. Among the buyers was a cadre from an agency of the General Corporation for POL! The public security agents confiscated for the State the POL that had been sold. They turned over the sellers and buyers to the authority of their cadre and worker management agency for prosecution.

The man who misappropriates the State POL is clearly guilty. Yet we feel that the one who buys POL illegally must also be severly punished. The sale of POL supplies takes place every day, every hour, out in the streets. Only if each person and each locality aggressively exposes and stops the practice, as in Nguyen Trung Truc Subward, can the loss of State POL supplies be checked.

PUBLIC SECURITY ASSAULTERS ARRESTED

Hanoi HANOI MOI in Vietnamese 17 Jun 81 p 4

[Article: "Violent Thugs Must Be Severely Punished"]

[Text] At 2000 hours on 15 June, after being tipped by the people that two persons hauled wood stolen from the state into Dao Van Thuan's home at 7C Cau Dat, public security cadres and combatants of Chuong Duong Quay Ward went to Thuan's home to ask him to return that wood to the state. In the face of Thuan's stubborn behavior, security officials determined to force him to come to the post for questioning.

At that moment the electric light went out. Taking advantage of darkness, Thuan stabbed Hai, post deputy chief, with a knife, injuring him. As other combatants rushed in to arrest Thuan, his son Chung emerged from the back of the house, hitting Hanh's head with a hoe and wounding him before running away. Notwithstanding, the combatants succeeded in nabbing the violent Thuan. As for Chung, while fleeing toward Duong bridge he was exposed by the people and later arrested.

Thanks to appropriate care of Hospital 108, Hai is now out of danger.

Public opinion is very indignant at activities of those who have not only broken the law, held illegally acquired properties, but also assaulted authorities on official duty and believe that legal organs will try them promptly and strictly in order to protect justice as well as those who resolutely struggle against negativism.

TEACHERS, STUDENTS BEATEN BY VILLAGE OFFICIAL, MILITIAMEN

Hanoi NHAN DAN in Vietnamese 14 July 81 p 4

[Unattributed article: "Prosecution Begins in Case Involving Beating of Teachers and Students in My Duc, Ha Son Binh Province"]

[Text] Because of a long-standing disagreement with his wife, on 8 April 1981 Dang Van Giam, a teacher at My Duc School in Ha Son Binh smashed the furniture in his house. At nightfall, when Giam was resting, Pham Van Don, Vice Chairman of the party Committee and head of Public Security in Le Thanh Village, accompanied by a number of other people, came to his house, beat him, tied him up, and locked him in a warehouse. The next morning, Giam was taken to the district seat and wasn't released until that afternoon.

That incident caused concern among the teachers and students of My Duc School. On 11 April teacher Bui Kim Long, deputy secretary of the school's trade union, accompanied by teacher Nghiem Vu Manh, request a meeting with the governmental administration of Le Thanh Village to find out what happened and request that Giam's beating be investigated.

Meanwhile, teacher Nguyen Dac Vuong and 15 students from class 101 went to the village. The village administration, making the excuse that it was too busy, refused to receive the teachers. A student who knew where Pham Van Don lived led Vuong and his friends there. Teacher Vuong forbade the students to say anything that was threatening or vengeful, or to do anything provocative in Don's house. The younger brother of Don's wife, who lived next door, knew what was happening and sounded the alarm. A number of militiamen arrived and savagely beat the 15 students. Nearly all of the village's key cadres, who were holding meeting, saw what was going on and supported the beating. The teachers intervened and sought to break it up, but were also manhandled. Pham Van Don himself used a mattock handle to seriously injure a student who was running away and beat up many other students. Thirteen students and two teachers were beaten and tied up for 5 hours. Only after arriving at the hospital were they untied. Six of the students were seriously injured, and two of them were so seriously injured that they could not take the general school graduation examination. Fifteen bicycles, and a motorbicycle belonging to a teacher, were damaged and some of their parts were missing.

That incident caused anger among the teachers and the people. Public opinion vigorously condemned the illegal acts of Pham Van Don and his accomplices, and demanded that they be punished according to law.

On 7 July, the legal organs of Ha Son Binh Province decided to begin prosecuting the case, indicted nine defendants, and arrested Pham Van Don a number of the above-mentioned law violators. An urgent investigation is being carried out and the incident will soon be brought to trial.

ARREST OF RICE THIEVES REPORTED

Hanoi QUAN DOI NHAN DAN in Vietnamese 23 Jul 81 p 3

[Article by Thanh Lang: "Valiant Policemen Fight Crooked Merchants"]

[Text] After discovering that a number of crooked merchants used to assemble in a riverine zone in Cao Nhan village, Thuy Nguyen district (Haiphong City), to steal state rice on ships in cahoots with bad sailors, Nguyen Huu Hom, a police sergeant, and Nguyen Van Loi, a member of the unit, sculled a small boat to the middle of the river, making their way through dense thickets of bruguiera gymnorrhiza and mangroves. Thanks to flashlight, they saw through the night a boat carrying many sacks of rice operated by four men. Taking advantage of their negligence, Hom and Loi jumped aboard. One man panicked and plunged into the river to escape. The three remaining men put up a stubborn struggle. A knife-toting man leaped toward Hom who, using martial arts, promptly decked him. Leaving him lying there, Hom joined forces with Loi in knocking down and arresting the rest of the gang. That same night, after handing the three criminals over to other policemen for escort back to the unit--along with the grain they had stolen from the state--Hom and Loi continued sculling their boat through thickets of bruguiera gymnorrhiza and mangroves, looking for other lawbreakers. At 0300 hours in the morning, they discovered a boat with three sacks of rice on, but the crooked merchants had already fled. In close coordination with other pursuing thrusts, the combatants nabbed more than 10 criminals, recovering more than 2 tons of rice for the state. It was already 0500 hours and Hom, back at the unit, refused to rest, choosing instead to take part in the pursuit. With two other comrades, he returned to the place of crime, where they discovered another gang of criminals in the process of salvaging a rice cargo they dumped the previous night into the river before fleeing. Caught by surprise and unable to escape, they assailed the combatants, seeking an opportunity to escape. But Nguyen Huu Hom stepped in, using martial arts to knock down the most violent criminals. The remaining thugs persisted in their attempt to seize the sacks of grain and to attack Hom with carrying poles and canes. Hom resolutely stood up to them, refusing to give up to protect state properties until grievously injured. In a coordinated effort, people in the neighborhood and police rushed in, nabbing a number of criminals, recovering nearly 5 quintals of rice for the state.

On the front of fighting negativism, protecting state properties, supporting circulation and distribution, and managing the market, Police Sergeant Nguyen Huu Hom has always upheld the spirit of responsibility, actively helped the people, raised the value of integrity and sincerity and resolutely struggled against criminals.

BA DINH MAKES ARRESTS FOR SPECULATING, SMUGGLING, THEFT

Hanoi HANOI MOI in Vietnamese 28 Jun 81 p 4

[Article: "Keep Apprehending Many Thieves of State Property, Speculators, Smugglers"]

[Text] Implementing Directive 109, the Ba Dinh Ward People's Security Force, in cooperation with the various sectors and with the masses, found and arrested thieves of State property and peddlers of precious metals.

Seized in Ngoc Ha Subward were 23 bags of P400 cement illegally sold by the Ba Dinh Ward House Repair Corporation. The public security economy surveillance unit arrested Tran Van Cau, a driver for the Metals Corporation of the Ministry of Supply, for conspiring with a warehouse guard of another agency in Lai Chau to sell 3 tons of iron and steel. Caught red-handed were gasoline peddlers at #110 Pho Duc Chinh and #6 Nam Bo, peddlers of polyethylene plastic at #30 Kim Ma, and peddlers of newspaper printing paper (led by Hoang Thi Le, of 22 Hang Vai).

Nguyen Huy Thang and Nguyen Van Kinh, of #121 Nguyen Thai Hoc Street, who had longstanding, widespread contacts for dealing in gold and silver, were arrested on a trip to the south. Ba Dinh Public Security confiscated 7.5 kilograms of silver, worth hundreds of thousands of dong.

On 18 June, the public security post in Gia Lam Town broke a case of speculation and smuggling. The culprit was Le Thi Tue, of 83 Phi Truong Street; seized were 102 dollars, 195 meters of various kinds of foreign material, 28 kilograms of monosodium glutamate, four foreign bicycles still in packing crates, and a number of other items valued at hundreds of thousands of dong.

ARRESTS MADE FOR ILLEGAL STREET SALES IN HANOI

Hanoi HANOI MOI in Vietnamese 24 Jun 81 p 1

[Article: "Speculators and Smugglers Countered"]

[Text] Continuing their effort to detect speculators and smugglers, on 19 June, the public security post of Hang Bo Subward caught Do Thi Vuong, of 15 Hang Ga Street, in the act of illegally selling 150 items of children's clothing and 250 meters of material. On 21 June, the Hang Bo Post also caught, red-handed, Tran Thi Thien, of 80 Hang Bo, along with an accomplice from Ho Chi Minh City, illegally selling 237 packages of "Summit" cigarettes and more than 1,000 meters of various types of material.

On 22 June, the Cua Dong Post caught Tran Thi Xuyen, of 6C Thanh Street, with an accomplice from Hai Phong, in the act of illegally selling various types of Western drugs.

PHU KHANH PROVINCE PEOPLE'S COURT CONVICTS BOAT HIJACKERS

Hanoi HANOI MOI in Vietnamese 25 Jun 81 p 4

[Article: "Stern Sentences for a Gang that Seized Fishing Boats to Flee Overseas"]

[Text] The People's Court of Phu Khanh Province recently tried Nguyen Hoang My and his accomplices for the crime of conspiring to steal fishing boats to flee overseas.

Nguyen Hoang My was born in 1959 in Tan My Hamlet, Van Tanh Village, Van Minh District, Phu Khanh Province. In the beginning of July, 1980, My contacted Nguyen Hong Tam, Commander of the Tan My Hamlet Militia, and Nguyen Son, Huynh Huu Quy, Huynh Ngoc Trang, Ngo Nhieu, Tran Quan, Nguyen Van Hoi, and Tran Xeo and discussed fleeing to a foreign country. My collected 6,000 dong from the others and had his wife purchase fuel, food, and other necessities for the ocean passage.

On 15 August 1980, My, Tam, Xeo, Quan, Nhieu, and Trang went out to sea and, brandishing and firing two M16 rifles, seized three boats belonging toe Msrs Son, Thao, and Tuong. They planned to then rush back to the shore and pick up the fuel and their accomplices. On the shore, however, their friends Don, Quy, and Hoi had been caught by militia members Do Quang Duoc, Ngo Thong, and Mai Chay. My and his accomplices then got away by bribing Duoc, Thong, and Chay with four gold chains and two Seiko watches. They held a rendezvous on Hoan Nai Island to wait for the opportunity to seize a larger boat. When Mr Nhat was fishing out on the sea, they drew up alongside, seized Nhat, and tied him up. The rudder of Nhat's boat was broken, however, so they chased down and took over a boat belonging to Mr Sy, who was fishing nearby. They shot to death 16-year-old Ho Thanh Hoang and wounded one other person on the boat. With the help of the families of local fishermen, the militia of Tan My easily captured My and his accomplices with the stolen goods in their possession.

Convicting the criminals, the Phu Khanh Provincial People's Court imposed the following sentences: the death penalty for Nguyen Hoang My; life imprisonment for Nguyen Hong Tam; 18 years of Nguyen Son and Huynh Huu Quy. The others received sentences of 14-17 years. Do Quang Duoc, Ngo Thong, and Mai Chay were sentenced 28-30 months' detention for accepting a bribe.

FINANCE BUREAU WORKER ASSAULTED--As HANOI MOI reported on 12 June 1981, on 3 June Nguyen Van Hoi of Nghia Do village was charged with assaulting a cadre of the Ba Dinh Precinct finance bureau on official duty. In the spirit of urgently investigating and trying thugs, and crooked merchants for hampering and sabotaging the implementation of market management policies, the Ban Dinh Precinct People's Court on 20 June 1981 tried the above crime (in first instance) and sentenced Hoi to 6 months in prison. [Text] [Hanoi HANOI MOI in Vietnamese 23 Jun 81 p 4] 9213

GANG OF EXTORTIONISTS ARRESTED--At 21 hours on 11 June 1981, a gang of thugs came into the home of Nguyen Huu Quang, 7C Luong Su A, to extort money and seize many valuable properties. Items of evidence used in the commission of the crime and left behind were very few. Nevertheless, with the people's help and a highly responsible spirit, the public security service of Dong Da Precinct after 31 hours of investigation and pursuit arrested all the above thugs identified as Nguyen Ngoc Nien of 66 Giang Vo, Le Minh Tu of 49 Hao Na, Nguyen Luong Hai of K40 Giang Vo collective housing complex, and Nguyen Trong Quan of 108 Quan Thanh. All the loot was recovered. This indicates that no matter how clever, thugs cannot elude the security dragnet. [Text] [Hanoi HANOI MOI in Vietnamese 24 Jun 81 p 4] 9213

'NHAN DAN' PRAISES CLOSE RELATIONS WITH MONGOLIA

Hanoi NHAN DAN in Vietnamese 25 Jun 81 pp 1, 4

[Editorial: "Close Fraternal Relations"]

[Text] Today, we and the people of Mongolia very happily celebrate the anniversary of an important event: the 20th anniversary of the first Friendship and Cooperation Treaty between the two countries.

Reviewing the process of carrying out the treaty, we are very encouraged by the vital achievements of Vietnamese-Mongolian friendship and cooperation. Just as the messages of greetings from our party and state leaders to the Mongolian party and state leaders on this occasion have affirmed, that historical document "is an important event that has initiated a period of strong development in the spirit of militant solidarity and the relations of fraternal friendship and cooperation between Vietnam and Mongolia based on Marxist-Leninist principles and socialist internationalism and has contributed to strengthening solidarity between the countries in the socialist collective."

Vietnamese-Mongolian friendship blossomed and developed in the long battle of the two countries' people. The victory of the Mongolian revolution was a great struggle comparable to our own struggle. Since the midpoint of this century, through the great Russian victory over fascism and through our two nations' great revolutionary victories, the militant solidarity between Vietnam and Mongolia has progressed to a new era. The Friendship and Cooperation Treaties of 1961 and 1979 between the two countries are important markers among the shining symbols of the broad and deep uninterrupted relations that have developed between our two countries.

The touching impressions of Vietnamese-Mongolian friendship burn forever brightly in our memory. We remember well the most passionate words of comrade Jambyn Batmonh, member of the Political Bureau of the People's Revolutionary Party, chairman of the Mongolian party and head of the state delegation that visited our country in 1979: "Our people, forever loyal to the unbreakable spirit of Mongolian-Vietnamese friendship and honor and treasure that friendship as our most precious achievement." In each stage of our revolution, we enjoyed profound solidarity with, and received firm support and immense assistance from the party, government and people of Mongolia. Those are the sincere sentiments of socialist internationalism, wholeheartedly in support of their comrades, sharing with them, to the greatest degree possible, the achievements of their labor. We greatly appreciate the precious support and aid of the Mongolian people for us during the period of resistance against America for national salvation as well as during this stage of building and defending the fatherland against Peking's hegemonic expansionism. The Mongolian party, state and people have also often given us timely assistance and helped us overcome the effects of natural calamities.

Through implementation of the new Friendship and Cooperation Treaty and the five-year signed agreements between the two sides concerning coordinating national economic plans and strengthening trade and cultural exchange, and through the two countries' participation in CEMA, relations between the two countries are developing even more and expanding in several spheres. The positive effects of the Friendship and Cooperation Treaty is concretely demonstrated in real life and is bringing gratifying results for building and defending our socialist fatherlands.

Vietnam and Mongolia are two socialist countries in Asia with a common enemy: the Chinese expansionists joined with U.S. imperialists. The strengthening of militant solidarity and cooperation between the two countries is highly significant for the popular revolution in each of our countries and for the common task of the socialist collective and of all nations. Our party, state and people willingly do everything in their power to strengthen fraternal friendship and all-round cooperation with the Mongolian People's Republic in the spirit of the treaty and believe firmly that that relationship is improving daily in the interest of the two peoples and in the interest of peace, national independence, democracy and socialism in Asia and around the world.

From the bottom of our hearts, we express sincere gratitude to the Mongolian party, government and people. May the fraternal Mongolian people, under the correct leadership of the People's Revolutionary Party headed by the illustrious Iu. Tsedenbal, achieve many great accomplishments in fulfilling the 7th 5-year plan outlined by the 18th Congress of the Mongolian People's Revolutionary Party.

PHAM VAN DONG GREETS NAMIBIA'S NATIONAL DAY

OW260351 Hanoi VNA in English 0305 GMT 26 Aug 81

[Text] Hanoi VNA 26 August--Premier Pham Van Dong today sent greetings to U.N. Secretary-General Kurt Waldheim and president of the U.N. Council for Namibia Paul Lusaka on Namibia Day.

He said: "The South African colonialists' illegal occupation of Namibia constitutes an impudent violation of the independence, the right to self-determination, and other rights of the Namibian people, in defiance of the fundamental principles of justice and international law and the U.N. resolution on Namibia.

"The people and the government of the Socialist Republic of Vietnam vehemently condemn the South African government's crimes, and demand that it withdraw its armed forces from Namibia, including Walvis Bay, and respect the Namibian people's independence, sovereignty and self-determination in line with the U.N. resolution. It must be pointed out that it is with the backing of Western countries, especially some in the U.N. Security Council, that the South African Government has been able to prolong this illegal occupation and escape the sanctions provided for in Chapter 7 of the U.S. Charter.

"The people and the government of the Socialist Republic of Vietnam reiterate their principle stand of full support for the Namibian people's just, legitimate struggle in all its forms for self-determination and genuine freedom and independence under the leadership of the Southwest African people's organisation, their sole authentic, legitimate representative.

"The people and the government of the Socialist Republic of Vietnam strongly support the U.N. resolution Namibia aimed at forcing the South African government to respect Namibia's independence, sovereignty and territorial integrity and to withdraw its armed forces from the country as quickly as possible.

"The people and the government of the Socialist Republic of Vietnam believe that the Namibian people, under SWAPO leadership and with their unity and determination, will struggle through to the end for their noble objectives, namely independence, sovereignty and territorial integrity.

"We welcome the forthcoming General Assembly's Ad Hoc Session on Namibia, and hope that the international community will then take strong and effective measures regarding the South African Administration in order to restore self-determination and sovereignty to the Namibian people."

GUIDELINES FOR PARTY CARD ISSUANCE CLARIFIED

Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 5, May 81 pp 1-2

[Article: "Some Problems Relating to Guidance for Issuance of Party Membership Cards"*]

[Text] (*XAY DUNG DANG footnote: "Circular No 124 of 25 April 1981 of the Party Central Committee Secretariat") The issuance of party membership cards in 1980 resulted in heightening the qualities of party members, raising their party consciousness (even for those who were high- and middle-ranking cadres), purging the party of unqualified members, making the party organization wholesome and full of combat strength and promoting the fulfillment of immediate political missions by each installation.

The result was uneven, however, because of a failure to strictly apply the party membership criteria and also because of a rightist tendency shown in examining the party members' qualifications. In many areas, deferring the issuance of party cards for some period of time was a way to avoid expelling from the party persons failing to meet party membership qualifications; in addition, there were instances of harassment and rejection of persons who were "not on one's side". A rather prevalent tendency among many party organizations was to retain party members who had a low combat spirit, who failed to carry out party resolutions, who could no longer lead the masses effectively and who wereno longer trusted by them. In many areas, party members still showed indulgence, fear and hesitation toward cadres with responsible functions. There were times when the lack of organization, discipline and responsibility, the failure to correctly apply policies and the law and the habit of oppressing the masses did not lead to expulsion from the party.

In the later stages, party committees at different echelons slackened guidance and many areas failed to associate the issuance of party cards with the movement to step up production, to maintain security, to oppose negative practices and so forth and also did not link the party building task to the mass movement.

The [Party] Secretariat requests the various levels and sectors to firmly adhere to the following guidelines and to satisfactorily implement them:

1. The resolution of the Ninth Party Central Committee Plenum states: "It is necessary to complete the issuance of party cards by the end of 1981". The Political Bureau's policy is: "From now to the end of 1981, efforts must be concentrated on properly guiding the issuance of party cards and associating this task with the

strengthening of party chapters. This must be considered as an important measure to strengthen the party, to educate party members, to cleanse the party ranks and to simultaneously step up the execution of immediate tasks. Though it is necessary to strengthen the party while issuing party cards, one must also take advantage of the party card issuance to strengthen the party." This policy must be satisfactorily implemented in order to reap realistic results to greet the Fifth Party Congress.

2. Since most of the remaining party bases which have not yet issued party cards are weak and inferior, special attention must be paid to inspecting, observing, improving and strengthening basic party committees and chapter committees to turn them into really trustworthy supports for party committees at higher levels. Only by doing so can one make sure that the examination and classification of party members are corrently carried out and that the missions entrusted are effectively fulfilled.

If, in any basic party organization, there is some party chapter which is qualified to issue party cards, then anyone in this chapter who meets the party membership qualifications must receive a party card without having to wait until all party chapters are strengthened when a general issuance of party cards is effected throughout the party organization.

3. The examination of the party members' qualifications must satisfy the requirement that the classification of party members is correct and rigorous and that a struggle is conducted against rightist views, indulgence, tolerance and easygoingness--which will lead to a lowering of the party membership criteria--and also against individualistic and factional thinking and the habit of harassing party members [who are outsiders]. Party membership criteria must be rigorously applied in examining the party members' qualifications. Following are some examples:

--Party members who have grown old and weak, who are sick or who are retired cadres and workers will be issued party cards if they still retain their revolutionary qualities; old age, weakness and limited abilities are not a reason for party membership disqualification.

--Party cards will be issued to female party members who were once active but whose task performance is now less effective because their households are encountering difficulties and lacking manpower or because they are busy with small children, provided they still retain their revolutionary qualities. Party organizations must entrust appropriate tasks to them to enable them to satisfactorily fulfill their duties.

--Party cards will be issued to party members who are demobilized armymen with combat achievements, who have returned to their respective localities and who have trouble doing their jobs in party installations because their families are faced with difficulties, provided they do not have any serious shortcoming which reflects on their party membership qualifications.

--Party cards will be issued to party members in the newly liberated zones who--though having carried out tasks for some period of time--have not yet conducted any study and undergone any advanced training but who, if educated, can improve and become able to fulfill their duties as party members and if they enjoy the masses' sympathy.

--Party cards will be issued to party members who belong to the ethnic minorities in the mountainous and border areas and who have some bad customs and habits--such as opium addiction among the H'mong--but who are loyal to the party and revolution and oppose the Chinese reactionaries.

--Concerning party members with some impediments in their curricula vitae or political backgrounds, the high levels must quickly draw a conclusion. Even though circumstances are not conducive to a quick conclusion, these party members will receive their party policies and if they actively carry out tasks. Meanwhile, party organizations must continue to examine their political records to reach a conclusion. The Central Organization Committee and the Central Control Committee have a document clarifying the political background problem in the spirit of Directive No 192.

Concerning cadres and party members who have been denounced, the various levels have the duty to investigate and adjudge their cases and to draw a conclusion soon.

Instead of being delayed in a sweeping manner, the issuance of party cards will be deferred only with regard to party members who have been subjected to the party's disciplinary measures or who have really committed mistakes. If, after examining these party members' cases, the party chapter finds it necessary to spend some time observing the correction of their mistakes, the issuance of party cards will then be deferred but only for 6 months. In the next stage, the party chapter must reexamine and solve their cases.

4. The elimination of [bad] party members must be carried out more vigorously and resolutely to purify and better the party members' ranks; the Political Bureau Resolution No 32 of 20 November 1980 must be strictly and thoroughly applied.

In examining basic party organizations and the party members' qualifications and in dealing with party members, it is necessary to truly rely on the masses, to carefully study the opinion of party members and the masses and to closely link these tasks with the struggle against negative manifestations. Where these manifestiations are serious, it is necessary to coordinate the above activities with guiding the implementation of Directive No 81 of the [Party] Secretariat to distinguish right and wrong so as to provide a basis for examining and classifying party members.

5. It is necessary to revamp the leadership exercised by party committees at the district, town, city and precinct levels; to closely coordinate the strengthening of party installations and the issuance of party cards with the accomplishment of political tasks and also to eliminate the tendency to tackle immediate tasks while neglecting the strengthening of the party and the issuance of party cards.

To complete the party card issuance by the end of 1981, additional cadres drawn from other committees and a number of provincial cadres experienced in party building must be assigned to strengthen the organization and control committees of district and precinct party committees; it is also possible to employ a number of retired but capable cadres to build the party.

--As for the utterly weak and rotten party chapters and basic organizations in which most party members have degenerated or committed so grave mistakes that they must be expelled from the party or are obviously intent on opposing the party line and policy, the provincial and municipal party committees have the right to dissolve them at the proposal of the district or precinct party committee and after conducting a direct and careful inspection and receiving the approval of the Party Central Committee (according to the Party Statute). Those party members who are authorized by the higher-echelon party committee to register again as party members and to receive party cards will be introduced to a nearby party organization to continue party activities or will be assigned to set up new party chapters.

--If the issuance of party cards to party members who are cadres managed by a party committee at a higher level (provincial or central) is to be temporarily deferred, such deferment must be decided by a district, precinct, town or city party committee; if these party members are not qualified to receive party cards, their case must be reported to the party echelon committee which manages them for decision (in pursuance of Regulation No 7 of 16 December 1977 of the Secretariat).

If, by the end of 1981, there still are party members who do not yet meet the criteria for party card issuance because they have not tried to improve, their names will be deleted from the party members' list by the party organization.

Provincial and municipal party committees must check plans for speedy issuance of party cards as well as plans for deployment of the cadres' force to insure that the issuance of party cards is basically completed by the end of 1981. It is necessary for the high levels to intensify inspection and to specifically direct the issuance of party cards at important or weak basic organizations, to promptly correct erroneous tendencies and to guide the preliminary review of each phase of party card issuance and also the recapitulation of this task by the end of 1981.

The standing committees of provincial and municipal party committees must hear concrete reports on the progress of party card issuance in certain basic party organizations beset with difficulties in order to help district and precinct party committees carry out this task satisfactorily.

Party committees at all levels must rely on Resolution No 32 of the Political Bureau, Directive No 83 of the Secretariat and the present circular to exactly achieve the objectives and to meet the requirements of the issuance of party cards.

NEW PARTY MEMBERS RECRUITED FOR INTERIOR MINISTRY

Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 5, May 81 p 30

[Article by Hoang Chi, Deputy Head of the Organization Board of the Party Committee in the Ministry of Interior: "Party Organization in the Ministry of Interior Steps Up Party Development"]

[Excerpt] In 1980, the Party Organization in the Ministry of Interior carried out the task of expanding the party rather well. The number of new party members recruited in 1980 was double that in 1979--when the recruits' number was the largest ever in the 5-year period between 1975 and 1979--and was equal to the total number of party members recruited throughout that 5-year period. Party development plans for 1980 were drawn up by 100 percent of party organizations and chapters attached to units having nonparty members; 87 percent of these units managed to recruit new party members though certain party chapters attached to these units did not expand the party in the previous 4 or 5 years. Though having to move about to carry out activities in scattered and distant areas, some party organizations overcame difficulties and recruited new party members in a number equal to that of the existing ones. Important units with secret missions paid attention to the recruitment of new party members, thus obviously raising the party members' ratio versus the total number of their personnel.

Of the newly recruited party members, 88.35 percent are outstanding members of the Ho Chi Minh Communist Youth Union, 100 percent have received commendations and rewards and 26 percent are emulation combatants.

BRIEFS

PARTY CARD ISSUANCE--In pursuance of the Resolution of the Fourth National Congress of Party Delegates and Directive No 83 of the Party Central Committee Secretariat, we have issued party membership cards in five stages since 1980. In the four stages in 1980, party membership cards were issued to 59 percent of the total number of party bases with nearly 46 percent of the total number of party members throughout the party. [Excerpt] [Hanoi XAY DUNG DANG [PARTY BUILDING] in Vietnamese No 5, May 81 p 3] 9332

HA NAM MINH PARTY CARD ISSUANCE--In 1980, the Ha Nam Ninh Party Organization made out party membership cards for 86.5 percent of the total number of party bases and 72.2 percent of the total number of party members and issued these cards to 83 percent of the total number of party bases and 64.3 percent of the total number of party members. 'NHAN DAN' EDITORIAL URGES URGES INCREASED EFFORT TO FULFILL PLAN

Hanoi NHAN DAN in Vietnamese 16 July 81 p 1

[Editorial: "Develop All Existing and Latent Capabilities"]

[Text] The working class and the laboring people of our country are competing in production labor to fulfill the state plan for the third quarter. It is the pivotal quarter of the annual plan and entails very difficult tasks. The new factors and new progress in implementing the state plan during the first 6 months of the year provided us with much experience and confidence that we can do a better job and attain higher economic effectiveness.

There are still many difficulties, but on the basis of the advantages that have been created our people can, if they have a high degree of determination and make great efforts, attain many new accomplishments in production and life.

An important concern at present is the development of all existing and latent capabilities. In all production bases, sectors, and localities, there are still many capabilities regarding labor, land, raw materials, materials, equipment, etc., which have not been utilized. If they carry out careful inventories, are fully aware of all material and technical forces at hand, and take the initiative in using them rationally, fully, and effectively, they can produce additional wealth for society. If the ports of Hai Phong and Saigon do a better job of managing and receiving imports, we will have additional materials for production and consumer goods for the people's lives. If we use economically, and do not waste, damage, or lose to thievery, grain, POL, coal, electricity, wood, cement, etc., we can reduce their scarcity and contribute to promoting production and construction. If the communications and transportation sectors rectify their management and overcome negative phenomena and tardiness, we will have many additional transportation facilities to use, or increase our cargo-hauling capabilities. If we create and tightly manage economic-technical standards and norms, we will have additional labor, energy, and materials with which to step up production, increase output, and lower production costs. If the factories organize production shifts at night when there is a surplus of electricity, it is certain that they will increase output. If the state commerce sectors strengthen their management and prevent corruption and "internal distribution," and if the factories turn over all output to the state, there will be additional goods to serve the people. Those are capabilities which we now have. If every person and all sectors have a sense of responsibility and take positive steps, those capabilities can be developed.

In economic management, we are gradually eliminating irrational restrictions, correcting inappropriate structures, eliminating bureaucratic administrative-supply management, and creating conditions for the production and commercial bases to increasingly take the initiative with regard to planning and finance. We have begun to implement the new economic policies set forth by the party and state. Although there are distortions that must be corrected, they have served to encourge workers to work enthusiastically and the bases to develop initiative and creativity in fully utilizing labor, land, equipment, and materials, and increase output for society and the income of workers. If we continue to closely guide the implementation of those policies in the direction delineated by the state, there are prospects for transforming the economic situation and living conditions in a more favorable way.

In addition to promoting production and practicing economy it is necessary to implement strong proletarian dictatorship measures to protect production and socialist production. The Beijing reactionaries, in league with the U.S. imperialists, are waging an all-round war of destruction against our country. We must always be vigilant and resolutely punish their lackeys who sabotage production and upset the market. Those who speculate, engage in blackmarketing, are corrupt, or steal state property are also enemies of socialism. Our people and state must be more stern and appropriately punish them.

Organizing a strong, seething mass movement to develop initiatives, compete in production labor, practice economy, and develop all existing and potential capabilities are decisive factors which determine the fulfillment of state plans. In an important speech delivered to the first session of the Seventh National Assembly, General Secretary Le Duan stated that "Whether the development of production and the stabilization and improvement of living conditions attain many results or not, and whether they are rapid or slow, to an important degree depend on the initiative, enlightenment, consciousness of discipline, and efforts of all our people all workers must positively advance to becoming brave and able warriors, diligent and bright masters on the production and distribution front. Only thereby can we achieve an important transformation in the national economy and overcome the present difficulties."

'NHAN DAN' EDITORIAL CALLS FOR FULL COLLECTION OF TAXES

Hanoi NHAN DAN in Vietnamese 15 July 81 p 1

[Editorial: "Industrial and Commercial Taxes"]

[Text] Industrial and commercial taxes are an effective tool of the state which is intended to manage and control collective and individual commercial and industrial production activities, and to guide the development of those activities in correct accordance with the state policies and regulations. In addition to financial income from the state economic sectors, the principal source of income of the state budget, industrial and commercial taxes are an important source of income. They are the principal means by which the collective and individual economic sectors, and the broad masses of people in general, fulfill their obligation of contributing to the enterprise of economic-social construction and development, and to stabilizing living conditions and defending the nation. The promotion of the industrial-commercial tax task at present not only contributes to balancing the budget but is also a positive measure for restoring order on the market, and at the same time stimulates the development of artisan industry and handicrafts production, expands the circulation of goods, and serves to regulate irrationally high incomes.

Since the beginning of this year, and especially during the past 6 months, the financial organs in the provinces, municipalities, districts, and precincts throughout the nation have made all-out efforts to collect the various kinds of industrial and commercial taxes. The collections in the localities have been many times greater than during the same period last year. But in comparison to the requirements and actual capabilities, the collection level is still too low and is not yet half of the planned collections for all of 1981. Many places, including Hanoi, Hai Phong, and Ho Chi Minh City, have allowed collection shortfalls and have not tightly managed collection. Instances of reluctance to pay taxes, tax evasion, engaging in commerce without registering and paying taxes, speculation and blackmarketing, producing ersatz goods, etc., have not been promptly dealt with in accordance with laws currently in force, which has exerted a bad influence on production, prices, and the market.

The localities must firmly grasp the situation of the production and commercial activities of the collective and individual industrial, commercial, and service bases and assure that they have commercial permits, sell the products they registered to sell, and are subject to tax collection. They must make a complete list of all bases which must pay taxes, categorize the collective commercial bases and the individual households, and correctly determine practical collection rates, in order to have tax collection measures that are in correct accordance with policies. In each specific sphere, the financial organ must collect all taxes and develop the effect of each kind of tax: commercial tax, income tax, commercial shipment tax, commodity tax, butchering tax, etc. The management of collections at the source must receive emphasis, but it is also to closely control circulation. Each station, subward, and village must strictly implement monthly and quarterly tax collection plans.

The industrial-commercial tax task can achieve good results when it is closely combined with commercial registration, goods inventorying, and the posting of prices. The implementation process demands that attention be paid to propaganda and to encourging the producers and merchants to fulfill their obligations. The administrative measures are also very important and it is necessary to continually oversee the production and commercial activities of collectives and individuals, and to appropriately punish people engaged in illegal livelihood, speculators and blackmarketeers, and tax evaders. The financial cadres must manifest a sense of responsibility and discipline, be brave and incorruptible, collect the full amount of taxes in correct accordance with policies, and struggle against, denounce, and severely deal with schemes to deceive and bribe on the part of those engaged in illegal livelihoods. Close cooperation between the financial, commercial, and public security organs on the one hand and the mass associations on the other hand is a way to assure that the task of collecting industrial and commercial tasks attain good results.

ECONOMIC PLANNING, TRADE AND FINANCE

EDITORIAL CALLS RESOURCE CONSERVATION A NATIONAL POLICY

Hanoi NHAN DAN in Vietnamese 8 Jul 81, p 1

[Editorial: "Conservation Is a National Policy"]

[Text] It is the duty of our people to increase production and produce effectively, in order to alter the economic situation and living conditions. Only the best and most rational use of labor, land, equipment, machinery, materials, and capital creates the conditions needed to increase accumulation and raise the standard of living. Thus, conservation must go hand-in-hand with production increases. Conservation has strategic significance in economic management; its aim is to raise socialist labor productivity, reduce the price of products, and upgrade the economic effect of the social product.

Our country still has a poor economic base. Most petroleum, raw materials, supplies and equipment must be purchased from foreign countries, while rising prices on the international market limit our import capability. Even domestically produced energy and raw materials are much more expensive, because extraction is getting more difficult. If we want to maintain and increase production, we must practice strict conservation in all fields, especially energy, raw materials, and supplies.

In recent years, economic sectors and mass organizations have sponsored many conservation drives, such as "A decimeter of land is a decimeter of gold," "Gasoline is as precious as blood," "Collect pieces of scrap metal, scraps of paper," and such campaigns as "Recover six million cement bags," and "Save ten percent of the electricity in production, 15 percent of the electricity in the home." These drives have realized some fine results. Shortcomings in economic and social management, however, and the failure to regularly carry out the education task have resulted in the low economic effectiveness of those drives. At times the economic effects were insufficient to compensate for the large-scale waste and property loss pervading our society and the economic establishment of our country.

In present circumstances, conservation has become an important policy. The economical use of the goods of society and consuming what we have rationally constitute a critical aspect of Party and State economic policy. The operational slogan in the field of economics is: produce better and more material goods with the provisions and supplies issued by the State, whether equal to or less than before. Conservation must characterize the expenditure of those things in very short supply: food, electricity, coal, POL, cloth, paper.

Mobilization to practice conservation is taking place in all sectors, at all levels, in all localities, and among the people, in all fields and in every processing link, from preparing for production or construction to formulating plans and setting up economic and technical norms for production and construction, to distribution, consumption, recovery and complete use of things discarded after use.

The policy of conservation and rational use of energy, supplies, equipment, labor, capital, and consumer goods demands rapid improvements in economic management. Most important is the need to set economic and technical norms and to implement economic accounting. In very many places the amount of energy, raw materials, and building materials used per unit of production is three or four times higher than pre-war levels, yet the director is not the least concerned. There is overall foot-dragging in the crooked administrative system and the bureaucracy. The rather large-scale misappropriation of electricity, oil, supplies, and equipment of the State is also due in part to many shortcomings in some management work.

Conservation requires the application of science and technology and progressive experience to organize labor for high productivity, to produce a maximum quantity of goods with minimum use of energy and materials, to find energy and supply substitutes, to make maximum use of discarded materials and rejects. Optimum use of machine productivity, increased use of return trip transport, and organizing work in the third shift in order to use the large amount of electricity available at night will also produce many more goods for society.

Needed are appropriate policies and suitable organization to collect discarded materials and rejects, discipline people and units guilty of corruption and waste of energy, materials, equipment, and capital and honor people and units successfully practicing conservation, and increase the inspection of supply warehouses and the payment of products to the State.

Party organizations and mass organizations have the duty to lead and guide the conservation drive toward practical results, turning it into a self-conscious and voluntary movement of the masses.

ECONOMIC PLANNING, TRADE AND FINANCE

PRICES STABILIZED DUE TO GOOD MARKET MANAGEMENT

Ho Chi Minh City TIN SANG in Vietnamese 10 Jun 81 pp 1, 7

[Article by PTH: "Good Changes in Market Price Management"]

[Text] Anyone who tours the various markets in the city at a time when we are eagerly trying to manage the market in order to stabilize prices can see rather clearly that encouraging changes are taking place in these markets' activities. Uniform price lists have appeared at all shops and a new attitude in doing business is being shaped up though not yet steadied. All female small traders have recently had the opportunity to study and work and to unanimously contribute to stabilizing the market. As a result, prices in all markets are being gradually stabilized.

In the Ba Chieu and Thi Nghe markets, Binh Thanh District, price lists have been posted up rather quickly. Since the afternoon of 4 June, price lists have been put up for all goods displayed for sale--not only staple foods such as rice, meat, fish and vegetables but also fruit, flowers, objets d'art, clothes, shoes and sandals. Many shoppers have been pleased with these price lists which have spared them the trouble of hearing sellers ask exorbitant prices as in the past. Shoppers can now compare the prices asked by different shops and choose those which suit their pockets without fear of making mistakes. There have been less squabbles between buyers and sellers. The Ba Chieu market management board is determined to turn the display of price lists for all types of goods into a uniform and regular routine.

In reply to a question about the fixing of prices for various commodities, the head of the Binh Thanh district market management board said that these prices had been studied by the board in consultation with female small traders. The District People's Committee then temporarily fixed the most appropriate prices. On 7 June, after successfully enforcing the order to put up price lists for 2 days, the market management board managed to reduce price pork by 5 dong per kilogram. Along with the display of price lists, a pretty large number of personnel were sent to two principal markets in the district to supervise this measure. There were scores of cases of violation of the regulation on price list display and on overcharging, each of which was fined 2 to 4 dong. It is clear that the organization of the display of price lists in the Ba Chieu and Thi Nghe markets is a good example to be followed by other markets.

However, the struggle for price stabilization has been fiercest in the Fifth Precinct markets. On 4 June, the Precinct People's Committee issued a notice fixing specific prices for a number of staple commodities. Compared with other markets, these prices are rather low (6 dong for a kilogram of white or brown rice, 7 dong for a kilogram of sticky rice, 50 dong for a kilogram of lean meat, 45 dong for a kilogram of round steak, 25 dong for a kilogram of fresh-water goby, 17 dong for a kilogram of castor sugar and 1.8 dong for a [as published] duck egg.)

At the An Dong market (the principal one in the Fifth Precinct), the newly fixed prices caused a number of sellers to "complain" that they were lower than the "cost" prices--that is, the ones they had to pay when buying goods for resale. Despite these "complaints," we have learned and seen that the number of sellers and the quantity of goods for sale are still as large as in the previous days and that no small trader has been forced to stop selling goods because they have had to "sell at a loss." The new prices have been applied rather strictly. Nevertheless, some traders have continued to sell at prices higher than the listed ones but many shoppers have immediately notified the management board for action against these merchants. The An Dong market management board has in turn intensified its activities. Loudspeakers have regularly blared out regulations on prices to remind sellers of the obligation to properly implement these regulations and, at the same time, to call on buyers to uncover sellers guilty of overcharging. The control force has also been strengthened to be able to intensify inspection and to deal with infractions.

The "splendid" management measures set forth by the Fifth Precinct and the initial success won in the past few days of "testing" have clearly demonstrated that price hikes have been mainly caused by rumors launched by bad elements and by traders bent on taking every opportunity to make a profit. Meanwhile, the price of grain, foodstuffs and agricultural products in the western provinces have remained stable and price hikes, if any, have also been due to false rumors and to the dishonest dealings of traders.

A concrete proof can be found in the purchase of pork in various precincts and districts of the city. Based on rumors and with a view to controlling and monopolizing the market and competing with the state in the purchase of goods, traders have unilaterally raised the price of live-weight pork by 3 to 4 dong per kilogram and also its wholesale and retail prices. Consequently, state food shops and consumer cooperatives have experienced difficulties in vying with traders in purchasing goods, which has made it easy for traders to raise prices over the recent past.

The experiences drawn from the implementation of the Fifth Precinct's administrative measures on prices show that these measures can be applied in other localities to stabilize the market. The fixed prices which have remained stable with only a few minor fluctuations can be observed at the markets of the Go Vap and Thu Duc Districts. The state and cooperative trade sectors have brought large quantities of staple commodities into these markets, making it difficult for traders either to raise prices or to cause disturbances. At the Go Vap market, almost all small meat-dealers have become agents of the state so that meat price has remained at 47 dong per kilogram and has risen, if ever, to only 50 dong at the maximum. When small traders were about to ask permission to raise the price of rice, the District Trade Board brought out a large quantity of rice for sale, thereby preventing any price hike right at the outset.

Situation in Retail Markets

While principal markets at the precinct and district level are controlling prices gradually and effectively, control is still slack in small markets at the ward level. At a result, about 100 traders have failed to put up price lists and have unilaterally raised prices.

During our tour of some small markets in Binh Thanh District, we heard from shoppers that prices there were raised unreasonably, with pork having sometimes been sold at 60 dong a kilogram. Generally speaking, there are only a few principal markets in each precinct or district but many small retail markets in its subordinate wards. Because most of these small markets have no management boards of their own and also because the consumer cooperatives' participation in trading activities is still negligible, many traders have unilaterally raised prices. Most people complain that prices have gone up because they have not been controlled at these small retail markets.

CONFERENCE HELD TO REVIEW IMPROVED DISTRIBUTION, CIRCULATION OF GOODS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 22 Jun 81 pp 1, 4

[Article by P.V.: "Conference To Review the Implementation of Measures To Improve Distribution and Circulation of Goods"]

[Text] SAIGON GIAI PHONG--Since the beginning of June 1981, our city has implemented numerous measures to step up production, to control sources of goods, to expand business and to manage the market. The socialist commercial forces have taken many active and versatile measures to carry out purchase. State trade corporations have maintained close contact with the centrally-run and local production enterprises to get to know their situation and to help them solve difficulties in the production process and in taking care of the workers' living conditions and have also signed specific contracts in order to take hold of commodities. Owing to these efforts, the value of contract goods has increased by 40 million dong over the previous month and the purchasing task has continuously been improved in June.

Precincts and districts have intensively exploited sources of supplies and raw materials to organize contractual manufacture and processing, signed additional contracts on the purchase of goods made on their own by small industry and handicraft installations, and brought exchange goods to the provinces. In carrying out this task, the 5th, 6th and 10th Precincts have reaped good results.

The cooperative trade sector and the Women's Union in precincts and districts have rapidly received thousands of tons of rice from the Grain Dealing Corporation for conveyance to and distribution among wards and markets, thereby stabilizing the price of rice in many areas.

To date, Go Vap District has continued to lead the movement to purchase pork and introduce it into the market. The markets in Go Vap District have maintained the pork price at the May 1981 level. Because the 1st, 6th and 11th Precincts and the Binh Thanh District have brought a pretty large quantity of pork for sale at the Tan Dinh, Binh Tay, Pho Co Dieu and Ba Chieu markets, the price of pork has remained stable in these areas.

Since the beginning of June, precincts and districts have also intensified price management in various markets. In pursuance of the Municipal People's Committee decision on registration and the posting up of lists of commodity prices and services charges, small traders in many markets have publicized prices and a number of them have sold goods according to these prices. Many precincts and districts have obtained the mass organizations' participation in carrying out propaganda, motivating and educating small traders and inspecting the price publication and the sale according to published prices.

Almost all large and medium-sized markets throughout the city are reorganizing themselves into perfect economic-administrative units with a view to strengthening and rearranging different goods sections and teams and continuously striving to lower prices.

Apart from the rice price and various service charges, the prices of certain good products and industrial goods are still high while the prices of a number of agricultural and food products in many markets have been brought down to nearly the same level as those applied on 1 June 1981.

However, market management over the recent past has been affected by a number of shortcomings requiring correction. In fact, the amount of commodities purchased has increased but does not yet meet the demand, the quantity of goods brought into the market for sale is still insufficient, cooperation has not been close among the forces responsible for management and price control, the education of small traders has not been duly intensified, these traders have not received adequate guidance for the publication of prices and the sale according to published prices, and there have been slow developments in the management of service charges.

At the conference held on 20 June to review the implementation of the Political Bureau directive on improving distribution and circulation, the Municipal People's Committee indicated that the following tasks should be carried out immediately: continue to properly execute the Political Bureau directive on improving distribution and circulation, consider this task to be the best opportunity to motivate the working class and laboring people to display a high sense of responsibility to the nation, and launch an emulation movement to increase productivity, to strengthen labor discipline, to save materials, goods, money and time and to produce more wealth for the society. It is also necessary to take firmer hold of goods and currency, to innovate working methods, to gradually seize the market and to effectively stabilize prices.

To carry out the tasks indicated above, the various sectors and localities must implement the following measures satisfactorily and uniformly:

--Step up production, overcome difficulties and exploit the capacities of the equipment belonging to centrally-run and local production enterprises located within the municipal area.

--On the basis of production development, intensify purchase and take hold of sources of goods falling within all the three sections A, B and C of the plan. The municipal trade sector must manage to grasp the goods falling within sections B and C of the plan and produced by the state-operated production sector and the joint state-private one. It is necessary to expand the purchase of goods produced on their own by small industry and handicraft installations, to broaden the purchase of goods from the provinces and to help solve difficulties in finding raw materials for production and commodities for consumption.

--Step up the business activities of the socialist trade sector, manage to seize the market while steadily supplying goods to cadres and manual and office workers according to the fixed standards and rations.

--Strengthen the task of managing the market and prices in order to prevent sudden price hikes, speculation and hoarding.

--Continue to properly carry out measures (supplying of goods in kind, the supplementing of salaries, the application of the product wage system and so forth) aimed at stabilizing the life of cadres, manual and office workers, and the armed forces and laboring people in the city.

COOPERATIVE TRADE SECTOR STARTS RETAILING FOOD PRODUCTS

Ho Chi Minh City TIN SANG in Vietnamese 10 Jun 81 p 1

[Article by Th. Ng.: "Cooperative Trade Sector Entrusted With Extensive Dealings in Rice, Vegetables, Fish and Meat"]

[Text] TIN SANG 9 Jun--To cope with the present state of the market, the municipality on 9 June decided to entrust the rice trade to the retail network of the cooperative trade sector for the purposes of selling rice at a truly commercial price [gias baor damr kinh doanh] and thus participating in the market. This plan is being developed by trading units of consumer cooperatives in the city and may be implemented soon. To deeply and widely disseminate this commodity among various markets and to actively struggle in this segment of the market, consumer cooperatives which do not yet possess a retail network in various markets may consign rice to certain small traders acting as sale agents under the condition that both the price and quantity of goods consigned will be tightly managed.

On the other hand, to expand the network dealing in raw and fresh food products, specialized trading corporations such as Food Corporations No 1 and 3 and the Vegetables and Fruit Corporation will consign meat, fish and vegetables to retail shops of the cooperative trade sector throughout the city so that these units may have the opportunity to broadly serve the local people, thereby alleviating the distribution process, and that the specialized trading corporations may concentrate forces on purchasing goods, attracting and grasping their sources and mobilizing them from the provinces to the city.

Thanks to the broadened retail network of the cooperative trade sector, specialized trading corporations will be able to concentrate commodities and to widely spread them throughout the municipal market, thus exercising a good influence on the state of prices which have tended to fluctuate in this market area.

In view of the present situation, the abovementioned commercial shift effected by the specialized trading corporations and the units of the cooperative trade sector will positively contribute to market stabilization.

AGRICULTURE

'NHAN DAN' EXPLAINS INCENTIVES FOR OPENING NEW FIELDS

Hanoi NHAN DAN in Vietnamese 24 Jun 81 p 1

[Editorial: "Expand Opening of New Small Fields"]

[Text] For the past several years, application of the labor redistribution policy directed at developing labor and land potential throughout the country and within each region, is normally organized in two forms: concentration and dispersal. Reclaiming large areas of wilderness to establish specialized cultivation areas requires large investment capital most important for the establishment of initial material bases for production and for organizing living conditions.

Multicropping is one form of increasing growing areas which brings fairly rapid economic results because it is production on familiar ground, the expense is small and the construction of fields is minimized. Reclamation of small abandoned and untilled fields also greatly reduces costs because of the full utilization of production and life support facilities already extant in the area.

At a time when the state has a limited investment capability, along with concentrating on a steady reclamation capability in large uncultivated land areas, we need to strongly stimulate multicropping and the opening of new small fields with the precept: the state and the people working together.

In pursuance of the policy of building new economic zones, the Council of Ministers decided to supplement the policy of opening new land and reclaiming idle land. This policy encourages localities and production installations to accept additional workers and residents to reclaim abandoned land, fallow land or land being farmed but with potential for multicropping. This policy also encourages collectives and individual workers in areas lacking in farm land to make the primary investment of their own efforts and capital to move their families and settle down in areas where new land is being opened and idle land reclaimed.

The essence of the supplementary policy is: to strongly develop the right of collective ownership and the spirit of self-reliance and self-strength in everyone, and--based on the state's policies of encouragement together with fulfillment of the policy of redistributing working strength throughout the nation--to rapidly increase agricultural production, primarily grain and food.

The main element of the new policy is: each collective unit or individual family has the right to choose where to go to request its allotment of land on which to work and live. City people, who go to open new land are maintained on the population register where they used to live, for the first 3 years. If they feel they can live there permanently, then they can transfer their registration completely to the new location. People who open new land have the right to choose the appropriate form of production organization. They can join a cooperative or a production collective or organize a labor rotation team, or labor exchange team, then gradually advance to establishing a production collective and then a cooperative. Land newly opened or reclaimed is exempt from agricultural taxes and from the obligation to sell agricultural products for many years more than centrally opened lands. Products made (except for state monopolies) can be sold at local markets; if sold to the state, they are sold at negotiated prices. People who open new land receive a priority in buying road transportation tickets and signing contracts with shipping enterprises for transporting production and living materials to their new homes. The state will reserve a portion of investment capital for the budget of areas with newcomers to increase public welfare work and production service work, and to assist people opening new land with a portion of transportation, food expenses, etc. during the initial period.

In the spirit of voluntarism, everyone should try to join in and contribute to the labor redistribution movement aimed at economic development and improvement of the people's way of life.

NAM NINH RESIDENTS ATTEMPT TO START NEW ECONOMIC ZONE

Hanoi NHAN DAN in Vietnamese 6 Jul 81, p 2

[Article by Tran Manh Sy: "Nam Ninh: More Than 21,000 Residents Leave To Build a New Economic Zone"]

[Excerpt] Nam Ninh is a district of Ha Nam Ninh Province, important for rice, with an average population density of 996 persons per square kilometer, a plentiful labor capability and with a small land area averaging 720 square meters per person. Rice yield is not stable. In 1976 it reached 64 quintals per hectare; in 1978, 46 quintals; in 1980, 41.3 quintals. The per-capita food consumption, therefore, also fluctuates. Some years it is high, with an average per-capita harvest of 18 kilograms; in years when there is a crop failure, only 7-8 kilograms might be realized.

Nam Ninh is conducting a drive for people to leave and build a new economic zone, with the aims of clearing wilderness and expanding the cultivated area, producing many new goods for society, raising the people's standard of living, and contributing to the implementation of the policy of labor force distribution on a nationwide scale.

Though some noteworthy efforts were made in the movement to build a new economic zone, Nam Ninh only attained 21 percent of the population movement plan. The reason for this was that, due to lack of persistence in party and government leadership echelons in their political education work and guidance, the movement has not yet become steady and constant. Few people left from places with a low ratio of land to population, such as Nom Giang, Nam Thanh, Trung Dong, Nam Hong, and Nam Duong villages. Many people, but not yet as many as planned, left from scattered hamlets. The mobilization has recruited the family and the worker but has not yet mobilized whole villages and whole farmsteads. A considerable base is needed to build a cooperative in a new economic zone, which creates part of the difficulty for grass roots leadership. Ninh Hoa (in Di Linh) gathered the people of 20 villages. There were villages whose people left, but cadres and party members did not form the core, and the masses lost trust; in a number of places, when hardships were encountered, the people even left on their own for home. Investigations of individuals who were to go were not conducted carefully. Some families did not meet standards having many members but too few workers, which created problems at the grass roots level. Planning at places of departure as well as at their destination was not well done, which was another source of trouble.

To do a good job of leading people to go and build a new economic zone requires good grass roots installations and a good site, with concrete planning and with close coordination between the place of departure and the destination. It requires detailed preparations, and it absolutely requires a core of cadres and party members. A lesson learned at Nam Ninh is that a place in which cadres and party members do not provide a good example is a place without a movement. Investigations must be carefully conducted on those who go, and assurance must be obtained that the entire family goes and that the departure is orderly. Property must be properly liquidated, and all requirements provided to ensure good living conditions (food supplies for 1-2 months) and provision made for plants, seeds, tools and implements needed for production.

MEKONG DELTA RICE PRODUCTION--Hanoi VNA 22 Aug--Rice-growing state farms in the Mekong River Delta provinces have so far planted 60,000 hectares of rice in this autumn crop, twice as large as by this time last year. The figure included more than 22,000 hectares of newly-reclaimed land. The farms have been supplied with 600 tractors, rice strains and fertilizers to step up intensive farming. The more than 5,000 workers of these farms are building more small-sized irrigation canals to prevent waterlogging in the current rainy season. [Text] [OW240007 Hanoi VNA in English 0259 GMT 22 Aug 81]

STOCK BREEDING IN SOUTH--Hanoi VNA 28 Aug--All provinces from Quang Nam-Da Nang southward are raising more than 3.5 million pigs including 521,000 sows, up by 20.8 percent over the same period last year. In the 3 Mekong Delta provinces of Tien Giang, Dong Thap and Long An, the number of pigs increased by 42 percent. The cattle herd in the south includes more than 513,000 buffaloes and 985,000 cows, up 5.9 percent compared with last year. Lam Dong province in the central highlands is leading in cattle breeding. The number of its buffaloes and cows increased by 23 percent and 16 percent respectively. A number of dairy farms have increased their cow herds. The An Phu farm on Ho Chi MInh city's outskirts is raising more than 1,000 dairy cows, an increase of 30 percent over last year. [Text] [OW240007 Hanoi VNA in English 1602 GMT 21 Aug 81]

DELAY IN REPAIR OF TRANSFORMER STATION DEPLORED

Ho Chi Minh City TIN SANG in Vietnamese 9 Jun 81 p 2

[Article by Nguoi Thanh Pho [City Citizen] in "Tales of the City" Column: "The Transformer Station in the 11th Ward, 8th Precinct, Must Be Repaired Soon"]

[Text] During my visit to a friend of mine in the 11th Ward of the 8th District, I heard tell that on the night of 19 May, there was an explosion at the transformer station near house No 540 Hung Phu Street and that ever since most of that area has been completely deprived of electricity for about 10 days.

To date, some task force teams have been sent by the electricity sector to the area for inspection but the transformer station has not yet been repaired and the local people are still experiencing difficulties caused by the power cutoff.

I know that there are many production installations in the area. This lack of electricity has badly reflected on the people's productivity. On the other hand, the local people's households have encountered numerous difficulties in their daily activities. Moreover, this situation has somewhat directly affected the maintenance of order and security as well as road traffic...

I would suggest that both the Electricity Management and Distribution Service and its branch in the Cho Lon area pay attention to the need to solve the power cutoff problem as soon as possible for the benefit of the people in the 11th Ward of the 8th Precinct. I take the opportunity to express the hope that in similar cases of breakdown for which repairs may take a long time, the electricity sector and the local administration will jointly issue a notice so that the people may clearly know the cause of the breakdown as well as the waiting time they will have to endure.

DIRT, ROCK CONVEYER CONSTRUCTION COMPLETED

Hanoi QUAN DOI NHAN DAN in Vietnamese 13 Jul 81 p 1

[VNA News Release: "Construction of Rock Conveyer With Transportation Power of Three Million Square Meters a Year Completed at Coc 6 Coal Mine"]

[Text] The Flat Surface Construction and Installation Enterprise (Uong Bi Coal Corporation) has just completed the construction of the dirt and rock conveyer system at Coc 6 coal mine and satisfactorily tested it under load. This is a key construction project of the Ministry of Mines and Coal, has a transportation power of three million square meters a year, and conveys dirt and rocks from core +30 of the center of the Left Bank mine pit to the dumping field. The construction consists of bunkers for containing dirt and rocks and a system of six conveyer belts from 1.2 to 1.6 meters wide and 2.4 km long, and is equipped with semiconductor and micro electronic combined control devices. When put into use, this conveyer belt system will be able to replace 14 to 20 trucks having a load capacity of 27 to 32 tons, thereby creating conditions for increasing the volume of conveyed dirt and rocks for the Left Bank mine pit, a principle coal producing work site of Coc 6 mine.

In the process of construction, units of Uong Bi Coal Corporation and of Hong Gai Coal Corporation combined their efforts and safely transported and received more than 1,000 tons of equipment, speedily solving problems related to the necessary procedures and technical projects, concentrating the labor force and equipment for the construction. Workers and cadres of the enterprise developed initiatives and improved techniques, thereby gaining more than 40 thousand dong for the state. Many of the major initiatives were valuable such as the initiative of changing the design of the C 2 Crane in compliance with changing work conditions on the mine road terrain saving nearly 300 cubic meters of concrete; the initiative of using a natural wall system by enlarging the base of a talus instead of building a protective rock wall at a U-turn point, which economized 2,500 cubic meters of large rocks; the initiative of installing bogies on trailers to transport large concrete sections over hilly and curved roads, increasing the volume of dirt transported by four or five times.

Coc 6 coal mine has paid attention to training a body of technical workers and drawing up technical and production plans so as to effectively use the dirt and rock conveyer belt system.

LAO CAI APATITE MINE INCREASES TRANSPORT PRODUCTIVITY--The shipping of consumable mineral ore is the final important link in the Lao Cai Apatite Mine production chain. At the work site, BelAZ trucks load and transport earth and clear the way for EKG vehicles to pick up the ore. Maz transport trucks line up single file and busily shuttle ore all day and all night. The ore in field 2 is piled as high as a mountain and the industrial installations getting it take it away in an endless stream. During the first 3 months of the year Maz convoys moved 24,000 tons over plan, bringing the amount of ore stored at field 2 up to 100,000 tons. Much high labor productivity emerged. The new transport capability and shipping productivity permitted ore to be transported as quickly as it was extracted. /Excerpt/ /Hanoi NHAN DAN in Vietnamese 25 Jun 81 p 2/ 9019

RUMOR ON RISING TRANSPORTATION COSTS SQUELCHED

Ho Chi Minh City TIN SANG in Vietnamese 12 Jun 81 p 1

[Article by PHH: "The Muncipal Transportation Service Denies Any Change in Transportation Costs"]

[Text] TIN SANG 11 Jun--Some people recently launched the false rumor that the state was about to raise transportation costs. This false rumor may have a bad effect on market prices. On 9 June, the Municipal Transportation Service issued a directive requesting transportation units to take the following urgent measures:

The first measure is for corporations, enterprises, transportation and communication bureaus in precincts and districts, and cooperatives to strictly and correctly apply the promulgated policy on transportation costs without unilaterally raising the transportation costs and cargo handling fees on any line or means of transportation. It is forbidden to raise the transportation costs under whatever form (such as collecting more money, fuel or supplies or increasing the transportation distances) and no matter whether the tasks involved are part of a principal or local plan.

The second measure is that vehicle stations and harbors must strictly carry out the regulation on the publication of transportation costs applied to each line and must fully and correctly implement the published price list.

The third measure is to assign cadres to regularly control the application of the fixed transportation costs by each unit within its own scope of activity and also to severely deal with any infraction in matters of transportation costs.

It is necessary to disseminate the present directive on application of transportation costs among vehicle drivers, ship pilots, members of mechanized and rudimentary transportation cooperatives and cargo handling workers and to ensure that the directive is implemented. All cadres, manual and office workers and cooperative members in the transportation sector must be reminded of the long-term and basic benefit to be derived from the efforts to maintain the current transportation and stevedoring costs.

VIGILANCE AGAINST VOA, 'REACTIONARY CULTURE' URGED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 18 Jun 81 pp 1, 4

[Article by Phan Van Thanh, 27th Ward, Binh Thanh District, in "Saigon People's Forum" Column: "The Most Effective Armor Against the Venom of Depraved, Reactionary Culture"]

[Text] There still are people with vague ideas about the plots woven by the enemy on the cultural and literary front. In our opinion, negligence and lack of vigilance will make us pay dearly for these schemes.

It is not by sheer chance that VOA--in the so-called "Musical Program From Overseas" conducted by Le Van-Do Ngoc Yen--has broadcast songs composed by imperialist henchmen with the aim of instigating our people to leave their country and opposing and undermining Vietnam. Nor is it a matter of chance that cultural merchants have illegally printed 150 kinds of novels and nonsensical, ghastly and fictitious stories aimed at poisoning the minds of teenagers and children. It is not accidental that Bui Dinh Ha, owner of a second-hand book shop in Dang Thi Nhu Street, First Precinct, has "written" and rented out depraved books and so forth.

This is clearly a plot to attack us on the cultural and ideological front. We fully agree with our friend Pham Phu Nhuan in his article entitled "The Grey War" and published by SAIGON GIAI PHONG on 8 June 1981 when he said:

"The psychological warfare waged by the imperialists and Beijing expansionists does not consist of sporadic and patchy activities but constitutes a very reactionary and cunning scheme which has been meticulously planned and is carefully carried out to attack us."

Closing down camouflaged coffee shops, confiscating depraved and reactionary music, songs, books and newspapers and prosecuting illegal dealers, smugglers and cultural speculators is not enough. The root of the problem is the need for everyone of us to become aware of his responsibilities in the current struggle against the reactionary and depraved culture. To this end--as Pham Phu Nhuan said--we must have a strong "political, moral and psychological" body, which means our resistance must be built up through "firmly adhering to the party line and standpoint, cultivating good revolutionary qualities and ethics, clearly distinguishing right and wrong and thinking and acting rightly."

In short, being naive and daydreaming on the cultural and literary front is falling into the enemy trap. We ought to display a high revolutionary vigilance. A strong political, moral and psychological body is the most effective armor for preventive and defensive purposes.

FOOD STORES CRITICIZED FOR RUNNING OUT TOO SOON

Hanoi HANOI MOI in Vietnamese, 30 Jun 81, p 3

[Article: "Consumer's Notebook Column"]

[Text] Recently, at a number of food outlets, customers have often been hearing an indifferent, "All sold out" when they bring in their ration coupons.

For goods to run out when the coupon will still be valid for a while probably doesn't bother anyone. The consumer is very sympathetic to the city's problems with goods these days. Deliveries might be delayed by shortages in transport facilities or for some other reason.

But when the expiration date is tomorrow, and they say "All sold out" today without any explanation as to what might be done--that's irresponsible.

On the afternoon of the 5th of last June, a number of customers brought ration coupons to Hom Market to buy spices. They were referred from store to store, each finally saying, "All out."

The food sector used to have a system for replenishing stocks and for adding enough sales personnel and outlets to ensure that food was available right up to the last day on which ration coupons were valid.

Today, with foodstuff problems widespread, it is only proper that a sense of responsibility be maintained toward the customer on the last day that ration coupons are valid.

We hope that the managing corporation will attend to this matter. Sufficient stocks should be available, especially on the last day before ration coupons expire; enough sales personnel and outlets should be added, in the spirit of continuing sales as long as there are still customers to sell to. If the expiration date is getting close, and demands were estimated too conservatively, the shortage should be announced early to keep customers from losing patience.

GRAIN DISTRIBUTION NORMS FOR CADRES, WORKERS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 19 Jun 81 pp 1,4

[Article by P.F.: "Rationally Adjust Norms of Grain Distribution to Various Categories of Recipients as of 1 July 1981"]

[Text] SAIGON GIAI PHONG--On 16 June, the Municipal People's Committee issued Decisions No 409 and 410 on the distribution of grain to various age groups belonging to a nonagricultural section of the municipal population and on the readjustment of grain rations to cadres and manual and office workers according to uniform regulations in force throughout the country.

1. Following are the norms to be applied in distributing grain to various age groups of dependents of on-the-job cadres and manual and office workers, armymen on active service, cadres and manual and office workers who have either retired or are on leave because of their incapacity to work, fallen heroes, wounded soldiers having returned to live with their families, and persons who had done meritorious service to the revolution but have now grown old and weak and can no longer work:

--Under 12 months of age: 4 kilograms per month.

--1 to under 2 years of age: 5 kilograms per month.

--2 to under 5 years of age: 7 kilograms per month.

--5 to under 10 years of age: 10 kilograms per month.

--10 to under 15 years of age: 13 kilograms per month.

--15 to under 18 years of age and exactly 18 years or more but still attending cultural general schools: 15 kilograms per month.

--Parents, wives or husbands of cadres and manual and office workers who are above the working age or who have lost their capacity to work: 10 kilograms per month.

Whenever they exceed a particular age group to which they have so far belonged, the dependents of cadres and manual and office workers will be reclassified to the next [elder] age group and their grain rations readjusted accordingly.

2. Cadres and manual and office workers will receive the following grain rations according to the labor categories in which they have been classified:

--13 kilograms per month for persons holding functions in various sectors and trades classified as Category A, cadres and manual and office workers who have retired or are on leave because of their incapacity to work, anti-French wounded soldiers of Categories 2, 3, 4, 5 and 6 and anti-U.S. wounded soldiers of Categories 1, 2, 3, 4 and 5 who have returned to their families.

--15 kilograms per month for persons holding functions in various sectors and trades who have been classified in Category 1.

--17 kilograms per month for persons holding functions in various sectors and trades who have been classified in Category 2 and for students of colleges and vocational middle schools.

--19 kilograms per months for persons holding functions in various sectors and trades who have been classified in Category 3, for anti-French wounded soldiers of the Special Category and Category 1 and anti-U.S. wounded soldiers of Categories, 6 7 and 8 who have returned to their families.

--21 kilograms per month for persons holding functions in various sectors and trades who have been classified in Category 4.

--24 kilograms per month for persons holding functions in various sectors and trades who have been classified in Category 5.

The abovementioned decisions will be implemented beginning 1 July 1981.

POLICY ON DEALING WITH BRIBERY EXPLAINED

Hanoi QUAN DOI NHAN DAN in Vietnamese 14 Jul 81 p 2

[Article by Pham Van Phat: "On the Policy for Dealing With the Crime of Bribery"]

[Text] Together with corruption and oppression of the masses, bribery has caused serious harms by decreasing the people's trust in the managerial effectiveness of the State, considerably hampering the realization of our Party's and State's policy lines, policies and laws, and rudely violating the working people's collective mastership. This is a dangerous behavior, a most negative and evil phenomenon in social life. The ordinance on punishing bribery promulgated on 20 May 1981 responded in a timely manner to the demand for struggle against this category of crime, thereby providing our State, people and army with an additional sharp weapon with which to stop and eradicate bribery.

Previously, our State had policies on dealing with bribery. They were expressed in decree 223/SL of 17 November 1946 and decree 03/SL of 15 March 1976. However, under the present conditions bribery involves complex variations and sophisticated schemes which have developed on a rather universal basis, thereby making applications of the old legislation inappropriate. Previously, the concept of bribery paid attention only to the close relationship between the person who offers the bribe and the one who receives the bribe to conceal crime and evade discovery. Therefore it did not clearly differentiate between the nature and level of harm of each act of offering bribes and accepting bribes, thus leading to dealing with both aspects of bribing in the same way and punishing both acts in the same way. Thus crimes were not discovered in time or remained undiscovered, and discouraged everyone from actively participating in the struggle against bribery, thereby weakening the preventive effect.

This time, the policy on dealing with bribery has many new amendments. On the basis of applying the principle: coordinate serious sanctions with leniency, punishment with prevention and reeducation insure a serious carrying out of policies and laws; strengthen State management insure that the ranks of State cadres and personnel firmly maintain their revolutionary qualities and integrity and put all their hearts and efforts into serving the people. The amendments to the policy are expensses in the following principal problems:

1. The attribute of bribery is that the criminal act takes place stealthily between the person who gives the bribe and the one who receives it, the latter being usually a cadre or employee of the State having a certain duty or power. The handling must be based on analyzing the nature and level of harm of the criminal act and its

consequences. Actually, the acts of offering and accepting bribes differ from each other in regard to goals, criminal motives, situations and causes, and especially in regard to the harmful degree and nature of the consequences. Therefore, in order to clarify the strictness and justness of laws and to insure accurate processing, our State considers accepting bribes more dangerous than offering bribes or mediating bribery because this is a duty related crime which endangers State management in many aspects. To a certain extent, it disturbs the normal operations of the State apparatus, especially in the present situation. Thus when we have to do our utmost to speed up production, gradually improve the people's life and overcome the weaknesses in social management, this act must be identified and dealt with severely.

2. Bribery is one of the negative phenomena which is condemned most severely by the masses and the people because it directly violates the working people's mastership. Degenerate cadres and personnel, taking advantage of the duties and powers entrusted to them and using loopholes in the managerial link have resorted to all possible tricks to carry out activities that go against State regulations to extert money and squeeze the people. The law identifies this gang. Here, it is necessary to see how determined our State is in the fact that there is no need to determine whether or not the criminal has already received the bribe and that it regards acts of asking for bribery whether or not the bribe is received as a crime and to be dealt with as bribery. That is, anyone who expresses the intent to ask for a bribe is to be sentenced as if he had already received it.

The act of receiving a bribe is also examined in terms of whether the bribe is received to carry out a duty or not to carry out a duty (for instance, a tax cadre is bribed to let dishonest merchants illegally transport State-managed goods through check points) and whether the bribe taker abuses his function and powers to do something illegal. Acts that belong to the second category are more dangerous because they demonstrate the criminals' spirit of no concern, no principles and disregard for the laws. Experience in dealing with corruption regarding socialist property show that these individuals often infringe upon socialist property to a great, serious extent. It is the same with bribery. They cause damage which cannot be fully measured to the State's management, diminish its prestige and sow doubt about managerial effectiveness among the people.

Simultaneously and on the basis of this analysis, our State clearly provides for cases of bribery which, because they are specially serious, must be dealt with severely for the sake of general warning and prevention, which is very necessary. The warning and threatening effect of law comes not only from serious punishment but also and essentially from a comprehensive use of necessary legal, administrative, educational, etc measures so as to struggle to prevent and oppose crimes. A crime committed by anyone regardless of his position or importance, must be uncovered and appropriately punished. This applies specially to bribery, which is a duty associated crime, in which the offender must bear a responsibility for his crime appropriate to the post and responsibility entrusted to him.

3. The guiding thought in the policy on dealing with bribery is to set forth concrete, accurate and strict regulations so as to express high determination along with great leniency, thereby enabling anyone with criminal intent to foresee that it is impossible to avoid being discovered and punished. At the same time constantly show tolerance and save those who sincerely repent and self-consciously report and denounce accomplices.

It is easy to recognize that the weakest spot in the close relationship of those involved in bribery is that they greatly fear being reported and denounced by partners. Therefore, to divide them by encouraging criminals to self-consciously report or denounce partners is to aim at this weak spot. Thus we notice a very strong point in the present policy which is that in addition to leniency if the persons who gives the bribe is granted leniency, that is, exempted from criminal responsibility, he will get back a part or all of the bribe. This paves the way for criminals to voluntarily report and to be assured that they will have their ciminal responsibility waived and that the State will return the riches they mistakenly used for bribery.

Also, in order to contribute to motivating the struggle against crimes, thoroughly understand the people's feelings in situations when they are forced to bribe, and encourage them to voluntarily report and denounce those who ask for bribes. In this case the state considers them not guilty and will give them back all the riches they used for the bribery.

This is a very important point in the policy in dealing with bribery in the present situation. It illustrates the depth and accuracy of the policy, clearly seeing that an attribute of the act of bribery is that the person doing it is afraid of being punished by the law and, therefore, does not dare to voluntarily report it and even intentionally covers it up when suspected or interrogated. Thus it may be also said that this is the highest level of leniency ever reached by the State's laws, manifesting the very deep socialist humanity.

4. Our State has always implemented incentive regulations vis-a-vis meritorious persons in the struggle against violations and offenders, such as rewarding those who discover and stop smuggling, gambling, goods speculating, etc. With the present policy, the State pays attention to rewarding the cadres and personnel who are honest and firmly maintain revolutionary cadres' qualities. Social opinion values very highly the cadres and personnel who possess precious qualities setting them up as typical examples of honesty and intengrity for all the ranks of cadres and personnel of our Party and State. In order that this policy highly develop its effect, the installations, army units, etc which have cadres and warriors who, while carrying out their duties, struggled straightforwardly, refused to receive bribery and denounced bribers and their middlemen, must reward them in a timely manner in line with State regulations. They can be cited in newspapers, broadcasts, etc if necessary.

5. Besides the points mentioned above, in order to insure that bribery be discovered in time and dealt with strictly, the policy even pays attention to punishing the elements who use their influence upon persons in official position or positions of influence to commit bribery and who threaten informants, concretely regulating a body of penalty, levels of fines and measures to insure the carrying out of sentences, etc. These points are spelled out in the ordinance on punishing bribery.

The ordinance on dealing with bribery is promulgated just at the time when our entire Party, people and army are hecticly struggling against negative phenomena in social life. Many examples of bravery and unselfishness for the sake of revolutionary duty have appeared among the armed forces. The latter's participation in the struggle against negativism has made great contribution to increasing the strength of the State, a dictatorship of the proletariat, in struggling effectively against negative phenomena, which include bribery.

ELECTRIC SERVICE DIRECTOR ANSWERS READER COMPLAINTS

Hanoi HANOI MOI in Vietnamese 23 Jun 81 p 4

[Article by Dang Duc Ha, Director of the Hanoi Electric Power Management and Supply Service: "On Irregular and Unfair Electric Power Supply"]

[Text] Since mid-May, 1981, the supply of electric power has been unreliable in the evenings for city residents, especially in the vicinity of Hai Ba Trung Ward and in the areas near the center of the city. This is mostly because of low power generation, but it is also true that our service has not yet managed to stop households from violating regulations on the use of electricity.

Besides, our service lacks the technical management tools needed to supply electric power with relative fairness among the various wards in the city; thus, the flow of electricity is never interrupted in some places, while there are long power failures in others.

We welcome constructive criticism from the people. Next week the electric service will announce to each subward which nights each week they will have a stable supply of electric power and which nights the power might fail due to weak generation or breakdown in the electrical network.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MAJOR GENERAL HOANG DIEN COMMENTS ON REAR-SERVICES SCIENCE AND TECHNOLOGY

Hanoi TAP CHI QUAN DOI NHAN DAN [People's Army Review] in Vietnamese No 5, May 81 pp 38-45

[Article by Major General Hoang Dien: "On the Rear-Services Scientific Work and Rear-services Science and Technology at Present"]

[Text] During the recent period, the rear-services scientific work and rear-services science and technology have been developed well and have operated effectively.

The rear-services scientific work has adhered closely to the military and rear-services missions, has developed relatively comprehensively theoretical research, the drafting of statutes, the recapitulation of war experiences, and the preparation of historical accounts, and has begun to develop a system and meet the requirements of guiding rear services and training cadres.

Although difficulties have been encountered in the rear-services scientific-technical work, scientific-technical research and the application of scientific-technical advances to actual rear-sercices activities have attained notable accomplishments and brought about real results. In the sphere of the entire sector, the scientific-technical work has been carried out along the lines of improving the living conditions and health of the troops, promoting production in order to create material resources, and guiding, commanding, and managing rear-services along professional, modern lines.

The organization, elementary training, and supplementary training of cadres have also been carried out effectively, have been increasingly perfected, are carried out smoothly, and have contributed to enabling the rear-services scientific-technical work to develop and to exert its effect under actual conditions.

Building on the initial victories and results, while at the same time endeavoring to overcome the deficiencies and weaknesses, we are determined to do a good job of fulfilling the directions and missions of the rear-services scientific work and rear-services science and technology in future years.

With regard to rear-services science, we must primarily and principally concentrate on the following major objectives:

Strongly promoting all-round study of the basic matters of the rear-services in war to defend the homeland, in order to contribute to guiding the rear-services work and build a rear services sector that is appropriate to the new phase of the revolution and is equal to the new development of war and the army.

Recapitulating the rear-services of the rear-services activities in the wars against France, the U.S., and the Chinese expansionists and hegemonists. That is an important matter, an indispensable content of building an all-round rear-services science. From the experiences that have been recapitulated, we must isolate the theoretical matters and principles which have an actual, scientific basis in order to provide guidance and resolve the new problems that are posed.

Promoting the systematic compilation of textbook materials relevant to the rear-services sector, a system of rear-services statutes, and the sector's history, and concerning ourselves with such secondary fields as rear-services geography, rear-services terminology, etc.

Those are matters which are both urgent immediate concerns and have a basic long-range nature. Doing a good job of carrying them out would contribute importantly to allowing the sector to quickly overcome the deficiencies and weaknesses of its rear-services production and management and become a professional, modern sector.

With regard to rear-services science and technology, we must concentrate our capabilities and enter deeply into applied research, in order to attain the following three objectives:

Increasing the productivity, quality, and effectiveness of the task of assuring materiel, living conditions, military medicine, and transportation, in order to promptly and definitively resolve difficult, complicated problems in organizing rear-services, especially with regard to the material lives of the troops at the front, including their messing, living quarters, and medical facilities, and the supplying and transporting of foodstuffs and consumer goods.

Researching and applying scientific-technical advances to the sphere of production in order to create sources of materiel. To meet that objective is to rapidly increase the sector's capability for agricultural, industrial, and consumer goods production, in order to stabilize and improve the troops' living conditions. And by that means the sector can have a material reserve in order to always take the initiative in assuring rear-services under all complicated circumstances of our country's economy and of war. We must apply scientific-technical advances to improve the quality of rear-services guidance, command, and management and to keep abreast of our army's development with regard to modernizing the task of commanding and managing troops.

In the process of implementing the above directions and missions, we must firmly grasp the following guidance thoughts:

Paying attention to the mission of building and perfecting rear-services science and science and technology in general with regard to rear services, while at the same time being adequately concerned with developing the professional, specialized, and technical theory of each sector and of each armed forces branch, combat arm, production and service base, etc.

We must carry out simultaneously and effectively the research, compilation, and recapitulation tasks in rear-services scientific activities and in researching, disseminating, and applying inovations, improvements, inventions, and scientific-technical advances in rear-services scientific-technical activities.

We must closely combine theory with practice, recapitulation with theory, short-range research and long range research, applied science with basic science, and rear-services science and technology, military science and technology and social science.

We must urgently complete the recapitulation of the rear-services work in supporting combat and building up the armed forces during recent years, and rear-services experiences in our nation's history. At the same time we must adhere closely to, and enter deeply into researching, the actual situation at present, and forsee future development in order to have correct research directions and plans, promptly resolve the new problems that are posed, and do a good job of carrying out long-range basic development.

We must firmly grasp the economic aspect and effectiveness of scientific-technical activities in order to correctly design, and do a good job of fulfilling, the research programs and topics. At the same time, we must apply innovations, improvements, inventions, and scientific-technical advances to actual situations as soon as possible, with the highest quality and at the lowest cost, and restrict to the minimum the waste of time, money materiel, manpower, and intelligence.

We must develop to the maximum all capabilities of the corps of specialized scientific-technical cadres and the collective strength of the research organs, and rely on the intelligence and advanced experience of the cadres and men throughout the sector, while at the same time winning the support and cooperation of the entire army and of the organizations and individuals engaged in scientific-technical work in the other state sectors.

We must positively serve the immediate requirements and missions but must also endeavor to prepare for the development and construction of rear-service science as well as rear-services science and technology, so that they can make greater, more lolid progress. It is especially necessary to pay attention to developing, training, and using the corps of specialized research cadres and to strengthening guidance and management of research, in order to rapidly increase the rate at which research plans, programs, and projects are carried out and apply them to actual conditions promptly and attain high effectiveness.

The year 1981 -- the first year of the third five-year plan -- has an especially important position with regard to the fulfillment of that plan. Therefore, in 1981 we are determined to bring about a new transformation in rear-services scientific activities and rear-services science and technology, and create momentum for the complete fulfillment of plans in future years.

In order to achieve that transformation, we must do a good job of applying the following principal measures regarding leadership, guidance, and management:

1. Improving a number of important and urgent aspects of the guidance, organization, and management of rear-services scientific research and rear-services science and technology.

We must immediately improve our planning, along the lines of developing to a high degree the capabilities, knowledge, and experience of the cadres and men, especially the responsibility and creative capabilities of the specialized scientific-technical research organizations and cadres, in order to overcome tardiness, a lack of balance, and low effectiveness of all scientific-technical activities. We must enable plans to truly become an effective management tool for increasing the productivity, quality, and effectiveness of the scientific-technical activities.

The plans that are drafted must be based on the military missions and the plans for providing rear-services support for the people's armed forces, and effectively serve those missions and plans. The over-all plans, the individual plans and programs, and the specific projects of each sector and echelon must manifest the directions, missions, and guidance thoughts of the plan to develop military science and military science and technology. They must be concrete, rational, and appropriate to the actual situation, and they must be positive, realistic, and active but must also clearly state each solid step and be appropriate to the capabilities of the organs and cadres carrying out research and the conditions of the army and the nation regarding the developmental pace of military science and technology, the investment of cadres, funds, and materiel, etc. We must resolutely overcome all tendencies to be subjective, impatient, conservative, timid, etc., in drafting plans. We should not organize programs and projects which we are not capable of carrying out, but we should not, because of difficulties and obstacles, ignore the key, urgent matters.

The over-all plan of the sector, as well as the individual plans of each sector, organ, and unit must also be complete and balanced, in order to enable the rear-services scientific activities and rear-services science and technology to develop harmoniously and solidly, both definitively resolving each problem and aspect and fulfilling the directions, missions, and objectives that are set forth. Both the short-range plans and the long-range plans of an echelon are drafted by that echelon in accordance with the directions, missions, and over-all plans of the upper echelon. All research programs and projects in each plan must clearly state the objectives that must be attained, and there must be a clear division of labor and close cooperation among the relevant individuals and organizations, and at the same time it is necessary to take into consideration the material factors ensuring the fulfillment of the plan. It is necessary to strictly carry out the drafting of plans from bottom to top, and pay all-out attention to the right of organs, sectors, and base-level units to take the initiative in drafting plans. Furthermore, we must absolutely observe the principle of explicit division of labor and decentralization, and have the approval of each competent echelon, so that plans can truly become legal orders which must be carried out by the lower echelon.

It is difficult to draft plans, and it is even more difficult to completely fulfill the plans that have been drafted in the present situation. Therefore, under the di direct leadership of the party committee echelons the commanders and organs managing science and technology must firmly grasp the plans, heighten their sense of responsibility, and find the most effective ways for the organization to victoriously fulfill the plans that have been drafted. Although all plans must be taken into consideration, they must not give them all equal consideration, but must have a central emphasis and a clear order of priorities focusing on the key, most useful matters and tasks.

We must promptly rectify the management of rear-services scientific research and rear-services science and technology. If that is to be accomplished, the most important matter is close management in accordance with plans, standards, and norms, the good implementation of division of labor and decentralization, and the assignment of responsibilities to collectives and individuals. At the same time, we must create a movement to carry out serious research, with scientific methods and discipline, increase the efficiency, effectiveness, and quality of research; disseminate and apply the results; and reduce expenditures of time, materiel, manpower, and intelligence.

We must positively research and immediately policies and systems to encourage scientific and technical activities, in correct accordance with the regulations and systems promulagated by the state and the Ministry of National Defense. It is necessary to immediately step up the study and concretization -- as soon as possible -- of systems, policies, and standards regarding rewards, compensation, and authors' emoluments in rear-services scientific-technical research, and the rewarding of innovations, improvements, and inventions in rear-services scientific-technical research. We must do a good job of organizing reviews in order to assure the scientific nature and accuracy of the research projects; correctly, justly, and rationally evaluate the ability and intelligence of groups and individuals; and make awards in correct accordance with the systems, policies, and standards that have been promulgated.

We must further expand cooperation in scientific-technical research between the General Department and the organs of the army and the other state sectors. An important matter regarding cooperation which must receive special attention is selecting for cooperation organizations and people capable of completing the programs and projects rapidly and with good quality. At the same time, we must focus on the objectives and requirements of the programs and projects, and must espeespecially be concerned with directly serving the combat-readiness, combat, development, training, and production of the armed forces. We must implement the entire plan, but must concentrate on the most urgent, difficult, and complicated problems. At present, we must pay the most attention to supporting combat and giving support with regard to living conditions, health, disease prevention, medical care, and transportation.

2. Building, consolidating, and developing an army-wide system of management organizations, and perfecting, training, and utilizing the corps of rear-services scientific research cadres and rear-services science and technology cadres, so that they can be equal to the missions assigned them.

At present, a rear-services scientific organization has begun to take form within the Rear-Services General Department and there is a relatively clear division of labor among sectors, but it has not been developed into a complete, solid system encompassing all sectors and the entire army. With regard to the rear-services scientific-technical apparatus, although the rear-services sector's supply and production units have been formed at all levels -- from the General Department down to the departments and organs -- throughout the army, they are not yet strong enough quantitatively or qualitatively to fulfill their missions. Therefore, an urgent organizational task is to urgently perfect the apparatus and add cadres, in order to assure that the rear-services scientific-technical activities and rear-services science and technology are put on the right track and attain increasingly higher productivity, quality, and effectiveness.

In perfecting the management apparatus, in addition to forming and consolidating organizations specializing in rear-services science and technology at the various echelons to form a complete, strong army-wide in accordance with the established table of organization, it is necessary to conduct research in order to quickly form a network of collaborators. That is a good form for enabling large numbers of cadres, scientists, and technicians to participate in scientific-technical research, and reduces the number of people involved while still allowing the fulfillment of missions. If that is to be accomplished, the mission of the apparata at the various echelons is to create a solid basis on which to readjust and reorganize the apparatus or build new apparata in places where there are none.

On the basis of clarifying the functions and missions, and resolving the problem of maintaining the stipulated tables of organization, it is also necessary to immediately isolate experiences in order to, by that means, draft regulations and improve the research methods.

A decisive matter in victoriously fulfilling responsibilities and assuring that the scientific-technical organizations fulfill their functions and become increasingly strong is to continue to develop and train cadres and have directions and policies for correctly using the crops of specialized cadres in research in the immediate future, and to quickly advance to having a succeeding corps of cadres capable of doing a good job of long-range research.

A problem that is posed is resolving all aspects and segments, promptly adding a sufficient number of people, in correct accordance with the requirements, tasks, and functions of the organization and appropriate to the responsibilities and professional capabilities of each person and urgently training the cadres in order to increase their research levels and capabilities, along the direction of development of rear-services science and military science, and of rear-services science and technology and military science and technology. In adding people, it is necessary to resolutely replace the cadres incapable of carrying out research with cadres who have theoretical knowledge, actual experience, and research ability, in order to assure that the task of perfecting research organs attains good results with regard to both numbers and quality, and that such organs are balanced and complete. In elementary and supplementary training, it is necessary to pay attention to both the older cadres and the young cadres, and to cadres both within and without the scientific-technical organizations. Especially, with regard to the cadres who will carry out long-range research, there must be plans to develop them into a new class of mid-level and high-level cadres and advance to attaining higher levels -- the college and post-graduate levels.

Good training is very important, but we must not lightly regard utilization, which is the final phase but has a positive effect on achieving the qualitative transformation of the organs and cadres. Only if they are well utilized can the cadres be content, concentrate their intelligence on their work, increasingly improve their ability and knowledge, accumulate much experience, and devote all of their spirit, energy, ability, and creativity to science and technology. Furthermore, only by good utilization can we uncover and select good, capable people who have good potential in order to develop them into skilled leading cadres and key aides, into experts who can fulfill the role of hard-core forces in all scientific-technical activities.

Therefore, when the organizations at all echelons require cadres they must pay attention to making careful selections and ensure that cadres are added in correct accordance with the requirements and functions of the organ and the position and responsibilities of each person, and use them in correct accordance with their occupations, knowledge, and capabilities.

All of those tasks must be organized and implemented in accordance with a unified, scientific plan, and carried out in coordination with the plans regarding the organizational and cadre tasks of the entire sector, the entire army, and of each echelon and unit.

3. Rapidly increase the sector's scientific-technical information capabilities.

Information capabilities are now very rich and are derived from many sources, but there must also be correct understanding of their significance and role, and especially there must be information organizational forms and methods that are effective and very responsive and accurate, in the form of a system of scientific-technical information organizations of the sectors and echelons and the expansion of contacts with individuals and scientific-technical organs in our country and abroad.

Therefore, in order to rapidly increase our scientific-technical information capabilities we must pay attention to both of those operational forms. We must urgently put in order the scientific-technical organizations, libraries, and bookshelves where they exist, while creating new ones in places which do not yet have them. We must also select, assign, and train cadres who have the necessary levels, knowledge, and ability, in order to improve the quality of the organizations doing scientific-technical information work, especially at the General Department and departmental levels.

4. Do a good job of organizing and managing the movement for the masses to partcipate enthusiastically in scientific-technical activities.

In order to do a good job of organizing and managing that movement, we must enable everyone to correctly understand the role and creative capabilities of the cadres and men. The command echelons and cadres, and the scientific-technical organs, must have a strong sense of responsibility toward the movement and be conscious of respecting and assimilating the innovations of the masses. Furthermore, there must be plans and measures to raise the scientific-technical level of the masses, and persistently encourage, actively appeal to, and guide the cadres and men to initiate and carry out research projects and technical improvements which are in accordance with the general requirements and directions and are appropriate to the positions and capabilities of each person and each component.

The launching, organization, and guidance of the movement must be carried out comprehensively, with regard to all aspects, throughout the sector, in all units, and at all levels, but there must also be a central focus and concentration on the units and sectors with high requirements regarding scientific-technical development, the key organs and units, and the scientific-technical topics which serve the urgent tasks with the greatest impact. It must be carried out step-by-step; each task must be completely finished and the results must be applied as soon as they are obtained. Then there must be continuing research to further perfect the results. At the same time, there must be close cooperation between the mass movement and the scientific-technical research organs and cadres, under the leadership of the party committee echelons and the direct guidance of the commanders.

5. Strengthen the leadership of the party committees and the commanders at the various levels with regard to the rear-services scientific work and rear services science and technology.

As is true with regard to military science and technology, rear-services scientific research rear-services science and technology constitute a major component of the leadership and guidance task of the party organizations and commanders at the various levels.

The party committees at the various levels must directly lead the rear-services scientific work and rear-services science and technology. They must exercise leadership principally by means of issuing resolutions, making certain that the resolutions are fully understood, and organizing the implementation of those resolutions by the command echelons, the scientific-technical organs and cadres, and all units. Whether the leadership of the party committee echelons is effective or not also depends on whether or not they enter deeply into science and technology and have the knowledge to serve as a solid basis on which to develop the strength of the party committee echelons in leading science and technology and enabling them to develop favorably and in the right direction, and attain high quality and effectiveness.

The commanders at the various levels must also, along with the deputies in charge of rear-services, assume direct responsibility for all tasks directly related to the results of implementing the echelon's resolutions and the upper-echelon directives and orders regarding the rear-services scientific-technical work. If they are to fulfill that responsibility, in addition to developing the effectiveness of the specialized cadres and organs, the commanders must also study in order to improve their knowledge and enter deeply into science and technology. At the same time, they must study, organize the implementation of,and guide the plans and specific contents of,the programs and projects, carry out preliminary and final recapitulations, isolate experiences, and make decisions regarding the accurate, prompt application of research results to actual situations.

MILITARY AFFAIRS AND PUBLIC SECURITY

BOGUS SOLDIERS, PUBLIC SECURITY PERSONNEL ARRESTED

Hanoi QUAN DOI NHAN DAN in Vietnamese 12 Aug 81 p 2

/Article by Thanh Lang: "Coordinate in Arresting Bogus Soldiers, Public Security Personnel"/

/Text/ Knowing that the family of Le Huu Cang is wealthy, professional hoodlums often visit him in an attempt to deprive him of his wealth.

One day Cang received a passport for traveling to a foreign country and they immediately arrived. When Cang returned home, two men, Pham Trong Han and Pham Duy Khuong, pretending to be cadres from the Ministry of Interior, came to demand that Cang return the permit with an amount of money in order to "give consideration." Knowing that the Ministery of Interior had issued a notice on criminals pretending to be soldiers or public security personnel to conduct illegal activities, Cang immediately secretly informed the ward public security and self-defense forces.

Receiving this information, the Ward II, Binh Thanh Precinct, Ho Chi Minh City public security forces quickly coordinated with the self-defense forces of the ward to apprehend the culprits. The bogus public security cadres fled but not in time. The people of Ward II joined the public security and self-defense personnel in arresting both men.

On another day, a military control team stationed at a road checkpoint outside Ho Chi Minh discovered something suspicious on a vehicle carrying passengers into the city: a number of soldiers were dressed in accordance with regulations but their manner of speech and address were not precisely in keeping with the behavior of the people's army. The military control team personnel carefully inspected their papers and discovered five men carrying false papers among this group of personnel wearing military uniforms, caps and insignia. All five men confessed that they were pretending to be soldiers in order to engage in activities to deceive and deprive the people of their property.

Knowing that there were many others disguised as soldiers for illegal activities, the military control team brought this group to their headquarters to join the public security personnel in further interrogation and in the pursuit and arrest of others. Relying on the spirit of vigilance and assistance of the people, the public security personnel and military control team found the man making the fraudulent seals and papers, Huynh Van Xam in Go Vap. Due to close coordination between the public security personnel and troops, in only a short time, they apprehended Xam and confiscated the equipment used for making fraudulent seals and papers, halting their illegal and fraudulent activity.

INSPECTION OF PUBLIC SECURITY FORCES' ACTIVITIES INTENSIFIED

Hanoi HANOI MOI in Vietnamese 18 Jun 81 p 1

[Text] To contribute to building, strengthening and purifying its forces, the Public Security Service has intensified inspection by doubling the previous number of cadres assigned to this task, by promptly examining the people's complaints and denunciations, by citing units and individuals with outstanding achievements, by taking stern disciplinary measures against faulty cadres and combatants by publishing the outcome of the handling of cases of violation of policy, law and regulations by public security cadres and combatants.

STATE FUND EMBEZZLERS SENTENCED IN DONG THAP

Hanoi NHAN DAN in Vietnamese 25 Jul 81 p 4

[Text] VNA--The Dong Thap Provincial People's Court recently tried four men named Trinh Van Tan, 55, cashier cum secretary at the War Invalids and Social Welfare Bureau in Hong Ngu District; Nguyen Tri Dung, 25, file keeper at the War Invalids and Social Welfare Service; Nguyen Tri Tham, 24, employee at the War Invalids and Social Welfare Service and Ho Giap Thiep, 42, employee at the War Invalids and Social Welfare Bureau in Hong Ngu District, on charges of misusing their functions and power to steal the state money and consequently seriously undermining the army-rear policy.

Taking advantage of the duties entrusted to them, they embezzled the state money by counterfeiting the files and certificates necessary to the payment of death compensations and destitution allowances to families of fallen heroes and wounded soldiers. Their embezzlement amounted to 111,206 dong.

The court verdict also condemned the laxity committed over a long period of time in administering the personnel and managing the state property in the war invalids and social welfare agency. Throughout 3 years, this agency failed to control the cash fund, to carefully examine certificates and to closely control the use of seals, thus providing opportunities for bad elements to connive with one another in fabricating files and certificates.

Following are the sentences meted out by the Dong Nai Provincial People's Court: Trinh Van Tan, life imprisonment and payment of an indemnity to the state and a fine totaling 62,193 dong; Nguyen Tri Dung, 17 years in prison and payment of an indemnity to the state and a fine amounting to 23,000 dong; Ngyuen Tri Tham, 13 years in prison and payment of an indemnity and fine amounting to 22,000 dong and Ho Giao Thiep, 3 years in prison and payment of a 4,012-dong indemnity.

BOAT CARRYING U.S. MUSIC TAPES CONFISCATED IN HO CHI MINH CITY

Hanoi NHAN DAN in Vietnamese 19 Jul 81 p 4

[Unattributed article: "Ho Chi Minh City Confiscates Boat Carrying Decadent Music Records"]

[Text] According to the newspaper SAIGON GIAI PHONG, the public security police recently confiscated at Bach Dang wharf a boat transporting eight cases of provocative, decadent music records, including 480 disco music cassettes bearing U.S. labels which were produced in 1981.

Those decadent cultural products were received from the U.S., via an intermediary, then sent to our country by sea.

The perpetrator of that depraved "commercial" transaction was Ly Xuan B, a no-good who works in a corporation. Social opinion vigoriously condemns people who intentionally speculate in such decadent cultural products and demands that they be severely punished, according to law.

FINANCIAL CADRES ATTACKED WHILE DISSEMINATING PRICING POLICY

Hanoi HANOI MOI in Vietnamese 12 Jun 81 p 2

[Article by L. B.: "Hooligan Acts Need Stern Handling"]

[Text] At 1100 on 3 June 1981, while Ms Nguyen Thi Thanh Van and Mr Tran Ngoc Thanh--cadres of the Finance Bureau--were propagandizing and disseminating the implementation of Decision No 2341 of the Municipal People's Committee on the posting up of price lists in order to call the attention of free businessmen and traders in the Doc Buoi area to this obligation, Nguyen Van Hoi, aged 44 and residing in Nghai Do (Tu Liem), who was selling bamboo in that area, used a farmer's pipe to hit Mr Thanh in the face. More seriously, Hoi's son named Nguyen Van Dat and aged 15 pulled out a fence pile from the ground, repeatedly lashed it out at Mr Thanh's body and ran away. On that very day, the responsible organs hunted down and arrested both Hoi and Dat and compiled a file to take legal proceedings against them.

Beating cadres while they are carrying out their mission is serious enough but beating them while they are helping implement the publication of prices to promote market management, to oppose speculation and price hike and to stabilize the life of cadres and the people constitutes an act which is aimed at sabotaging the state policy and which must, therefore, be severely punished.

MEDICAL EQUIPMENT CORPORATION HEAD FIRED FOR MALFEASANCE

Hanoi NHAN DAN in Vietnamese 3 Jul 81 p 4

[Unattributed article: "Director of Medical Equipment Corporation Dismissed"]

[Text] The Ministry of Public Health recently announced that it has dismissed Le Phuong, Director of the Class-1 Medical and Chemical Test Equipment Corporation of the Materials Department of the Ministry of Public Health. The dismissal was decided upon after the Ministry suspended Le Phuong while it reviewed such serious mistakes and deficiencies as the unprincipled internal distribution of medical equipment and the coercion and bullying of people who had a spirit of struggling to uncover mistakes by the cadres in charge, etc., such as the NHAN DAN reader who brought the affair to light.

MINERALS CORPORATION EMPLOYEES TRIED FOR CORRUPTION

Hanoi NHAN DAN in Vietnamese 3 Jul 81 p 4

[Unattributed article: "Prosecution of Corruption and Bribery Case in Minerals Export-Import General Corporation Begins."]

[Text] Last month, NHAN DAN wrote about an incident involving corruption and bribery in the Minerals Export-Import General Corporation of the Ministry of Foreign Trade. Then a large number of readers in both the north and the south wrote letters to the party newpaper expressing their anger toward the errant cadres in the above-mentioned corporation, criticizing the deficiencies in economic management, and recommending that the party and state deal with those people promptly and strictly in order to educate everyone.

NHAN DAN collected all of those opinions and sent them to the competent organs. After investigating and verifying the case, the Supreme People's Organ of Control recently decided to begin criminal prosecution. The decision was numbered 01-KSDT. The Ministry of Interior is carrying out an investigation.

The decision of the Supreme People's Organ of Control to begin prosecution of those who were guilty of corruption and bribery in the Minerals Export-Import General Corporation demonstrates the strict attitude of our party and state toward violations of socialist property and their determination to implement socialist laws.

BOGUS HOUSING CADRE TRIED FOR SWINDLING, BRIBERY

Hanoi HANOI MOI in Vietnamese 21 Jun 81 p 4

[Article by V.T.: "Case of Swindle and Bribery Relating to Housing Projects Tried"]

[Text] Nguyen Van Ngoc was a contract employee in charge of literary and artistic activities at the Housing Corporation subordinate to the Hanoi House and Land Management Service. From 1978 to early 1979, he used many tricks to defraud 38 persons of 72,650 dong.

When calling at some place, Ngoc usually passed himself off as an organizational cadre of the Housing Corporation, saying that he could easily help anyone needing a dwelling house or desiring to change houses as they pleased. The condition was that they should give him a deposit of 1,000 to 3,000 dong so that he might "offer some gift" to Mr such-and-such! To gain the confidence of credulous people, Ngoc produced a number of stolen documents and blank "House Lease" forms bearing the seal and counterfeited signature of the responsible cadre. Some people even introduced their children, nephews, acquaintances and close friends to Ngoc to offer him money to get into his good graces in the hope that he would agree to help them rent houses.

In the first-instance trial of 19 June 1981, the Hanoi Municipal People's Court sentenced Nguyen Van Ngoc to 9 years in prison and ordered the confiscation of all his property to pay indemnities to the persons cheated by him.

The money which people gave to Ngoc as a bribe or for use in further bribery would be confiscated. However, the court ordered Ngoc to fully idemnify the persons who badly needed houses, who were in strained circumstances and who had the merit of denouncing him and giving full information to state organs to enable them to investigate the case.

At the trial, it emerged that over the past few years a number of elements have impersonated public security or housing service cadres to swindle money out of credulous people who wrongly believed that everything could be "settled with money". Our people ought to be very vigilant and to denounce any bribe seeker to the administration or public security organ.

COAL CORPORATIONS CONDUCT ILLEGAL COAL SALES

Hanoi NHAN DAN in Vietnamese 14 Aug 81 p 3

/Article by Huy Minh, Quang Ninh Province in the column "Readers' Opinions": "Sale, Transportion of Coal in Excess of Plan!"/

/Text/ The provinces of Nghe Tinh, Binh Tri Thien, Quang Nam-Da Nang, Nghia Binh, Phu Khanh, etc. have serious shortages of coal and the state has no coal to supply in accordance with plan norms. However, from the end of 1980 to July 1981, many ocean going vessels transported coal in excess of the plan (about 50,000 tons) which was directly sold by the Hon Gai Coal Corporation to five districts in Quang Nam-Da Nang Province (the majority good coal). If the amount of coal above had been transported down and supplied to the provinces above, the state would have had a fairly large volume of industrial and consumer goods to support production and daily living. By carrying coal for sale outside the plan in such a manner, the units above have sold a portion of this coal in the free market at a high price or used part of the coal in expenditures not precisely in accordance with principle, in steps: relations along the route, renting sea going vessels and vehicles, offloading and movement of cargo at the ports and disturbing market prices.

We know that the Ministry of Mines and Coal has issued an order forbidding the sale of coal outside the plan but to the present time, the Quang Ninh Coal Corporation has not strictly complied. During the two months of June and July 1981, four ocean going vessels transported coal to the districts related above.

This arbitrary sale and transportation of coal has created a poor public opinion of the provinces above and it is suggested that the Ministry of Mines and Coal inspect, examine and formulate methods of overcoming the situation. It is necessary to inspect the coal sales and for what requirements this fairly large amount of coal was used. The Ministry of Communications and Transportation should also inspect and formulate methods of complying with the transportation plan in accordance with state plan norms and signed economic contracts with units managing coal vessel transportation and the midland provinces. Transportation units must be instructed to precisely comply with state plan norms and economic contracts, not bringing sea going vessels to transport coal to units in excess of the plan because such service is not to the proper recipient.

ECONOMIC PLANNING, TRADE AND FINANCE

STATE PLANNING DIRECTOR COMMENTS ON ECONOMIC-TECHNICAL NORMS

Hanoi NHAN DAN in Vietnamese 17 Jun 81 p 2

[Article by Che Viet Tan, Deputy Director of the State Planning Commission: "Strengthen Economic-Technical Norms to Contribute to the Improvement of Planning"]

[Text] Economic-technical norms are a scientific basis for planning and managing the socialist economy. Therefore, the strengthening of norms is an important requirement in improving economic management and planning. In economic planning and management during the past several years the economic-technical norm task has attained definite results. The drafting of norms regarding the use of materials, labor, and capital has been carried out for a long time in a number of ministries, general departments, localities, and bases, and has served the drafting of plans and the management of production and commerce.

However, the economic-technical norm task is still too backward in comparison to the requirements of improving economic management and planning, and is still beset with many deficiencies. The system of economic-technical norms is still incomplete: there are still no norms for many products and tasks. The norms are not uniform and there is a lack of a compulsory relationship among the factors of the production process. For example, the labor expenditure norm is drafted separately from the norms regarding the use of raw materials and materials. In some sectors, localities, and bases, the management of norms is still lax and the norms are not continually reviewed and promptly adjusted when conditions regarding equipment, the organization of labor, and management change. The systems, regulations, and methods of the economic-technical norm task have not received adequate attention or been promulgated in a uniform manner, which has led to the situation of each echelon having a different way of understanding and applying norms. Failure to stipulate an organizational system has prevented the norm task, from the base level on up to the central level, as well as distribution of labor and decentralization regarding the norm task, from being clear, specific, and tight. The cadres carrying out the norm task are deficient in numbers, are weak, and have not been well-trained.

Those deficiencies were present for many years in the management structure based on the bureaucratic, administrative-supply system and have been overcome slowly, which has lowered the quality of planning, affected the production and commercial activities, and led to the situation of management being ineffective and inefficient and of there being serious waste of labor, materials, and capital in production and commerce. Recently, the expansion of the paying of salaries according to output and the paying of bonuses in industry and commerce, the expansion of contracting-out in agriculture, etc., have had a good effect on production and the increasing of labor productivity. But a number of units have arbitrarily lowered the norms and increased the unit prices, which has increased the incomes of workers irrationally, in comparison to labor productivity and the results of labor. In view of the requirements of improving economic management and planning and, in the immediate future, the drafting of the 1982 plan and the third five-year plan (1981-1985), it is necessary to quickly overcome those deficiencies and take positive steps to create a strong transformation in the strengthening of the economic-technical norm task and assure that the economic-technical norms are truly a scientific basis for economic planning and management.

The strengthening and further improvement of the economic-technical norm task has become an extremely urgent requirement in improving economic management and planning at present.

Only if we do a good job of drafting a system of scientifically based economic-technical norms, in order to calculate draft plans in the bases, sectors, and localities, can we do a good job of exploiting latent capabilities, increase the effectiveness of production and commerce, overcome the bureaucratic administrative-supply management method and create a new management structure. Therefore, the Council of Ministers issued Decree No 201-CP, dated 26 May 1981, "Regarding the management of economic-technical norms." The implementation of the Council of Ministers decree will create a new transformation in economic planning and management.

The economic-technical norm task is a process made up of many elements which follow one another and are closely interrelated: drafting, review, promulgation, and managing the implementation of norms. That task is all-encompassing and has very deep, all-round and complete professional contents, from beginning to end. The strengthening and improvement of norms is carried out step-by-step.Improvements are made as the work is carried out, and stimulating the increasing of the effectiveness of the use of materials, labor, and capital permeates the strengthening and improvement of the norms task.

In the immediate future, it is necessary to organize the drafting of economic-technical norms to serve as the basis for calculating annual and five-year plans. In the coming period, concentrating on drafting norms in the base-level units, in order not only to create a foundation for the drafting of norms by the sectors, the localities, and the state, but also create practical conditions for drafting and synthesizing plans from the base level on up, is a requirement of the improvement of planning as well as the drafting and expansion of the economic accounting system in management, and is appropriate to the policies of the Council of Ministers regarding the expansion of the right to take the initiative in production and commerce and the implementation of financial autonomy by the base-level units. Experience clearly indicates that norms must be drafted from the base-level units on up and must be appropriate to the economic-technical conditions of each base-level unit, for only then can the actual value of the norms be high. The list of products (or tasks) requiring the establishment of norms in the sectors and echelons must meet the requirements of balancing plans and economic management, and must be pyramidal in form: narrow at the top, with a few key products or tasks, and broad at the bottom, with many detailed products or tasks.

In order to ensure the unity of norms from the base level to the central level, the planning organs at the various echelons, along with the scientific-technical research organs, the ministries, the general departments, the localities, and the colleges must study the drafting of regulations and systems regarding the norm task, and guide the common norm methods, in order to serve the annual and five-year plans. On that basis, the sectors and localities must provide specific guidance for the base-level units with regard to the method of setting norms.

The decentralization of norm approval is carried out in accordance with the decentralization of plan approval. To ensure that approval is carried out in accordance with the scientific qualities (progressive, practical, etc.) of the norms, it is necessary to organize norm-approval councils made up of representatives of planning, scientific-technical, labor, materials, financial, price, statistical, and other organizations. Such councils are advisory in nature and their principal functions are to investigate the methods and bases for making specific calculations resulting in effective norms, analyze the economic effectiveness of the norms, and recommend the conditions necessary for the head to make a decision before the norms are approved and promulgated.

The approval and promulgation of economic-technical norms will be a basis on which to calculate and unify them in all aspects: drafting plans, supplying, and cost accounting, as well as organizing the implementation of those norms in the process of fulfilling plans. The promulgation of norms must be carried out before plans are drafted and synthesized.

It is necessary to do a good job of organizing statistical systems, initial notations, meter reading, and accounting norms and methods, and organizing the collection and processing of information in the management of norms.

In order to create favorable conditions for the sectors and echelons to do a good job of implementing norms, the distribution and supply organs must strictly implement the norms, do a good job of standardizing weighing, measuring, and counting, and ensure that the time and place for delivering and receiving are in proper accordance with specifications and technical standards. We must create and perfect organizational systems to carry out the norm task in the sectors and echelons consisting of trained, specialized cadres. The organizational systems carrying out the norm task in each sector, echelon, and unit have the functions of coordinating with relevant elements and organizations and helping the heads of the sectors and echelons guide that task, from drafting, approving, and promulgating norms to managing their implementation.

The strengthening of the economic-technical norm task has a very great importance and significance. If it is carried out well in all sectors, echelons, and base-level units, it is certain to contribute positively to improving economic management and planning, while at the same time making a good contribution to guiding the implementation of the 1981 annual plan and the drafting of the 1982 state plan and the third five-year plan (1981-1985).

COUNCIL OF MINISTERS PROMULGATES DECISION ON RESEARCH ECONOMIC CONTRACTS

Hanoi DAI HOC VA TRUNG HOC CHUYEN NGHIEP in Vietnamese No 5, May 81 pp 30, 32

/Council of Ministers Decision 175/CP on Signing, Implementing Economic Contracts for Scientific Research, Technical Development/

/Text/ Office of the Premier
175/CP

Socialist Republic of Vietnam
Independence-Freedom-Happiness

Hanoi 29 April 1981

COUNCIL OF MINISTERS

Based on the Council of Ministers Organization Law passed by the National Assembly on 14 July 1960;

To develop the creative labor capabilities of the scientific and technical cadre ranks and to promptly answer the economic and social missions of the nation while simultaneously encouraging cooperation within the scientific research and technical development fields and to assist in completing the scientific and technical plans of the nation and of all sectors and echelons;

In accordance with a suggestion from the Chairman of the State Science and Technology Commission.

DECISION

Article 1: The application of a system of signing economic contracts in scientific research and technical development is permitted.

Article 2: The bases for signing economic contracts in scientific research and technical development are state plan norm missions or goods orders.

The contract signing and implementation must be conducted precisely in accordance with the following stipulations:

1. Must be on a voluntary basis between the scientific research and technical development agencies and colleges and vocational middle schools with each other or with state and collective economic organizations.

The signed contract is a legal document in the economic relations of the participating parties.

2. No obstacles to completion of state plan missions may be caused. Contracts in goods orders are fulfilled in the following circumstances:

When the party assigning the contract has fully utilized all his capabilities but has still not completed state plan norms.

When the party accepting the contract, after fully arranging conditions for completing state plan norms, still has the capabilities possible for full utilization.

3. Contract participants may agree on compensatory funds for contract fulfillment in excess of research and development expenses, losses and other expenses. The party accepting the contract is permitted to use a portion of the compensatory funds for material encouragement of individuals participating in contract completion.

In contracts with goods orders, the accepting party will not deposit compensatory funds in the state budget but will use them as follows:

a. In projects not using state labor time to achieve (achieved outside of administrative hours), participants completing the contract will receive all the compensatory funds.

b. In cases where upper echelons allow the use of state labor time to complete the project (achieved during administrative hours), part of the compensatory funds will be used to supplement the scientific work and collective welfare funds of the unit with the remainder distributed to the cadres participating in contract completion.

4. The higher level agencies of contract participants have a responsibility for following, assisting and creating favorable conditions for the participants to sign contracts precisely in accordance with the law and to fully and strictly fulfill the pledges. Upper agencies have joint responsibility in cases where their decisions lead to contract revisions, cancellation and violation.

5. Projects completed through contracts in accordance with the stipulations in this decision will all assure legal equality in the review and evaluation of awards and issue of patents, etc. in accordance with the overall system of the state.

Article 3: The treatment of scientific research and technical developments disputes and violations will be applied in accordance with the Economic Contract Statutes but with full attention to the special characteristics of scientific and technical activity.

Article 4: Based on this decision:

The Chairman of the State Science and Technology Commission, after reaching agreement with the State Economic Arbitration Council and related sectors, will promulgate stipulations on the signing and fulfillment of economic contracts in scientific research and technical development.

The Chairman of the State Economic Arbitration Council will provide guidance in contract signing and resolving disputes when violations occur.

The Minister of Finance and the General Director of the State Bank of Vietnam will provide guidance in payment procedures for contract participants.

Article 5: The Chairman of the State Science and Technology Commission, Chairman of the State Economic Arbitration Council, General Director of the State Bank of Vietnam, chiefs of related agencies and the people's committees of provinces, cities and special sectors directly subordinate to the central government bear responsibility for implementing this decision.

On behalf of the Council of Ministers and
the Premier

Deputy Premier
Vo Nguyen Giap

'NHAN DAN' EDITORIAL CALLS FOR EXPANDED EXPORT-IMPORT ACTIVITIES

Hanoi NHAN DAN in Vietnamese 4 Jul 81 p 1

[Editorial: "Expand the Export-Import Activities of the Enterprises and Localities"]

[Text] In order to encourage the sectors and localities to develop their latent capabilities and rapidly increase the supply of goods for export, the Council of Ministers has decided to allow the central enterprises and the localities to engage directly in exporting and importing. From now on, they will have the right to take the initiative in production and commerce, to exercise financial autonomy, and to effectively use the existing production capabilities, create many export goods, and gradually balance their requirements for imported raw materials and materials, in order to assure that production stabilizes and develops. That will tie in our country's production more closely with the world market and encourage the application of technical advances.

In order to increase the effectiveness of those activities and effectively serve the planned economy, the central enterprises and localities are allowed to engage directly in exporting and importing when they have all the essential conditions stipulated by the state, and must be managed in a centralized, unified manner in accordance with the principle of the state having a monopoly with regard to foreign trade and all economic relations with foreign countries.

There must be statutes to stipulate the operational spheres and conditions, and the authority and responsibilities, of the enterprises and corporations in commercial relations with foreign countries. Those organizations are responsible for strictly observing the laws of the state, especially the systems and regulations regarding the management of foreign exchange and finances, and are subject to the supervision and control of the state organs managing those spheres. Before goods are exported or imported, export-import authorization must be obtained from the Ministry of Foreign Trade, the only organ competent to grant such authorization. All provinces and municipalities are authorized to import and export directly, and need only form a unified organization to deal in local imports and exports. The enterprises and corporations of the other ministries and localities are allowed to engage directly in exporting and importing, under the management of the Ministry of Foreign Trade with regard to foreign trade policies, regulations and professional matters. There must be appropriate organizational and management structures to prevent competition in buying and selling exports and imports, and to ensure the many long-range commercial interests of each unit and of the state. In its function of state administrative-economic management, the Ministry of Foreign Trade guides, assists, oversees, and controls all export and import activities, and at the same time, along with the sectors, and localities, seeks all ways to develop the production of export goods in accordance with state plans, and to fulfill our international obligations.

The sectors managing finance, banking, and prices are responsible for promptly drafting, adjusting, and supplementing realistic policies and regulations, in order to effectively expand export-import activities.

In over to do a good job of serving production, distribution, and circulation we we must seek all ways to expand economic relations with foreign countries, and to promote exports and imports. Our country, which is advancing from small-scale production, has various natural resources in all localities and is capable of promoting exports and imports in order to develop production. We export what we have in order to import what we cannot yet produce. In all such activities we must attain high socio-economic effectiveness. Therefore, we must not only take into economic-technical plan but must also change managerial and commercial methods in our country.

To expand export-import activities along the lines mentioned above is to develop the collective mastership right of the workers and develop all existing and latent capabilities of the enterprises and localities.

ECONOMIC PLANNING, TRADE AND FINANCE

EDITORIAL CALLS FOR STRICT DELIVERY OF GOODS TO STATE

Hanoi NHAN DAN in Vietnamese 25 Jul 81 p 1

[Editorial: "Delivering Products to and Gathering Commodities for the State"]

[Text] The products of the state economic sector including industrial, agricultural, forestry and fishing enterprises must be delivered to the state in strict accordance with the plan and system promulgated by Decision No 64-CP. Another important source of goods which is mostly composed of the products and goods made by the collective and individual economic sectors must be collected for the state through the system of agricultural tax, debt payment and sale based on two-way economic contracts between peasants and that state and also through the relationships with small industry and handicraft production installations based on the contract ordering of goods, the sale of raw materials and the purchase of finished products. A further source of valuable goods includes production means, technical supplies and import consumer goods. Concentrating all sources of goods in the hands of the state according to plans and to the fixed time limits, quantities and qualities is an important condition for rational distribution according to the requirements of production, consumption and exportation. To do so is also to apply the principle of unified and centralized management, the law of the state and the discipline of the party with the common objective of building and defending the fatherland. The various enterprises, sectors and localities are responsible for strictly carrying out the system of delivering products to the centrally-run competent organs for the purposes of redistribution.

In developing the right to take the initiative in production and business and the right to financial independence, many state enterprises have formulated and implemented tripartite plans and have thus created the necessary production conditions to manufacture many more products for delivery to the state. In this way, it has been possible to combine the three benefits and, in particular, to rationally increase the laborer's income, to augment the legitimate profit of the enterprise and to contribute larger proceeds to the budget. This working method conforms to principles and must be encouraged. We must try to overcome the tendency to strive only for high income and profit and to care only for unilateral and local interests in violation of the system of delivering products, cash and various proceeds for contribution to the budget.

Identity among the three benefits is a law to be enforced in whatever activity of the national economy with a view to ensuring the success of socialist construction and continuously improving and heightening the living standard of the people. It is wrong to pay insufficient attention to individual and common interests. A society where everyone is concerned about all the three benefits--individual, unitary and national as well as the immediate and long-term ones--is a beautiful society which can be found only under a socialist system. Correctly solving this problem of relationships is firmly adhering to the basic principle governing the building of a new system, a new economy, a new culture and a new type of man.

An inspection conducted in several stages has revealed that many units have contravened the law in distributing within their own scopes various types of products or in exchanging them with other sectors and that these products include machines, appliances, technical materials and valuable consumer goods. The state's orders for mobilization of goods have been replaced by individual decisions and hand-written documents and letters. In addition to the habit of withholding commodities and illegally consuming them, there has been the practice of freely raising prices to bring pressure and even conniving with speculators and smugglers, thereby hampering the execution of production-business plans of other units and breaking up economic contracts. These habits and practices have also created undue discrepancies of income among different installations, sectors and localities, caused a noticeable loss of commodities to the state and disrupted the market, prices and currency.

The ultimate result of the production and business activities of state enterprises, sectors and localities must be the concentration of sources of goods in the hands of the state for subsequent distribution and consumption according to plans, goals and needs. All systems and regulations set forth by localities, ministries, general departments and federations of enterprises, corporations and production installations that are contrary to Decision No 64-CP are illegal. All types of products, contract-manufactured goods and purchased goods--especially those falling under the unified management of the state--must be subjected to the strict implementation of the systems of delivery, mobilization, distribution and use. The ministries, sectors and localities with decentralized management have the duty to urge and control installations to ensure strict application of production-business discipline and of the system of delivering products, cash and proceeds for contribution to the budget. The activities of party and mass organizations in conjunction with the management apparatus in installations will become effective only by strongly developing the right to collective ownership of workers, office personnel and cadres and by urging them to participate in mangement and in maintaining production-business order and discipline and protecting the state property.

To encourage laborers and the enterprises' collective to increase their income in a legitimate manner, the sectors and organs responsible for management must try to create the necessary conditions for installations to step up production and business and to stabilize the living standards of workers and cadres. To create more favorable conditions for production and business activities in installations, it is necessary to promptly guide the precise accounting of products manufactured under the three sections of the production plan, to readjust wholesale prices for enterprises and the prices of contract-ordered goods and to guide the application of the contract wage and product-based wage system after the receipt of new allowances. Strict application of the abovementioned economic measures will have the effect of promoting the concentration of various sources of goods for the benefit of the state.

SMALL INSTALLATIONS SELL MOST OF THEIR PRODUCTS IN 'FREE' MARKET

Hanoi HANOI MOI in Vietnamese 5 Jun 81 p 3

[Article my Minh Hoang: "A Glance at Small Industry and Handicraft Production Installations: Where Did the Products Go?"]

[Text] According to the figures computed from initial investigations, 80 percent of the total number of cooperation teams in the city are now "doing business" with the free market and from 50 to 60 percent of their products--especially the staple commodities such as bicycle parts, plastic items and so forth--are surreptitiously delivered to private traders. Worse still, under the pretext that the state has allowed the "private property" sector to "find a consumer market by itself" (?), many teams have managed to "consume" 100 percent of their products in the "free" market despite repeated inspections by the [state] trade sector.

Though signing three or five yearly economic contracts with state agencies on the production of various goods, some teams have never carried out one such contract. They have signed contracts for certain goods only with the objective of warding off inspection and control by management organs because their real intention in doing business is to slip commodities out through the back door--not to speak of the prevalent practice of using only 2/10 or 3/10 of their capacities to produce goods for the state.

Since the sources of goods are not concentrated in the hands of the state, outside traders have had an opportunity to exploit the consumer and to raise prices with impunity. At the hardware shops in the Dong Xuan and Bac Qua markets and in busy streets such as Hue, Cau Nam, Hang Bong, Hang Gai, Hang Thiec, Hang Ma, Hang Dao, Hang Duong and so forth, prices have soared up over the past few days, especially for those commodities which do not exist or exist only in small quantities in state shops.

Recently, the Association of Interbranch Handicraft Cooperatives in conjunction with various sectors has organized inspections and investigations into the productive and commercial abilities of cooperation teams. This is a sound move which will not suffice, however, if it is aimed only at controlling to adjust the tax rates and to accumulate more capital for the state. It is also necessary to compel these teams to deliver the fixed quantities of products to the state. Only when the state trade sector cannot buy all of their products or does not buy them at all will these teams have the right to "find a consumer market by themselves" under the guidance of the Association of Interbranch Handicraft Cooperatives at the higher level.

The small industry and handicraft sector in urban precincts and rural districts is now actively studying and applying Decisions No 25-CP and 26-CP of the Government Council in the commercial and production fields. It is more necessary than ever to strengthen management to concentrate sources of goods in the hands of the state and this is especially important with regard to cooperation teams. Only by so doing can the state trade sector acquire large quantities of goods in order to conduct the struggle to stabilize market prices for the benefit of the consumer.

STATE SHOPS APPLY DUAL PRICING SYSTEM

Hanoi HANOI MOI in Vietnamese 3 Jun 81 pp 1, 4

[Text] In pursuance of Directive No 109/CT/TU of the Party Central Committee Political Bureau on reorganizing and improving distribution and circulation for the consumer's convenience, the Hanoi Trade Service has set up two networks of shops to sell goods according to a dual pricing system including a supply price and a commercial business price.

The network of supply-price shops deals in food and industrial products, clothing textiles and fuel. In each of the four urban precincts and rural districts such as Gia Lam, Thanh Tri, Dong Anh, Tu Liem, Soc Son, Me Linh, Son Tay and so forth, there are 2 or 3 shops each having 2 or 3 counters belonging to each of the branches that sell sugar, soap, milk for children and so forth to serve cadres, manual and office workers, students and other people according to ration coupons and stamps and that sell also six categories of goods including bicycle parts as well as household utensils including fans, mats, thermos inner tubes and plastic articles to cadres and manual and office workers on presentation of canteen books. The network of shops that sell goods at commercial business prices usually serves people with consumption needs. This network belongs to specialized business corporations in the city--such as the Food Products Corporation, the Vegetables and Fruit Corporation, the General Business Corporation, the Building Materials Corporation, the Industrial Products Contract Ordering and Purchase Corporation and so forth which all have shops in urban precincts and rural districts after setting up shops that sell goods at supply prices to cadres, manual and offices workers and armed forces. In each precinct, there remains a department store to sell goods at commercial business prices.

The network of shops selling goods at supply prices has its own stock of goods, capital and economic accountability to ensure supplies to cadres and manual and office workers. The network of shops selling goods at commercial business prices is given flexibility in matters of prices and business methods in order to struggle against the free market prices. On this basis, efforts will be made to gradually organize and manage private traders and to rearrange the market.

FOOD PRICES ABATE IN HANOI MARKET

Hanoi HANOI MOI in Vietnamese 20 Jun 81 p 1

[Text] On 19 June, the prices of certain commodities in the Hom-Duc Vien market tended to go down. Ducks cost at most 24 dong a kilogram (Category 1) and 23 dong a kilogram (Category 2) versus 28 and 30 dong 10 days ago.

The price per kilogram of good quality chub was 16 dong and that of good quality chicken 40 dong and Category 2 chicken 30 dong (as compared with 45 to 50 dong a kilogram of good quality chicken prior to 1 June).

Some kinds of goods such as vermicelli and chicken and duck eggs were recently scarce because their prices were not realistically fixed; they are now as abundant as in the past because their prices have been appropriately adjusted.

ECONOMIC PLANNING, TRADE AND FINANCE

MISUSE OF GRAIN BY STATE ORGANS, STORES DEPLORED

Hanoi HANOI MOI in Vietnamese 6 Jun 81 p 4

[Article by Nguoi Xay Dung [Builder] in "A Story a Day" Column: "What if All of Them Are Inspected?"]

[Text] A recent inspection reveals that there have been a good many cases of violation of standards in the use of grain by a number of organs, wards and grain stores in Ba Dinh Precinct. In general, grain rationing has not yet been discontinued concerning persons who have joined the army, quit their jobs or passed away and rationing standards have not yet been readjusted regarding persons who have changed their occupations or outgrown their age groups or are still awaiting employment and so forth. Following are some examples:

On inspection, it has been found that among 5,269 households in Buoi Ward, there are 220 incorrect cases involving 125 persons who have long been absent or have passed away but their grain rations have not yet been cut off, 74 persons who have received rations incommensurate with their age groups and 21 persons who have been reassigned to other jobs but their rationing standards have not yet been readjusted. The amount of incorrectly distributed grain has come to more than 4 tons.

Though the inspection in Chau Long Ward has not yet come to a close, 87 incorrect cases have been detected and 1,302 kgs of grain retrieved.

In Giang Vo Ward, a preliminary inspection has uncovered 93 incorrect cases among 7,050 households and has led to the retrieval of 4,253 kgs.

In Doi Can Ward, 1,618 kgs have been retrieved and so forth.

It is regrettable that though 34 workers had quit their jobs in the Machine Assembly Enterprise of the Ministry of Building--one of a number of state enterprises--the factory has continued to purchase rice in the same quantity as before...as if nothing has happened. Roughly, this undeserved benefit covers a total period of 407 months with 8,011.5 kgs. Of course, the benefit has not been shared by the enterprise as a whole but has fallen into the hands of certain persons concerned with this affair.

Though only four wards and an enterprise in Ba Dinh Precinct have been taken into account, the amount of grain used contrary to standards has come to nearly 20 tons. How much will this figure rise to if all units in the city are inspected?

At present, grain is a staple commodity of strategic significance to the entire country. Despite the overall difficult situation, the state has made tremendous efforts to supply grain to cadres, manual and office workers and their dependents. In answer to such efforts, everyone and every household and unit must self-consciously implement the grain distribution policies and systems and must take care to save grain by the kilogram and even by every 100 grams for the benefit of the state. In addition, to retrieving the amount of incorrectly used grain as has been done so far, it is, therefore, necessary to take appropriate administrative or legal measures against persons and units having deliberately used grain not according to the rationing standards--especially if these units are state organs or enterprises.

PRINCIPAL GUIDELINES SET FORTH FOR PRODUCTION IN MEKONG RIVER DELTA

Hanoi NHAN DAN in Vietnamese 24 Jul 81 p 1

[Editorial: "Production in the Mekong River Delta"]

[Text] With a vast area of land and relatively favorable natural conditions, the Mekong River Delta is considered as the largest key zone of rice production in the entire country. At present, rice is being grown on more than 2.3 million hectares but this area may be extended to more than 3 million hectares if water conservancy and other technical measures are properly carried out.

This is a newly formed region the soil of which has been built up mainly by tender alluvia rich in nitrogen and other matters that are nutritious to crops. The climate and weather are favorable to rice and other crops. Temperature is high and stable, with plenty of sunshine, and rainfall is rather abundant but storms are almost nonexistent. In carrying out farming, one must overcome a number of difficulties caused by unfavorable natural conditions such as acidity, alkalinity and salinity of soil on a large scale, yearly floods covering 1.7 million hectares in the 6-month long rainy season and severe drought in the 6-month long dry season. The material-technical facilities necessary for coping with unfavorable changes in weather conditions are still small and our knowledge about the natural conditions of this region still insufficient.

Over the past 5 years, the works done in the agricultural field have not amounted to much but have brought about significant results. The age-old traditional production method depending on natural conditions and permitting only a long-term, low-yielding floating rice crop per year is being shifted to the method of growing a short-term, high-yielding 10th-month rice crop and creating two additional main production seasons (winter-spring and summer-fall) with a total area of nearly 1 million hectares and a total output of more than 2 million tons of paddy. The leafhopper pest which had destroyed hundreds of thousands of cultivated hectares has been gradually repelled and the production seasons rationally scheduled.

The state has drafted a project to exploit the Mekong River Delta in accordance with its position as the No 1 key area of grain production. The sectors and localities concerned have the duty to start recapitulating experiences in guiding producting in the Mekong River Delta and to formulate a plan to develop production in the coming years. Under the present circumstances, our production task requires us to take effective measures to overcome unfavorable natural conditions and to exploit objective opportunities to the maximum in order to achieve the greatest economic effects. The age-old production experiences of the people and their familiar working tools must be considered important.

The Mekong River Delta has been divided into six agricultural zones. The production guidelines and the principal measures have also been defined. Relying on the general guidelines, the localities and sectors concerned must carefully consider each small area and conduct a survey to fully know the farmland and other natural conditions so as to be able to clearly delineate zones, to fix a crop cultivation pattern and to formulate specific measures for exploitation. Intensive cultivation measures must be applied to all types of farmland. Multicropping and opening and breaking new lands is an important guideline to be followed in the entire region. Even the acid, saline and marshy lands can be immediately exploited by growing suitable crops such as kenaf, pineapple and other plants.

Farmland water conservancy is still a technical measure of prime importance to all types of soil and attention must be paid to medium- and small-scale works suitable for each small area. Other technical measures must also be taken uniformly and simultaneously with production development policies--including those related to prices, purchase, sale and the correct combination of individual and common benefits.

Exploiting the Mekong River Delta is a major plan of socialism. At present, it is only possible to formulate a few guidelines for immediate application.

'NHAN DAN' EDITORIAL URGES WINTER CROP PREPARATIONS

Hanoi NHAN DAN in Vietnamese 3 Jul 81 pp 1,4

[Editorial: "Actively Prepare for the Winter Crop"]

[Text] In 1979 and 1980 the winter crop area amounted to between 250,000 and 270,000 hectares of vegetables and subsidiary food crops and between 200,000 and 280,000 hectares of azolla. That is equivalent to 20 percent of the cultivated area in the north, to 40 percent in some provinces, and to between 70 and 80 percent in some cooperatives. In comparison to 1971, the first year of the movement to grow three crops, the winter crop area has nearly tripled. The winter crop output amounts to about 450,000 to 460,000 tons of grain in paddy equivalent, and winter has become a principal production season.

Since it is a third season in between the two principal rice seasons, the results of the winter season are determined above all by a rational seasonal structure. On the very early tenth-month rice land we must decide whether to devote little or much of the area to winter crops of tropical orgin, such as sweet potatoes, corn, soybeans, the various kinds of melons, onions, and garlic. On the early tenth-month rice land we must determine the area to be devoted to winter crops of temperate origin, such as white potatoes, nuts, the various kinds of fruit, the various kinds of vegetables, etc. The victorious 1980-1981 fifth month-spring season and the expansion of the contracting-out of output have created conditions for liberating the soil, plowing, and sowing rice seedlings more rapidly than in previous years. Those are conditions for rapidly transplanting early tenth month rice and preparing to develop the 1981 winter season.

During this year's winter season we will plant about 350,000 to 400,000 hectares, in accordance with a seasonal schedule for each crop guided by the Ministry of Agriculture. Crops which must be strongly developed are sweet potatoes, corn, white potatoes, soybeans, garlic, and azolla.

The winter sweet potato area is concentrated in the (former) Zone 4 area, and in the Bac Bo piedmont and delta areas. In the record year, 100,000 hectares were planted. This year we are striving to increase the total to 150,000 to 160,000 hectares. The provinces are sprouting sweet potatoes grafting seed cuttings, and some localities with high-lying land are developing summer-fall sweet potatoes in order to both harvest the potatoes and obtain cuttings for the winter crop. The quantity of cuttings that is prepared will determine the sweet potato acreage during this year's winter season.

During the record year, 27,000 hectares of winter corn were planted, concentrated mostly in the areas along the river bank. We are changing a slowly maturing winter-spring corn crop into a winter corn crop and a subsidiary food crop. The provinces of Ha Nam Ninh, Ha Bac, Ha Son Binh, etc., are also increasing their winter corn area on land planted in two rice crops. This year the winter corn area will be expanded to 40,000 to 50,000 hectares planted with quickly maturing varieties, and there will be a further development of the corn area on two-crop rice land.

The white potato crop has only recently been expanded. During the record year, 100,000 hectares were grown. Indeed, during the past 2 years the white potato area has declined. The seed potatoes that have been prepared for planting this year are sufficient for only 70,000 to 80,000 hectares. The white potato area has declined for many reasons, the main one of which is failure to realize the importance of that crop and to understand its special characteristics. We have 50 days in which to plant the winter crop, but part of the initial period must be reserved for crops of tropical origin, and three-fourths of the remaining time must be reserved for crops of temperate origin. Therefore, if we do not expand the white potato area we can only grow cold-season vegetables or green beans. If there were 500,000 hectares of winter crops in the north, white potatoes should account for about 200,000 hectares. If we do not develop white potatoes, during the period at the end of October and the first part of November we cannot utilize the latent labor and land capabilities to grow winter crops.

This year we are endeavoring to plant 65,000 hectares of vegetables and legumes, an increase of nearly 10,000 hectares over last year, in order to fulfill the people's need for vegetables. We must strive to grow many kinds of vegetables that can be produced in our country, and must increase the various kinds of cold-weather legumes. Soybeans are a very important winter crop. Having gained experience in developing winter-spring soybeans over a period of many years, we have selected variety DT-74 and its seasonal schedule for the winter season. During the 1980 winter season we planted 3,500 hectares, and this year have the policy of developing that crop rapidly and strongly on an area of 16,000 hectares, and will strive to increase the total to between 50,000 and 100,000 hectares in the shortest possible time.

Other crops -- such as watermelons, tomatoes, and tobacco -- are also grown during the winter season. Azolla is also an important winter crop and has a long growth period, from September to February of the following year. We must go all-out to sow 350,000 hectares of azolla so that we can practice intensive cultivation. In order to have a large azolla area and high azolla output, it is necessary to assure the following production sequence: the state seedstock station selects and propagates the seedstock; the azolla seedstock stations of the districts and of small areas or cooperative clusters propagate the seedstock; the azolla propagating units of the cooperatives and production units continue to propagate the seedstock; and finally, depending on whether it is early or late in the season the cooperative issues to laborers or groups of laborers who have received land for contracted-out rice production, a quantity of azolla seedstock to spread on paddies that have been plowed or on transplanted rice. In addition to azolla spread on paddies, it is necessary to intensively cultivate azolla to increase output for use as fertilizer for winter crops and spring rice.

By attaining the 1981 winter plan we will have 580,000 tons of grain in terms of paddy, and 3.5 million tons of azolla with value equivalent to more than 35,000 tons of standard nitrogenous fertilizer. The preparatory tasks -- including drafting plans, supplying materials, seedstock, fertilizer, etc. -- must be carried out positively so that in all situations, cold or warm, much rain or little rain, we can take the initiative in fulfilling the winter season plan.

HEAVY INDUSTRY AND CONSTRUCTION

EDITORIAL DEMANDS IMPROVEMENT IN SUPPLY, TRANSPORTATION OF MATERIALS

Hanoi LAO DONG in Vietnamese 16 Jul 81 p 1

[Editorial: "Supplying and Moving Materials for Production"]

[Text] The industrial production plan for the first 6 months of this year has been completed. As in 1980, the situation is not quite satisfactory because the supply and transportation of materials has limited and greatly hampered production and has thus become a subject of complaint by producers. Here are some examples: Almost all power plants are not sufficiently supplied with coal; the important state-operated work sites do not have enough cement, sand and lime; consumer goods producing enterprises are short of raw materials and the railroad sector also coal to run locomotives. We have witnessed the producers' hectic search for materials from anywhere and at any time. This state of affairs can be summed up as follows: Though the materials deficit has been made up by the state to fulfill the plan norms which are legally compulsory, the materials supplied and moved to serve production have been either insufficient, substandard or different from the specified categories or have been delivered too late. The consequences are, of course, numerous difficulties for production. Some enterprises belatedly received materials at the end of the second quarter. So what did thousands of workers have to work on in the more than hundred days before that date?

Difficulties have also beset the materials supply and transportation sector. For instance, it possesses insufficient means, handles the cargo slowly and has to go through troublesome formalities in delivery and receipt. We know that the planning task of the state has not yet been carried out uniformly and that each organ and enterprise in charge of supplying materials have their own internal difficulties. But if we continue to blame objective circumstances and to use them as a pretext to explain shortcomings, what will our answer be concerning the need to make subjective efforts to promote production? While production enterprises and key projects of the state have much trouble coping with the shortage of materials, these materials are poured in relatively sufficient quantitites into less important areas. Moreover, many kinds of materials which cannot be found at all by producers exist in abundance in the market. An enterprise which needs Category A coal has received Category B coal and another which lacks Category B coal has been supplied with Category A coal. Though a general warehouse is crammed with tens of millions of dongs' worth or materials, nobody has inspected it to see whether it is still possible to use this stock to supply the production sector. Clearly, the state of materials management and supply is replete with shortcomings; in other words, there is not yet a supply method which is appropriate and beneficial to production. How about transportation? The producers have been made more miserable by the habit of causing inconveniences, authoritarianism, bribery, delays and loss of materials in the transportation process.

The supply and transportation of materials must satisfactorily serve production purposes. That is an order--in other words--a request of the great majority of workers and people who are producing for society. The three types of benefit or any other pretext must not be used to limit or hamper production and, worse still, to cause losses to the production sector. It is possible that many cadres responsible for supplying and moving materials have swerved from the viewpoint that it is necessary to serve production--a viewpoint which must now be maintained and extolled. What if we link the activities of the materials supply and transportation sectors more specifically with those of the production enterprises and if we assess the quality of the supply plan only after their principal targets--that is, the production enterprises--have completed their own plans? It is unreasonable that while production installations are unable to fulfill their plans because of a shortage or delayed delivery of materials, the supply and transportation agencies celebrate their achievements with firecrackers and share the three benefits (simply because the total volume of materials has been supplied to all areas). It is more illogical thar while the legally compulsory character of the production plan is imposed very severely on the producer, no heavy penalty has been meted out to any supply and transportation agency which has failed to fulfill its plan. Even though the volume of materials supplied is sufficient, production will not proceed normally if these materials are delivered belatedly or do not conform to standards.

There is positive proof that many materials supply and transportation organs have caused numerous inconveniences to the production sector. Many production installations have brought lawsuits to the State Economic Arbitration Council but there still are production leaders who are reluctant to make open criticism simply because they are afraid of the "retaliatory" attitude usually seen in the materials supply organs. Obviously, this problem must be resolved soon because we must not tolerate the bad elements who, under cover of the three benefits, cause difficulties to production and great losses to the state.

Material supplies are the lifeline of production. In view of a satisfactory fulfillment of the state plan for the last 6 months of this year, we expect a positive shift in the method of managing, supplying and transporting materials and also in the responsible attitude of the persons in charge of this task.

DIFFICULTIES CAUSING SLOW HOUSING CONSTRUCTION IN HANOI REVEALED

Hanoi NHAN DAN in Vietnamese 28 Jul 81 p 2

[Article by Luong Xuan Hoi: "Housing Construction Is Still Slow in Hanoi"]

[Text] Under the 5-year plan for the 1975-1980 period, Hanoi has invested hundreds of millions of dong to build houses with a total area of hundreds of thousands of square meters. Beside the old housing areas, new ones have emerged in Kim Giang, Vinh Ho, Tan Mai, Thanh Cong and Mai Dong. Though we have built many new apartments, many families still lack dwellings or are still crammed in small ones. This is a major problem for Hanoi and the first measure to be taken to solve it is to accelerate housing construction.

In 1981, housing construction in Hanoi ranks among the many key projects of the state and is also the No 1 key project of the municipality. To carry out this project, many centrally run sectors--especially the Ministry of Building--have provided assistance and the Municipal People' Committee has paid attention to it and has closely directed the construction speed. However, the rate of housing construction in Hanoi in the first 6 months of this year is still low compared with the plan norm and the goals set for the handing over and commissioning of houses. The capital investments have been used to carry out only 20 percent of the plan. The area of the houses which have been built and handed over is still small--only over 12 percent of the yearly plan norm. To accomplish the 1981 housing construction plan, the Hanoi construction sector must, by the end of June, have built more than 60,000 square meters of housing which is now under construction but, in reality, it has built only nearly 40,000 square meters. For this reason, it is necessary, in the last 6 months of the year, to concentrate labor and materials on the houses which can be finished and delivered by the end of the year and also to try to build low-storied houses for which the necessary building procedures have been fulfilled.

Over the recent past, the supply of technical supplies and the transportation task have not caught up with construction requirements and many types of materials lying in distant places have been lacking although many trips have been made to pick them up from these lcoations. For example, timber has to be taken from Nghe Tinh, cement from Haiphong and lime from Ha Nam Ninh. Sometimes, materials have been made available but there has been no contract on the hiring of sufficient transportation means in the past 6 months. The fact that almost all materials are distributed in areas far from Hanoi and that the Hanoi Building Service has been obliged to tackle their transportation by itself constitutes one of the difficulties confronting the Service.

From a subjective point of view, construction preparations have been inadequate: Though it has been envisaged that the building of many houses will start during the second quarter, capital construction procedures are still unfulfilled such as the design of the foundations and total platforms of each housing bloc, the construction [expenditures] estimate... Nor have the platforms been cleared up in many houses under construction in the Khuong Thuong and Thu Le areas and in the interspersed houses being built in Quan Thanh, Hoa Ma, Ngo Thi Nham and Mai Hac De Streets. Though the building of multistory houses has been planned on some locations, a geological engineering survey has revealed that the soil there is too weak to bear the pressure intensity and that it is, therefore, necessary to change the construction plan or the building locations as has been the case of the E5 Quynh Loi housing area and the C3 and C4 Thanh Cong collective residential area. For this reason, the execution of the construction plan has been protracted. It would be better if the capital construction preparations and procedures had been carried out in the fourth quarter of last year or in the first quarter of this year at the latest.

In the light of the experiences drawn in the first 6 months of this year, to be able to fulfill the housing construction plan in 1982, we must in the last 6 months of this year make adequate preparations for investment and construction and must satisfactorily fulfill other procedures such as designing, surveying, construction designing and construction expenditures estimate in strict accordance with the spirit of the Capital Construction Management Statute recently promulgated by the government. Adequate preparations for capital construction will positively contribute to the completion of construction at the indicated speed.

OPERATION OF THERMOELECTRIC STEAM BOILERS DISCUSSED

Hanoi KY THUAT DIEN LUC in Vietnamese No 2, Mar-Apr 81 pp 1-3

[Article by Nguyen Van Quang of the Northern Electric Power Corporation: "Some Features of the Operation and Breakdowns of the Steam Boliers of Thermoelectric Plants in the North, 1978-1979"]

[Text] 1. The problem.

During the past several years the electricity situation has been rather tense. The amount of electricity generated by the system has not been stable. Except for natural gas turbines, no new power plants have been built. The difficulties of the electricity sector are also common difficulties, shared by the entire nation, resulting from the serious aftereffects of war. Some power plants were damaged in the war, and some were evacuated to mountain caves and were later returned to their former locations. Since 1970 the electricity sector has implemented the policy of restoring and fine-tuning the equipment in the damaged power plants, building and expanding power plants, and stepping up scientific research in order to fully utilize the in-depth capabilities of equipment, by "increasing the capacities of the boilers and machinery without changing equipment," designing additional systems to spray oil into the steam boilers in order to increase the generating capacity, etc.

However, difficulties are still being encountered in restoring and fine-tuning boilers and machinery. Especially, materials and equipment are very scarce, so some equipment is patched up and at times must be redesigned because we are unable to manufacture it or because imports are limited. Furthermore, the management of records and production operations, and the organization of boiler and machinery repairs, are not as well-regulated as before the war. Those are some basic features of the factors which led to the unstable operation of boilers and machinery, frequent break-downs, low generating capacity, a short operational cycle, and low, uneconomical, efficiency.

II. The situation of steamboiler operation and breakdowns in the year 1978-1979.

1. The operational situation.

One of the important norms allowing a power plant to attain its annual plan is the 8,760 hours norm for the use of equipment, i.e. the number of operational hours per boiler per year. Although it varies according to design, the average number of operational hours per steam boiler is 6,000 to 6,500 hours per year. In addition to that ratio there are the major overhaul ratio (the number of hours of major epuipment/8,760 hours), the minor overhaul ratio (the number of minor overhaul hours/8,760 hours), the unplanned repair hours/8,760 hours), and the reserve ratio (number of hours of operational reserve hours/8,760 hours).

The actual situation during the past several years has been that the steam boiler operational ratio has been relatively low. In 1979 the average number of operational hours of a boiler was less than 5,000 hours a year, about 55.2 percent of the norm. Furthermore, each steam boiler in a power plant had a different ratio. Steam boiler models 112-35/39 and 213-75/39 operated more than 7,200 hours (82.93 percent of the norm), boiler model OR-32 operated nearly 7,000 hours (81.51 percent of the norm), and boiler model SG-130-39-450 operated more than 6,800 hours, 79.19 percent of the norm). The lowest were boiler model BW, which attained 25.75 percent of the norm and model TC-20, which attained 33.51 percent. The operational hours of boilers No 2 and No 4, model BKZ-75-39- FB, of the Uong Bi power plant were especially low (1,488 hours/8,760 and 2,226 hours/8,760.

After several years of monitoring, we have made the following observations:

a. From the point of view of the generating output norm, plants with boilers and machinery which have high annual equipment utilization norms (i.e., low major overhaul, minor overhaul, and unplanned repairs norms) are capable of fulfilling their plans.

b. From the point of view of equipment use, if the utilization time of the equipment is greater than the designed utilization time, in future years it will be difficult to maintain their operation over a long period of time, there are instances of mass equipment failure, many difficulties will be encountered with regard to obtaining materials and personnel with which to repair the equipment, and the entire network will be imperiled.

c. Plants which are good at organizing and carrying out repairs and at reducing repair time will attain high operational ratios. On the other hand, if the quality of repairs is not maintained and the repair time is prolonged, the boilers and machinery there will have a low number of operational hours.

d. Plants which have good operational organization and management, allow no breakdowns to occur, and take the initiative in assuring the stipulated times called for by the annual repair-operation schedule, will attain the output and economic-technical norms.

There is a very close relationship between the operation and repair of a boiler. They are two aspects of the same problem and cannot be separated. If operation is slipshod and not in correct accordance with rules and regulations, the equipment will quickly become damaged, or the boilers will often break down and cease operations, and much time will be lost in repairing them. Furthermore, if repairs are prolonged and quality is not assured, operational reliability sill not be high and there will always be present the threat of break downs.

2. The situation of steam boiler break downs:

As stated above, boiler breakdowns result in many harmul consequences requiring the shut-down of equipment for months so that repairs can be made, which wastes replacement parts and repair personnel and adversely influences the utilization time of the equipment. During the past 2 years the situation of steam boiler breakdowns has been relatively serious. The average number of breakdowns per boiler in a year has tended to increase:

Boiler models BKZ-75-39-FB and PK-20: seven times per boiler in 1978, 7.1 times in 1979.

Boiler models OR-32 and BW-1: six times per boiler in 1978, 7.9 times in 1979.

Boiler tupe TC-20: 3.6 times for each boiler in 1978, seven times in 1979.

Reasons for the breakdowns included:

a. Subjective reasons:

Workers do not fulfill their duties during their shift. Therefore, the observance of operational rules, regulations, and systems is arbitrary. A number of workers leave their work stations during working hours to read books and newpapers, take a nap, etc.

The operational technical parameters are not assured, so there is a tendency for the steam boilers' pipe systems to clog, which results in pipes swelling, becoming stopped up, or bursting, and in some places the pipes are corroded.

The inspection and supervision of specialized cadres and enterprise leadership cadres are not continuous and tight. Instances of violations of regulations are not looked into deeply and incisively and are not dealt with strictly. People who do a good job are not encouraged and rewarded.

There is little supplementary training to raise levels and there is no regular practice in dealing with break-downs, so in all shifts there are instances of breakdowns and of workers being inexperienced and slow in diagnosing and taking care of the problem. At times there is a lack of precision, which leads to serious damage to equipment.

The repair of equipment during the major and minor overhaul periods is sometimes not closely overseen, technical requirements are not met, and the repair is superficial, but ultimately the boilers are brought back into use, so unforseen breakdowns occur.

b. Objective reasons:

The measurement and automatic temperature control, and technical data input equipment of some plants is old and there is no new replacement equipment, so the degree of safety reliability is low and the equipment is not precise, to the extent that in some plants practically all such equipment is inoperative. Due to a shortage of materials, the repair of much equipment is patchwork in nature and pressure pipes have been corroded and should be replaced but no new pipes are available, so there are constant breakdowns caused by the bursting of live steam, super-heated, and heating pipes (such as the BKZ-75-39-FB model).

At times the repair of equipment must be carried out urgently because of a shortage of electricity, which affects the quality of repairs.

Also because of the need for electricity, there are boilers which are operated too long (beyond the regular major overhaul or minor overhaul periods), so the degree of safety is low and break-downs are continually occuring or threatening.

The build-up of cinders and ash in the steam boilers has not been thoroughly resolved (although there are many methods to improve and research the heating system, etc.), so stell pipes are adversely affected.

III. Conclusions:

If steam boilers and the secondary equipment are to be operated continually with safety, with few break-downs or prolonged dead-time, and if high productivity and the economic-technical norms are to be attained, it is necessary to do the following:

When the electricity grid is unstable, we should not force some boilers to operate below or above the allowable technical parameters, or reduce and then raise the operational rate of the steam boilers too many times.

During the normal steam-boiler operational periods it is necessary to maintain the technical parameters, observe the heating regulations, and continually monitor and calculate the economic-technical norms, in order to fulfill (or nearly fulfill) the designed requirements.

We must continually inspect and monitor the operational and shift daily records, solicit the opinions of the specialized cadres, promptly reward workers who do a good job, and appropriately descipline those who violate rules and regulations.

We must continually organize "break-down drills," and organize supplementary training, control, and testing in order to raise the workers' theoretical and vocational levels.

HEAVY INDUSTRY AND CONSTRUCTION

PROBLEMS IN COAL PRODUCTION, TRANSPORTATION, SUPPLY RAISED

Hanoi LAO DONG in Vietnamese 16 Jul 81 p 1, 7

[Survey by Dinh Nguyen: "Coal--a Matter of Concern for Producers"]

[Text] The present state of coal supply is explained in the same way as in any humoristic story. To the question: "Why is there a shortage of coal?", the answer is: "Because there is not enough electricity." To the question: "Why is there not enough electricity?", the reply is: "Because there is not enough coal." This is because of that which is due to another thing which is in turn owing to something else... This kind of explanation is partly based on realities but does not elicit substantial truth about the case; more importantly, it does not say who is responsible, which phase is hampered by obstacles and what must be done to satisfactorily solve the remaining shortcomings.

The truth is that the supply of coal has for long failed to meet the still very limited domestic demands and has frequently been the subject of numerous complaints. We must admit that there are good grounds for most of these complaints, especially those about the nonunderstandable troubles and irrationalities found in the supply and transportation of coal. Because of the coal shortage, a metallurgic plant has been forced to discontinue production for a long period of time, which results in a loss of more than 10 million dong. Though it needs only a type of dust coal of average quality, a power plant has been supplied merely with good-quality dust coal, which results in steeply raising the production cost. Meanwhile, a cement factory which needs good-quality dust coal has been supplied with low-quality dust coal with the result that the quality of its product has been lowered. While the railroad sector is obliged to discontinue the operation of more than 10 trains because of the lack of briquettes, the coal factory is crammed with more than 10,000 tons of briquettes and does not have any platform left on which to continue production. Sometimes the freight handling equipment breaks down at the arrival of the transportation means! That is not all. While a glassware factory needs lump coal to produce a new type of goods but cannot obtain it, a brick and tile enterprise which needs dust coal is supplied with lump coal (!) and is, therefore, obliged to grind this lump coal before using it, which amounts to a great loss of energy and materials. So what is the truth? Is there a shortage or surplus of coal? What is the cause of such irrationalities and is there any way to solve the abovementioned shortcomings?

Coal Quality and Grading--the No 1 Problem

Before speaking of the supply and transportation problem, we must deal with its origin which is that state of coal production.

In the first quarter of this year, the coal sector's business was pretty good. The entire sector fulfilled 103 percent of the washed-coal production plan--which is equivalent to 25.3 percent of the yearly plan and includes also the achievement of the Hon Gai Coal Corporation which surpassed the legally compulsory plan by 5.2 percent, up 6.8 percent as compared with the first quarter of 1980. In addition, the amount of coal consumed [in the market] in the [first] quarter [of this year] exceeded the plan by 92.1 percent, fulfilling 22 percent of the yearly plan. (Noteworthy is the output of export coal which surpassed the quarterly plan by 12.9 percent, fulfilling 37.7 percent of the yearly plan).

However, the problem of ensuring coal quality has shown a weak point in the present process of coal production--a weakness which became increasingly conspicuous during this [first] quarter when conditions were relatively favorable for production. In trying to overfulfill the production plan norms, the coal sector fulfilled only 82.3 percent of the norm for lump coal production and achievement of the Hon Gai Coal Corporation was even lower--only 77.3 percent of the quarterly plan norm. The production of standard lump and dust coals did not suffice to meet domestic demands, causing much trouble to many industrial units and seriously hindering the execution of the state plan.

In view of this situation, the Ministry of Mining and Coal intensified guidance and sought by all means to solve the problem of producing lump coal and raising the quality and grades of coal. The Hon Gai Coal Corporation focused on eliminating the remaining shortcomings at Grading and Washing Network II in Cua Ong, especially the water washing network, to make it possible to repair Grading and Washing Network I. To increase the lump coal ratio, various measures were taken such as organizing the picking up of lump coal from the grading and washing platform, seeking ways to change this platform, organizing manual grading and washing at selecting mills... The General Corporation for Coal Management and Supply revamped the organization of grading and washing on transit fields and on fields wherefrom coal will be taken for consumption. The supply of lump and dust coals to key industrial units was uniformly planned by the General Corporation for Coal Management and Supply in conjunction with the coal selecting enterprises and others.

Nevertheless, the state of production in the coal sector as a whole showed a marked decrease at the beginning of the second quarter. Almost all norms of the monthly plan were not fulfilled in May. Compared with April achievements, the norms attained in May were low--only 76 percent for original coal, 77 percent for washed coal... Under such circumstances, coal supply for domestic consumption represented only 65.2 percent of the monthly plan.

It must be noted that by that time the measures aimed at upgrading coal had not yet been actively implemented by production installations. Grading and Washing Network II at the Cua Ong Selecting Mill had been put to the test but its operation was still unsteady. Suspension pumping devices, grading and washing lines and bucket elevators suffered frequent breakdowns. Since the actual productive operation time of Grading and Washing Network II was only 22 percent, the quality and marketability of coal were seriously affected. The method of increasing the quantity of lump coal by picking it up and sorting and washing it again at production installations was not yet strictly applied... In view of such a quality of coal, it may be possible for the entire coal sector to try to achieve at all costs the output of washed coal to fulfill the 1981 production norm but it will certainly be impossible for it to supply coal in strict accordance with the different types of coal required by domestic consumption. This is a major problem which cadres and workers in the coal sector must concentrate their efforts to resolve positively with a high sense of responsibility required of a sector responsible for supplying energy to the national economy.

Insufficient Means of Transportation

In 1981, the plan assigned by the state to the communications and transportation sector is to carry 4.88 million tons of coal from the mines to other areas. This task has been entrusted to river transport corporations at both the central and local levels, to sea transport corporations, to the Mao Khe railroad section and a number of automobile transport enterprises. A review of the implementation of the plan for the first 6 months of 1981 has shown that the said units have averaged only 75 percent of the assigned plan. Does this achievement accurately reflect the subjective abilities of these transportation corporations?

Equipment breakdown is a condition prevailing in the centrally-run river transport corporations. Nearly 40 percent of the transportation means are not qualified for registration. The reason for this state of affairs is the negligible amount of mechanical parts supplied in 1980 to repair and rebuild equipment. Moreover, the plan to build new transportation means (with an estimated freight carrying capacity of 30,000 tons) during the current year has not yet been implemented. Why the present transportation capacities of the centrally-run river transport corporation amount to only 2/5 of their capacities in the past year is quite understandable. The situation is similar to the local river transport corporations. Apart from the Thai Binh corporation, the river transport corporations in Ha Nam Ninh, Hai Hung, Ha Bac, Ha Tuyen and so on have suffered a 1/3 to 1/2-cutback in their actual carrying capacities. Considering that at present 8/10 of the total volume of coal is carried away from the mines by the river transport sector, it is very urgently necessary to strengthen and increase the freight carrying capacity of this sector.

Following is a solvable contradiction: The Uong Bi Coal Corporation has repeatedly reported that the transporation means coming to pick up coal from Vang Danh and Mao Khe are seriously insufficient and the Hon Gai Coal Corporation has also reported that on many days the transportation means coming to load coal are inadequate. On the contrary, the transportation means owners have continually complained about the coal shortage which has compelled these means to wait at the port for several days. This is true. Why? Once again, we have to reconsider the question of coal quality and grades which is the root cause of the lack of synchronization between loading and transportation. It is true that, on many days, the transportation means had to wait at the port because of the lack of a specified type of coal. The transportation means owners might say: Let you load your coal aboard and we will carry it all and will be able to fulfill the ton/km transportation plan! But if things were done that way, it would mean that coal exploitation was aimed only at obtaining the specified output without paying any attention to quality.

On the other hand, the troublesome formalities and, worse still, the irresponsible attitude on the part of certain coal delivery and receipt localities have often caused people to miss or to postpone an entire transportation phase with the result that transportation means have had to idle away their time for many days and that a substantial waste [of time and expenditures] has been incurred.

To solve these problems in order to help further increase transportation capacities, the coal sector has specifically defined the responsibilities of the three parties--the port enterprise, the transit corporation and the transportation means owner--for strictly applying the priority list of important recipient units throughout the country and for regulating the supply of coal more effectively. In our opinion, beside the necessity for the production installations--that is, the mines--to try to fulfill the production plan and improve the quality and grades of coal, the coal selecting enterprises must try to gradually abolish the currently applied method of moving coal directly from the grading and washing plant to the harbor. We have to strenuously push production one step ahead of consumption and, as in the past, classify coal by category and grade on each bank [ca-roo--French "carreau"] in the mine. Only by doing so can we supply coal to meet new demands at the planned speed and the specified quality.

A Proposal Worthy of Consideration

Difficulties will still be encountered in the supply of coal to meet domestic demands in the next few years. We believe that workers and cadres of the coal sector will do their utmost to fulfill their sector's duty to provide energy for the national economy. A question must be raised: Is it advisable that each locality takes the initiative and makes every effort to help overcome difficulties?

A supply cadre told us: Fuel is very scarce in Hue where a not too large family spends 75 dong monthly on firewood. While everyone is waiting for the arrival of coal from Hon Gai, there is the Phong Chuong peat bog which is pretty good and which is situated only more than 10 kms from Hue. This bog has been exploited by the local people who sell peat at the price of 8 dong a cubic meter. From this, we can induce that the production cost of dried peat will be only 16 dong per ton. On reckoinging, we find that with a sound organizational method, Binh Tri Thien may exploit 100,000 tons of peat per year. Peat bogs of similar capacities can also be found in Hanoi and Vinh Phu. In U Minh (Minh Hai), Mo Vet (Long An) and Dong Nai, the peat potential is very great and over 200,000 tons may be produced yearly. Despite the abundance of the sources of peat, how is it that so far scarcely any locality has organized and planned its exploitation and considered this to be a local economic sector? This is because people have not yet got into the habit of using peat, because peat exploitation has not yet been guided and organizated, because no appropriate system has been formulated and applied to exploiters and mainly because of the tendency to rely merely on the supply by the centrally-run coal sector.

Based on the initial experiences of some localities which have well organized the exploitation and use of peat, the General Corporation for Coal Management and Supply is planning to hold a conference on the exploitation of peat and the production of bricks and tiles. This is a sound proposal to which the various localities must respond enthusiastically. If well organized, by 1985 the coal output of various localities nationwide will reach 1 million tons including 850,000 tons of peat. Since only a simple technique and small investments and expenditures will be required and since the production cost will consequently be low, the local peat bogs will exercise a very great effect and will, at the same time, constitute a front to provide a joint support for the centrally-run coal sector to satisfy the export demand and serve the key industrial sectors throughout the country.

BRIEFS

BRICK PRODUCTION POWER SHORTAGES--Due to power outages, enterprises producing baked brick and tile with circular kilns using suction fans have encountered a great many difficulties with a great effect on production. The Hop Thinh Brick Plant in Vinh Phu Province is also in this condition. Circular kiln operation depends on supply from the electric power grid. When a power outage occurs, the fires must be banked (flame rate is only two or three modules/day and night), coal consumption is great (at times up to 600 kilograms per 1,000 bricks or tiles) and product quality is low (usually fan burned or uncured). If the power outage is prolonged, the kiln fires will go out. Relighting the kiln is extremely expensive, costing 1,000 dong each time. Additionally, the entire production line is disturbed, brick molds lie idle and the production plan is not assured. /Excerpt/ /Hanoi XAY DUNG in Vietnamese No 6, Jun 81 p 25/ 7300

POWER GRID OUTAGES--In order to overcome a situation of prolonged power grid outages and old and worn out electric power generators in many enterprises, the Federation of Construction Earthenware and Porcelain Brick and Tile Enterprises has designed and successfully installed a transmission system for using the engine from a Bong Sen tractor in operating an EG2 press. In many test runs, the combined Bong Sen-EG2 machine complex has achieved outputs of 550 to 600 bricks or tiles per hour. Compared with the manual production plan, the production costs for every 1,000 bricks produced by the Bong Sen-EG2 machine complex have been reduced by 2.5 dong. From these results, the federation has designed and installed a Bong Sen tractor engine for operating a five-faced tile machine with an output of 960 tiles per hour, similar to operation with an electric motor. /Excerpt/ /Hanoi XAY DUNG in Vietnamese No 6, Jun 81 p 33/ 7300

TRANSPORTATION AND COMMUNICATIONS

MEASURES TO IMPROVE GRAIN TRANSFER TO STATE SUGGESTED

Hanoi NHAN DAN in Vietnamese 25 Jul 81 p 3

[Article by Bui Dinh Thiep, Hanoi, in "Reader's Opinion" Column: "Improve Grain Delivery and Receipt Methods"]

[Text] Each year, the centrally run sector organizes the transportation of hundreds of thousands of tons of grain. Localities have also assumed the transportation of a very large quantity of grain. However, safety has not yet been ensured in the train transportation process. Large amounts of the state's grain have been lost, deteriorated and wasted and the losses sometimes come to 30 percent of the volume of grain transported. To date, these losses have been born by the state--that is, society--because no agency and nobody have been held responsible.

For long and especially since the wartime, we have, for many reasons, been obliged to apply a number of methods of delivering and receiving the transported grain such as delivery in terms of the number of bags, tonnage, calculated according to the marks reached on the boat side by the water level, weighing 15 percent of the transported commodity [to ascertain even weight of the remainder], using the capacity of the bucket elevators to calculate the volume of grain delivered and so forth. These delivery and receipt methods were reluctantly applied in wartime. Since circumstances have changed, the continued application of the old delivery and receipt methods is an irrationality which has caused great losses of grain to the state and given bad elements an opportunity to take advantage of this gap to steal the socialist property.

Everyone knows this simple thing: You have to count the money paid to you and to weigh or measure the goods delivered to you to see whether there is a deficit or an excess. Nevertheless, we have invoked certain difficulties in delivering and receiving the transported goods in order to avoid weighing them.

To gradually overcome these difficulties, we would suggest the following measures:

1. The state must invest capital in building a network of public weighing stations, first at communications centers such as large harbors and railway stations where large quantities of commodities pass through and also in certain grain mills and vermicelli factories. These weighing stations must have technical equipment capable of weighing a fully loaded truck or railroad car and must be allowed to do business independently and to charge weighing fees to make up for their operational

expenditures. Once the weighing stations have been set up, the state will stipulate that the amount of goods taken into account in calculating transportation fees and the amount of goods entered in warehouses must conform to the figure written on the weighing slip issued by the station. This weighing station network will be gradually expanded according to the situation, possibilities and requirements. While setting up weighing stations, one must immediately consider the provision of scales to weigh separate commodities when these are loaded on transportation means or poured into warehouses.

2. Measures must be taken soon to bring the commodity packaging task into line with the industrial production method. Now is the time to wrap goods in bags and packages according to fixed standards. For example, vermicelli must be put in glued-down bags of 1/2-kg, 1-kg, 5-kg or 10-kg capacity right at the vermicelli producing factory and to pack rice in bags of 100-kg or 70-kg capacity right at the milling factory. The milling and vermicelli-producing enterprises must be held responsible for the volume of the packed commodities. In view of the present actual conditions, we do not yet need good-looking and tidy bags and packages but only those which are in good and safe condition and which contain the exact amounts of goods.

3. Along with the technical organization of the weighing and packing tasks, it is also very important to inculcate the sense of responsibility into the persons connected with the transportation, handling, preservation and distribution of grain. The Youth Union and Trade Union chapters must educate their members, warn them against stealing common property and urge them to consciously protect socialist property and to display a high sense of responsibility in serving the people. Each union member must refrain from committing mistakes and violations while at the same time preventing other people from doing the same. Great progress will be made in safeguarding the state's grain and in distributing it to the people if ideological education is closely combined with administrative measures, if meritorious persons are deservedly rewarded in kind and if those who act illegally are severely punished.

LABOR

LABORERS' INCOME TO BE ASSOCIATED WITH COLLECTIVE, STATE BENEFIT

Hanoi NHAN DAN in Vietnamese 28 Jul 81 p 1

[Editorial: "Unifying Three Benefits at Enterprises"]

[Text] Distribution according to labor is the most important principle of distribution in our system. This correct standpoint is reflected in the policy newly promulgated by the party and state concerning state enterprises. About 85 percent of the total number of cadres and workers in various economic sectors have been working and receiving contractual wages or salaries based on the amount of their products. The workers' initiative and creativeness have been brought into play by extensively applying the system of paying contractual wages and salaries based on the end product and also by giving out money rewards in state enterprises. In many installations, the working time, materials and fuel have been used more rationally, labor productivity increased and product quality improved. Since workers have become more interested in production, there have been fewer instances of late arrival at the working place, early departure, laziness and concern only for private interests. Laborers have also earned a larger income.

Distribution according to labor will have the right meaning and a positive effect only if it is applied on the basis of a correct implementation of the promulgated policies and systems and through the unification of all the three benefits--those of the state, enterprise collective and laborer. It has been found that recently an erroneous viewpoint and working method have led many localities to take care only to exploit the aspects that prove beneficial to the laborer and the enterprise without paying due attention--or any attention at all--to the benefit of the entire society.

Instead of considering the principal production plan important, a number of enterprises have concentrated merely on the subsidiary production plan, in some of them, subsidiary products represent over 90 percent of the value of their gross output. Many localities have used the materials, gasoline, oil and energy reserved for the plan in the first stage to carry out the plan in the second stage and have even employed the principal and precious raw materials and supplies or raised the ratio of substandard products to carry out the subsidiary production plan. No enterprise has been able to do an explicit, accurate and separate accounting for the first- and second-stage plan.

In implementing the system of contractual wages and product-based salaries, many installations have unilaterally lowered norms, raised unit prices, upgraded jobs, fixed too high progressive coefficients and widely applied the system of paying progressive product-based salaries--which has resulted in creating great income discrepancies among laborers. Moreover, commendations and rewards have been offered at random, with some enterprises giving out a year-end bonus equivalent to 35 to 38 months' salaries or using the principal products to reward cadres and workers so that these products have ended up in the free market. The real income of a number of persons appears too high as compared with the labor they have performed. The correlation between the income of cadres and workers in a given sector and that of cadres and workers in others--especially between the income of the light industry personnel and that of the heavy industry employees, and between the incomes of the employees working in different zones or even in different enterprises belonging to a single sector--has proven irrational and contrary to the principle of distribution according to labor and has caused comparison and envy.

Many enterprises are withholding the products made under both the state plan and their own plans and have freely distributed these products within their own confines or sold them on the free market instead of delivering them to the state for planned distribution in the society as a whole. Worse still, some areas have failed to deliver to the state part of their profits and other financial incomes, retained more cash than allowed by the fixed norms or raised illegal funds.

In the socialist state economy, the three types of benefit are closely linked and form a unified entity. Paying attention only to any one of them will harm the others and reflect badly on the state of production, distribution and circulation in the entire society. Ensuring the benefit of the state is thus tantamount to ensuring that of the individual laborer and the enterprise collective. The benefit of the enterprise collective can be safeguarded only by developing production, fulfilling the obligation to deliver products and finances to that state and associating these tasks with the laborer's benefit. To benefit the laborer, it is first necessary to ensure the state's benefit. Encouragement by means of material benefit must be accompanied by other measures such as political motivation and raising the socialist consciousness and revolutionary spirit of the laborer.

The basic guideline to be followed in improving business management and in implementing the newly promulgated economic systems and policies is to unify the three benefits, to step up production and to stabilize live. All state enterprises have the responsibility to elevate the sense of organization and discipline, to strictly implement these systems and policies and to deliver the exact amount of products to the state without using the "characteristics" of their own sectors and localities as a pretext to break up the unity of the three benefits. The competent ministries and organs have also the duty to quickly promulgate documents to guide the uniform execution of these systems and policies by all installations and throughout the country.

SOUTHERN 'NOXIOUS' LITERATURE REPORTED REACHING SCHOOLS IN NORTH

Hanoi NHAN DAN in Vietnamese 28 Jul 81 p 3

[Article by Hong Hanh, P.O. Box 38-50, Hanoi: "Clear Our Schools of the Depraved Culture"]

[Text] While on mission at a number of Level-III schools in Ha Bac, I saw some schoolmistresses confiscate depraved and reactionary novels from the students. These novels had been stealthily brought from South to North Vietnam and were entitled: "A Star in the Lovely Eyes," "Adultery" and so on. The fact that they were crumpled and stripped of their covers and many pages proved that they had been passed on to many people. After confiscating these novels, a number of schoolmistresses took turns at reading them whenever they could. Some schoolmistresses sat up late in the night to finish reading these novels because they had promised to return them the next morning. I was more suprised on hearing that these schoolmistresses had asked the schoolgirls to act as go-betweens to pass the novels on to their [the schoolmistresses'] friends. Of course, these trustworthy schoolgirls had also the opportunity to borrow the novels and to read them as passionately as their schoolmistresses.

When on mission in South Vietnam a few years ago, I saw how our youths and teenagers had been perverted by the poison of the depraved and reactionary culture. At present, the schools, provinces and cities there are launching a strong movement to wipe out the noxious effects of that depraved culture. Our socialist schools have the duty to train the youths and teenagers into new men to continue the task of building and defending the fatherland but the enemy is seeking by all means to bring in a depraved culture to debauch them. In my opinion, instead of displaying subjectivism and laxity, the schools in the northern provinces must take energetic measures to prevent the vestiges of that reactionary culture from infiltrating the ranks of our young generations. This problem must receive the attention of the leading comrades who must, together with the Youth Union organziations, provide education to make teachers and students fully understand the harmfulness of that bad culture.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MAJOR GENERAL LE DUC ANH ADDRESSES CONFERENCE ON CAMPAIGN FULFILLMENT

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 6, Jun 81 pp 1-8 & 71

[Summary of speech by Major General Le Duc Anh at the Conference to Recapitulate the Campaign to "Develop the Good Qualities and Increase the Combat Strength" of the People's Armed Forces in the South and Southwest: "Promote the Campaign, Fulfill All Missions Well"]

[Text] After 3 days of work, our conference discussed, and reached unanimous agreement on, the report of the Ministry of Defense's Campaign Standing Committee. The Campaign Standing Committee will add the opinions you contributed to its guidance work in the future. On behalf of the Standing Committee of the Military Commission of the VCP Central Committee, today I will conclude the conference and make additional remarks on two topics:

I. The Relationship Between the Campaign and the Fulfillment of Missions That Have Been Set Forth

In 1980 the Ministry of National Defense clearly defined the basic, specific missions of the military regions, corps, and armed forces branches, as well as the units fulfilling missions on the battlefields of neighboring countries. That is an extremely great advantage.

The missions assigned to the army by the party and state are very difficult. In order to fulfill those missions, it is essential that there be a mass revolutionary activity movement. If there is to be a mass revolutionary activity movement, it is essential that we tie in the campaign to "Develop the good qualities and increase combat strength" with the fulfillment of those missions. The five objectives of that campaign reflect the requirements that can be met and the factors that must be created in order to fulfill the basic missions of our armed forces, as well as of each military region, armed forces branch, and combat arm. For example the first objective -- strong will, a strong sense of responsibility, strict discipline, and good solidarity -- is a matter of foremost importance in the mission of building up the army, and is also a foremost factor in the fulfillment of the other missions. The objective of increasing consciousness and ability to master weapons, technical equipment, etc., also clearly reflects the missions of our army. If we are to advance to a professional, modern status, it is essential that all cadres and have a firm grasp of weapons and technical equipment. We must do a good job of managing, maintaining, and using the army's material-technical bases. That objective reflect's the armys missions and is also a factor for winning victories. The objective of military-civilian solidarity and international solidarity is both a mission and one of the components of the nature of our army. That objective is a mission which the army must continually carry out, for it is the source of our army's strength and creates the combined strength of our nation in the enterprise of constructing socialism and defending the socialist homeland.

But not all of our cadres and enlisted clearly understand that. The thoughts and acts of some cadres, enlisted men, and units have violated the honor and property of the local people where the troops are stationed. If we do not prevent and end such thoughts and acts, and do not do a good job of meeting that objective, they will harm the qualities and combat strength of the army and harm our combined strength for building and defending the homeland. International solidarity is both a quality and a mission of a revolutionary army. The party educated our army and assigned it that mission because it is a noble international duty and a mission of a revolutionary army of the proletarian class. International solidarity is also a factor in developing the strength of three Indochinese countries and the three revolutionary currents in order to strongly defend the Vietnamese homeland, strongly defend the independence and freedom of the three Indochinese countries, and contribute to maintaining peace in Southeast Asia and the world and to oppoing the common enemies -- the Beijing expansionists, the U.S. imperialists, and all reactionary powers in league with them.

Thus the objectives of the campaign are on the surface very simple, but they have a profound significance and very great importance. They are very closely related to the missions assigned to our army and armed forces by the party and state. In exercising international solidarity we must truly respect our friends and truly love the people of the friendly countries. The units now operating in Kampuchea must help our friends build new lives and develop their forces in all respects, with a full spirit of compassion, with a profound class sentiment, and with a noble international spirit. If that is to be accomplished we must fully understand the teaching of President Ho -- "To help friendly countries is to help ourselves" -- and must combine our national missions with our international missions, for our nation and the world are intertwined and closely bound to each other.

That is a matter of combining the campaign with the missions. But some units in the south and in the Kampuchean theater have often failed to do so. If we can overcome that deficiency it is certain that we will do a better job of fulfilling our missions. Many units and localities have fulfilled a number of missions and contributed worthily to the enterprise of defending our homeland, the victory of the Kampuchean revolution, and the creation of an increasingly stronger battlefield position for the three Indochinese countries. That is a great accomplishment. But we are still restricted in many respects, for we have not yet closely combined the campaign with the fulfillment of missions. This conference has concluded that we must overcome our deficiencies and do a truly good job of combining the campaign with the fulfillment of missions during the coming period. In promoting the campaign it is essential that we create a strong mass movement. Everyone must manifest a strong will, tie themselves in very closely with the Kampuchean revolution, and do a truly good job of fulfilling all missions in order to contribute worthily to enabling the Kampuchean revolution to advance even more strongly and win a complete victory -- both politically and militarily -- in both the short range and the long range. The Kampuchean people are very moved by our army's fine, noble spirit of solidarity toward the army and people of Kampuchea. International observers, even those who are not of good will, have had to admit that. But because we have not applied that to the campaign, the objectives of military-civilian solidarity and international solidarity have not become a broad mass movement which leads everyone to continually follow that noble example. That is a deficiency in our guidance of the campaign.

The major lesson to be learned is that we must closely relate competition to carry out the campaign with the fulfillment of the basic missions. Although they are two separate matters, they are interrelated. If we clearly realize our recent deficiencies and affirm the problem in a clear-cut manner, in the future the campaign will be bigger and greater results will be attained in fulfilling missions.

II. Some Measures for Carrying Out the Campaign

First of all, we must enable the masses to clearly realize the objectives and great significance of the campaign and the profound significance of each objective, then create a strong mass revolutionary activity movement, compete to attain the very basic objectives of the campaign to build the army, and improve the quality of the armed forces, so that they can fulfill the political missions assigned to the army by the party and state. Recently, we have not done a good job of carrying out that task. Some places have not carried it out at all, and some places have carried it out but not carefully and deeply. We must enable everyone to fully understand the profound significance of each objective. We must enable the cadres and men to clearly realize the advantages, but at the same time to clearly realize the difficulties in carrying out the objectives and missions. The masses should realize the advantages so that they can be enthusiastic and confident, but it is extremely important that the masses realize, and confront, all the difficulties. If the broad masses discuss each difficulty, they will find ways of overcoming them. The upper echelons cannot resolve all the difficulties of the lower echelons. Nor can the party committees and the commanders by them selves resolve all difficulties of the unit. Only the masses have the great capability of overcoming all difficulties. That is a truth that everyone knows, but in the course of their work they often regard it lightly, so when difficulties are encountered they often usually appeal to the upper echelon or the lower echelon, but do not allow the masses to discuss them and join in seeking ways to overcome them. In the anti-French and anti-U.S. resistance wars, we did a good job in that regard and thus attained many results. There were many difficulties that were seemingly unsurmountable, but when the masses understood them and discussed them in detail, ways were found to overcome them. So now we must do what we did during the past several decades.

On the battlefields a considerable number of units have been able to carry out that task. A unit in the delta had a jungle but complained that it didn't have trucks to haul timber to build fortifications. Meanwhile, there was a unit in the mountain region bordering on a friendly country which was able to build comfortable houses, had fortifications made of wood and earth, and had solid concrete fortifications. But its wood and earth had to be carried up on people's backs from the foothills to an elevation of 600 meters! Water was also carried up. Life there was wholesome and happy. Those results were attained because the masses discussed and resolved the problems. Many units have achieved rather good results with that method. That method is very basic, and is only a matter of whether it is carried out or not and whether or not there is a mass viewpoint. It is very old, but also very new. If it is carried out well it is possible to launch a mass movement to meet the objectives and fulfill the missions.

If there is to be a mass revolutionary activity movement, it is essential that the leadership and commanders be concerned with the material lives, morale, and sentiment of the masses. That is also a truth. After liberating our country our party, in leading the development and defense of the homeland, day and night studied and sought ways to organize and improve our people's living conditions in all respects. In that process, there are many difficulties which cannot be resolved in a brief period of time. Although our party has shown such all-out concern, since it cannot yet resolve all difficulties, especially those regarding the economy and living conditions, teh appearance of negative manifestations among the people can hardly be avoided. And our army can hardly avoid being affected by that situation. In order to have a mass revolutionary activity movement, with regard to leadership and command it is necessary to think about and seek all ways to care for the masses as regards the material life, the cultural life, the morale, and the sentiments of the masses. "Care" does not mean requesting large material resources from the sta state to distribute to the cadres and men. That is not how things are, and that is not appropriate to reality. Problems regarding living conditions must also be resolved by means of a mass movement. The leaders and commanders must love and care for the masses first of all and directly by mobilizing and organizing the masses by means of a mass movement for the masses to improve their own material, morale, and cultural lives. Only thinking about requesting the state to supply more is not positive!

Is it possible to develop each unit, organ, school, hospital, and enterprise into a revolutionary family? Can each battalion, school, hospital, and organ use its labor and sentiment to create a relatively good way of life? I believe that the southern provinces, and even the units operating in Kampuchea, are capable of doing so. In some cases the units, such as those stationed in cities, encounter many difficulties, but they can also find ways to resolve those difficulties. The deputy commander of Dong Thap Province told me that the troops of Dong Thap produce most of their food. Thus, if the problems are posed there are capabilities for resolving them. If their leaders and commanders have a high degree of determination, have sentiment, and are concerned with resolving problems, our units in Kampuchea can also organize better living conditions for the troops. We are entirely capable of developing all units into revolutionary families in order to create a way of life that is relatively complete, happy, wholesome, full of revolutionary setiment and ardor,, close to the people, and united with our friends. So that is the major obstacle? It is true that there is a shortage of books and periodicals, but not to the extent that it is impossible to set up clubs and small libraries in the units. There is a shortage of movies, but our cadres and men do not lack the capability to have cultural and artistic activities and create a happy life. When I go to border outposts I still see soldiers writing poetry. There are even units helping our friends in the districts and villages which, although they don't know much Cambodian, created cultural works to perform for the Kampuchean people, who were very appreciative. It must be said that although those works were not very good, they were overflowing with revolutionary ardor and the happiness of the soldiers, so the masses and the Kampuchean people appreciated them. So nothing can hold us back.

One person asked,"If we want to produce where will we obtain the seeds?" I thought about Regiment 14 which, although it was stationed in a very difficult area. had many seeds because the men had brought them with them. That does not mean that the rear-services at the various echelons need not be concerned. What I want to say is that when the masses enthusiastically improve the unit's living conditions everyone thinks and seeks ways to make a contribution. Seeds were brought for the unit from Viet Bac, Quang Ninh, and Minh Hai. When there was a shortage of gasoline and oil in Battambang with which to operate tractors, our troops worked with the people to hoe thousands of hectares in order to transplant rice, so Battambang was able to have a victorious tenth-month season. There was a shortage of gasoline and oil, but the troops had their labor. When there is a shortage of simple tools, the unit can provide some for itself and the upper echelon can provide some. With labor, land, simple tools, and organization we can produce.

The only fear is that among the command cadres some comrades do not pay attention, or do not pay adequate attention, to the lives of the units, cadres, and men under their command. There are many different reasons for that, but once their sense of responsibility and revolutionary will has weakened they think of themselves more than they think of the masses. Our cadres are educated and trained by the state, so if they are remined they can quickly overcome that problem and rapidly strengthen their revolutionary will, sense of responsibility, and sentiment toward their men. That is certain to happen. Our cadres want to promote the mass revolutionary movement. First of all, they must be concerned with the lives of the cadres and men and create living conditions as discussed above. At one time or another, although difficulties are encountered with regard to living conditions, due to the requirements of the revolution the masses can concentrate on fulfilling their missions. But if a unit does not create a life with concern for the material, norale, and sentimental aspects, it will be very difficult to maintain a continuous mass movement. We must correctly resolve that problem and create a broad mass movement to advance the campaign. In fact, many places have done so. For example, at E8, where the border defense troops are stationed right on the border, the cadres and men who are ill want to be treated on the spot and do not want to go far from the unit, for there the feeling is warmer and care is better. The same is true in the units defending the Spratley Islands, the units helping our friends in K.D., etc. Care in the units is good, assistance for our friends is good, there is solidarity in the unit and between our friends and ourselves, combat strength is greater, the work results are greater, and internal solidarity and international soladarity are closer.

Party building and Youth Union building must be closely combined with the campaign. Party building and Youth Union building at the base level constitute an organic unity. Strong leadership organization will play the role of educating and guiding youths. A strong Youth Union organization will draw the participation of youth masses and bring them into revolutionary activities. Youths are in the majority at the base level. The mass movement at the base level is in fact a youth movement. Only if youths enter into revolutionary activities can there truly be a mass revolutionary activity movement. The building and development of the party and the Youth Union are stimulated by means of the movement for the masses to fulfill the unit's political missions.

When you return to your work, don't separate meetings regarding party building, the youth work, and the campaign at the base level. They must be combined, in reviewing and drafting plans, and even in activities. Each unit must take the initiative in establishing ties between the party and Youth Union organizations and the campaign in the army on the one hand and the party organizations, the Youth Union, and the campaign in society at large so that they can assist one another to attain the objectives and fulfill the missions. In the Ministry's Campaign Standing Committee such a relationship exists, but at the military region level and in the lower-echelon units there are few relationships, which has limited the results of the campaign in the army and has not contributed to aiding and assisting the campaign on the outside. For example, if we do a good job of combining the campaign in the army with the "army and people share a common will" campaign in the localities, we can not only develop the role of the rear area toward imporving the qualities and traditions of the army, but also effectively restrict the negative manifestations on the part of some cadres and men.

In guiding competition to carry out the campaign, we must pay attention to creating models in many respects. In the campaign, we have stressed the creation of overall models, but at the same time it is necessary to pay attention to creating models for each aspect. Models regarding each aspect are also very important. We must rapidly discover, nurture, and develop the models, both all-round models and models for each aspect, promptly multiply them, and universalize them. Recently that task has been carried out too slowly. That is a deficiency in guidance. Creating positive elements, multiplying them, and broadly developing them, is the best leadership art for repulsing negativism. Everyone is aware of that, but do not pay it much attention or positively carry it out. If there are positive models but they are not rapidly developed, that is not the fault of the masses but of leadership and command.

In its resolutions and planned work programs for each month, quarter, and year, and when reviewing its work each month, quarter, and year, the unit or organ must closely combine its missions with competition to achieve the contents of the campaign, and the two cannot be separated. Its missions may be combined with all five objectives or with one or two objectives, depending on its principal missions in each period of time. We should not draft separate programs and plans to carry out the campaign. On the contrary, they must be combined with the programs and plans to carry out the missions. Separating them from the programs and plans to carry out the missions will cause competition to carry out the campaign to become lifeless, and it will not be tied in with the mass movement to fulfill missions.

Once there are work contents and contents regarding unit development, it is essential that there be specific guidance of the various steps and a division of labor. For example, in the monthly work of an organ or unit there must be a division of labor in order to fulfill the missions. At the same time, attention must be paid to developing the organs and units in the process of fulfilling those missions.

There must be over-all plans for the organs and units, but at the same time there must be plans for each person, in order to fulfill the common missions of the units and organs. The work plan of an organ, unit, or individual must be tied in with the attainment of the campaign objectives. When reviews are carried out, that will be the basis for determining to what extent each person has fulfilled his work assignments and attained the objectives of the campaign. Only after each individual has been reviewed can we correctly evaluate the entire organ or unit. If, in an organ with ten people, at the end of the month the organ is evaluated as having fulfilled its missions, but individual reviews show that only three comrades have done their work well and seven have done very little, we can conclude that the organ has not fulfilled its missions, has not used all of its capability, or lacks personnel.

For a long time now we have drafted plans in a general sort of way, so we have also reviewed in a general sort of way. Such reviews do not carefully evaluate each individual, from top to bottom, so it is very difficult to correctly evaluate the organ or unit as a whole. In the campaign, there is a requirement that each person have, and work in accordance with, a program and plan. The program and plan must emphasize the missions and responsibilities of each person. If that can be accomplished, on a regular basis, on a regular basis, I believe that the missions will be furthered and it will be possible to quickly uncover the deficiencies and mistakes regarding responsibilities so that they can be promptly rectified.

One unit reviewing its work after a month said that it had fulfilled, or essentially fulfilled, its missions, but one-third of the time the men did not have work to do, or worked without result and did not attain the requirements, so it can be concluded that its command was not good and the commanders did not fulfill their missions.

If a provincial military command or a district military command committee, when reviewing determination, responsibility, and functions, knows about and categorizes the youths in the province or district and has plans to coordinate with the youth and women's mass organizations in order to educate and raise the consciousness of each type of youth, and cause them to voluntarily fulfill the mission of defending the homeland and their military obligation, it will have fulfilled its mission. If it cannot do so, it may be said that in that month or quarter the provincial military command or district military command committee has not fulfilled its mission. We must be clear-cut, and cannot be too general. If we are too general, and do not do a good job with regard to each person and echelon, we cannot advance the campaign.

When carrying out reviews to determine whether the units fulfilling missions in the Kampuchean theater have fulled their missions well or carried out the campaign well, it is also necessary to consider each person and unit in detail. For example, when reviewing the first objective we must consider whether they are content in the Kampuchean theater and whether they clearly understand that their national and international missions are the same. Is their attitude toward helping our friends the one taught them by the party? Only by such clear, specific, frank reviewing can we encourage each person and group to advance.

In brief, we must tie in the carrying out of the campaign with the missions and responsibilities even when drafting work programs and plans. Although they are two different tasks, they are closely related. That does not mean that the two should become one, for they have different requirements. A mission cannot be fulfilled if a mass movement is not created to attain the objectives of the campaign, or if the missions are not combined with the campaign. In providing guidance we must clearly understand that in order to combine them harmoniously and closely.

The leadership of the party committees and the party chapters is the decisive factor determining whether the mass movement strives to attain the objectives that have been set. That leadership must include leadership of the contents, measures, and methods for carrying out the campaign. It is also important that leadership encourage party members to play an exemplary role in the campaign. Whether party members are exemplary or not will determine whether the mass movement will compete to carry out the campaign. The party committees and party chapters must, in discussing the contents and measures for each period, also carry out a review to determine whether each party committee member and party member has been exemplary in carrying out the campaign. The party organizations, party chapters, and party committees must nurture and develop the assault role of the Youth Union, and use the youth forum to encourage youths to advance into the spheres of combat, improving living conditions, developing the unit, etc.

In the campaign, the party committees, the party chapters, and the commanders must directly organize and manage. That is the responsibility of the commander and is in accordance with the system of a commander. Then as now, nearly all of the commanders are members of the party committee and have an important role in it. Commanders are responsible for contributing positively to the leadership of the party committee. Such contributions greatly affect the quality of leadership. When a party committee's leadership is weak and ineffective, the commander is also responsible, and cannot place all the blame on the party committee. The commander is the person who organizes the implementation of the resolutions of the party committee, the orders and directives of the upper echelon, and the laws of the state. The same is true with regard to the campaign: it is the responsibility of the commander, who cannot give a blank check to the organ, and even more so cannot give a blank check to one or two aides. The commander is responsible for organizing, motivating, educating, managing, and controlling the cadres and men under his command so that they can enthusiastically fulfill the missions and objectives. He does not merely give orders and assign tasks, then turn over organization, motivation, monitoring, and control to the deputy commander or organ. The organ must work in accordance with its responsibility, but the commander must realize that he is primarily responsible. The commanders at the various echelons, nearly all of whom are party committee members, are responsible to a very important degree for the effectiveness of the leadership of the party committees at the various levels, and are completely responsible for organizing the fulfillment of the mission and carrying out the campaign.

HO CHI MINH CITY COMMANDER INTERVIEWED ON LOCAL MILITARY TASK

Hanoi QUAN DOI NHAN DAN in Vietnamese 2 Jul 81 p 3

[Article by "P.V.": "New Features of the Local Military Task"]

[Text] As scheduled, at 1600 on that day arrived to meet Major General Tran Ha Phung, Commander of Ho Chi Minh City. But the Commander was not working in his office. The organ's aide told us that because of an unscheduled meeting of the standing committee of the Municipal Party Committee held to discuss preparation to greet soldiers who had completed their military obligations, the Commander could not keep the appointment. No until half an hour later did the Commander return to his headquarters to receive us. As soon as he got out of the car and entered the reception room, he said enthusiastically, in a Nghe Tinh accent mixed with a Nam Bo accent, "Excuse me. I had been concerned with recruiting troops, but now I'm concerned with greeting returning troops, with making arrangements for the return of thousands of men who have achieved merit. That's not easy!"

Reporter: That's enough to show that new things pop up every day in the city's military work -- although yesterday you said "not much is going on" and intended to cancel the interview.

Commander: If we speak of the new features of the local military work in the city we must speak of the various aspects of that work. Each aspect is beset with new problems which must be resolved. Each aspect and task must be well resolved and combined to create combined strength with regard to national defense and security. In this city, the various kinds of enemies and reactionaries are seeking all ways to unite with one another to attack us in all regards. The political parties, factions and large and small forces of all kinds, which have even given themselves names, of the U.S.-puppets, Beijing, and the other enemies which were left behind or have been planted, are springing up and opposing us. There are also gangs of thieves of the old regime, which number in the hundreds and are armed and have hideouts. During the past 6 years we have mopped up most of those organizations. We have struck them with one heavy blow after another and have cleaned up the city. But we have not finished the job, so we cannot be satisfied. They are operating both secretly and openly, at times hiding and at times popping up, blending in with the people in the city and the corridors leading into the city. That is not to mention people engaged in other illegal livelihoods. In view of that actual situation, when we speak of the local military task and the mission of the local armed forces to be ready to fight to defend the city, we must necessarily focus on the mission of maintaining political security and social order and safety. Under the close guidance of the Municipal Party Committee, all precincts, subwards, districts, and villages have plans to cooperate with the armed forces to protect security. The self-defense militia and the regular units have done a better job of cooperating with the People's Public Security forces on the streets and in the key areas, and in strengthening the subwards with regard to security. At the port, the Western Region bus station, and the Eastern Region bus station, along the Saigon and Long Tau rivers, and in the Rung Sat area, as well as in many other places, the military control forces are very active in order to promptly deal with events.

We regard the maintenance of security and order as the foremost mission of the self-defense militia. They also have another key mission in the immediate future. It may be said that the city's self-defense militia progress from fulfilling the missions of maintaining security and order and protecting socialist property. The effectiveness of that task is one of the yardsticks measuring the quality of the self-defense units. If hundreds of thousands of self-defense militia cooperate closely with the People's Public Security forces with regard to organization and guidance, have a high degree of consciousness, have appropriate operational plans, and know how to rely on the people, then the various kinds of enemies will have no territory or opportunities to carry out their sabotage activities. Due to the good fulfillment of that task, in addition to the consolidation of the base-level governmental administrations, the development of the revolutionary organization, and the gradual stabilization of living conditions, the security and order, and way of life, of the city have improved greatly. The very good security during Tet and during the recent National Assembly elections is lively proof of that.

Reporter: Please tell us about how the development of base-level units by the city's armed forces is progressing and how that task is related to the mission of maintaining security and order as well as the other missions.

Commander: You probably know that the people's armed forces of Ho Chi Minh City have made strong progress during the first 2 years of carrying out the major campaign, and that the city has been selected as one of the nation's exemplary localities. However, if we review the situation critically, we see that there are still many weaknesses, especially because the quality of the base-level units is not high. If training is to attain high effectiveness and if combat-readiness and aid for the front are to be good, they must be based on political quality, the discipline situation, and the leadership and command ability of the base-level units. This year we are concentrating our model-unit guidance in order to gain experience and create a good all-round transformation. From the regular units, we have selected the Gia Dinh Regiment as the model unit. We have also held conferences to seek solutions to problems of the Rung Sat Regiment, the 19-5 Regiment, and the other units. I, and the other managing comrades of the command organs, must directly supervise the isolation of "model" experiences and multiply them to create "universal" experiences. Each precinct and district must also select self-defense militia models which do a good job, in order to similarly universalize their experiences. The role of the commanders and the imposition of tight discipline are concerns which must receive the most investment, and we must invest in them continually. Many tasks are not carried out very satisfactorily. The regular and self-defense milita units which are not well led and which do not have tight discipline have a hard time completely fulfilling their missions, especially with regard to security and order. Examples of that may be seen everywhere.

Reporter: Please tell us moreabout the new features of the city's appeal for youths to enlist.

Commander: It may be said that this year that task fo the city has more depth. The objective that has been set is that recruitment appeals must be assured in accordance with requirements, while at the same time having the support of the people and achieving military-cicilian solidarity. To obtain that objective, the Municipal Party Committee, the People's Council, and our Command are determined to make public the obligations of every youth and family, and the specific standards and policies -- wh will go first, who will go later, and who receive deferments -- so that the people in the neighborhoods, subwards, organs, and enterprises can examine them. We are also cooperating closely with the public security and commercial organs, so we are reviewing the rolls more carfully than in previous years. Investigators of the Command go to the source to investigate complaints, carry out a careful investigation, and deal with the problem immediately. A military organ cadre guilty of collusion was severely dealt with. This year will be the fifth year the city has fulfilled its military recruitment mission. We did a good job in the first cycle, and it is certain that we will go all-out to do a better job in the second cycle and fulfill the annual norm. Although there are still instances of negativism and deficiencies in that work, they have clearly declined. Something we must go all-out to accomplish in the coming period is to contribute to assuring that the troops who are recruited are of high quality. Of course, that is related to the quality of the task of greeting soldiers returning after having fulfilled their military obligations.

Reprter: That is something that is very new an increasingly greater task. Please tell us how the city will perform that task.

Commander: It's not that we've just begun to perform that task. But the most valuable thing is that the Municipal Party Committee, the People's Committee, and the sectors agreed unanimously with the recommendations of the command organ. In the precincts and districts, and in the city, there have been formed councils made up of representatives of the public security, commercial labor, war invalids and social welfare, and many other relavant sectors, to work with the military organs in assuring all rights of those being discharged. The entire city is determined to assure that all soldiers returning after fulfilling their duties have jobs. It may be said that this is a struggle that must be carried out in many segments and be carried out resolutely and thoroughly. During the first cycle the returning soldiers returning after fulfilling their duties have jobs. It may be said that this is is a struggle that must be carried out in many segments and be carried out resolutely and thoroughly. During the first cycle the returning soldiers received rather good care from the municipal organs. As for the Command, we are overcoming many difficulties and promoting the establishment of economic zones of the municipal armed forces in Duyen Hai District (in the outskirts of the city) and at a number of other locations, to receive the families of those returning after fulfilling their military obligations and are going to such places to earn a living and develop them over a long period of time. The initial accomplishments have had a good affect on the families of those setting out to enlist, for they know that when they return to the locality their rights will be similarly assured.

The local military work in the city will become increasingly difficult and complicated. We would very much like to exchange and study the experiences of the cities and provinces throughout the nation.

MILITARY AFFAIRS AND PUBLIC SECURITY

DEVELOPMENT OF PARTY CADRES IN ARMED FORCES URGED

Hanoi TAP CHI QUAN DOI NHAN DAN [PEOPLE'S ARMY REVIEW] in Vietnamese No 7, Jul 81 pp 17-26

[Article by Le Tat Thang: "Build a Strong Corps of Party Cadres in the People's Armed Forces"]

[Text] After the party line has beeen determined, the mission of building a corps of cadres with sufficient quality and ability to victoriously carry out that line plays a decisive role. A strong corps of cadres will not only assure the implementation of lines but will also contribute to developing the lines and enable them to be lively and rich in actuality and to become increasingly complete.

One of our party's successes is that it has been able to build a strong corps of cadre including a corps of cadres in the people's armed forces. They have been the party's hard-corps force in victoriously fulfilling the revolutionary lines and missions and the military lines and missions during the past several decades. If our people have never had such great nation-defending strength as that of today, never before has our party had such a powerful corps of cadres in the armed forces.

During the past several years, in view of the new, very demanding, and very urgent requirements of the enterprise of defending and building socialism, in addition to the new development of the armed forces our corps of cadres, always richly experienced in combat, has also undergone new maturization development with regard to structure, quantity, and quality.

With regard to such a corps of cadres, our armed forces have done a good job of fulfilling the great political missions assigned them by the party and state in the new revolutionary phase. Especially, during the spring of 1979 our armed forces, along with the people of the entire nation, won complete victory in two wars to defend the homeland -- along the southwestern and northern borders -- and struck a heavy blow against our new strategic enemies, the Beijing expansionists and their lackeys, and gloriously fulfilled both our sacred national mission and our noble international mission.

That corps of cadres is valuable capital with which our party and state can build our armed forces in the present and many years in the future, and is a legitimate source of pride for our armed forces and people. But it must understood that in the new developmental phase of the revolution, the corps of cadres has not kept up with the requirements of the mission of combat readiness and combat to defend the socialist homeland, of the international mission, of the economic development mission, and the mission of continuing to develop our army into a powerful revolutionary people's army that is increasingly professional and modern.

Those very difficult, vast, complicated, and varied missions require that we build a corps of party cadres in the armed forces that is numerically sufficient and has a rational organizational structure, good quality, good virtue, a stable political level, expert military skills, and good specialized and professional ability, who are capable of fulfilling their responsibilities and missions. Only thereby can the corps of cadres assure the victorious fulfillment of the party's political lines and missions, and military lines and missions, in the new revolutionary phase.

The requirement of building the party's corps of cadres in the armed forces during the new phase of the revolution is very demanding. Therefore, the specific mode and missions of the cadres during future years must be based on the political lines and missions and the military lines and missions of the party, the missions of the armed forces, and the actual situation of the corps of cadres. We must both persist in the basic, long-range direction of building a powerful corps of cadres in the people's armed forces which is sufficiently strong to defend the homeland and know how to apply it appropriately to the actual situation and missions. It profoundly manifests the revolutionary and scientific viewpoints in building the corps of cadres, and avoids arbitrariness and patch-work while also avoiding being impatient and mechanical.

At present our country is and for a long time to come will continue to be, in a situation of peace in which war may be started by the Beijing expansionists in league with the U.S. imperialists and the other reactionary forces. Although they have been heavily defeated, they are still not willing to abandon their basic plot of weakening, and then annexing, our country, Laos, and Kampuchea. While preparing for a war of aggression against our country, they are feverishly waging an all-round war of destruction against our country economically, politically, culturally, socially, etc.

In the sphere of production, a new factor, a new spirit, is becoming increasingly widespread, and is creating a premise for a new development of the national economy. But time will be needed to bring about a basic, long-range transformation of the situation. In the immediate future our country must strive arduously to overcome our difficulties regarding the economy and living conditions.

In view of that situation, the missions of our armed forces continue to be very difficult. They must be prepared to defeat the war of aggression of the Chinese aggressors, no matter what the scale, and, along with the public security forces and the people, smash their all-round war of destruction and maintain political security and social order, while also doing a good job of fulfilling their international and economic construction missions. At the same time, they must continue to promote the great undertaking of building the people's army along revolutionary, professional, modern lines, so that it can be worthy of being a sharp tool of violence of the proletarian dictatorship state and a solid pillar of the system of socialist mastership.

All aspects of building the corps of cadres -- from elementary and supplementary training to deployment, utilization, etc. -- must above all be based on the requirements of those great, actual political missions.

The corps of cadres must be the "backbone of the great task of building the people's armed forces." The army cadres must have sufficient ability and quality, two aspects which are bound together and are manifested in the results of fulfilling missions. The army cadres must exemplify revolutionary heroism and the spirit of sacrificing for the homeland. They must firmly grasp the political and military lines of the party and the military science and art of people's war to defend the homeland, and they must be very close to the enlisted men and the masses and maintain a pure, simple way of life.

If that is to be accomplished, during the next few years it is necessary to take an important step in long-range planning to build the corps of party cadres in the people's armed forces so that they can be numerically sufficient, have a rational organizational structure, and have high quality. We must endeavor to train the corps of cadres and improve their quality in all regards, along basic, comprehensive, and deep-specialization lines.

At the same time, we must create an organizational structure for the corps of cadres that is increasingly uniform, complete, and balanced among the armed forces branches and combat arms, between the regular troops and the local troops, between the standing forces and the reserve forces, among the organs, schools, and units, and among the various kinds of cadres, including command cadres, political cadres, scientific-technical, specialized, and professional cadres, scientific theory and research cadres (both social sciences and natural sciences), instructors, etc. It is necessary to form a corps of high-level and mid-level managing cadres organized into many successive classes, in order to assure continuity, maintain and develop the combat experiences, and help and train one another. We must positively train ethnic minority cadres and stress the building of a corps of cadres to fulfill economic, capital construction, and national defense production cadres, and a corps of military specialists to fulfill international missions.

Care for building the corps of cadres must be comprehensive, regarding numbers, organizational structure, and quality, and no aspect can be regarded lightly. But we must pay all-out attention to improving the quality of the corps of cadres, for that is an urgent task at present and has a decisive long-range significance.

In improving the quality of the corps of cadres there are many tasks that must be carried out, the central of which is improving the quality of cadre training. Cadre training must be carried out along basic, long-range lines in order to build a corps of cadres for a professional, modern revolutionary people's army, and we must, on the basis of the actual situation of our corps of cadres, set specific objectives that must be attained in a certain period of time. Attention must be paid to political, military, specialized, cultural, and scientific-technical supplementation, assuring that most cadres can study in the institutes and schools; closely combine study in schools with on-the-job training, and making on-the-job training a regular practice. At the same time, we must stress efforts to correctly implement the regulations regarding senority for cadres at the cadres at the various levels during future years.

In order to transform the above-mentioned directions, missions, and objectives into real results, one of the most important matters is that there must be correct action policies and measures.

1. We must continually perfect long-range plans regarding the building of the corps of cadres. That plan must be perfected at an early date, be appropriate to the new requirements of the new phase of the revolution, and promptly meet all demands of the developmental situation of the armed forces. That plan must include all aspects of the cadre work, including the elementary and advanced training, assignment, and utilization of the various kinds of cadres, especially the managing cadres of the sectors and echelons. We must avoid patch-work, incomplete ways of doing things, which leads to the work of the corps of cadres lacking balance and continuity, and causes the cadre work to become passive and encounter many difficulties in training, assignment, and utilization.

We must, on the basis of the over-all plan regarding the development of the armed forces, and of the over-all organizational structure and table of organization of the entire army, clearly determine the kinds of cadres that are needed, create standards for each type and echelon, calculate the cadre needs for each period of time, and determine measures for fulfilling those requirements. Furthermore, on the basis of fully understanding the party's policy toward selecting cadres and firmly grasping the standards of the cadre functions, we must correctly evaluate the existing cadres and the sources of supplementation of each echelon and select reserve cadres of the various types to be included in the plan and arranged in many successive groups in order to assure continuity and enable the cadre work to become increasingly professional. We must promptly perfect each step of the cadre plan and rapidly supplement the specific five-year and annual cadre plans.

2. Training the cadres and raising their levels. The development and combat missions of the people's armed forces in the enterprise of building socialism and defending the socialist homeland set new, very demanding requirements with regard to the ability and quality of each cadre.

Therefore, the task of training cadres must be carried out along basic, all-round. deeply specialized lines in order to raise their Marxist-Leninist theoretical level and their level of understanding of the lines and policies of the party and state; improve their working-class viewpoints and stands, their level of knowledge of military science and art, military science and technology, culture, and foreign languages; improve their ability to organize, command, and manage the troops; and raise the specialized professional level of each type of cadre at each echelon.

In order to fulfill that requirement we must concentrate on promoting in-school training, while positively providing on-the-job supplementary training, combined with steeling under actual combat, work, training, and production labor conditions. The number of cadres who must be trained according to plan is very great. The problem that is posed is to give higher priority to that task.

We must perfect the system of army schools along professional, modern lines. The system of party schools is very large and includes the institutes, officer-training xchools, and military administration schools of the military regions and corps. the schools of the armed forces branches and the modern technical combat arms, the system of party schools, and the system of cultural achools and classes.

All of the schools play important roles in the elementary and advanced training of the various kinds of cadres, and they must carry out an educational reform so that they can be appropriate to each category of student. At present, it is necessary to stress providing supplementary training for and improving the quality of the instructors, for only if the instructors are skilled can the quality of elementary and supplementary training be high. At the same time, we must urgently complete and improve the curricula and textbooks in correct accordance with the military line and thought of the party in people's war to defend the homeland, build schools and classrooms, and increase teaching and study equipment. We must do a good job of student recruitment, assuring that the people who attend school are promissing and are in correct accordance with the standards and training plans. We must not send unqualified cadres to study. But we must take appropriate steps so that people who are older and less educated, but who have combat experience, can study and become officers.

In addition to in-school training, continuous attention must be paid to on-the-job supplementary training for cadres, to instituting on-the-job training on a regular basis. Each cadre must regard study and self-improvement as a responsibility and obligation. Study is part of the party nature and must be strictly carried out. The fulfillment of the study mission must be regarded as the fulfillment of an assigned mission. We must tightly organize on-the-job study and oppose subjectivism and laziness toward study among cadres, while overcoming the haphazard organization of schools and classes, and the lack of effort to meet the conditions necessary for both teaching and study.

The cadres managing the units and organs must be exemplary in study and must manifest a strong sense of responsibility in organizing study for cadres and urging the cadres to engage in self-study.

3. Positively and actively uncover, select, and cultivate sources of cadres for training. The quality of the corps of cadres depends on two factors: training and the selection of people for training, i.e. the correct determination of sources for the recruitment of students to study in the schools and sources of supplementation for the corps of cadres of the sectors and echelons. In order to improve the quality of the corps of cadres and create a good basis for cadre training, we must actively and positively create sources of cadres for training. Nearly all of the cadres and men of our army -- which has more than 35 years of combat experience -- have been tested and steeled. That is a great potential and an extremely great advantage for selecting and training cadres. Therefore, we have a basis for selecting people who have combat experience, are young, and are promising, to enter the corps of cadres and serve as a long-range development source, thus assuring that decades later the great majority of cadres at the division level and higher will have combat experience. Comrades with insuffieient educational levels must be further educated. Those who do not meet the stipulated requirements regarding grade and rank must be considered for promotion so that they can have an opportunity to improve their leadership and command ability. Units fulfilling combat and combat-readiness missions at the border on islands, and in neighboring countries must receive priority so that many promising people may be sent for cadre training. The selection of students for officer training schools, with regard to both military personnel and general school students, must be in accordance with regulations.

People to be trained as sector-leading scientific-technical cadres must be selected from among those who have actual work experience, truly have scientific-technical ability, and have good prospects for development. They must be supplemented comprehensively, with regard to science and technology, politically, and militarily.

4. There must be a plan for developing the existing corps of cadres. As regards the old cadres and the new cadres, our party's cadre policy is always to "combine the experience of older people with the enthusiasm of younger people, and exploit the good points of each type of cadre," and to "correctly combine the experienced cadres and the new cadres, the old cadres and the young cadres, in order to fulfill the immediate missions while assuring continuity in building the corps of cadres in order to meet the long-range requirements."*

Therefore, in addition to training new cadres, we must do a good job of the advanced training, use, and development of the existing cadres. Experience shows that if conservatism creates many obstacles in the promotion of young cadres, the attitude of disregarding the strengths of the old cadres is no less harmful.

In order to develop the existing corps of cadres we must quickly bring an end to the situation of using cadres arbitrarily and not in accordance with the capabilities, strengths, and vocations of each type of cadre, which results in a cumbersome organization and low productivity. It is necessary to clearly determine the cadre missions, functions, and table of organization in each organ, unit, and school, and stipulate cadre standards for each specific sector, type, and position, in order to have a basis on which to correctly utilize the cadres and develop their abilities.

The corps of command cadres must be supplemented and steeled comprehensively, with regard to military and political matters, science and technology, the command and management of troops, and the management of weapons, equipment, and the other material-technical bases, thus assuring sufficient quality and ability to command the units assigned them. While implementing the system of a single commander, it is necessary to pay attention to supplementing, using rationally, and developing well the corps of political cadres. Those who are capable to development militarily, and whose ages and health are suitable, should be cultivated to become command cadres. The other components are assigned and utilized in order to perfect the system of political deputies and political organs. We must provide some cadres with supplemental training so that they can be assigned to units which still lack cadres or serve as cadres in charge of units specializing in economic construction.

With regard to the corps of scientific theory and research cadres (including both social science and natural science), we must pay attention to supplementing, using, and managing them, and assure that that corps of cadres is fully capable of fulfilling their mission of being the hard core in military science work and in military science and technology.

---

* Political Report and Report Recapitulating the Party Building Task at the Fourth Party Congress.

The corps of specialized cadres must be used and developed in the fields in which they were trained and in correct accordance with their capabilities and strengths. We must resolutely reassign cadres who are not being properly utilized. With regard to recently trained specialized technical cadres, it is necessary to assign them to the base level in order to assure that they have appropriate work. Only cadres who have actual combat and work experience, who truly have research capability, or who have been trained in research should be assigned to the research organs.

On the basis of cultivating and developing the corps of cadres, we must promote the training of new cadres and have plans to implement, step-by-step, positively, and stably, the regulations regarding the service time requirements of officers. We must fully implement the cadre systems and policies promulgated by the party and state, especially the policies regarding cadres who have been demobilized and reassigned, and cadres who retire or resign because of ill health.

5. Do a good job of organizing and training cadres of the units fulfilling economic construction missions. Economic construction is a very important mission of the armed forces. The missions assigned by the state in the economic development plans are very great. Therefore, the responsibility of the echelons, sectors, and cadres in the army is to fulfill those missions with the greatest possible effectiveness.

We must do a good job of the ideological, organizational, and policy tasks regarding the cadres fulfilling economic construction missions, assign sufficient command, leadership, and management cadres, and assure that the units doing economic work fulfill their missions. Cadres with combat experience who have undergone basic training, are healthy, and are of suitable age, and scientific-technical cadres who specialize in weapons and military equipment, should be assigned to combat units.

At present, there must be close cooperation between the army and the economic sectors, in order to have the necessary number of cadres. The basic training of cadres doing economic work must be carried out in state schools. The units doing economic work should only organize short-term training and supplementary education classes to provide cadres with the necessary knowledge of economic management and specialized technical subjects.

6. Endeavor to build up the reserve officer corps, be prepared to meet the needs of cadres under all wartime circumstances. The reserve officer corps is the hardcorps element of the powerful reserve forces of people's war to defend the homeland. In order to have a reserve officers corps with large numbers and high quality, which can meet the mobilization requirements under all wartime circumstances, we must organize the training, registration, and management of all four categories: discharged noncommissioned officers, officers who are too old to serve on active duty and have been transferred to a reserve status, students who have graduated from colleges and advanced schools, and cadres of state sectors with skills appropriate to the army. That is a task which demands that there be tight rules and a very high level of organization.

During the next few years we must concentrate on doing a good job of recruiting and training reserve officers from among noncommissioned officers who have completed active service, especially those who have combat experience; continue to train as reserve officers students who are college graduates and have skills appropriate to the army's development and combat requirements; and tightly manage the officers who are too old to serve on active duty but are qualified for transfer to reserve status.

In the reserve officer work, we must pay all-out attention to organization and quality. We must go all-out to avoid formalism, cumbersome organization, and long training periods, but during mobilization not having sufficient numbers, or experiencing difficulty in assigning and using personnel because of low quality.

7. Strengthen the centralized, unified leadership of the party committees with regard to carrying out the responsibility of the commander in the cadre task. The cadre task is an aspect of foremost importance of the organization task, and is a matter of decisive importance with regard to the over-all revolutionary undertaking." * Therefore, "The party must firmly grasp the cadre task and always tie in leadership of the fulfillment of political missions with leadership of the cadre task. The party must establish the lines, mottoes, and major policies regarding the cadre task and oversee their implementation. In the party leadership task, the party committee echelons must continually discuss and guide the education, training, assignment, and utilization of cadres." **

In our army, the party's leadership role with regard to the cadre task is manifested in the principle that the party committee leads the collective and the commander organizes the implementation of the cadre task. The standing committee of the party committee determines the policies and plans of the cadre task with regard to the assignment, promotion, and use of cadres according to the authority delegated to it. The commander directly controlls and organizes the implementation of the cadre task, manages and observes cadres, and takes the initiative in recommending policies and plans regarding the organization, promotion, and appointment of cadres so that the party committee as a whole can discuss them and make decisions. The commander must directly guide the cadre organ and guide the sectors and units in carrying out the cadre task. The deputy commander in charge of political matters is responsible for helping the commander organize the implementation of the plan to develop the corps of cadres.

The task of managing the various types of cadres at the various echelons must be centralized. The cadre organ must cooperate closely with the responsible sectors in training, using, and managing cadres, and must continually solicit the opinions of those sectors. In turn, the sectors must take the initiative in making recommendations to the commanders and the cadre organs regarding the development of the sector's corps of cadres.

The cadre task in each unit must also pay attention to developing the collective mastership right of the masses. The cadre organ must help the party committee and commander solicit the opinions of the cadres and men in selecting and managing cadres, and in finding appropriate forms for collecting the opinions of cadres, party members, and the masses regarding the cadre task.

---

* Resolution No 225 of the Political Bureau.

** Resolution No 225 of the Political Bureau.

8. Improve cadre management and strictly implement the systems and policies regarding cadres.

Only with good management can there be a good basis for training and using cadres. In some cases, appointments and promotions are incorrect because management has not been tight. In order to create a new transformation in cadre management, the cadre management task must be rectified along the lines of professionalism, centralization, and unity, in order to assure the good implementation of the party's organizational lines, stands, policies, and principles. We must pay attention to improving the management of cadre dossiers and evaluation and to organizing a system accurate and prompt information from top to bottom in order to assure close monitoring of cadre development. We must advance to perfecting the management of cadres by modern facilities, and assure the management of both active duty officers and reserve officers.

The cadre policy has many aspects: selection, elementary training, deployment, utilization, solidarity, the care and maintenance of cadres with regard to morale, material lives, etc. All of those aspects are important and they are closely related to one another. The most important are training, utilization, solidarity, and cadre maintenance. At the same time, we must pay all-out attention to caring for the living conditions of the cadres, as permitted by our country's economic capabilities, and pay adequate attention to cadres on distant battlefields, retired cadres, and rear-area cadres. In this regard, we must be just, rational, and unified, and the problem must receive attention from top to bottom. All echelons and sectors must truly begin to resolve that matter in a practical manner, not relying on the upper echelon or turning the task over to the lower echelon. In the immediate future, we must strictly implement the cadre policies and systems promulgated by the state and army. That is a requirement that all echelons must be concerned with and do a good job of fulfilling.

In the new situation of our country's revolution, the mission of strengthening national defense of all the people and building powerful people's armed forces capable of victoriously waging people's war to defend the homeland is posing new, very demanding requirements. In order to fulfill those missions, it is essential that we have a truly strong corps of party cadres in the armed forces. If that is to be accomplished, we must do a good job of carrying out the cadre task, and in order to do a good job of carrying out the cadre task there must be people who do a good job of carrying out the cadre task. The cadre task and the cadre management task in the armed forces must undergo a new, all-round transformation with regard to organization, personnel, and working methods.

The responsibilities and missions of the cadre organs at the various echelons must be clearly determined. The structure must be changed part by part in order to meet the new requirements. We must select people who have sufficient ability and quality to be a party cadre in the army, who have the necessary knowledge and ability regarding the cadre work, who firmly grasp the party's cadre line, stands, and policies, who firmly grasp the varied, complicated missions of the army in the new phase of the revolution, and who have actual experience in the unit, especially those who have combat experience and have attended schools. We must enable people who do cadre work to clearly realize their responsibility and honor, and endeavor to forge a working class outlook and revolutionary, scientific working methods. The commanders and those doing cadre work must truly be models with regard to loyalty, impartiality, devotion, love, and righteousness, and resolutely oppose impartiality, individual sentiment, etc., which are feudal, petty bourgeois viewpoints, in the cadre work.

We must improve our management of cadres, build scientific working methods, and overcome bureaucratic, manual, patch-work managerial and administrative methods. The commanders and the organs doing cadre work must increase their contacts with cadres and regularly meet with them in order to understand their thoughts and aspirations, and must help the cadres develop their good points and overcome their deficiencies. They must remain close to the cadres and observe them in actual work, study, and combat, as well as in their relationships with the party, the people, their comrades, and the upper and lower echelons. They must also observe and understand cadres when the cadres must come to grips with the enemy under all circumstances. They must go all-out in loving and caring for the cadres. Especially, when considering the disciplining of cadres, those comrades must be provided the opportunity of presenting their case to the organization. Their opinions must be considered without prejudice, and when they stumble ways must be found to help them get up, correct their mistakes, and progress.

If we do a good job of all the above, we will certainly create solid confidence for those doing cadre work, and motivate everyone to continue to strongly develop their intelligence and talent, in order to fulfill all missions assigned by the upper echelon and contribute positively to building the corps of cadres, so that it can be appropriate to the political and military lines of the party in the enterprise of building and defending the homeland, and be worthy of being the hard-core force of the powerful people's armed forces, of our country's professional, modern people's army in the new phase.

CONTROLS TO MAINTAIN PARTY DISCIPLINE STRESSED

Hanoi NHAN DAN in Vietnamese 29 Jul 81 p 3

[Article: "Party Edification - Controls to Maintain Party Discipline"]

[Text] The firm maintenance of control patterns serves the important purpose of guaranteeing that the general line, policies and operational principles of the Party and the socialist system of law be strictly implemented. In so doing we contribute to maintaining Party discipline; to helping the cadres and Party members promote their good points and overcome their shortcomings, but the essential thing is to actively prevent and limit to the utmost the errors and shortcomings that may rise at any moment.

Our control work has been strengthened and become more experienced, especially after the Party membership card issuing phases and the struggles against negative expressions. Through these movements there have been discovered many good examples on the implementation of the general line and policies of the Party, just as there have been discovered the errors and shortcomings of various echelons, sectors, cadres and Party members. The control work has helped the various committee echelons to assess even more clearly the strengths and weaknesses of the ranks of cadres under their management. This is the very basis for doing the ideological and organizational work in a correct and effective manner. The treatment of a number of cases and actions has served to play up the principles and discipline of the Party and the revolutionary quality of cadres and Party members.

Nonetheless, many widespread and prolonged negative expressions in the Party and in the state organs have not been well overcome. Many localities have not seriously implemented the directives and resolutions of the Party; there is internal disunity; the social vices like corruption, working through connections, bribery and mass oppression are still serious.

These expressions of Party discipline violation have many causes, first of all because the training and upgrading of the quality of the Party members in the new situation have not been given enough attention. Many Party committee echelons have not maintained firmly the pattern of control so as to grasp the situation of discipline maintenance at the bases, to actively prevent and discover in time the negative expressions. The organs of control have not assisted the committee echelons to do well the job of ideological management, the assignments and activities of the Party members. In many localities the control work is still passively carried out, it is done after the fact, and when there occur a violation of discipline it is usually not brought to light in time so as to quickly arrive at an appropriate and definite conclusion and clearly deal with the matter. When discipline is lax in the case of Party members holding responsible positions it negatively affects the general situation of discipline in the Party.

The task of Party edification at the present time requires that we strengthen the control of the political quality and of the organizational and disciplinary awareness of the Party members in the implementation of the general line and policies of the Party, of state laws, that we struggle against the arbitrary tendencies and actions that make light of the Party principles and state laws, that are self-willed and dictatorial, and against retrogressive and degenerate expressions such as taking advantage of one's position to extort money or seek profit. The control work has to answer the requirement of pushing towards the completion of the ideological task and at the same time to insure "justice, judiciousness, accuracy and timeliness." In the immediate future we should contribute towards improving our cadre ranks, help overcome the weaknesses found in the Party basic units, control the work of Party membership card issuance, and serve well the Party chapter congresses at every echelon and the coming Fifth National Party Congress. The control work has to become a regular pattern at each and every base unit and implemented by each unit on its own. At the same time we must organize discrete and focused control phases. And though the control may be carried out on a regular basis, on a periodical or on a random basis, all committee echelons must directly guide the process in a comprehensive and in-depth manner.

The personnel that assist the various committee echelons to carry out the actual control work must be made up of loyal cadres dedicated to the public interest, who firmly grasp the principles involved, who understand the law but also have feelings, who know how to rely on the masses in order to investigate and clear up issues, but who also must carefully analyze and judge of things and are responsible for their own conclusions. The Party's control work in which strict and fair discipline is ensured consists in not covering up for those in the wrong but also in not letting any cadre or Party member be run after and pronounced guilty without firm evidence of wrongdoing.

'UNQUALIFIED' PARTY MEMBERS PURGED FROM PARTY

Hanoi NHAN DAN in Vietnamese 29 Jul 81 p 3

[Article: "Ben Tre, Thanh Hoa, Quang Nam - Danang--Unqualified Party Members Purged From Party"]

[Text] Before issuing the Party membership cards, many base organizations have made it a point to expel unqualified members from the Party. Through the last membership card issuance phases, the municipalities and provinces have expelled from the Party 1.6 percent of the total number of Party members. These include those who do not garner enough political criteria, who have regressed or degenerated, or lost their will to struggle, etc. The Ben Tre Party chapter has expelled 3 percent of the total number of Party members, Thanh Hoa has purged around 3 percent, and Quang Nam - Danang 2.4 percent, etc. Ever since the implementation of Circular No 22 and Directive No 72 of the Secretariat of the Party Central Committee, the various echelons have purged from the Party 4.36 percent of the total membership. The number of members expelled from the Party in the later phases of issuance of regular Party membership cards is proportionately higher than in the earlier phases.

In each phase the various Party chapters and cells refrain from handing over the cards to those who have shown shortcomings or still do not garner all the criteria for membership. Many comrades thereafter have taken care to correct their shortcomings and therefore have received their membership cards. But in the case of those who do not improve on their shortcomings and who fail to progress even after a lapse of time, we must resolutely expel them. In many Party chapters and cells there are members who, after having received their membership cards, have shown to have serious shortcomings; these too must be purged from the Party.

From now until the end of 1981 there are still two more phases of issuance of Party membership cards. These are also the last two phases of the movement this time. The number of Party members that remains to be issued membership cards in these last two phases is still quite sizeable, representing 34 percent of the total membership. The base units which are up for receiving their membership cards are for the most part weak ones, and the number of unqualified Party members will be proportionately greater. For that reason, the various echelons are working urgently and determinedly to purge those unqualified to be Party members from the Party. The Hanoi City Committee, the Nghe Tinh and Ha Nam Ninh provincial committees are rechecking those base units which have not received their Party membership cards, they are sorting out the various categories of members so as to have plans for retraining and reeducating some, thus creating the conditions for them to garner enough criteria for receiving their membership cards while at the same time resolutely expelling from the Party those unfit for Party membership.

OVER 70 PERCENT OF VCP MEMBERS ISSUED PARTY CARDS

Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 1

[Article: "70 Percent of Total Party Membership Receive Their Party Cards--Unfit Members Purged"]

[Text] The Party card issuance phase of 19 May 1981 has been concluded. From Phase 1 (3 February 1980) up to this Phase 6, in the whole Party 70 percent of the total membership have received their cards.

Before issuing the cards in this 19 May 1981 phase, over 40 provinces and cities have organized preliminary conferences recapitulating the earlier phases so as to draw from them the experiences needed to guarantee the quality of the Party card issuance work.

Many of the Party card issuing cells and chapters of this phase are base units exhibiting some weaknesses, which therefore have met with difficulties in regard to leading the implementation of the political tasks. For this reason the improvement and consolidation of these base units have been attended to in a thorough and urgent manner by the various provincial and district echelons. The district and precinct committees have sent action teams down to these unit localities to help them boost up production, task implementation, and Party building. Only after that are the Party cards issued to the members.

After this strengthening process, the weak bases have shown many clear improvements. Nonetheless, the number of Party members unfit for receiving their cards still remains higher than that of the other phases. In some Party chapters the proportion of Party members still not having their membership cards comes to around 30 percent. Many Party base organizations resolutely expel retrogressive and degenerate members from the Party. Generally speaking, in this last Party card issuance phase (19 May 1981) the members of various echelons purged from the Party came to 2.7 percent as compared to the total membership considered for Party card issuance this time. A number of Party members unfit for receiving Party cards in the last few phases, who still do not overcome their shortcomings, have also been purged in the last 19 May Party card issuance phase.

PREVIOUSLY UNPUBLISHED POLITICAL BUREAU RESOLUTION 228, DOCUMENTS RELEASED

Resolution 228-NQ/TW

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978 pp 8-15

/Selected items from book "Protecting Socialist Property," published by Phap Ly Publishing House, 10,000 copies printed, printing completed in February 1979--for a translation of the introduction and table of contents of this book see JPRS 78681, VIETNAM REPORT No 2295, 5 Aug 81, pp 37-41/

/Text/ Political Bureau Resolution Number 228-NQ/TW Dated 12 January 1974 on the Struggle To Combat the Theft of Socialist Property, Combat Illegal Ways of Earning a Living, Improve the Management of Labor and Market Management, Maintain Order and Security and Serve the Life of the People Well

Over the past several years, even though the North has experienced a very fierce war of destruction and very serious natural disasters, production and socialist production relations have been maintained, the circulation of supplies and goods on the organized market has been broadened, order and security have been maintained and the lives of the people have basically been stable.

At present, however, there are certain negative phenomena that are having an adverse impact upon many areas of the economy and society, most notably the many different forms of theft of socialist property and the widespread practice of earning a living illegally within the enterprises and agencies of the state, at the various types of cooperatives and in society. The party and state have issued numerous directives and resolutions and promulgated numerous laws but, because they have not been fully implemented, this situation still has not been resolved. The agencies of the state on the various levels have not fulfilled their functions. The various party committee echelons have not been providing close, determined leadership. The management of labor, supplies, goods and capital from the central level to the basic level is very haphazard and marked by many loopholes. The socialist system of law is not being scrupulously implemented. Many policies, regulations and laws that have been promulgated are not being correctly implemented and, in some cases, are even being seriously violated. Unsuitable regulations have not been revised or amended.

The Political Bureau sees the need to resolutely, urgently and effectively stop the negative phenomena mentioned above. This is a vital and pressing effort of the dictatorship of the proletariat in the struggle between the socialist way of life and the capitalist way of life to improve the management of the state and the management of society. This struggle must be waged well to insure the successful performance of present and upcoming tasks.

It is necessary to scrupulously implement the various directives and resolutions of the party and the laws and regulations of the state (especially the law on the punishments for the various types of crimes against socialist property, the law on the punishments for the various types of crimes against the private property of the citizen and the law on protecting the forests) by means of organizing forces to struggle against and eradicate the theft of socialist property and illegal ways of earning a living and strengthen the management of labor, the management of grain, supplies and goods and market management and maintaining order and security in coordination with implementing the state plan and the performance of routine, daily work; on this basis, we must launch a truly strong productive labor movement within the enterprises, worksites, farms and agencies of the state, army units and cooperatives.

The Requirements Between Now and the End of 1974

1. Protecting socialist property and determinedly combating and eradicating the theft of this property.

Determined steps must be taken to protect socialist property in all sectors and on all levels, from within the enterprises, worksites, farms and agencies of the state to the cooperatives, throughout the army and among all the people. Wherever there is property of the state, effective measures must be taken to manage and protect it.

Efforts must be concentrated on providing guidance that will insure the thorough management and protection of the property of the state in all sectors that have much property (such as the supply, commerce, grain, communications-transportation, building, industrial, artisan and handicraft cooperative and other sectors) and at important places.

2. Tightly organizing and managing social labor, taking determined steps to combat and eradicate illegal livelihoods of every form and insuring that everyone works, everyone has a legitimate livelihood.

There are very many jobs that must be performed at this time: improving the farmland water conservancy systems, mining coal, harvesting timber, making building materials, establishing new economic zones in the midlands and mountains, etc. There are some types of jobs that do not require many supplies or raw materials (cargo handling, cutting stone, collecting discarded products within state-operated enterprises and among the people and so forth); however, although we have a large population, the failure to organize labor well or arrange jobs in an organized manner has resulted in the establishment of jobs that are unnecessary, very low productivity and the failure to express the principle of distribution in accordance with labor. For this reason, it is necessary, on the basis of redetermining what each person does to earn a living, to place each person in a legitimate job and, on this basis, to reorganize and tightly manage the social labor force. This is the prerequisite to eradicating social ills.

3. Tightly managing grain and implementing the policy on abolishing the free grain market.

Grain is a strategic material that must be tightly managed and consumed in a very frugal manner. We must put an end to the practice of falsely declaring the number of persons in residence in order to receive additional grain from the state. Through the supplying of grain, we must tightly manage social labor in accordance with the principle "those who do much work, receive much; those who do little work, receive little; and those who are able to work but do not, receive nothing." There must be very tight management of the sources of goods at the various types of production cooperatives that are supplied grain by the state.

In addition to the grain that is distributed within agricultural cooperatives in accordance with general policy, the state must unify the management, purchasing and distribution of grain and abolish the free grain market, both in the cities and the countryside. The Council of Ministers must quickly study the situation and gradually adopt plans and measures to provide the guidance needed to insure that this policy is implemented in a thorough and effective manner. In the immediate future, it is necessary to forbid private individuals to do business in paddy, rice, corn and wheat flour. In the cities, in the industrial complexes and along communication routes, the state must employ many different measures in order to organize the processing of products from grain and open food stands to serve breakfast to the people and serve food to travellers; at the same time, strict management and control regulations and measures must be enacted in order to avoid waste and prevent every possible abuse of this policy.

4. Strengthening the circulation-distribution network and improving the management of the free market.

In conjunction with expanding and strengthening the socialist market, urgent steps must be taken to reorganize and rearrange the free market in a reasonable manner. In coordination with combating the theft of state property, we must tightly manage the various types of supplies, grain and consumer goods (including stamps, coupons, tickets and lottery tickets) that are exclusively managed, purchased and distributed by the state: a plan must be adopted for shifting persons who do not have business licenses to production, to legitimate livelihoods in conjunction with strengthening the network of state-operated commerce and the marketing cooperatives. We must be determined to effectively stop the activities of speculators and illegal merchants and businessmen. We must prohibit the sale on the free market of materials and goods that belong exclusively to the state. The responsible agencies must be determined to confiscate these items and return them to the state; they must actively look for and punish persons who steal such goods or obtain them through conspiracy.

As regards cooperatives and private individuals that do have business licenses, the state must reinvestigate them and tightly manage their purchases and sales in exact accordance with the polices and laws of the state.

5. Strengthening the socialist system of law, improving the management of order and security and insuring that society is managed well.

While performing the above mentioned jobs well, we must, at the same time, take steps to gain everyone's participation in wholesome social activities, establish the socialist style of life, mold the socialist man and maintain order and security better; we must be determined to combat and appropriately deal with activities that do not submit to state management and that violate the policies, regulations and laws of the state. Efforts must first be focused upon guiding, inspecting and supervising the protection of the socialist economy at the enterprises, farms, worksites and agencies of the state and maintaining social order and security. We must find and harshly punish hoodlums, thieves, speculators, professional smugglers and persons who receive and market stolen goods. Criminals who, upon release from prison at the end of their terms, refuse to take a legitimate job must be forced to work and prohibited from residing in the cities and industrial complexes.

We must closely coordinate the public security forces, police forces, military police forces, militia and self-defense forces, Red Flag youth forces and so forth to maintain public order in the municipalities, cities and towns. We must immediately put an end to theft, muggings, fraud, the harassment of others and the creation of disturbances at public places.

The above mentioned jobs are closely interrelated and must be performed in a well coordinated and strong manner in order to achieve stable results. For this reason, we must simultaneously take the following steps:

--Clearly define the responsibilities of the Council of Ministers, the heads of the central sectors and the heads of the various levels of government down to the basic level as regards protecting socialist property, managing grain and managing labor within the enterprises and agencies of the state, within cooperatives and in society; give attention to broadening the network that supports production and everyday life and to organizing and providing jobs for everyone;

--Take coordinated legal, administrative, economic, organizational, propaganda, educational and other measures and, in particular, appropriately improve the accounting and control work of the state; coordinate control work of the state with supervision by the people; coordinate grain management and other necessary measures in order to place everyone in a legitimate job and manage the way each person earns his living...; define the obligations of the various types of cooperatives to the state; and harshly and promptly deal with persons and organizations that violate the law;

--Establish specific regulations or amend existing regulations, policies and laws with a view toward tightly managing socialist property, labor, the market, social order and so forth; in the process of implementation, research must be conducted in order to adjust the organizational structure and improve the operations of the economic management agencies.

The Council of Ministers is responsible for guiding the various sectors and the various levels of government in implementing this resolution in a practical, continuous and stable manner from within the enterprises, worksites, farms and agencies of the state, cooperatives and army units to the people and launching a widespread movement of the masses to resolutely denounce theft, misappropriation and illegal methods of earning a living of every type and voluntarily work together to protect socialist property, actively support and implement the measures of the state and support persons who earn their living legitimately. There must be tight organization and guidance and we must work in a comprehensive fashion but must firmly adhere to the elements of key importance; reviews and preliminary summaries must be conducted once every 6 months and a general summary must be conducted once a year with a report on results submitted to the Party Central Committee and government.

The various party groups in the sectors and the various party committee echelons must closely lead cadres, party members, manual workers and the people in implementing this resolution well.

Party members must set good examples in complying with this resolution and all violations must be harshly dealt with in accordance with the Code of Discipline of the party and the law. Each chapter of the party must manage its members well and lead the masses of its unit or agency in fulfilling the task of protecting socialist property, correctly implementing the regulations on the management of labor, supplies, finances, technology, etc.

The various departments of the party must, on the basis of their function, observe implementation and make practical contributions to the implementation of this resolution.

The party groups of the public security, court and control sectors must coordinate more closely to insure the implementation of the laws of the state and the effective implementation of the resolution of the Political Bureau.

The Trade Union, Youth Union and Women's Union must actively work with the government to teach, mobilize and inspect their members and make their own positive contributions to the implementation of this resolution.

Hanoi, 12 January 1974

Directive 205-CT/TW

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978, pp 16-19

[Text] Party Secretariat Directive Number 205-CT/TW Dated 13 October 1973 on Intensifying the Struggle Against the Theft of Materials and Goods of the State and Maintaining Order and Security in the Municipalities and Cities

The situation surrounding security in society is developing in a complex manner and, in some areas, especially in Hanoi,and a number of other municipalities, it is a serious situation. The Party Central Committee and government have issued many resolutions and directives concerning this matter but, due to the lack of close guidance and to numerous shortcomings in the organization of implementation, the situation has yet to undergo a fundamental change. The management of materials and commodities of the state and the maintenance of order at public places are very poor and are causing harm to the property of the state, posing an obstacle to the normal activities of city dwellers and exerting an adverse political influence.

The two problems mentioned above are pressing problems, the basic causes of which lie in economic management and social management that are not tight and the very haphazard compliance with management rules and regulations. Even more serious is the fact that a number of cadres, party members, civil servants and manual workers, taking advantage of this situation, look for every possible way to get around the law and conspire with decadent elements, thieves, dishonest merchants and speculators in society to steal and market property of the state. The various levels of government have not fulfilled their dictatorship function and the organizations of the party and mass organizations have not actively struggled against these negative, decadent phenomena; the attitude of soft-heartedness, of saving face is very mistaken and harmful. We must resolutely struggle to limit, in a short period of time and to the lowest possible level, and stop the theft of materials and goods of the state and maintain normal order at public places. A number of important and practical jobs must be performed on an urgent basis in order to meet this requirement.

1. The effort to combat the theft of materials and goods of the state must be resolutely carried out from within agencies and enterprises to society. As regards production and business installations, management agencies must clearly define the responsibility of each person, beginning with the primary person in charge within each agency and unit as regards protecting socialist property and complying with the management regulations and rules of the state. The various organizations of the party and the mass organizations on the basic level, especially the Youth Union and the Trade Union, must make the task of protecting the supplies and goods within their units the subject matter in their routine effort to teach the sense of protecting public property; they must also reorganize their protection of public property, criticize expressions of irresponsibility and promptly expose and stop acts against public property. We must strengthen the specialized security forces and means at installations that have materials and goods; these forces must be managed and their activities must be guided by the agency in charge of the economic unit and they must receive professional guidance from the public security sector. As regards important installations, the public security sector must immediately assign cadres and soldiers to them to perform this task.

2. We must coordinate the management of materials and goods at installations with market management and harshly punish persons who steal, market or receive materials and goods stolen from the state as well as cadres in charge who allow materials and goods in their unit to become lost; this punishment must take the form of administrative disciplinary action, party disciplinary action and prosecution under state law together with compulsory payment of damages.

3. We must organize the management and education of children who are not of work age but have left school and provide jobs for youths of work age who are unemployed. We

must inspect the licenses and tightly manage the organizations and individuals engaged in free production and business.

We must find and harshly punish professional hoodlums, thieves, persons who market stolen property, speculators, persons who hide stolen property, criminals released from prison who commit another crime and, in particular, the dangerous ringleaders of these persons. Criminals who, upon their release from prison, refuse to take the job provided for them must be forced to work at worksites and state farms in accordance with the regulations of the state.

4. We must immediately reorganize and put on a regular basis every activity designed to maintain public order at railroad stations, piers, bus terminals, large markets and stores, theaters, movie houses, parks, etc. It is necessary to promulgate and widely disseminate statutes, regulations and rules governing order at public places and to mobilize the people to effectively and permanently participate in this effort in coordination with organizing specialized security forces at public places. We must organize and establish a unified command of specialized patrol forces consisting of police, public security, military police, militia, self-defense, youth and Red Flag youth forces and make good use of these forces to rapidly handle complex situations; we must harshly and promptly deal with those who commit the acts of stealing, mugging, fraud, harassing others and disrupting order at public places. The government must, at an early date, supply additional forces and means to the public security sector, beginning in Hanoi and Haiphong.

5. Intensifying the struggle against the theft of materials and goods of the state and maintaining order and security in the municipalities and cities are pressing, important jobs that must be under continuous leadership and guidance and for which we must launch a movement of the masses in agencies and enterprises and in society against the theft of materials and goods belonging to the state, against acts that disrupt order at public places and mobilize the masses to maintain order and security and build the new lifestyle. Periodically, we must gain experience in each job; we must constantly take the offensive and bring about a marked change for the better during each specific period of time.

The investigation, control, prosecution and trial agencies must coordinate well with one another and establish good working cooperation so that they have the strength to competently assist the mass movement, assist in administrative management and economic management and correctly, rapidly and fairly deal with violations of the law while promptly and appropriately suppressing criminals.

The various levels, sectors and mass organizations, primarily the city party committees and the various party groups directly related to the work mentioned above, must adopt specific plans for implementation in accordance with their function and responsibilities... Each month, the party committee echelons, party groups and components in charge must report to the Secretariat on the situation surrounding and the results achieved from the implementation of the major work programs presented above.

Hanoi, 13 October 1973

Directive 20-CT/TW

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978, pp 20-25

[Text] Secretariat Directive Number 20-CT/TW Dated 24 September 1977 on Continuing the Implementation of Political Bureau Resolution 228-NQ/TW

In January 1974, the Political Bureau issued resolution 228, which advocated launching a movement of the masses to struggle against negative phenomena in economic and social life while intensifying the various measures employed in economic management and social management. This resolution was disseminated to the services, sectors and various levels, which implemented it rather widely in the North and achieved a number of initial results. The limiting aspect deserving of attention is that the implementation of the resolution has not led to marked progress in economic management and the management of society; violations of the law involving cadres who hold official positions have not been thoroughly prosecuted, thereby affecting the efforts to maintain and develop the mass movement. Since the South was liberated, many new and more urgent jobs have arisen and the guidance of the implementation of resolution 228 has been lax. Several results achieved during the initial period of the implementation of resolution 228 in the North have not been developed upon. At present, in both the South and the North, the theft of state property, bribery, illegal ways of earning a living and other negative phenomena within the agencies of the state and in society are increasing and are, in some areas, serious. The management and distribution of materials and goods are still marked by many loopholes, regulations are still not being scrupulously implemented and regulations that are no longer suitable have still not been revised. Continuing to implement resolution 228 and broadening its implementation to the entire country are pressing requirements; this will involve a struggle among the people to improve economic management and the management of society and build the system of socialist collective ownership; at the same time, it will involve a sharp struggle between our people and the saboteurs of socialism, hoodlums and gangsters.

Simultaneously carrying out the three revolutions, improving economic management and the management of society and combating the negative phenomena in economic life and social life are an important part of the effort to strengthen the dictatorship of the proletariat. We must have the following results as our objective: increasingly stable economic management and social management, a wholesome life in the cities and the countryside, the strengthening of the party organization, the government and the mass organizations and the true exercise of ownership by the laboring people with the laboring people being close to the party and having confidence in the leadership of the party.

In order to stop the decadent phenomena that are developing and bring about a change of political significance within society, it is necessary to conduct a phase of concerted guidance between now and the end of 1978 in which we mobilize and organize the masses to implement resolution 228, considering this to be a part of the movement to work, produce and practice frugality in socialist construction.

1. This phase of concerted guidance must be designed to meet the five requirements set forth in resolution 228. The South, which is embarking on socialist transformation

and socialist construction, must apply this resolution in a suitable manner that insures the correct implementation of the line set forth by the Party Congress of building a large, strong state-operated economy that rapidly assumes the dominant position in production, circulation and distribution. In conjunction with transforming production relations, it is necessary to efficiently reorganize production forces on a sector-wide basis and within each locality, improve management and provide additional equipment in order to expand production.

2. It is necessary to launch a widespread mass movement to expose loopholes in management from the central to the basic levels and find ways to reorganize and improve management with a view toward achieving higher work efficiency; at the same time, we must avoid loopholes, combat the theft of state property and combat illegal actions. We must effectively protect those persons who expose and denounce persons who engage in wrongdoing and expose and denounce illegal actions; we must praise persons who perform this service and harshly punish those who try to bribe or retaliate against persons who denounce them.

The main guidelines in reorganizing and improving management are to put accounting and control work on a regular, effective basis within the economy, establish work regulations, revise rules and regulations that are no longer suitable, clearly define the responsibility of each organization and each person, implement control by the upper level and the collective and reduce procedures and paperwork to a reasonable level instead of creating additional procedures and paperwork that cause work to proceed slowly and pose a bother to the people. At each installation, we must take organizational steps to uphold and implement the right of collective ownership of the working people, widely disseminate regulations and rules and mobilize the masses to implement them and supervise their implementation.

We must persevere in mobilizing the masses in order to expose and correct loopholes; at the same time, importance must be attached to guiding the specialized organizations in researching, uncovering and stopping theft and bribery and uncovering important violations of the law with all the necessary evidence so that these violations can be thoroughly prosecuted. Cases involving incorrect prosecution must be rectified; in cases in which a person is unjustly punished, the sentence of the person who was unjustly punished must be expunged and his honor and citizenship rights must be restored. Within each locality, it is necessary to prosecute a number of typical cases in a strict and fair manner with a view toward upholding the discipline of the party and the discipline of the state and having a significant educational impact. There must be good coordination between the economic-financial agencies and the organization, control, public security, inspection and court agencies as well as the mass organizations in order to verify charges, reach conclusions and prosecute cases in a timely fashion. Efforts must be focused on important cases and incidents, on current cases and incidents; trivial cases should be avoided. We must guard against and resolutely prosecute saboteurs taking advantage of the situation to create disruptions and sow internal divisions, to provoke and deceive the masses, to falsely accuse and isolate good persons.

3. While guiding the effort to reorganize and improve management within the agencies and enterprises of the state and struggling against theft and bribery, we must, on the outside, guide the effort to improve the management of society and struggle against

speculators, smugglers and persons hiding stolen property while resolutely suppressing hoodlums. In the cities, especially Ho Chi Minh City, Hanoi and Haiphong, we must systematically send dangerous counter-revolutionary elements and professional or obstinate hoodlums for transformation far from the city. The Minister of Interior must guide the localities in organizing the correct implementation of this policy and achieving stable results. As regards persons who are able to work but are lazy, sit and do nothing or work in illegal occupations, we must send them to worksites, force them to work and tightly manage them.

4. The scope of implementation of resolution 228 encompasses all sectors and localities. Each sector and locality must determine the key points upon which it must focus its guidance in order to achieve results. The Central Committee and the government will observe, provide assistance and provide guidance within four key sectors, communications-transportation, home trade, supply and banking, and in three key areas, Hanoi, Haiphong and Ho Chi Minh City. The Central Military Party Committee must determine the key areas within the army and adopt a plan for closely guiding them.

The information and propaganda agencies and the mass organizations must adopt plans for intensifying the education of cadres, troops and the people, setting examples of good persons and good work and criticizing things that are bad; guide artistic works in order to support the movement of the masses exercising socialist collective ownership well; guide the masses in harshly denouncing and resolutely struggling against the theft of socialist property, against the various forms of bribery, against manifestations of irresponsibility and against illegal actions.

The responsibility for guiding the implementation of resolution 228 within each sector, each agency and each production or work unit lies with the head of the sector, agency or unit; on the local level, this responsibility lies in the people's committees which shall fulfill their responsibility under the leadership of the party committee.

Within the sector and on the local level, it is possible to organize a group of cadres to help observe and summarize the situation instead of organizing a guidance committee; existing organizations must be mobilized and utilized to support this work on the basis of the function of each organization. On the central level, the Standing Committee of the Council of Ministers must issue a new decision on organizing and guiding this work in a manner consistent with the present situation and tasks.

5. The sectors and localities must restudy resolution 228 and formulate plans for continuing its implementation in a manner closely linked to researching and implementing the resolution of the 2nd Party Plenum on developing agriculture, in a manner closely linked to implementing the state plan and in a manner closely linked to the various movements within each sector and each locality.

Through the implementation of resolution 228 and the other resolutions of the party and state, we must examine and evaluate the basic organizations of the party, evaluate cadres and, on this basis, train and assign cadres, improve the quality of the party organization and expel unqualified members from the party; through these movements, we must also strengthen the government and strengthen and develop the mass organizations.

The sectors and localities must report each month to the Secretariat and the government on the implementation of resolution 228.

Circular 139-TTg

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978, pp 86-91

[Text] Premier's Circular Number 139-TTg Dated 28 May 1974 Providing Guidance with Regard to a Number of Matters Involved in the Prosecution of Crimes Discovered in the Process of Implementing Resolution 228-NQ/TW and the Other Resolutions of the Party and State

Political Bureau resolution 228-NQ/TW dated 12 January 1974 states: "We must take determined steps to protect socialist property in all sectors and levels, from within the enterprises, worksites and agencies of the state to the cooperatives, throughout the army and among all the people; wherever there is state property, effective steps must be taken to management and protect it." To accomplish this, we must "take coordinated legal, administrative, economic, organizational, propaganda, educational and other measures" while "strictly, fairly and promptly prosecuting persons and organizations who violate the law."

In the process of implementing resolution 228-NQ/TW and the other resolutions of the party and government, many violations have been or will be exposed. The prosecution of these violations must be based on the lines and policies of the party and the laws of the state.

Having held discussions and reached agreement with the Supreme People's Organ of Control and the Supreme People's Court, the premier hereby provides the following guidance with regard to a number of matters involved in the prosecution of crimes discovered in the process of implementing resolution 228-NQ/TW and the other resolutions of the party and state:

As regards crimes committed directly against socialist property; crimes involving the intentional violation of principles, policies, regulations and rules in a way that harms socialist property; violations of ration stamp and coupon regulations in the distribution of materials and goods and the crime of earning a living illegally; irresponsibility that causes serious harm to socialist property; the crime of protecting persons who have committed crimes against socialist property; the crime of retaliating against persons who expose and denounce crimes and so forth, these crimes must be reported to the People's Organ of Control, which is the agency that has the authority to supervise prosecution, so that it can initiate legal proceedings and have the public security agency conduct an investigation. On the basis of the case file, the People's Organ of Control determines which of the various methods of prosecution should be employed, including prosecution at the People's Court in order to put the criminal on trial. The sectors, levels and basic units do not have the permission to handle matters involving violations of criminal law internally; the procedure presented here is a mandatory procedure.

2. In cases involving violations of the law that are not a serious crime or violations that do not require criminal prosecution and concerning which the People's Organ of Control agrees to waive prosecution and turn the matter over to the sector, level or installation at which the violation occurred for necessary action, the sector, level or installation must examine the matter and strictly adhere to the Code of Discipline of the party, the state and mass organizations in conjunction with requiring payment of damages. Discplinary action must be carried out rapidly and the results of this action must be reported to the upper level and to the People's Organ of Control on the same level.

3. The handling or criminal violations must focus on punishing persons who willfully commit sabotage and professional hoodlums. Persons who abuse their position and authority for the purpose of stealing or seriously harming socialist property and criminals who obstinately refuse to repent must also be harshly prosecuted. Criminal punishment must be waived for persons who confess, denounce their accomplices or voluntarily repay the damages caused by them to socialist property. At the same time, steps must be taken to protect and encourage good, faithful persons who boldly expose and struggle against criminals.

4. In order to fully implement the line and policy of the party and state regarding procecution, each sector and level must establish the following correct cooperative relations with the agencies that enforce the law and the related agencies:

--They must immediately report any manifestations or signs of criminal activity and their suggestions concerning the crimes occurring within their sector or locality to the People's Organ of Control and the public security agency on the same level so that these agencies can take appropriate and timely steps to prevent and stop these activities.

--They must actively collaborate with the public security agency, the People's Organ of Control and the People's Court in investigating, verifying and reaching conclusions concerning matters related to violations of the law and persons who violate the law; supply necessary information concerning the principles of organization, work regulations and professional rules applied within the sector or locality; and give full eyewitness testimony at the time required or send a specialized cadre to verify their testimony in accordance with the requirements of the investigative and prosecutorial agencies.

--They must actively coordinate and collaborate with the inspection committees on the various levels with regard to exposing, investigating and reaching conclusions concerning mistakes and shortcomings in the implementation of statutes, the fulfillment of official duties and the fulfillment of tasks and in determining the responsibilities of each level and each person; they must supply necessary information in exact accordance with the requirements of the inspection agency and supply this information when required.

--They must work with the organization and inspection departments of the party and the government inspection and public security sectors to reassess the violations of the law and crimes of the sector or locality and coordinate with the People's Organ of Control and the People's Court on the same level in classifying the cases and incidents that must be investigated and prosecuted under criminal law or the cases and incidents lying within the scope of administrative action.

Cases or incidents in which the criminal is a person under the management of the agency on the upper level or the criminal must be prosecuted under the law, it is necessary, after taking internal disciplinary action, to immediately transfer the files of this person and suggestions concerning the method of prosecution to be employed to the above mentioned agency.

5. The public security and government inspection agencies must fulfill their functions and tasks as stipulated in the law dated 20 July 1962 on the tasks and authority of the People's Police and in Council of Ministers' decree number 165/CP dated 31 August 1970 on the tasks, authority and organization of the Inspection Commission of the government; they must improve their professional procedures and coordinate with the People's Organ of Control and the People's Court in order to provide professional guidance of investigations, the keeping of files and the application of legal documents to the various sectors, localities and installations so that they can promptly and successfully conduct investigations, verify charges and prosecute violations of the law.

If a problem arises between law enforcement agencies in the process of their work, it is necessary to discuss and resolve it promptly in accordance with existing policies and laws. As regards any new violations of the law occurring within the sectors, localities or installations, it is necessary for the sectors, localities and installations to inform one another so that they can keep abreast of these violations from the very outset and guide the lower level in taking effective actions.

As regards cases involving criminals caught in the act, cases not requiring an indictment, cases for which there is ample evidence and the defendant admits his crime, the public security agency must file a report with the People's Organ of Control so that it can determine whether or not to transfer the case directly to the court for trial.

As regards complex cases involving many incidents and details related to many different persons and many different areas of illegal activity that cannot be rapidly investigated or concluded at one time, the inspection agency must, in order to avoid prolonging resolution of the case, hold discussions and reach agreement with the People's Organ of Control in order to put together the evidence on the matters that are clear and promptly propose indictments, prosecution and trial concerning these matters if they do not change the nature of the case. At the same time, it is necessary to urgently continue to conduct investigations in order to reach conclusions concerning the remaining elements of the case and resolve the entire case; this continuing investigation cannot be ignored or postponed because of difficulties or complications.

With regard to cases involving many defendants, some of whom have been arrested and some of whom have not, the investigative agency can propose the prosecution and trial of those who have been arrested and the trial in absentia of the others who clearly committed crimes or defer their prosecution until a later date.

In the immediate future, the sectors and localities must coordinate with the public security sector, the People's Organ of Control and the People's Court to review the cases and incidents for which sufficient grounds have been compiled in order to adopt a plan for urgently resolving these cases and supporting the implementation of Political Bureau resolution 228-NQ/TW well.

In addition to correctly implementing the stipulations of this circular and in order to strengthen the working relationship between the People's Organ of Control and the various agencies of the state, the premier hereby reminds the various sectors and localities to scrupulously comply with Premier's circular number 09/TTg dated 1 February 1963 on the working relationship between the People's Organs of Control on the various levels and the agencies subordinate to the Council of Ministers and local state agencies.

Hanoi, 28 May 1974
signed: the Premier
Deputy Premier Le Thanh Nghi

Circular 99-TTg

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978, pp 92-98

/Text/ Premier's Circular Number 91-TTg Dated 24 February 1976 Providing Guidance with Regard to the Administrative and Economic Action To Be Taken in Cases of Violations Uncovered When Implementing Resolution 228-NQ/TW

The effort to prosecute mistakes committed in the process of implementing resolution 228-NQ/TW and the other resolutions of the party and government must continue to be intensified and must be based on the line and policies of the party and the laws of the state. As regards cases and incidents that must be prosecuted at court, this prosecution must comply with the procedures stipulated in Premier's circular 139/TTg dated 28 May 1974. In this circular, the premier stipulates and provides guidance concerning a number of additional points regarding administrative and economic action:

1. Every act of conspiracy, bribery, theft of property belonging to the state, the collective or the people, disruption of public order, retaliation against persons who expose crimes, the intentional harboring of criminals and so forth must be investigated and prosecuted.

All mistakes must be strictly and fairly prosecuted, whether they be made by an organization or an individual, by a person within or outside a mass organization. Every mistake by any organization or individual that is voluntarily reported by an organization or individual or exposed by a person must be seriously examined, a clear conclusion must be reached concerning it and must be appropriately dealt with by means of state (or mass organization) administrative or economic action; such action cannot be ignored or postponed for absolutely any reason.

Prosecution must be fair but strict and conform with both reason and sentiment as well as coordinate punishment with clemency; prosecution must be based on the precise nature of the crime and encourage the person who made the mistake to willingly talk about his mistaken action.

Persons who commit mistakes but forthrightly confess to them, willingly talk about them, voluntarily return the property acquired by them through misappropriation, abuse of authority or theft and truly repent should be considered for clemency. When considering such persons for clemency, attention must be given to seeking the approval of the masses. Clemency does not mean that every mistake is forgiven as soon as the person committed it talks about his mistake; rather, clemency means a lesser degree of disciplinary action than normal, depending upon the case. Persons who intentionally conceal mistakes and do not offer testimony concerning them shall be subjected to more serious disciplinary action than normal; in particular, any person who is exposed but continues to commit the same mistake shall be dealt with even more severely.

Cadres in charge, cadres who hold official positions and have authority but who commit the crimes of misappropriation or theft shall also be dealt with harshly; if these cadres truly repent, they, too, may be considered for clemency; persons who intentionally harbor someone who has violated the law or retaliate against or suppress persons who expose crimes shall be dealt with in a truly harsh manner. When taking disciplinary action, it is necessary to have a thorough understanding of the cadre policy of the party and state and to comprehensively examine both the strengths and weaknesses of the cadre in question. Generally speaking, persons who once recorded many achievements in combat and production but have now made a mistake and express a good attitude in admitting to their mistake must still be subjected to disciplinary action but can be considered for disciplinary action of a lesser degree.

We must be determined to severely punish cadres who degenerate and become deviant (such as those who engage in misappropriation, theft and the satisfaction of personal interests many times; cadres who engage in serious speculation...), aggressive hoodlums and gangsters, cowboys, persons who disrupt public order, dishonest merchants, smugglers, persons who specialize in earning their living illegally, in earning their living through fraud, etc.

2. In conjunction with administrative disciplinary action, importance must be attached to requiring payment for damages or the return of property to the state, collective and people.

--Generally speaking, all property that is taken from the state, the collective and the people through misappropriation or theft, be it a large or small amount, must be returned in full. However, in cases in which the person who violated the law forthrightly admits his shortcoming and is encountering difficulties in his everyday life, an exception can be made by merely requiring that a portion of the property be returned or that the property be returned gradually if the property obtained through misappropriation or theft no longer exists in its entirety.

--In cases involving violations of a collective nature (collective misappropriation, the establishment of illegal funds and so forth), all property must be returned to the state or collective; it is necessary to clearly determine the responsibility of each person involved as regards whether they caused damaged or enjoyed illegitimate gains in order to require payment of damages or the return of the property.

--In cases in which property of the people is obtained through misappropriation or theft but this property cannot be returned because its owner is unknown (such as raising the prices of goods, reducing product purchasing prices, overweighing products, reducing contents of pre-weighed packages, reducing the quality of products in any way, raising passenger ticket prices, raising transportation charges, the prices of movie tickets, the prices of cultural entertainment tickets and so forth), the money must be deposited in public funds.

--Persons who buy and resell materials and goods supplied by the state in accordance with policies and regulations to individuals (building materials, trunks, bicycles motorized bicycles and so forth), the different between the purchasing price and the sales price must be deposited in public funds.

--Cases involving the use of public property in a manner that raises questions must also be investigated and resolved in a fair manner. Furniture and utensils of agencies and enterprises that are not borrowed in exact accordance with circular number 529-TTg dated 8 December 1958 or which are borrowed in quantities exceeding the standard must be reclaimed. If it is felt that the person who is using this property truly needs it, it is possible to set a price for this property and sell it to this person under the direction of the finance agency or allow him to continue to use it if he is unable to purchase it while requiring that this person complete a full set of loan papers so that the use of this public property is not in question; the amount of money obtained from the sale of this property must be reported to the finance agency and the money itself must be submitted for inclusion in the budget.

--In cases in which the amount of distributed housing being used exceeds stipulated standards, the amount of living space should, if possible, be reduced or the occupants should be transferred to other housing that complies with the standard for which they are eligible; if the amount of living space cannot be reduced, additional money must be collected at state housing rental rates for that portion of the living space that exceeds the stipulated standard.

--In cases in which money obtained through misappropriation or money obtained through the theft and sale of materials or goods is used to build a house or building materials are stolen to build a house, full repayment of these materials or money must be made to the state or collective or part or all of the house that was constructed can be confiscated and used for the common good of society, of the collective.

--In cases in which a person uses manpower of the state or cooperative to build a house for himself but makes no payment or only partial payment to the state or collective for this manpower, full payment must be required.

In the mountains, in cases in which cadres and the people illegally harvested and used timber before the issuance of resolution 228-NQ/TW to build housing and furniture, economic disciplinary action, generally speaking, need not be considered but such cases must be thoroughly reviewed; in cases in which persons who have adequate housing and furniture still have additional wood that they intend to use, this wood must be returned to the state. Administrative and economic action must be taken in cases that occur after the issuance of resolution 228-NQ/TW (reclaiming the wood, requiring payment for it, or confiscating part or all of the housing or furniture constructed with it...).

--All cases involving the taking of bribes in the transportation of commodities, the distribution and repair of housing, the distribution of electricity and water, the issuance of various types of papers, the recruiting of students, the recruiting of labor or the taking of illegal commissions (letting someone else use an account for a commission, subletting housing rented from the state for a commission and so forth) must be subjected to harsh administrative and economic disciplinary action.

--At those places that were recently the scenes of heavy enemy attacks, economic as well as administrative action may be waived but cases involving taking advantage of this situation in order to commit illegal activity must be dealt with in a harsh manner.

The Ministry of Finance has issued specific instructions on how to reclaim property and deposit money in public funds in the cases mentioned above.

3. Heightening the responsibility of the unit heads and of the agencies on the upper level as regards taking disciplinary action and guiding and inspecting the disciplinary action taken in cases involving violations.

Generally speaking, in cases of violations that occur within a sector, locality or basic unit, the head of the sector, locality or unit is responsible for conducting an investigation, verifying charges, reaching a conclusion, compiling files and taking disciplinary action. The level directly above the sector, locality or basic unit has the responsibility of closely and regularly observing, supervising and inspecting the action taken by the head. In cases related to many sectors, to many localities or related to cadres in charge of units of the upper level, the unit that exposes the violation must promptly report it to the head of the upper level and the agency on the upper level must provide guidance and assistance or directly investigate the matter, verify charges and take disciplinary action.

Full importance must be attached to mobilizing the masses to participate in exposing and verifying violations of the law and to listening to the opinions of the masses concerning disciplinary measures; disciplinary action must be used to heighten the sense of responsibility of the masses in the struggle to stop negative phenomena and deter persons who would commit illegal actions. Attention must be given to resolving the problems in the thinking of persons who commit mistakes so that they realize their shortcomings, return the property obtained through misappropriation or theft, accept the disciplinary action taken against them and actively rectify their shortcomings. Once disciplinary action has been taken, the masses must be informed of the specific action that was taken. In order to mobilize the masses well, it is first of all necessary for the head of the sector, locality or unit to set good examples himself; if he commits a mistake, he must review and rectify it on his own so that the masses can follow his example.

4. In conjunction with exposing and taking disciplinary action against violations of the law, every effort must be made to close loopholes and rectify shortcomings in guidance and management and to putting management on an increasingly firm basis and improving it, especially the management of labor, materials and capital.

This is the best way to heighten the impact of disciplinary action and promptly prevent negative phenomena. The heads of the sectors and the people's committees on the various levels must keep abreast of the situations that are exposed, conduct research and guide installations in taking specific, practical steps to reorganize guidance and management on the basic level, establish the necessary internal rules and work regulations and insure strict compliance with the policies, regulations and rules of the state in a manner coordinated with the intense productive labor emulation movement of the masses. If it is felt that management regulations are unsuitable and pose difficulties and obstacles to work, the heads of the sectors and the people's committees on the various levels have the responsibility of researching them and proposing to the authorized agency that they be revised; they may not change management regulations of the state on their own.

The Guidance Department of the Central Committee is implementing resolution 228-NQ/TW and the heads of the various sectors and the people's committees on the provincial and municipal levels are responsible for implementing and inspecting the implementation of this circular.

Deputy Premier Nguyen Duy Trinh

Directive 146-TTg

Hanoi BAI VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978 pp 99-104

[Text] Premier's Directive Number 146-TTg Dated 5 June 1974 on Prohibiting the Illegal Sale, Storage and Transportation of Materials and Commodities That Are Under the Exclusive Management of the State

The government has issued many documents on the sale, storage and transportation of materials and commodities that are under the exclusive management of the state. At present, however, the illegal sale, storage and transportation of these materials and commodities are widespread and serious in nature. On the basis of the resolution adopted by the Council of Ministers at the 8 March 1974 Conference of the Standing Committee of the Council of Ministers, the premier hereby directs the various sectors and levels to implement the policies and measures reiterated below in order to immediately put an end to the illegal sale, storage and transportation of materials and commodities that are under the exclusive management of the state.

1. All materials and technology, such as raw materials, machinery, equipment, spare parts and tools used in production, construction, communications-transportation and so forth that are imported, are produced by state-operated enterprises or provided by the state to small industrial and handicraft production installations to process products for the state are under the exclusive control of the state and directly distributed by the state to installations to use in accordance with the state plan. They absolutely may not be considered other products and may not be freely sold. The purchase, sale, storage, transportation or use of the technical materials mentioned above without proper papers is considered an illegal action.

2. Products of the types described below are also under the exclusive management of the state in terms of purchases and distribution (supplied or sold) and their illegal sale, storage and transportation are prohibited:

a) Grain, paddy, rice, corn, wheat, wheat flour and the products processed from rice, corn, wheat and wheat flour;

b) Food products, other agricultural products, forestry products and marine products that are purchased and sold exclusively by the state;

c) Industrial and consumer goods that are imported, are produced by state-operated enterprises or are manufactured by small industry and handicraft installations and are exclusively purchased and sold by the state;

d) Discarded or defective technical materials or discarded materials of industrial or consumer goods that are reclaimed exclusively by the state and distributed for use exclusively by the state.

3. Destroying finished products that are under the exclusive management of the state for the purpose of using the raw materials in them to produce other products is prohibited.

4. Collective installations (cooperatives or teams) or individuals who sell products of the types mentioned above must have a business license issued by the district, ward or city people's committee, be assigned as a purchasing or sales agent by the state-operated commerce agency and buy and sell these products only within the scope of their license.

When it is necessary for agencies, enterprises and cooperatives to establish direct contacts with production installations for the purpose of purchasing products that are under the exclusive management of the state for use as raw materials in production or construction, they must comply with the plan of the state, have a permit from the authorized provincial or municipal purchasing agency stating where the products are to be purchased and only purchase the quantity of products and the product quality stipulated.

Producers of grain products, food products, other agricultural products, forestry products and marine products that are under the exclusive management of the state may, after completing their task of selling products to the state (under obligations or contracts) may use the remaining portion of their product; if they do not use all of their remaining product and wish to sell it, they must comply with the regulations of the state stipulated for each product.

If agencies, enterprises, cooperatives or individuals that are supplied with materials and commodities (including stamps, coupons and purchasing books) for use do not use all of them, they must return the balance to the state and are prohibited from trading or selling them.

5. Personnel who have the function of inspecting and confiscating goods that are illegally traded, such as market management personnel within the home trade sector, tax personnel of the finance sector, public security personnel and so forth, must closely coordinate in the effort to expose and promptly stop the illegal sale, transportation, storage and use of materials and commodities that are under the exclusive management of the state and must guide responsible personnel in firmly adhering to the regulations on the management of materials and commodities of the state and the regulations concerning the procedures to be followed in conducting inspections, confiscating materials and goods and so forth so that they fulfill their task in a correct and precise manner and avoid violating the democratic rights and the personal freedoms of the people.

It is necessary to appropriately praise, in accordance with general policy, inspection personnel who record many achievements; at the same time, it is necessary to take harsh disciplinary action against inspection personnel who abuse their authority, engage in misappropriation and illegally use confiscated goods or take bribes and accept gifts in order to conceal or release persons who violate the law.

6. The handling of violations must be based on current regulations (decree number 001-SLt dated 19 April 1957 and decree number 163-TTg dated 19 April 1957); the premier has provided the following instructions concerning a number of points so that violations are handled in a manner consistent with the present situation:

a) Depending upon whether it is serious or minor in nature, one or many of the following forms of administrative action must be taken against every violation of the law:

--Warning;

--Confiscatory purchase of goods at directed prices of the state (this measure should only be taken against producers of grain, food products, other agricultural products and so forth who sell them illegally);

--Confiscation of goods (including stamps, coupons, tickets and books);

--A fine ranging from 1 to 1,000 dong;

--The temporary suspension or permanent suspension of business or transportation licenses.

When taking administrative action, it is necessary to distinguish between producers and sellers; between cases involving many illegal goods and few illegal goods; between persons committing their first offense and repeat offenders and so forth. Violations that are organized in nature, are in the nature of speculation, are committed against socialist property or are repeated many times must, in addition to the various forms of acti mentioned above, also be prosecuted in court so that those who commit them are punished in accordance with the law.

Violations governed by customs or forestry regulations must be handled in accordance with these regulations.

b) In order for administrative action in cases involving violations to be carried out rapidly and promptly, the people's committees on the various levels have the authority to handle the following violations:

--The district (or ward and city) people's committees have the authority to take action in cases involving goods worth less than 500 dong and fines up to 500 dong;

--The cadres in charge of the inspection units and stations of the public security, commerce and finance sectors stated in Point 5 have the authority to handle cases involving goods worth 100 dong or less and fines up to 10 dong (they only have the authority to make confiscatory purchases, not to confiscate goods).

More serious violations or cases requiring more serious action are to be handled by the provincial people's committees and the people's committees of the municipalities directly subordinate to the central level.

7. While waiting for action to be taken, all confiscated goods and evidence must be turned over to the district (or ward and city) commerce bureau for temporary storage. If the products are fresh products or products that rapidly spoil, they must immediately be delivered to the nearest state-operated store or marketing cooperative for sale and the money from this sale must be deposited in the bank while awaiting action to be take.

If the goods or material evidence becomes damaged or lost while waiting for action to be taken, the person responsible for managing them must pay damages; persons who use or steal material evidence can be subjected to disciplinary action or prosecuted under the law.

Once disciplinary action has been decided upon, all confiscated materials and goods become public property and are to be delivered to the state store or marketing cooperative responsible for receiving and managing them so that they can be distributed or sold in accordance with general regulations; the internal use, distribution or sale of these materials and goods are prohibited. Once every 3 months, the commerce agency must send to the finance agency copies of the disciplinary decisions that were made and copies of the list of goods involved in them so that the financial agency can observe payment and the inclusion of funds in the budget.

8. The Ministers of Home Trade, Finance and Interior, after reaching agreement with the sectors that manage materials and commodities, must provide the various localities with guidance regarding the current regulations of the government regarding the management of materials and commodities, inspection and confiscation procedures and the procedures for handling goods involved in violations of the law.

On the basis of this directive and the guidance provided by the Ministry of Home Trade, the Ministry of Interior and the Ministry of Finance, the provincial and municipal people's committees must publicly post lists of the materials and goods that are under the exclusive management of the state and may not be freely sold; at the same time, they must guide the effort to abolish the illegal sale, transportation and storage of these materials and goods.

9. It is necessary to establish a deadline by which persons who are now illegally selling and storing materials and goods that are under the exclusive management of the state must declare what they have and resell their materials and goods to the state at directed prices or turn them over to the state.

Depending upon the specific case, persons who are engaged in an illegal trade must be shifted to other work, primarily productive labor.

10. The heads of the sectors on the central level and the people's committees of the provinces and the municipalities directly subordinate to the central level have the responsibility of implementing this directive within the scope of their management.

Hanoi, 5 June 1974

Deputy Premier Le Thanh Nghi

Directive 266-TTg

Hanoi BAO VE TAI SAN XA HOI CHU NGHIA in Vietnamese, 1978 pp 255-257

[Text] Premier's Directive Number 266-TTg Dated 28 June 1977 Concerning a Number of Grain Management Measures

At present, there are many difficulties and complex problems in the management of grain. In the provinces and municipalities of the South, private merchants are engaging in speculation and disrupting the market by using counterfeit papers of state agencies and enterprises, of the army, public security agencies and Trade Unions to purchase, at very high prices, and smuggle many types of agricultural products that are purchased exclusively by the state, especially paddy and rice. At some places, they also impersonate army troops and give the reason that they are buying grain for the rear service unit or buying seed paddy for troops to raise rice. They also use passengers to transport goods on ferries and, at times, also transport goods by small vehicles (because small vehicles are rarely inspected at inspection stations). There are also a few corrupt persons within state agencies and the army who are used by merchants engaging in speculation and smuggling, who serve as a screen for these merchants or who participate with them, etc.

In the provinces of the North, the theft or smuggling of grain along transportation routes, both land and water routes, are rather widespread. This is not to mention the dishonest weighing of grain, dishonest shipping and receiving practices, conspiracy and organized theft.

In order to tightly manage grain, put an end to the use of the names of state agencies, troops and revolutionary mass organizations and, at the same time, appropriately punish private merchants who engage in speculation, smuggling and disruption of the grain market, the premier hereby issues the following directive:

1. The ministers, the heads of agencies of ministerial level and agencies directly subordinate to the Council of Ministers and the chairmen of the people's committees of the provinces and of the municipalities directly subordinate to the central level must educate their cadres, manual workers and civil servants and prohibit them from using the name of the agency or enterprise for the purpose of transporting grain (except for rear service and grain agencies which have the permission to and responsibility of transporting grain).

2. Beginning now, all troop units in the various branches of the military and in the public security forces of the various sectors are not permitted to purchase or transport paddy or rice. These jobs shall be performed by the rear service agencies of the army and the public security force.

3. In all purchases and sales by agencies and units permitted to buy and sell grain and agricultural products that are under the exclusive management of the state, they must directly contact the people's committee of the province or municipality that has a grain service or commerce service to assist them.

4. All types of vehicles (including small vehicles, if deemed necessary), launches, ships and boats must be inspected by the inspection stations established in each province of the South.

5. Persons using counterfeit papers and papers that are not in order must be detained and investigated.

Smugglers who are caught in the act of smuggling must fill out a report and be tried in accordance with the law.

6. The Ministry of Communications-Transportation and the Ministry of Food must reinspect the installations in charge of transporting grain (by both land and water routes) in order to tighten their organization. The party committee, party chapter committee and cadres of installations must insure the good completion of their tasks and not allow bad situations such as those mentioned above to occur.

7. The people's committees of the northern provinces must inspect and strengthen the crews on ships and boats that transport grain to insure that they have competent and trusted cadres in charge in order to avoid theft and smuggling along transportation routes as mentioned above.

It is requested that the Ministry of National Defense adopt a plan for disseminating and implementing this directive in the various branches and military regions.

To perfect the socialist production relations in the North and carry out transformation and the establishment of socialist relations in the South, it is very important that the agencies of the state, the army, the public security sector and the mass organizations constantly educate their personnel and members and strengthen their internal organizations so that they are very strong in terms of work ability, management skills, sense of organization and discipline, spirit of responsibility and revolutionary-offensive ethics.

Our management of grain is marked by many weaknesses and shortcomings; to an important degree, this is due to the failure to comply with regulations as a result of which more and more loopholes have emerged for speculators to use to their advantage. Therefore, we must determinedly implement the measures mentioned above in order to manage grain well.

Hanoi, 28 June 1977

ECONOMIC PLANNING, TRADE AND FINANCE

TEN THOUSAND MORE FAMILIES GO TO DEVELOP NEW ECONOMIC ZONES

Hanoi QUAN DOI NHAN DAN in Vietnamese 2 Jul 81 p 1

[VNA News Release: "More Than 10,000 Families, 21,300 Workers Go To Develop New Economic Zones"]

[Text] According to the Ministry of Agriculture, in the first 6 months of 1981 the provinces and municipalities throughout the nation sent 10,560 families, totalling to,196 people, including 21,300 workers, to develop the new economic zones, which amounts to more than 50 percent of the annual population-transfer plan. The people who went to develop new economic zones cleared 6,858 additional hectares of land, 5,000 hectares of which have been developed into fields and paddies and have been used to produce the various kinds of crops.

In general, the tasks of transfering people, clearing wasteland, and developing new economic zones is of better quality, more concentrated, and more selective. The provinces of Ha Nam Ninh, Hai Hung, Thai Binh, Binh Tri Thien, Nghia Binh, etc., launched a movement for the masses to volunteer to go to develop the new economic zones. Ha Nam Ninh approximately attained its plan for transfering workers to participate in developing new economic zones in Minh Hai, Gia Lai-Cong Tum, and Lam Dong. In Binh Tri Thien, in addition to the transfer of people organized by the state, in 1980 and the first part of 1981 more than 7,000 people, including about 2,500 workers, went to places they selected to request land on which to make a living, mainly in Thuan Hai Province. The ecelons, sectors, and people of Thuan Hai enthusiastically helped the people from Binh Tri Thien to build a new home area.

The areas receiving people who came from other places to participate in developing new economic zones paid attention to clearly delineating the areas to be cleared, and went all-out to overcome the situation of people arriving before the production plans and directions have been determined. The various aspects of management regarding the new economic zones improved, especially the management of investment capital. The agricultural, financial, and banking sectors cooperated more closely and are now along with the localities, doing a better job of developing new economic zones.

An important requirement of the development of new economic zones is that in opening up a zone it is necessary to carry out the planning and design of tasks on schedule. But many places have carried out that task slowly,which has affected the waste of capital, and the requirement that investment must be complete, all-inclusive, and deep. In a considerable number of places, the lack of complete investment has affected the building of material-technical bases for the new economic zones.

ELECTRIC POWER WASTE IN HO CHI MINH CITY REPORTED

Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 2

[Article: "Ho Chi Minh City--In Six Months 970 Consumers Waste 2.3 Million Kilowatt/Hours of Electric Power"]

[Text] In the last few years Ho Chi Minh City has urged the people to economize on the use of electric power. The average electric power use level has decreased from one period to another: starting at 100, it has gone down to 80 then 70 kilowatt/hours at the present time for each household in a month. According to the directives of the City People's Committee, the Electric Power Service has stipulated that the consumption level of power should decrease by at least 15 percent in the various enterprise offices, in the government organs, and in the communal living quarters.

When it tries to control to see if that stipulation has been implemented, it finds that the situation is still excessive in the various service units, in the restaurants and hotels and coffee shops, and in the private restaurants. There are more than enough light bulbs being lit up in each such place; air conditioners of the large variety from 7 to 20 kilowatts are being used; many refrigerators are being used in those homes that produce ice for profit, gathering thousands of dong each month. Cumulatively in the first 6 months of the year, 970 cases of violation of the stipulation regarding electric power use have wasted 2.3 million kilowatt/hours of power. These consumers have been fined almost half a million dong. The responsible organs have seen even more clearly the need for correction and guidance in the use of electric power so that it becomes more rational.

MEKONG RIVER DELTA WATER CONSERVANCY WORK STRESSED

Hanoi NHAN DAN in Vietnamese 31 Jul 81 p 1

[Editorial: "Mekong River Delta Water Conservancy"]

[Text] In the struggle process to make the Mekong River delta into the number one central area for food production, the integrated system of technical measures in agriculture has a decisive effect on intensive cultivation, crop multiplication, and expansion of acreage.

The water conservancy work, with its top importance position and technical function, has seen the overcoming of many unprecedented difficulties on a new stretch of land with its soil, water irrigation, climatic and meteorological characteristics unlike anywhere else in the country.

Water conservancy is the most important measure that we can take in improving upon acid, salt-containing, and marshy soils, while the introduction of freshwater into reclamation areas has helped put hundreds of thousands of hectares of abandoned land into cultivation and production.

A number of regions used to doing only one crop by relying on rainwater has done well the water conservancy work and shifted to two crops using shortterm maturing and high productivity seeds. These initial successes have opened up bright prospects for regions which in the past rely only on rainwater for production in the Mekong River delta.

Regions lacking freshwater for living purposes and for running industrial and handicraft operations have started to build facilities for securing underground waters or bring in freshwater from afar.

Besides the achievements there are also failures and some relatively serious shortcomings, which make it that the results achieved have been extremely modest as compared to the tasks initially projected in the plan and as compared to the potential for realization inherent in the natural conditions of the region.

There are many reasons for such underachievement but one widespread reason is that as they started to put into exploitation the Mekong River delta, the various sectors and localities made a rather simple assessment of this new land; and while we did not have sufficient data backed up by documentation and the needed understanding of the problems involved we already came up with gigantic water conservancy projects well beyond our capabilities. Consequently we started too many projects that are scattered over too wide an area without realizing all the difficulties that had to be overcome in the process of linking the stages of implementation: basic investigations, blueprinting, actual building and putting into operation. It is for this reason that we now have projects that must be temporarily shelved because of difficulties owing to geological conditions or because we lacked building materials and capital. Then there are projects which have been completed but the exploitation of which is somewhat limited because the system lacks canals, ducts and dams. Then there are those that because of miscalculations have been completed but for no useful purpose.

Our coming water conservancy plan must be carried out on the basis of multifaceted experience learned in the past so as to determine the directions and organizational measures meant to implement the projects in close concordance with the natural characteristics and conditions of each area. The water conservancy plan must be tightly linked to the agricultural development plans, and we must struggle to move ahead to create the conditions necessary for intensive cultivation, crop multiplication, land reclamation and the working of fallow lands.

The entirety of measures devised in the water conservancy plan must reflect the spirit of exploiting to the fullest the natural advantages of the region while preventing and avoiding the difficulties owing to the natural conditions; of fully exploiting existing works; of concentrating our forces and focus our investments in those areas which are capable of producing many products in a short time and at the lowest costs. While actively preparing technical proposals for a number of large water conservancy projects, we must launch a vigorous campaign in all areas so that the people participate in doing water conservancy work. In the immediate future we should concentrate on the middle-sized and small works which are the types of projects in tune with the local manpower capabilities, projects which the people will build essentially by hand, and which will bring quick realistic results.

Every step must be carefully calculated in a scientific manner, respecting the implementation process and the specifications, and realized with a high technical quality. Basing itself on the larger areas, the water conservancy work will continue its inroads into the smaller areas, building blueprints and concrete plans for each province, district, village and hamlet. In particular, the district water conservancy plans will play a decisive role in determining the completion of the planned tasks for the entire region.

Basic investigations constitute the very first link in the broad outlining and planning of work, they must be done with care and accurately. In the case of a land that recently forms on a saltwater foundation, the requirements are even more stringent as regards the basic investigations, especially as concerns the hydrology, geological formation, and topography of the place, which must be studied with extreme care and in a solid manner.

In the case of works that are only half-completed or which belong to a new system for which the foundations have just been laid only, we must continue and complete their building, and simultaneously bring to a completion various parts of the works within the system so as to put them quickly in the service of production.

In the case of the works planned for construction (including both the middle-sized and small ones), we must make careful calculations and scientifically weigh the economic and technical factors so as to decide on the best blueprint.

The responsible sectors should study and propose to the state the promulgation of a number of policies in tune with the characteristics of the production situation and the production relations in the Mekong River delta, thus creating favorable conditions for the water conservancy work.

Water conservancy is an important work of the Party and state in the plans for exploitation of the Mekong River delta. The various sectors and localities and the production bases must have tightly knit and harmonious cooperation plans under the unified guidance of the Government. And this will surely bring the exploitation of the Mekong River delta to a quick and high level of effectiveness.

POPULATION, CUSTOMS AND CULTURE

MINISTRY ADMITS PILFERAGE INCIDENT, DISCIPLINARY MEASURES NOT YET TAKEN

Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 3

[Readers Opinions column: "Shortcoming Admitted But Not Corrected"]

[Text] NHAN DAN of 8 July 1981 in its Readers Opinions column carried an item entitled "Taking Advantage of Dissolved Organ in Order to Pilfer the State." After the appearance of this article, we the cadres, workers and people of Quang Nam - Da Nang felt that although the letter written by the reader Luu Van Tuy had not said it all it nonetheless had accurately reflected the situation of pilferage of state property which was happening at the Quang Nam - Da Nang Building Materials Corporation at the time. After a while, also appearing in NHAN DAN, in an answer to the readers column, the Ministry of Building Materials admitted that the above mentioned article was an accurate reflection of the situation, it admitted its shortcomings and said that it had checked on the comrades in charge of the Quang Nam - Da Nang Building Materials Corporation, and that it had implemented measures to reclaim the lost state property. We who are aware of the whole situation are very anxious to see the Ministry of Building Materials implement the measures that it has promised to take, take back the lost state property and implement strict disciplinary measures towards the violators, yet none of these measures has been implemented since. The state property continues to be lost and the main cadres responsible for these losses continue to be raised to higher functions. The above situation has created a poor impression and loss of credibility for the authorities among the masses of the people in our locality.

After reading the editorial carried in NHAN DAN, issue of 20 May 1981, entitled "Strictly Deal With Corrupt Officials, Those Who Take Bribes and Mistreat the Masses," and in the spirit of contributing towards struggling against the present negative phenomena in our society, we petition the Ministry of Building Materials and those organs in charge to strictly fulfill their promises as presented in the Party newspaper and to give a clear account of their doings to the readers.

Hoang Van
and many cadres, workers and people of
Quang Nam - Da Nang

MISUSE OF HEALTH RESORT CRITICIZED

Hanoi NHAN DAN in Vietnamese 30 Jul 81 p 3

[Readers Opinions column: "Use of Health Resort for Erroneous Purposes"]

[Text] The Vietnam Confederation of Trade Unions has invested a relatively large sum of capital to build an integrated high-rise health resort (consisting of dining halls, an auditorium, a clubhouse and four two-story buildings) near Thac Ba Lake. Each year, this health resort receives about 120 vacationers at a time who come to rest in accordance with the 15 days off they have a year. This is a great stimulant to every cadre, worker and government employee in the province. But since May 1981, this resort has turned into a meeting and recap with entertainment place for a number of organs and units stationed in and around the province(!). In the two months of May and June last there have been three organs and units using the vacation coupons issued by the Federation of Trade Unions to call their representatives up for a meeting at the place. This is a misuse of vacation coupons. The Finance Service has used up 50 coupons with each coupon valid for 15 days in order to have a good time and recap its work during 1980 in a period of 6 days. The provincial Party school used up 50 coupons, each coupon worth 111 dong, also for the purpose of recapitulating its work. The Transportation and Communication Service also used the number of coupons distributed to it, which were supposed to be used in 13 days, in order to organize the recapitulating work for 1980 in a mere three days (?). The above misuse of vacationing coupons has done havoc to the health resort's service plans and cut into the interest of others who deserve to benefit from the vacationing regime.

It is our wish that the leading echelons in Hoang Lien Son Province, especially the provincial Federation of Trade Unions, carry out investigations, examine the situation and quickly put an end to these violations of policies so as to guarantee to the cadres, workers and government employees their rightful privilege of getting a vacation and rest in exact accordance with the stipulated regimes.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

IMPROVE DISTRIBUTION AND CIRCULATION IN ORDER TO ACCELERATE PRODUCTION AND STABILIZE LIFE

BK031500 Hanoi Domestic Service in Vietnamese 1100 GMT 1 Jun 81

[Article by Le Duan in Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 1-8 and 34--also carried in NHAN DAN issue of 1 Jun 81. Translation of Domestic Service version was previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 108, 5 Jun 81, pp K6-K12]

[Text] Production, distribution, circulation and consumption are links in the process of production and social reproduction, with production being a basic link. Production decides distribution, circulation and consumption.

As intermediary links between production and consumption, distribution and circulation play a very important role and have a direct effect on production and the people's life. Improving distribution and circulation and effecting a drastic and comprehensive change in this important area of activity are basic and pressing requirements.

1. Guiding concepts

Improving distribution and circulation should always be a part of all economic management activities. Distribution and circulation are aimed at meeting the consumer needs of society and, at the same time, stimulating the growth of production--especially the production of grain, foodstuffs and consumer goods; promoting exports and imports; and broadening the exchange of goods between our country and other countries. On this basis, it should contribute to stabilizing and gradually improving the livelihood of the people, especially workers and peasants. This is the basic target of the party's and state's current policies.

General guidelines for improving the task of distribution and circulation involve linking this task with economic management, eradicating the mode of management through bureaucratic administration and subsidization, adopting the mode of socialist trade that is based mainly on planning, making correct use of all material and monetary transactions and all economic levers, adopting the system of accountancy and opposing the system of indiscriminate subsidization. However, opposing the management mode of bureaucratic administration and subsidization and adopting the mode of socialist trade does not mean using market mechanisms in place of planning. It also does not mean blindly following the free market law of supply and demand. Firmly grasping planning work is a central task which requires us to use planning as a main tool to organize and manage production, distribution and circulation in a way suited to economic growth.

Distribution and circulation are areas of activity involving the close combination of materials in kind and the relationship between goods and currency. In this area, we must attach importance to the correct categorization of values and the satisfactory use of all market relations and economic levers such as prices, wages, finance, credits and profits, with the use-value being considered most basic. Distribution under the form of value can in no way decide or replace the distribution under the form of use-value.

All policies on distribution and circulation must correctly reflect agreement among the three interests--the interests of the entire society, the interests of the collective and the interests of individual laborers. With regard to the current situation, these policies must give due attention to the interests of laborers so as to make everyone more concerned about the need to increase his labor productivity and economic results. Correctly combining the three kinds of interests amounts precisely to contributing to exercising the system of socialist collective mastery on a society-wide scale, in each locality and at each establishment.

Distribution and circulation requires correct application of the three measures--economic, financial and education--with economic measures being regarded as the most basic. Educational measures must also be taken seriously, but simultaneous efforts must be made to develop the strength of the proletarian dictatorial state. To use administrative measures against profiteering and smuggling, to do away with all phenomena of negativism in society and to establish order in the economy and in the market.

Ideological indoctrination must be stepped up to make everyone more aware of the situation and tasks and to ensure that they are able to firmly grasp the party and state's line and policies, actively engage in productive and nonproductive work, practice thrift for the sake of national construction and remain vigilant against all enemy schemes.

To improve distribution and circulation, we must implement a series of uniform measures to fulfill the main objectives of promoting the development of production, gradually stabilizing and improving the people's livelihood and stabilizing the economic and financial situation.

We must firmly grasp the following immediate problems of distribution and circulation which involve support for production, concentrating the flow of goods into state hands, ensuring the supply of staple commodities to laborers--especially workers and civil servants, expanding state-run trade, intensifying market management, adjusting prices and wages, balancing the budget and regulating the circulation of currency. Among these issues, prices and wages are the two urgent ones.

2. Adjusting prices and wages

Prices constitute a major problem which has a comprehensive effect on the economic, political and social fields. This problem is very complicated, especially at a time when our economy is still in a troubled situation and the bases on which to determine prices have not been stabilized.

Prices have their roots in production. Prices and socialism are born out of production in a planned manner; they do not come spontaneously from trade in the marketplace. Therefore, the problem of prices must be resolved in a planned manner. Based on the demands of society and the laboring people's livelihood, we must arrange production plans to optimally use all economic potential, especially in terms of manpower and land, to produce much wealth for the society.

The problem of prices can be resolved satisfactorily only on the basis of developing production, increasing labor productivity, improving the quality of products, reducing production costs, increasing economic results, creating conditions for better capital accumulation for socialist industrialization and stabilizing and gradually improving the laboring people's livelihood.

Prices should contribute to the distribution and use of all sources of capital, both in kind and money in an effective and thrifty manner, correctly resolve the relationship between capital accumulation and consumption, between industry and agriculture and between workers and peasants: expand the division of labor and international cooperation, and satisfactorily meet the strategic requirements of the revolution. Prices should resolve well the problems of distributing and redistributing national income, balancing the income of people of all strata in the direction benefiting socialism and the laboring people--especially workers and civil servants who live on their wages--and regulating the irrationally high income of those who earn it through illegitimate ways.

The system of state-directed prices is established in accordance with the lines and policies of the party and on scientific and correct economic and technical bases. It does not allow the use of free market prices, which entail detrimental speculative factors.

The state system of prices must become a true tool of management if the national economy is to develop in a well-planned manner. Since the free market still exists in certain areas, when the relationship between supply and demand is unbalanced, the state must implement a flexible policy of directed prices to manage the market in order to struggle effectively against speculative activities and balance supply and demand to the advantage of socialism.

Under the aforementioned economic conditions, we must objectively establish two systems of prices: One is a relatively stabilized system of such prices as commercial prices, prices of obligatorily collected and purchased commodities, prices of production means sold according to two-way economic contracts; and supply prices; the other is the system of prices which has been applied in a relatively flexible manner to trade business.

For 20 years or more, due to the objective conditions of protracted wars, we had to abstain from making too many changes in the pricing system. The system is no longer suitable and must be adjusted in a relatively comprehensive manner to make prices relevant to the changed economic and social conditions, namely production costs, prices of imported goods, wages and the relationships between supply and demand and accumulation and consumption.

However, prices should be adjusted step by step in line with the actual situation. We must gradually advance toward determining a new pricing system to promote production, stimulate exports, create conditions for socialist trade to expand its business, overcome the situation in which the state has to suffer too heavy losses and rationally balance the income of people of all strata.

The primary purpose of price adjustment is to promote production and stabilize livelihood. As a result, the state must maintain stabilized supply prices for staple commodities to ensure the livelihood of workers and civil servants who live on their wages. At the same time, it must firmly maintain a rational rate of exchange between industrial goods and agricultural products in order to ensure a rational income for peasants and encourage peasants to accelerate production and sell more products and goods to the state.

Retail prices are always a matter of concern to the state and the people because they directly affect the livelihood of all people. Retail prices must stem from the party and state policies on consumption to ensure that trade and business organizatins will not suffer losses. With the exception of state-supplied commodities, appropriate rates of accumulation will be determined for each group of commodities: Little or no accumulation will be required from the sale of stable commodities, while we can get a larger accumulation from unnecessary luxury items.

The retail price policy must settle well the relationship between the state and the people of all strata in society, and must especially be tied to wages to ensure the livelihood of peasants and those engaged in handicrafts, forestry, fishery and salt work and so forth.

Our wage system was established long ago and is no longer suitable. During the years of war, we did not have conditions for improving our wage system. To ensure realistic wages, the state implements the system of supplying staple commodities to workers and civil servants at stable prices. However, due to limited supply funds, the amount of commodities supplied can meet only part of the daily consumption demands of workers and civil servants and their families. As a result, part of their wages is used to buy commodities on the free market at high prices, thus reducing their real income.

In the present situation, with supply and demand still unbalanced and the market and prices not yet stabilized, the problem of stabilizing and improving the livelihood of workers and civil servants cannot be resolved simply by nominally raising wages. It must be resolved by combining several methods, such as ensuring the supply of staple commodities as stable prices, establishing allowances developing production to create sufficient jobs for workers and correctly applying the systems of contractural and piece work pay.

Until we can carry out wage reform, the state establishes temporary allowances to workers and civil servants to compensate them for high living costs resulting from increased prices. This is a very important measure, the positive effects of which must be developed on the basis of ensuring the supply of material goods and struggling to stabilize market prices.

The fundamental measure for ensuring the livelihood of workers and civil servants is to make sure that staple goods in kind--especially grain and foodstuffs--are supplied at stable prices.

In the years ahead, we advocate a policy of maintaining the state supply method but not the widespread and ill-considered practice of subsidization. At the same time, supply procedures and organization must be improved in the direction of separating the supply system from the business system. We should intensively manage and control the issuing and recovery of rations cards, intensify internal management in the trade sector, ensure the distribution of rationed commodities as prescribed and overcome such negative phenomena as corruption, underhand transactions and authoritarianism. The supply procedures for commodities in kind are determined in a practical manner in general and in each locality throughout the country. State agencies are dutybound to struggle by all means to implement the published supply objectives.

The most important matter in the stabilization of the life of office and manual workers is to seek ways to create employment opportunities for workers and to encourage them to work with high productivity, to get higher pay and earn more income. Recent efforts to apply contract-based and product-based wages have produced good results. These wage forms have encouraged workers to actively engage in rpoductive labor and to strive to increase their productivity, thus enability enterprises and society to obtain more products and workers to earn more income. This is a progressive form of payment of wages which is compatible with the "each according to his work" system of socialism and which helps link the interests of workers with those of enterprises as well as with the collective interests of society.

3. Essential measures: Prices and wages are the most urgent matters in the current task of distribution and circulation. In order to satisfactorily deal with these matters, it is necessary to positively and effectively carry out various measures aimed at boosting production, increasing purchase activities and the control of all sources of goods, improving the people's livelihood and ensuring a sufficient supply of goods to meet the people's needs, broadening socialist trade activities, enhancing market management, stabilizing the country's financial system and improving the management of cash. These measures are also aimed at creating a precedent and conditions for positively and steadily solving the question of prices and wages.

A. In order to solve problems of distribution andcirculation, the most basic prerequesites consist of boosting production, especially agricultural production and the manufacture of consumer goods and putting more goods under state control. All difficulties facing production must be solved forst of all through planning, organization and management of production; and it is necessary to promptly remedy shortcomings inherent in the policy for distribution and circulation of goods, in order to encourage the development of production.

In the past, many new positive factors have emerged in various sectors and localities and at various establishments. In the north, despite heavy losses experienced in last year's 10th-month crop and the resulting difficulties affecting the people in certain areas, the application of the policy of giving contracts for products to groups of laborers and individual laborers in agriculture has been inspired a new momentum in production.

In the south, the agricultural sector has enjoyed bumper crops for several consecutive growing seasons. Recent changes in the pricing system and in the procedures governing the conduct of trade with peasants have been instrumental in promoting production and sales of products to the state. Despite numerous difficulties--mostly arising from a shortage of raw materials and energy--now confronting industrial production, efforts to improve planning work and adopt the forms of contract-based and product-based wages have enabled enterprises and localities to initially overcome certain difficulties in tapping the capabilities of their production establishments and in increasing labor productivity and the income of their workers.

Along with taking various steps to promote increased production, concentrating all sources of goods into the state's hand is a decisive factor for ensuring the success of various measures aimed at improving distribution and circulation activities. As for the collective and privately-run economic sectors, it is necessary to step up the purchase and collection of agricultural, forestry and marine products on the basis of promoting a high sense of responsibility among peasants toward fulfilling their duties of paying taxes and selling products to the state; to improve policies and procedures regarding collection and purchase activities; and to tighten the bonds of economic and political alliance between workers and peasants. With regard to the state-run economic sector, all sectors, localities and establishments must uphold a sense of responsibility and discipline in turning in products as planned and must do away with the willful practice by various state-run economic units of using and trading those products which are under uniform state management.

Problems concerning enterprise and industrial wholesale prices and concerning the financial collection system applied to various sectors and localities, especially to various establishments, must be solved in a rational and satisfactory manner so as to encourage and/or compel state-run economic units to turn in their products to the state in accordance with the law.

Along with stepping up the tasks of conducting collection and purchase activities and securing the sources of goods, it is necessary to take steps to satisfactorily organize and manage existing quantities of materials and goods, determined not to allow any loss and damage to occur; to avoid the distribution of goods to unauthorized recipients; to prevent and punish those government cadres and employees who have committed corrupt acts of stealing state goods or materials or who have given a helping hand to profiteers, smugglers and dishonest persons in infringing upon socialist property and disrupting the market.

B. It is important to expand socialist trade and intensify market management. Only by strongly developing the organization and activities of the state-run trade, can we closely control the market. Conversely, good market management will create conditions for the state to control the flow of goods and develop state-run trade.

If it wants to correctly play the role of housewife of society, state-run trade is duty-bound on the one hand to ensure the supply of staple commodities at stabilized prices to paid workers, and on the other, to expand its dealing in other commodities at commercial prices.

The state-run trade sector must use several fruitful methods to expand its business operations in all fields ranging from collection and purchase to wholesale and retailing activities and from food catering to other service operations in order to advance toward controlling large segments of the wholesale trade and most retail operations.

In order to vigorously accelerate socialist transformation and construction, promote the stabilization of production, consolidate our financial system and firmly maintain and gradually improve the people's livelihood, we must resolutely revamp and intensify market management, consolidate and expand the unified socialist market, constantly strengthen the trade forces of the state and collectives and develop a unified market throughout the country.

Along with expanding the organized market, we must strive even harder to organize and control rural markets, continue to transform privately owned trade and small merchants and producers, and oppose speculation, contraband and other operations disrupting the market.

Good results in intensifying market management can be obtained only if we know how to combine the three managerial measures, among which the economic measure--specifically, expanding the organization and operation of socialist trade--is the main one. Nevertheless, the administrative measure remains the most important. It includes registration of industrial and trade businesses, collection of industrial and trade taxes, implementation of the system for price postings and price control, punishment of speculators and smugglers and struggle against negativism in factories, agencies and society, and so forth.

The immediate requirement of market management is to use the integrated strength of the proletarian dictatorship in the struggle to restore order in the market, especially in major cities, in order to stabilize prices, strictly prevent private traders from abusing the situation to speculate in and deliberately increase prices, and prohibit all sectors, echelons and state-run trade organizations from raising prices against the pricing policy and the price control system of the state, thereby maintaining steady market prices.

C. At present, the important task in the field of distribution and circulation is to stabilize the country's financial system, balance the state budget, stabilize the value of currency, mobilize all the sources of financial revenue to meet the requirements of production, life and national defense and strictly practice thrift in spending. The financial plan must be established in close coordination with the production and business plan by all echelons. The financial plan norms must be assigned simultaneously with the production and business plan norms to all sectors, localities and primary production units.

Revenues from the state economy constitute the main source of revenue in the state budget. As a result, they must be paid due attention and correctly acquired on the basis of vigorously accelerating production and intensifying collection and purchasing activities to control the flow of commodities.

As regards collective and individual economies, taxes constitute an important form of contribution to the state. The policy of agricultural taxes must be unified, just and simple, based on the area and fertility of the soil. It must be aimed at strengthening management, encouraging the use of land and ricefields and promoting intensive cultivation and multicropping and the expansion of the cultivated area.

Industrial and trade taxes must play the role of bringing about more development and must be aimed at promoting the development of handicraft and artisan production, expanding the circulation of goods and regulating the irrationally high income of some units.

Tax collection must be intensified and closely combined with the strengthening of market management and price control. It must effectively help the state-run trade sector better collect and purchase commodities.

In order to overcome difficulties and imbalances in the economy, it is necessary to strictly practice thrift in production, distribution, circulation and consumption. In the field of finance, thrift must be scrupulously taken into account and resolutely adopted. Banking operations must be intensified. The circulation of currency must be expanded to mobilize all sources of idle capital while developing credits and intensifying cash management. Economic results must be considered as a basic standard for banking operations to give priority to the use of additional manpower and land and to turn out more products.

The task of keeping saving accounts should be improved in the direction of making the account owners see the profit from depositing money in their accounts and of sparing them any trouble when withdrawing their money. Methods of payment without using cash should be expanded. Those economic units run by collectives and private business units must open accounts with the state bank and they must settle their payments mainly by charging them to their accounts.

The system of banking finances must be improved to allow the monetary control of all production and business operations in the area of state, collective and individual economies, and to closely control and supervise the thrifty and effective use of manpower, equipment, materials and capital in all sectors, localities and primary production installations.

D. Along with extending financial autonomy to production and business units in order to eliminate the bureaucratic method of centralized management, it is necessary to enhance and strengthen the uniformity of the systems of banking finances, prices and wages, and state discipline in the management of distribution and circulation.

The division of labor and the assignment of management authority in the fields of distribution and circulation must be redetermined to cope with the new situation and the new management system in order to ensure unified and centralized managerial control over fundamental and vital factors while flexibly enabling all sectors, localities and primary production installations to develop their dynamism and creativity.

All sectors, localities and primary production units are forbidden from establishing policies and systems which conflict with general state regulations on the delivery of products, the receipt of cash, and prices and wages. All violations must be promptly overcome and severely dealt with in accordance with party discipline and the state law.

The improvement of distribution and circulation constitutes a difficult struggle. If we want to attain our goal, there must be some real improvements from the central down to local grassroots-level units, especially in the distribution and circulation sectors. All cadres and party members, depending on their positions, must strive to fulfill their duties and make practical contributions to the common struggle for the victory of socialism.

All of us are dutybound to defend production units, warehouses, ports and all economic operations by constantly remaining vigilant against enemy plots of sabotage and by correctly implementing all party and state regolutions on distribution and circulation.

THE FINE SUCCESS OF THE 4TH CONGRESS OF THE KAMPUCHEAN PEOPLE'S REVOLUTIONARY PARTY

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 9-11, 70

[Unattributed article]

[Text] During the final days of May, the communists of Kampuchea successfully held their 4th congress. This was an event of extremely important significance, one that marked a turning point in the history of the Kampuchean revolution.

The Kampuchean People's Revolutionary Party, a brother of our party, was also born in the Indochina Communist Party of past years. Inheriting the tradition of unyielding struggle of the heroic people of Kampuchea, the party has led the working class and people of Kampuchea in a long, arduous and glorious struggle, a struggle in which they have won victory after victory. The French colonialists and the U.S. imperialists were driven from the country one after the other and then the genocidal regime of Pol Pot-Ieng Sary-Khieu Samphan, a lackey of Chinese expansionism and hegemony, was also crushed.

During the past 2 years and more, the people of Kampuchea have recorded tremendous achievements in every area of endeavor. They crushed the scheme of intervention and sabotage of the Chinese expansionists acting in collaboration with the U.S. imperialists; the remnants of the Pol Pot army have been virtually annihilated. Famine has been virtually eliminated and the economy and culture have begun to be restored. Every normal activity of society has been restored. Human rights are being guaranteed by the new society. And, from the pile of ashes of genocide, the country of Kampuchea has arisen in a rapid and remarkable fashion and is overflowing with vitality. With the recent truly free and democratic general election, the first one held in their several thousand year history, the people of Kampuchea became the collective masters of the country. These tremendous victories have caused the prestige and the international position of the People's Republic of Kampuchea to constantly be heightened.

The brilliant victory of the Kampuchean revolution is primarily the victory of the correct line of a genuine Marxist-Leninist party. Loyal to the lofty ideals of national independence and socialism, the Kampuchean People's Revolutionary Party has always brandished the banners of patriotism and proletarian internationalism, consequently, it has succeeded in mobilizing the strength of all of the people of its country in coordination with the strength of the Vietnamese, the strength of the people of Laos and the strength of the three revolutionary currents of our times, primarily of the socialist community, of which the Soviet Union is the pillar, and has, on this basis, created a tremendous combined strength insuring victory over every cruel enemy.

It is also the victory of the patriotism and the unyielding will to struggle of the people of Kampuchea for their independence, freedom and happiness; the victory of the brave, undaunted spirit of the communists of Kampuchea, who have united as one within the party and are closely linked to the flesh and blood of the people of their country.

On the basis of the present domestic and world situations, the 4th Congress of the Kampuchean People's Revolutionary Party set forth the general line for the present stage of the revolution as firmly protecting national independence, building the fatherland and gradually advancing to socialism.

The general line of the party encompasses the following several important matters:

--Brandishing the banners of patriotism and proletarian international solidarity;

--Protecting the fatherland, which is the foremost and sacred task of all the people of Kampuchea;

--Restoring and developing the economy, culture, education and public health and gradually making the transition to socialism in order to build a life of comfort and happiness;

--Uniting all the people and employing the strength of all the people in order to protect and build the fatherland.

The congress expressed a deep realization that the patriotism of the people of Kampuchea is an extremely strong factor, one that has been and will continue to be a very important guarantee of every victory of the Kampuchean revolution. However, this patriotism must be closely combined with proletarian internationalism, especially with the militant solidarity of the three countries of Indochina. The history of the Kampuchean revolution over the past half century and more has proven that whenever this militant solidarity is maintained, the Kampuchean revolution develops brilliantly; whenever this solidarity is broken by insidious schemes and actions of the enemy, the Kampuchean revolution suffers a setback and even suffers serious defeats. On the basis of this reality, the Kampuchean People's Revolutionary Party reached the following conclusion: strengthening the solidarity of the three countries of Indochina "is a law of development of the Kampuchean revolution as well as each revolution in Indochina." This correct conclusion is a clear truth that has been proven by the revolutionary history of the countries in Indochina over the past several decades.

In the face of the insidious scheme of the Chinese expansionists of collaborating with the U.S. imperialists and making every effort to rally the various types of lackey reactionaries in order to oppose and undermine the Kampuchean revolution, the congress decided that protecting the fatherland is the foremost and sacred task of all of the people of Kampuchea.

The congress set forth suitable policies for building and developing the economy and developing the culture and emphasized the need to "experience a period of transition to socialism on the basis of agriculture, consequently, the nucleus of the development of our economy can only be agriculture." And, of the various forms of economic transition, the congress maintained that production solidarity teams within agriculture are a very reasonable form of organization in the present stage.

The congress asserted that building a strong and solid Marxist-Leninist party is a foremost strategic task of the Kampuchean revolution at present and in the years to come.

Concerning immediate work tasks and the work tasks of upcoming years, the congress pointed out: "Our revolutionary tasks...are accelerating production and developing the three segments of the economy, especially developing the state-operated segment of the economy, so that agriculture becomes a decisive factor that is fully capable of resolving the food, clothing and housing problems so that the people are not hungry or cold. We must strengthen our security, firmly protect the people, defeat the clever schemes of the enemy, firmly protect the fatherland and strengthen the revolutionary governments on all levels in the spirit of the Constitution that will be ratified by the National Assembly in the near future. We must also strengthen the unity of all the people, broaden the Front, strengthen the mass organizations and develop international solidarity, consequently, we must develop the Kampuchean revolution so that it wins new victories in each and every field."

The historic resolutions of the congress reflect the creative application of Marxism-Leninism to the specific conditions of Kampuchea and are a bright beacon leading the people of Kampuchea in their work of protecting and building the fatherland.

Our party and our people are extremely happy over the fine success of the recent congress of the Kampuchean communists. We warmly congratulate the people of Kampuchea for the brilliant victories they have won. We are extremely proud of our steadfast, loyal comrade-in-arms, the Kampuchean People's Revolutionary Party.

At present, in the course of their development, the people of Kampuchea as well as the people of Vietnam still face many large difficulties caused by the common enemy of the countries of Indochina. Acting in collusion with and with the support of the U.S. imperialists, the Chinese expansionists, refusing to admit defeat, are waging a comprehensive war of sabotage against Vietnam while persuading international reactionary powers to oppose the revolutions of the three countries of Indochina. Recently, together with intensifying their acts of armed provocation against our country, they frantically assembled traitors in exile in a reactionary front to oppose the Kampuchean revolution; at the same time, they have urged the convening of a so called "International Conference on Kampuchea" in a vain attempt to intervene in the internal affairs of Kampuchea.

However, each of their decadent schemes and actions will surely meet with tragic defeat. The Kampuchean revolution will surely advance steadily forward along the path charted by the People's Revolutionary Party. Because, the people of Kampuchea, as a result of their own experiences, clearly realize who the genuine representative of their basic and long-range interests is. Under the banner of the Kampuchean People's Revolutionary Party, they have acquired extremely powerful strength. This strength has been multiplied many times by the spirit of international solidarity and the especially close solidarity with the fraternal peoples of Vietnam and Laos. Tempered in one-half century of struggle against the common enemy and built upon the flesh and blood of hundreds of thousands of Vietnamese, Kampuchean and Lao soldiers, this solidarity of the three countries of Indochina has become a powerful material strength insuring the successful development of the revolution of each country.

As do the fraternal party and people of Kampuchea, the communist party and people of Vietnam greatly treasure the sacred solidarity of the countries of Indochina. Expressing this noble feeling of our people, Le Duan, in his greetings to the 4th Congress of the Kampuchean People's Revolutionary Party, formally declared: "The unswerving policy of the Vietnam Communist Party is to make every effort to protect and develop the especially close relationship between the people of Vietnam and the people of Kampuchea as well as the people of Laos and strengthening the militant solidarity, trust, long-range cooperation and mutual help in every respect among the three countries on the basis of the principles of equality, respecting one another's independence, sovereignty and territorial integrity and respecting the legitimate interests of one another so that the three countries, which were close to one another in the struggle for national liberation, will always be close to one another in the work of building and protecting the country for the sake of the independence, freedom and prosperity of each country."

With the warm feelings of comrades-in-arms who are fighting on the same front against the common enemy, our people sincerely wish the fraternal people of Kampuchea, under the leadership of their vanguard revolutionary party, increasingly large victories in the work of protecting and building the beloved Kampuchean fatherland and hope that they make positive contributions to the cause of revolution and peace in Indochina, Southeast Asia and the entire world.

THE ENTIRE PEOPLE SAFEGUARD POLITICAL SECURITY AND SOCIAL ORDER

BK110517 Hanoi TAP CHI CONG SAN in Vietnamese No 6, Jun 81 pp 12-19

[Article by Pham Hung--passages in capitals were published in italics in the original. This translation previously appeared in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 156, 13 Aug 81, pp K9-K15]

[Text] In its new stage, the Vietnamese revolution is coping with a new enemy which pursues heinously wicked schemes of aggression. The new struggle requires that we further strengthen our political security and public order.

I

After the great victory in 1975, which completely liberated the south, unified our entire country and placed it on the path to socialism, the Vietnamese revolution defeated the Chinese reactionaries in the war waged by their henchmen--the Pol Pot-Ieng Sary clique--on the southwestern border. We then helped the Kampuchean people overthrow the genocidal regime, rebuild their country and normalize their lives. Later, we again won the war of aggression directly waged by the Chinese reactionaries on our northern border. We also caused the U.S. imperialists to suffer a major setback in their "postwar plan" which was aimed at disrupting our people's peaceful construction.

Despite the heavy defeat administered by our people, the Chinese reactionary rulers still have not abandoned their scheme of aggression against our country. They are seeking alliance with imperialism and colluding with the U.S. imperialists in rallying the most malignant reactionary forces to jointly oppose the Vietnamese revolution and the revolution in the two fraternal countries on the Indochinese peninsula and to intensively sabotage our people's cause of socialist construction. They are resorting to all types of tricks--political, military, economic and diplomatic--in an attempt to weaken and then annex and use our country and the rest of Indochina as a springboard for their aggression against Southeast Asia.

At present, the Chinese reactionaries are amassing their troops close to our northern border to carry out provocations and cause armed conflicts regularly. At the same time, they are trying to distort various economic policies adopted by our party and government and sabotage production, THUS DESTABILIZING OUR ECONOMY and causing even greater difficulties to our people's livelihood.

They are establishing contacts with their long-implanted henchmen and dispatching additional spies, intelligence agents and commandos to our country in order to grasp the situation and carry out sabotage activities. In addition, they are taking advantage of all types of reactionaries among the Hoa population and various ethnic minority and religious groups as well as among a number of bad elements in certain organs and units to find new reactionaries for the formation of an underground force.

They are cunningly conducting psychological warfare by spreading rumors, criticizing our party's policies and leading party and state cadres, arousing skepticism and inciting the people to flee from the country in an attempt to paralyze our people's revolutionary will, create AN UNSTABLE POLITICAL SITUATION and create favorable conditions for violent disorders on our land.

They are making every effort to UNDERMINE THE NATIONAL SOLIDARITY BLOC, sow dissension between our people and our party, between our state and the Soviet Union as well as other socialist countries, and slander, carry out an economic blockade against and isolate our country from other countries in the world.

Meanwhile, the U.S. imperialists, though having been weakened repeatedly following their tragic defeat in Vietnam, have yet to resign themselves to giving up their perfidious designs against Vietnam. The U.S. imperialists and the Chinese hegemonist reactionaries are colluding with each other against the Soviet Union, Vietnam and other socialist countries as well as against national revolutionary movements and world peace. THUS, THE U.S. IMPERIALISTS ARE THE ENEMY OF THE VIETNAMESE REVOLUTION AND THE WORLD REVOLUTION; AND THE CHINESE EXPANSIONISTS AND HEGEMONISTS ARE THE DIRECT AND DANGEROUS ENEMY OF THE VIETNAMESE REVOLUTION AND ARE DANGEROUS SABOTEURS OF THE WORLD REVOLUTION.

Moreover, in the north, after some decades of socialist transformation and construction, public order and safety has improved. However, there continue to be numerous and serious criminal cases. In the south, the vestiges of neocolonialism remain very serious. According to incomplete statistics, before liberation, more than 7,000 notorious robbers were released by the enemy from Chi Hoa prison. These robbers have returned to their business, causing losses in property and human lives. In addition, the former regime left behind 270,000 wounded and disabled soldiers with many of them originally professional rascals or aggressive hooligans who are now engaging in dishonest business. Some of them are working clandestinely as henchmen for imperialist-run espionage organizations.

Propagated, incited and directed by the imperialist-run espionage organizations, various reactionary organizations--including those reactionaries and tyrants in the former puppet army and administration refusing to repent for what they have done, those reactionaries belonging to defunct exploitative classes trying to raise their heads again, and those reactionaries playing off the ethnic minority people or working under the cloak of religion to oppose the administration--are taking advantage of the carelessness and unawareness of cadres and public organs to oppose and sabotage our people's revolutionary struggle.

In addition, those deviant and debauched people opposing the revolution, those undermining the economy and infringing upon socialist property, those engaging in speculation and blackmarketeering, those rigging the socialist market and those professional rascals and aggressive hooligans engaging in robbery-manslaughter activities or in forgery and fraud-related activities are undermining public order and safety.

The imperialists' and the reactionaries' many perfidious and crafty schemes, in addition to the annexationist designs of the Chinese expansionists, their threats of aggression and their espionage and psychological warfare; the difficulties confronting our people's economic life; and the activities of the reactionaries and antisocialist elements at home ARE TROUBLING POLITICAL SECURITY AND PUBLIC ORDER AND SAFETY IN OUR COUNTRY.

We must realize that in the past, our entire party, people and army were thoroughly aware of the spirit of the resolution of the fourth party congress: "Maintaining political security and public order and safety is an extremely important task" of our party and state. On the political security and public order and safety front, led by the party, our entire people, with the people's public security force as a backbone, have foiled many enemy espionage and psychological warfare schemes and actions; they have successfully prevented sabotage and rebellious activities, have timely suppressed many reactionary organizations; have annihilated or broken up an important part of the reactionary FULRO organization; have rounded up and re-educated dangerous political activists and criminal elements; have captured many enemy weapons and operational means; have actively wiped out reactionary cultural works and done away with social vices and so forth. The political security situation has been firmly safeguarded and public order, in general, has been stabilized.

However, there are many loopholes in the struggle against the schemes and espionage and psychological warfare activities conducted by the Chinese expansionists and the U.S. imperialists. The economy and socialist property have not been properly and fully protected. Corruption and theft, which damages socialist property, are still prevalent and are becoming very serious in some localities. Hooligans, who rob, murder and create social disturbances damaging to the people's lives and property, have not been scrupulously suppressed. The political security and public order and safety situation in a number of localities are complex and becoming serious in some places, especially in densely populated areas with weak bases and numerous state properties.

After implementing the sixth party Central Committee plenum resolution, our entire party and people are striving to fulfill triumphantly various basic tasks of the future plans and the 1981 plan as set forth in the ninth party Central Committee plenum resolution which include:

--Accelerate production, improve distribution and circulation to stabilize and develop the economy, overcome difficulties and gradually improve the people's daily life.

--Strengthen and consolidate national defense, firmly maintain political security and public order and safety, stand ready for combat and fight to defend the fatherland triumphantly.

--Accelerate socialist transformation in the south, consolidate and perfect socialist production relations in the north, vigorously develop the economic managerial task and strive to oppose negative phenomena.

--Continue to build key material and technical bases of socialism.

--Consolidate the special relations with Laos and Kampuchea, accelerate the comprehensive cooperation with the Soviet Union and strengthen economic collaboration with socialist countries in CEMA and expand economic relations with other countries.

In this context, we must realize that the maintenance of political security and public order is the most important and urgent task of our party and state. To carry out this task satisfactorily, we must OFFENSIVELY AND RESOLUTELY STRUGGLE TO FOIL ALL SCHEMES AND ACTIVITIES OF THE CHINESE SPIES, THE IMPERIALISTS AND CAPITALISTS; PROMPTLY AND RESOLUTELY SUPPRESS THE EXISTING SABOTEURS; SMASH THE EXPLOITING AND REACTIONARY CLASSES' ATTEMPTS TO RAISE THEIR HEADS; STRIVE TO OPPOSE ALL OTHER CRIMES; POSITIVELY ERADICATE SOCIAL VICE AND MINIMIZE SOCIAL VICTIMS.

OBVIOUSLY THE ESPIONAGE AND PSYCHOLOGICAL WARFARE AND THE WAR TO UNDERMINE OUR ECONOMY WAGED BY THE CHINESE EXPANSIONISTS AND HEGEMONISTS IN COLLUSION WITH THE U.S. IMPERIALISTS AND OTHER INTERNATIONAL REACTIONARIES, IN REALITY IS A WAR OF TOTAL DESTRUCTION AND HATE AGAINST OUR NATION IN ALL FIELDS--POLITICAL, MILITARY, ECONOMIC, CULTURAL, SOCIAL AND DIPLOMATIC. IT IS AIMED AT DESTABILIZING OUR POLITICAL, ECONOMIC AND SOCIAL SITUATION, AT WEAKENING US AND CREATING REBELLION IN ORDER TO CREATE AN OPPORTUNITY FOR THEM TO WAGE A WAR OF AGGRESSION AGAINST OUR NATION.

For our part, the struggle to safeguard political security and social order and safety constitutes a fierce class struggle for national independence and socialism. In this struggle, our people must fight the enemy face to face as well as on the silent front, and endure a tense test of both strength and will against an enemy who resorts to aggressive actions at one time and subtle and cunning maneuvers at another. We must carry out this struggle with determination and flexibility and with persistence and sharpness. We must rally the forces of all the people and launch a vigorous movement alongside the silent activities professionally conducted by the cadres and combatants of the security forces in order to set up a tight dragnet with which to ensure the people's surveillance of enemy activities. [paragraph continues]

The history of our national struggle to safeguard political security and public order and safety for more than 35 years that we must not only be clearly aware of our main enemy and its henchmen but must also firmly grasp and correctly apply the guiding principles that have been proven correct and effective by reality. These principles consist of ENHANCING THE PARTY'S ABSOLUTE, DIRECT AND COMPREHENSIVE LEADERSHIP OVER THE STRUGGLE TO SAFEGUARD POLITICAL SECURITY AND SOCIAL ORDER AND SAFETY. This is the most important and fundamental guiding principle for the struggle to safeguard security and order. For only the party is capable of mobilizing the combined strength of the entire system of proletarian dictatorship for SETTING UP A FRONT OF COMPREHENSIVE STRUGGLE to resolutely smash all the schemes and acts of intelligence agents and spies of imperialism and capitalism, especially China and the United States, reactionaries of various stripes and other criminal elements, in order to safeguard political security and public order and safety. Reality has shown that we can achieve success only if the party committee echelons closely monitor the situation regarding political security and public order and safety, pay attention to leading the security forces, hear periodic reports on their work, study and apply the party line and policies to meet specific requirements of the situation and set forth appropriate viewpoints, programs and measures; combine the struggle to safeguard political security and public order and safety with the major basic and regular tasks of the party; link the implementation of the viewpoints and policies concerning the struggle to safeguard political security and public order and safety with other viewpoints and policies of the party; combine the mass movement to safeguard political security and public order and safety with the broad mass movements on the production, combat, economic construction and cultural fronts; motivate cadres, party members and the people of all strata to satisfactorily carry out their duty to safeguard political security and public order and safety; regularly enforce control and supervision, remedy shortcomings and mistakes and promptly draw upon and review experience so as to further reinforce and perfect the party's line and struggle methods with the aim of constantly advancing by longer and firmer strides the establishment and maintenance of socialist order.

The struggle for the maintenance of political security and public order and safety is THE TASK OF THE MASSES. It is both the right and duty of the masses toward the country's interests and their own. We must disseminate widespread and profound propaganda among the masses, making them comply with the party's policies and line and the state law voluntarily and scrupulously and prepare and carry out their own preventive measures against unlawful acts and social vices. We must motivate the masses to exercise their right to collective mastery over the maintenance of political security and public order and safety. As trade unions, youth union organizations and women's associations are component members of the system of proletarian dictatorship and are representatives of the masses' collective mastery, they should have a great responsibility for this work. We must carry out the indoctrination task satisfactorily if the masses are to be self-motivated to report to the public security organs concerned about what they suspect to be counterrevolutionary or criminal activities; to participate actively and resolutely in the struggle for the suppression of counterrevolutionary and criminal activities; to actively educate and re-educate counterrevolutionaries, criminals and backward people; to condemn and struggle to do away with negative and backward phenomena in the ideological, political, economic, cultural and social life and to positively wipe out social vices; to control and supervise cadres and office and manual workers of various state organs; to criticize cadres and combatants of the people's public security force; and to make those mass organizations responsible for maintaining political security and public order and safety stronger and more stable.

Increasing the party leadership also means UPHOLDING THE MANAGERIAL EFFECTIVENESS OF THE STATE in the field of political security and public order and safety. The managerial effectiveness of the state in this field is reflected through the organized and systematic operation of the society's activities. The state is strengthening socialist legislation, gradually supplementing and perfecting the legal system, establishing a series of systems, stipulations and procedures for the management of political security and public order and safety in keeping with the new situation; increasing various effective administrative managerial measures in the maintenance of political security and public order and safety; and disseminating and teaching law to the people. The enemy is very crafty in its activities, increasingly using sophisticated and modern scientific and technical means. Fostering its function of exercising management over society, the state is COMBINING THE REVOLUTIONARY ACTIVITY OF THE MASSES WITH THE WORK OF VARIOUS PROFESSIONAL ORGANS such as the people's public security force, the people's organs of control and the people's courts. They are the tools of force of the proletarian dictatorial state, the backbone shock forces of the party and the state and the devoted and loyal servants of the people in establishing and managing socialist social order. The combination of the masses' strength and great capabilities with the scientific and technical services of various professional sectors will be instrumental in obtaining mutual support and will ensure a firmer and more effective struggle.

In our country, CLOSELY COMBINING THE DEVELOPMENT OF PRODUCTION WITH THE DEFENSE OF PRODUCTION AND THE BUILDING OF SOCIALISM WITH THE DEFENSE OF THE SOCIALIST REGIME AND THE SOCIALIST FATHERLAND is an objective law of the socialist revolution. This is because one of the most important objectives of the espionage and psychological war waged by Chinese spies in collusion with U.S. spies ... is to sabotage the economy, production and the building of socialism of our country. Therefore, combining production with its defense and building with the defense of its achievements is an important principle of the present struggle. This principle must be understood and applied nationwide as well as in each locality, each installation, each unit and each specific task. The more the building of socialism (including both socialist transformation and the building of socialism) is developed, the further its defense must be strengthened. We must oppose the idea of separating building from defense or even contrasting them. On the other hand, we must press on with the struggle against the concept that defending production is an exclusive responsibility of the public security sector. All sectors and localities, in accordance with their functions and duties, have the responsibility to defend production and the building of socialism; to struggle against enemy sabotage against the economic line and policy of the party and the material and technical bases of socialism; and to oppose the thieves of socialist property. We must clearly define the responsibilities of the organs which are in charge of construction projects and which are owners of state property, and the responsibilities of the organs specializing in protecting political security and public order. Only in this way can we achieve high efficiency in the defense of production and in building.

THE PROTECTION OF POLITICAL SECURITY MUST BE CLOSELY COMBINED WITH THE MAINTENANCE OF PUBLIC ORDER AND SAFETY (including the protection of socialist property) because they are just two aspects of a single task in the proletarian dictatorial state's management of public order and security. These two aspects are closely related, with THE PROTECTION OF POLITICAL SECURITY BEING THE MOST BASIC AND DECISIVE OBJECTIVE. Political security is closely linked with the dictatorship of the proletariat and with the survival of our party, our state, our regime and our nation in both the immediate and distant future.

In our country, like any other country, when our people began to build socialism, the activities of other criminals, especially the violators of socialist property, often increased to a serious level, especially during the early stage of the postwar period of transition to socialism. For this reason, in certain places, the struggle to maintain public order sometimes exerted a very important impact on political security.

In our country, there are at present quite a large number of cadres, party members and people who have not yet fully understood the essential relations between these two aspects. Therefore, they have sometimes emphasized political security while making light of public order or, conversely, they have at times neglected the protection of political security when they saw public order deteriorating. We must realize that the enemy is trying to sabotage us in all fields; for this reason, protecting political security is still our most important task at present. At the same time, we must absolutely not disregard the maintenance of public order. If political security is not firmly protected, there will be no favorable conditions for us to satisfactorily safeguard socialist property and to effectively maintain public order and safety. On the contrary, if public order and safety are not satisfactorily maintained, the enemy and other criminals will take advantage of such a situation, the law will be flouted and the property of the state, the collectives and citizens will be violated. Such a state of affairs will seriously affect political security.

Realities of the struggle in our country have shown that the counterrevolutionaries have often taken advantage of our momentary difficulties and our shortcomings in implementing the party's policies and the state's law to incite bad elements to disturb public order and safety, to steal socialist property and, eventually, to sabotage political security. If public order and safety are seriously violated, or if we fail to skillfully resolve the public order and safety problem, political security will be adversely affected or, worse still, the public order and safety problem may turn into a political security problem. Therefore, in evaluating the situation as well as in resolving the problems of political security and public order and safety, we must always remain alert and take into consideration the relations between the two problems so as to adopt appropriate policies and measures to satisfactorily resolve one problem while effectively attending to the other. This is to avoid developing shortcomings in our efforts to resolve one problem and allowing the enemy to take advantage of them to sabotate our efforts in tackling the other problem.

WE MUST BRING INTO PLAY THE AGGREGATE STRENGTH OF ALL FORCES, AND APPLY ALL NECESSARY MEASURES IN A WELL-COORDINATED MANNER SO AS TO ACTIVELY BUILD UP OUR FORCES. WE MUST TAKE THE INITIATIVE IN GUARDING AGAINST AND CONTINUOUSLY ATTACKING THE COUNTERREVOLUTIONARIES AND OTHER CRIMINALS. WE MUST ATTACK THEM AND HAVE FIRM CONTROL OF THE SECURITY SITUATION AND VICE VERSA, IN ORDER TO DESTROY AND BREAK UP THESE ELEMENTS. This is our party's highly creative method of making revolution; it is also the guiding principle enabling us to bring into play the aggregate strength of the dictatorship of the proletariat in our struggle against the counterrevolutionaries and other criminals and for satisfactorily protecting political security and public order and safety. This aggregate strength is the strength of our party's correct line and policies combined with the strength of tens of millions of people enlightened by the party. It is an aggregation of political strength and military, economic, cultural and social strength and a combination of the strength derived from the management system based on legal and administrative measures and the strength of public opinion.

This principle reflects an extremely important strategic concept of our party; the concept of the initiative, or the sense of responsibility which calls for efforts to ensure the highest safety for the revolution and to promptly check dangerous schemes and acts of the counterrevolutionaries and other criminals, thereby preventing them from jeopardizing the country's political security and violating the people's property and lives.

Therefore, we must grasp and closely combine the two tasks of actively taking preventive measures to defend ourselves and actively launching attacks to destroy and break up the enemy. We must take all preventive measures for self-defense. In terms of our basic and long-term interests, the most active and effective preventive measure is for us to victoriously carry out the three revolutions and to successfully build socialism in our country. Viewed from the angle of protecting political security and public order and safety, to be active means to take very strict and absolute preventive measures. These measures may even include, initially, the suppression and reduction of social vices to the minimum and, eventually, the elimination of social conditions which breed crimes and the prevention of shortcomings which facilitate the activities of old counterrevolutionaries and criminals and breed new ones.

Active prevention also means actively and continuously attacking the counterrevolutionaries and other criminals politically, ideologically and organizationally. We must attack them any time, in war as well as in peace, anywhere, in all fields, in different forms and by different measures. The building and defense of socialism does not allow us to cope with the enemy in a passive manner. It requires us to have a firm knowledge of his schemes and activities and to firmly maintain the initiative in public order and security. The present situation calls for us to be active in gaining a comprehensive knowledge of the security conditions, in building our forces, in combat, in implementing general positions and policies, and in handling each specific court case. In doing this, we must consider building as a basic and highly decisive factor. By building we mean developing mass movements for the protection of political security and public order and safety; building an honest and strong public security service; building reconnaissance organizations and formulating reconnaissance plans for key areas and principal targets [doois tuwowngj]; formulating plans for our self-defense and for enemy suppression; developing scientific theories for the Vietnamese people's public security work; building the material and technical bases necessary for the public security forces in maintaining public order and security; and developing strong, effective, creative and timely party leadership in this struggle.

BUILDING, PREVENTION, ATTACK AND MASTERY--these four aspects are closely related, with building being the basis. As such, they help create an aggregate strength in our struggle against the enemy. This is a very important principle in the task of guiding the struggle to protect political security and public order and safety.

The struggle to protect political security and to maintain public order and safety is an extremely complex, difficult and fierce struggle. Under the party leadership, our entire armed forces and people are always alert for the scheme of the Chinese expansionists and reactionaries in collusion with the U.S. imperialists to sabotage our country, and are determined to firmly protect political security, to satisfactorily maintain public order and safety and to successfully implement the resolution of the ninth plenum of the party Central Committee, thereby contributing to fulfilling the task of building socialism and defending our beloved socialist Vietnamese fatherland.

THE ROAD THAT LEADS TO PEACE, INDEPENDENCE, FRIENDSHIP AND COOPERATION AMONG THE SOUTHEAST ASIAN NATIONS

BK161200 Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 20-34

[Article by Phuc Cuong--this translation previously was published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 162, 21 Aug 81, pp K3-K14]

[Text] Forty Years of No Peace and Drastic Changes

In the past 40 years Southeast Asia has been one of the most volatile regions and the only place in the world where there has been no peace. Wars and crises have repeatedly broken out year after year, rendering the situation in Southeast Asia unstable and volatile. It was here that the bloodiest and most protracted wars, more fierce than World War II in certain respects, were fought.

World War II began in Southeast Asia almost at the same time as in Europe. Taking advantage of the defeat of the imperialist West European countries by German fascism, Japan jumped into Southeast Asia--driving off France, Britain and Holland--and enforced the Greater East Asia Doctrine, turning Southeast Asia into a new-style Japanese colony. Japan's thrust into Southeast Asia broke the imperialist West European countries' colonialism and destroyed the social basis of their rule. At that time Japan's neocolonialist rule had just begun and had yet to be consolidated. Seizing this opportunity, many Southeast Asian nations rose up and, in coordination with the democratic and anti-fascist forces in the world, launched their struggle for self-liberation. The victory of the Soviet Red Army that destroyed German fascism and routed the most powerful armies of Japan, which led to the unconditional surrender of Japanese fascism, created a very favorable historic opportunity for the world revolutionary movement, especially the movement for national liberation in Southeast Asia, to develop and achieve success in a number of countries--the three Indochinese countries, Indonesia and Burma.

However, not long after the Japanese surrender, the West European colonialists renewed their aggression against various countries in the region and started bloody colonial wars such as the Dutch war in Indonesia, the British war in Malaysia and Singapore, the French war in Indochina and so forth. Except in the case of Indochina, most of the colonial wars in Southeast Asia soon ended with a political reconciliation between the West European colonialists and the bourgeoisie of the Southeast Asian countries. From 1950 onward, there remained in Southeast Asia only the war conducted by French colonialism against the independence of the nations on the Indochinese peninsula. This war only ended following the heavy defeat of the French expeditionary army at Dien Bien Phu, which forced France to sign the 1954 Geneva agreements and recognize the independence, unification, sovereignty and territorial integrity of Vietnam, Laos and Kampuchea.

The decline and crisis of the Western European imperialist countries' colonialism in Southeast Asia paved the way for the U.S. imperialists to expand their role of international gendarme in this region. Simultaneously with reoccupying the colonies lost to Japan, the U.S. imperialists sought to gradually drive the Western European countries out of their Southeast Asian colonies including Indochina, which they considered an important target.

Along with waging war in Korea, the U.S. imperialists actively gave aid to the French colonialists so as to gradually take over the conduct of the French war of aggression in Indochina and to direct it according to U.S. strategic aims. France's defeat in Indochina precipitated direct U.S. intervention in Southeast Asia with the founding of the aggressive bloc SEATO in September 1954 and France's ouster from South Vietnam. The intervention of U.S. imperialism, the leading imperialist power, in Southeast Asia this time plunged the region into a crisis of a far larger scale and a totally different nature from the previous ones. To support their war of aggression against Vietnam and other countries on the Indochina peninsula, the biggest aggressive war in the history of the United States, the U.S. imperialists mobilized almost all their war machine, put into use not only the system of their military and logistics bases in the Asia-Pacific region but part of their facilities in Western Europe and other parts of the world, and attracted the involvement of many of their allied and satellite countries. This crisis was also deeper because it was triggered by the biggest neocolonialist power, whose defeat would entail not only the crisis of U.S. imperialism but the bankruptcy of neocolonialism throughout the world. Therefore, the U.S. debacle in Vietnam was the most serious crisis of imperialism since World War II. Just as in earlier cases, the victory of the Southeast Asian nations' struggle for self-liberation which culminated in the victory of our people and other Indochinese nations in their anti-U.S. war of resistance for national salvation, put an end to the longest and most bitter crisis in Southeast Asia.

We will not include all the complexity and turbulence of the past situation in Southeast Asia if we do not mention the criminal plans which the Chinese authorities have carried out against the Southeast Asian peoples throughout the past 30 years, ever since Maoism came to power in China. A characteristic of the undeclared war waged by the Beijing authorities in Southeast Asia is that the war provoker always covers his face and fights through surrogates. This kind of war, however, can do extremely serious harm. It constitutes a latent menace to the independence of every nation; it sows division and stirs up confrontation among the countries in the region. Prior to 1973, Beijing's scheme was carried out mainly in the form of civil wars provoked in various Southeast Asian countries by Maoist forces fostered and abetted by Beijing. These wars at times heatedly flared up and at times temporarily cooled off on Beijing's orders to serve China's expansionist and hegemonist designs and to suit its strategic aims in each specific period. From 1973 onward, after the United States, in the wake of its Vietnam debacle, was forced to withdraw its troops from Indochina and continental Southeast Asia, Beijing increasingly revealed its reactionary colors and blatantly opposed the independence of the Southeast Asian nations. This policy culminated in the war of aggression directly launched by more than 600,000 Chinese troops against Vietnam in February 1979. Although the Beijing authorities were forced to withdraw their troops as a result of the fierce counterblows dealt by our armed forces and people, the undeclared war started by the reactionary forces among the Maoist ruling circles in China against the Vietnamese, Lao and Kampuchean peoples and other Southeast Asian nations has not ended. It is being waged under a new form and by a combination of various measures, including the use of military forces to constantly carry out armed provocations and to threaten invasion in coordination with intensified psychological warfare, infiltration, sabotage and subversive activities coupled with economic sabotage and blockade. At the same time, Beijing has stepped up its diplomatic campaign aimed at isolating Vietnam in the international arena and dividing the Southeast Asian nations, especially, to stir up confrontation between the Indochinese and Asean countries.

The situation in Southeast Asia over the past 40 years has clearly shown that the cause of the unending state of war and crisis in this region is the policy of aggression and interference pursued by the colonialist and imperialist powers and the expansionism and hegemonism embraced by the Beijing ruling circles. The situation in Southeast Asia over the past 40 years, however, has not been marked solely by war and crisis. This has also been one of the regions of the world in which most far-reaching and radical changes have taken place.

First, the national liberation movement of the Southeast Asian countries has ended the rule of more than 3 centuries by the West European colonialist regimes in Southeast Asia. In particular, the victory of the Vietnamese people's resistance struggle against the French colonialists went beyond their national boundaries, contributed to the collapse of the French colonialists' age-old colonialist system and marked the beginning of the complete collapse of colonialism throughout the world. With the collapse of colonialism, the trend of peace, national independence and nonalignment developed among the nascent countries. The Afro-Asian conference held in Bandung, Indonesia, in 1955 marked a new development step of the national independence movement, greatly contributing to the birth of the nonaligned countries' movement 6 years later.

Second, the victory of the Vietnamese people and other peoples in Indochina in their anti-U.S. national salvation resistance is of epochal character and assumes an international importance. Following the total U.S. defeat in Vietnam, for the first time in 30 years foreign aggressor troops are no longer seen on the Southeast Asian continent. The trend of peace, neutrality and national independence has developed in the Southeast Asian countries, including those which used to side with the United States in its war of aggression against Vietnam.

This change also bears further international significance because it has ushered in a new era in international relations: the post-Vietnam era, the main characteristics of which are the decline of U.S. imperialism, the crisis of the entire imperialist system and the tremendous growth of the era's three revolutionary currents.

Third, the Beijing leadership's expansionism and hegemonism in Southeast Asia has met with grievous failure, especially during the past 5 years. Parallel with the collapse in Kampuchea of the genocial regime of Pol Pot, the most capable lackey of Maoism in Southeast Asia, was the total failure of the Chinese expansionist and hegemonist scheme in Indochina. This scheme has been gradually exposed in the Southeast Asian region.

Fourth, following the victory of the Kampuchean people in overthrowing the Pol Pot-Ieng Sary genocidal regime, since 1979 there have developed two types of nations in Southeast Asia with different social, political and economic regimes. Following the chasing out of the French from Vietnam, a mere 25 years ago, socialism was initially built in only half of Vietnam. Today socialism has been chosen as the path of development for their countries by the Indochinese peoples.

Fifth, the profound change in the balance of forces in Southeast Asia has created a totally new situation in this region, thus contributing to changing the world balance of forces which is beneficial to peace and revolution. Forty years ago, colonialism covered the whole of Southeast Asia, and the reactionary forces were obviously stronger than the progressive forces. Today the peoples of the Southeast Asian countries have risen up and become masters of their own destinies.

The imperialist and international reactionary forces' attempts to use military power to impose their will on the Indochinese peoples and to repress the national independence- and peace-loving forces in Southeast Asia have been foiled and frustrated. This has forced them to change their tactics. They are now resorting to political and economic measures as a means to maintain their interest in Southeast Asia and to change the situation in Indochina. They have, especially, colluded with one another in an attempt to sow division between the ASEAN countries and the Indochinese countries. Although this situation has created more complex phenomena in the region's international relations, the tendency toward peace, national independence and nonalignment in Southeast Asia has become irreversible.

Looking back to the situation in Southeast Asia 40 years ago, one can see that this is a region where the era's two opponent forces struggled violently against each other. Why was it that in Southeast Asia--a region which though strategically significant and rich in natural resources, is not a leading zone compared with the Middle East, Europe and other regions of the world--the struggle was so violent and changes in the region over the past 40 years were so profound and radical? There are many factors:

Firstly, Southeast Asia is a sole region in the world that witnessed the partition efforts of the four largest imperialist and expansionist forces--Japan, the United States, China and Western Europe. Conflicts therefore occurred between the "old" and the "nascent" imperialists, between old and neo-colonialism, between Western imperialism and Chinese expansionism. This contest gradually became acute because it happened against the background in which the world and Southeast Asian revolutionary movements were embarking on a new, developing era.

Secondly, the most important factor for change in Southeast Asia in the past 40 years was that, of all the regions oppressed and exploited by imperialism, Southeast Asia achieved revolutionary enlightenment early. The influence of the October Revolution also reached this region in no time. As early as in the 1920's, a number of communist parties were founded here. This is the only region in the world where all the countries have their communist parties, many of which have, since the early days of their founding, wielded the banner of leadership over the revolution. Under the leadership of genuine revolutionary leaders, the national liberation movement in Southeast Asia bore the most marked revolutionary character. This was most clearly reflected in the revolutionary movement of the Indochinese nations. The Indochinese revolution has not stopped with the national democratic revolution but advanced directly to socialism, bypassing the stage of capitalist development; and it has resolutely opposed opportunism in all forms, especially Maoism. The Indochinese revolutionary movement has closely linked national independence with socialism and this has served as a source of strength to make this movement invincible and a factor deciding the development of the Southeast Asian situation in the past 4 decades. The imperialist and international reactionary forces have, in the past 40 years, mobilized the greatest military forces and resorted to the most cunning maneuvers to make our struggle against them extremely fierce; but in the end, they have courted the most ignominious defeats. SEATO, one of the biggest military alliances set up by U.S. imperialism after World War II, collapsed as a result of the revolutionary movement in Southeast Asia. Southeast Asia is also the only region in the world where U.S. imperialism was forced, for the first time in history, to dismantle a number of its military bases and withdraw its troops home after having been defeated in aggression. The success and growth of the revolutionary movement in Southeast Asia have transformed this region in the post-Vietnam period into one of the weakest links of the world imperialist system.

Thirdly, the resolute and victorious struggle of the three Indochinese countries has not only challenged the interests of colonialism, imperialism and expansionism in Southeast Asia but also threatened their illegitimate interests elsewhere in the world. French colonialism considered the Indochinese war a gamble that would decide its colonial rule in the world. This was the reason why France threw all its forces into this war. And true enough, the Dien Bien Phu victory not only heralded the collapse of French colonialism, but contributed to bringing down colonialism all over the world. For U.S. imperialism, South Vietnam was the site for the most complete and comprehensive experimentation of its neocolonialism. The defeat sustained by the United States in its war of aggression against Vietnam meant total bankruptcy for U.S. neocolonialism; it threatened the very rule of the United States over the capitalist world. As a consequence, the victory won by Vietnam and the defeat sustained by the United States in Vietnam have opened up the post-Vietnam period in the world. The Beijing reactionaries consider Southeast Asia their main target for expansion and the most important instrument in their strategy to achieve world hegemony and their relations with world powers. Their failure in Southeast Asia meant bankruptcy for their counterrevolutionary strategy in a region where Beijing enjoyed the most favorable conditions, and bankruptcy for Maoism in Southeast Asia.

For the reasons mentioned above, the events that have taken place in Southeast Asia in the past 40 years, especially the successes of the revolutionary forces in Indochina, have had a tremendous impact that reaches beyond regional boundaries and has transformed Southeast Asia into the region of greatest strategic importance in the world.

Maoism and Southeast Asia

Since the founding of the People's Republic of China 30 years ago, the Southeast Asian people have had to cope with the danger resulting from the Beijing powerholders' expansionism and hegemonist policy.

This danger is very great and long-lasting, particularly because of the strategic position of the region which is located close to the southern border of China. The territorial waters of various countries in the region are also close to China's. China has long continued to regard Southeast Asia as a traditional and priority target for its expansionism. From the earliest days when Mao was still in power, he regarded Southeast Asia as part of Chinese territory which was seized by the West and which was to be taken back by the new Chinese state. That is why the danger of Chinese expansionism and hegemonism facing Southeast Asia is great, direct and long-lasting. Though the danger of imperialism--which remains unchanged in nature--continues to exist, it has been limited following its defeat and withdrawal from the region. Meanwhile, the danger of Chinese expansionism and hegemonism facing Southeast Asia will continue to exist as long as the Beijing powerholders adhere to a reactionary policy. This danger has become more and more serious because the influence of Maoism has long infiltrated quite deep into the revolutionary movements of the region through various pro-Maoist forces and through tens of millions of Chinese nationals and people of Chinese descent.

We would not be able to realize the dangerous nature of Maoism if we failed to realize the important position of Southeast Asia in Beijing's global strategy. The reasons for Beijing to pay attention to Southeast Asia are that:

First, Southeast Asia is a region made up of small countries, the largest of which has a population only one-tenth that of China. The divide-and-rule policy of the colonialists created national discrimination, conflicts and disagreements among the various nations in the region. This situation has created an opportunity for China to "fish in troubled waters," especially when the region has many groups ready to assist China's intervention.

Second, Southeast Asia is a region in which the strategic interests of various imperialist forces have always been in conflict. This region is fraught with disagreements which China can play off. China tried to take advantage of the disagreements among the imperialists themselves to secure a temporary compromise with the French at the Geneva conference on Indochina in 1954 in order to prevent U.S. influence from spreading to China's southern border. China also took advantage of the disagreements among various Southeast Asian nations over imperialism in order to develop its influence in the region, just as it took advantage of the disagreements among various forces, especially the disagreements between the antigovernment pro-Maoist forces and the governments of various countries in the region, in order to exercise pressure on these countries.

Third, Southeast Asia is a region where there are many highly dynamic and thorough revolutionary movements which, however, have had to cope constantly with enemies 10 times bigger than themselves which possess enormous economic and military potential. To become victorious, these movements must rely on support and assistance from the outside. This factor has been fully exploited by the Chinese powerholders. They have used their economic and military assistance as a means to get hold of these movements so that they can employ them as a tool to bargain with the imperialists, thus using the blood and bones of the Southeast Asian peoples as a stepping stone to climb to a position of a great power in the world.

Over the past 30 years, China's Southeast Asia policy has changed many times, with only one strategic aim--serving China's hegemonist ambition in Southeast Asia and in the world as a whole.

From 1949, when Mao Zedong took over the administration, to 1958, China's general strategy was to quickly restore its war-devastated economy and cope with the two hotbeds of war caused by the imperialists on its northern and southern borders (the Korean war and the Indochina war) while countering the U.S. policy of blockade and military threat. That was the time when the global cold war was at its peak. Faced with this situation, the Beijing rulers were compelled to rely totally on the Soviet Union as China signed a treaty of alliance and mutual assistance with that country and looked upon it as the leadership center of the world revolution. This was aimed at soliciting Soviet economic aid and assistance and using the Soviet-Chinese alliance to warn and threaten the United States. At this time China also sent its troops to help the Korean people fight the Americans and lent its support to national liberation movements in Southeast Asia. During this period, particularly from the end of the Korean war, China intensively took advantage of the struggle for national liberation by the peoples of the Southeast Asian countries, especially the Indochinese people, to advance itself to the position of a world power and serve as an instrument for bargaining and reaching agreements with the French colonialists. At the 1954 Geneva conference on Indochina, China was given equal footing with the other four big powers--the Soviet Union, the United States, Britain and France--while China's permanent seat on the UN Security Council was retained by the Chiang Kai-shek regime. Concerned over the possibility of U.S. involvement in Southeast Asia, China sought to help the French and the Indochina war by dividing Vietnam into two parts and maintaining the French presence and influence in the southern part of that country and in Laos and Kampuchea so as to check the Americans and keep the Vietnamese revolution under control, and thereby pressure Vietnam into depending on Beijing.

Meanwhile, the Beijing rulers joined the countries of Southeast Asia in signing a statement on the five principles of peaceful coexistence and ordered all pro-Chinese "communist parties" to suspend the armed struggle and begin negotiations with the Southeast Asian governments. They also protested against the armed struggle for national liberation waged by Vietnam and Laos.

These acts by Beijing were aimed at preventing the United States from interfering directly in Southeast Asia while serving as indications of detente toward that country. Contacts between China and the United States began at Panmunjom (Korea) and continued at the 1954 Geneva conference. Official talks at ambassadorial level between the two countries finally began in Geneva in mid-1955 (and later in Warsaw).

Between 1950 and 1969, the balance of power began to change in a manner favorable to the Soviet Union and revolutionary forces. The achievements of the Soviet Union in the fields of strategic weaponry and space conquest led to the establishment of the U.S.-Soviet strategic balance while the vigorous development of the struggle for national liberation following the Dien Bien Phu victory compelled the United States to consider detente with the Soviet Union. Meanwhile, in China, as a consequence of the "Great Leap Forward," the economy was devastated and famine and unemployment were rampant. The prestige of Mao and the pro-Mao ruling clique declined seriously. A decisive power struggle then took place within the pro-Mao clique, which led to the civil war known as the so-called "Great Proletarian Cultural Revolution" in the last half of the 1960's.

During this time, China worked actively to sow dissension within the international communist movement. Along with working out a "25-point platform" for this movement, China also made every effort to cause a split among the world communist and worker parties by urging the setting up of Maoist groups under the label "genuine Marxist-Leninist communist parties" throughout the world and intensively campaigning for the convening of a conference of 11 communist parties in Southeast Asia, in a bid to set up a China-led world communist movement.

To cause further trouble for the Soviet Union and the United States, the Beijing reactionary clique created disputes at the Soviet-Chinese border and conducted large-scale anti-Soviet and anti-U.S. campaigns in the world. It ordered the Maoist groups in Southeast Asia to initiate armed struggles against the United States and other governments in this region under the slogan "Power emanates from the barrel of a gun."

At that time, the United States was waging its war of aggression against Vietnam and other Indochinese countries. Beijing sent word that if the United States did not lay a hand on China, China would reciprocate toward the United States. Meanwhile, Beijing rejected the setting up of a world people's front with the participation of the Soviet Union to support Vietnam, while urging the latter not to accept Soviet aid. Moreover, the Chinese authorities encouraged Vietnam to fight to the end, and protested against the negotiations between Vietnam and the United States. As M. Taylor observed, Beijing was determined to "oppose the United States" to the last Vietnamese. Beijing's scheme was to monopolize our people's resistance struggle as a trump card for reconciliation with the United States.

From the 1970's onward we have had the post-Vietnam period. The U.S. defeat in Vietnam and the economic and political crises in the United States have weakened it, thus dragging the entire world capitalist system into a crisis. The tremendous growth of the Soviet Union and the three revolutionary currents of the era has tipped the balance of power in favor of the forces of peace, national independence and socialism. In the meantime, China, which has experienced many troubled years, is faced with the danger of political and economic collapse. The Chinese authorities' primary strategic tasks in this period are to stabilize internal order and modernize the country in order to quickly become a world power. China wants to place the United States in opposition to the Soviet Union in order to fish in troubled waters. In other words, it wants to take advantage of U.S. weakness and the U.S. policy of coping with the Soviet growth and the developing of the world revolutionary movement. On the one hand, China has advanced the three-worlds theory, calling for opposition to the two superpowers, opposing and undermining Soviet-U.S. detente and pitting the United States against the Soviet Union. On the other hand, it has formed a front with the imperialists and world reactionaries against the Soviet Union and called on the United States and other imperialist powers to help it build a powerful China as the 16th member of the North Atlantic military bloc--NATO--to defend the wealth of imperialism in the Orient. The Chinese ruling clique has completely cast away its fake revolutionary face and openly colluded with imperialism, especially U.S. imperialism.

The Chinese powerholders' apostasy began and has reached its peak in Southeast Asia. The United States, defeated in Vietnam, was forced to implement the Nixon doctrine and the policy of Vietnamization of the war, which were aimed at withdrawing U.S. troops from South Vietnam while being able to maintain the Saigon puppet clique, and also at withdrawing U.S. troops from mainland Southeast Asia while being able to maintain U.S. interests there. The Chinese powerholders' apostasy helped the Nixon administration achieve these objectives. China agreed to help the puppet regime in South Vietnam in exchange for U.S. withdrawal from Taiwan. Moreover, the United States would not prevent China from being admitted to the United Nations organization and becoming the third pole in the U.S. "triangular" strategy. [paragraph continues]

Meanwhile, China has colluded with the United States and the ASEAN states in controlling the Vietnamese and Indochinese revolution and stemming Soviet influence in Southeast Asia. To support this strategy, China has ordered the "Maoist" rebel groups in the Southeast Asian countries to end their armed struggle and cooperate with the governments of these countries.

The total victory of our people in their anti-U.S. struggle for national salvation and unification together with the victory of the Lao revolution and especially the victory of the Kampuchean people--which led to the overthrow of the genocidal Pol Pot-Ieng Sary clique--dealt a deadly blow to China's sinister designs, causing major setbacks to China's strategy of seeking collusion with the imperialists and reactionaries. With these victories, the trend towards peace and independence has developed ever more vigorously in Southeast Asia. Faced with this situation, the Beijing reactionaries have made every effort to distort the truth about our armed forces' coming to help the Kampuchean people track down the remnant Pol Pot forces at the request of the KPRC. They have slanderously charged that "Vietnam invaded Kampuchea," have invented the so-called "Vietnamese threat" and have created confrontation between Vietnam, or the Indochinese countries as a whole, and the ASEAN states. They are plunging deeper and deeper along the path of hostility against the peoples of the Indochinese countries and are creating confrontation between the ASEAN states and the Indochinese countries.

China employed the Pol Pot clique to create a hotbed of war in Southeast Asia and utilized more than 600,000 troops to mount a military offensive against Vietnam in February 1979 primarily to invade and weaken Vietnam. It also intended to create a major crisis in Southeast Asia and sabotage the trend towards peace and friendly cooperation which has developed among the Southeast Asian nations following the victories of the Indochinese countries. This crisis has resulted in a new regrouping of forces in Southeast Asia into two blocs, with China, the United States, Japan and the ASEAN states against the Indochinese countries. This crisis contributed to pushing Sino-U.S. collusion to its height during the years 1979 and 1980. At present, the Beijing reactionaries are very aggressive in trying to oppose the dismissal of Pol Pot and the trend towards dialogue in Southeast Asia. Though defeated by our army and people and forced to withdraw its troops, China has not given up its aggressive schemes. Instead, the Chinese reactionaries are trying to combine the use of its military pressure against Vietnam and Laos at its borders with these two countries with the use of the so-called "Kampuchean issue" as a means to maintain the state of confrontation in Southeast Asia. Regarding the ASEAN states, the Chinese reactionaries are, on the one hand, trying to court and woo these countries with the purpose of sabotaging these countries' desire to have a dialogue with the Indochinese countries; and are, on the other, continuing to use their economic assistance and rebellious Maoist groups as a means to pressure the governments of the ASEAN states into following the Chinese orbit against the Soviet Union and Vietnam. The rebellious Maoist groups in Southeast Asia have become the tools of Beijing against the Indochinese revolution and against the interests of the peoples in their own countries.

The Chinese authorities' expansionist schemes against Southeast Asia have also been reflected in their designs and ambitions for the Eastern Sea--a sea area which is very important for the interests of the Southeast Asian countries. China wants to monopolize this sea area of approximately 4 million square kms and turn it into its own backyard waters. A map published by China depicts China's southern territorial waters with its boundaries overlapping the entire exclusive economic zones and the continental shelves of "Vietnam, Malaysia, Indonesia, the Philippines and others." To control this sea area means to control Southeast Asia in terms of the sea, monopolizing the exploitation of underwater resources and commanding the international shipping routes which run through the area.

At present, there are major differences between the blocs in Southeast Asia with the reactionary forces in the Beijing leadership--which are colluding with the U.S. imperialists and other reactionary elements in the ruling circles of certain ASEAN states--on the one side; and with the peoples of three Indochinese countries, the Southeast Asian people as a whole and other forces of peace and national independence in the region on the other. The current struggle of the various Southeast Asian nations is a struggle for peace and national independence.

In summation, facts over the past 30 years show that Southeast Asia ia a main target for the Beijing reactionaries' expansionism and that they regard this as the main tool to carry out their global counterrevolutionary strategy. They can profit from Southeast Asia only when peace and stability are absent there. But Southeast Asia is also a place where China has suffered the most tragic setbacks.

The struggle for peace and national independence in Southeast Asia in the past as well as at present has been a struggle between the imperialists and the Beijing reactionaries on the one hand, and the forces of peace and independence in the region on the other. It is also the struggle between two tendencies in the region--the Maoist path and the path of independence and sovereignty. The activities of the Pol Pot-Ieng Sary clique and the pro-Maoist rebel groups in Southeast Asia show that the Maoist path is one of serving as lackeys of Beijing, against their own national interests. It has only led to crises and renegade acts. The experiences of the peoples of the Indochinese and other Southeast Asian countries in their struggle show that only by advancing along the path of independence and sovereignty and uniting with all progressive and peace-loving forces in the world against imperialism and the Beijing reactionaries can their struggle be successful, their national independence consolidated and peace and security in the region ensured.

Peace and Stability in Southeast Asia on the Basis of Peaceful Coexistence Between Indochina and ASEAN

The imperialist and expansionist powers' aggressive and interventionist policy has, over the past 40 years, not only plunged Southeast Asia into wars, but has caused the countries of this region to be constantly opposed to each other. The U.S. intervention, particularly the U.S. war of aggression in Vietnam, caused considerable dissension among the Southeast Asian countries. Immediately after World War II, a number of countries became U.S. neocolonies. The Philippines and Thailand became official members of the U.S.-led Southeast Asian aggressor bloc--SEATO. In 1967 ASEAN was established to cope with the victory of the revolution in Indochina and the U.S. defeat.

After the United States was forced to end the war and withdraw its troops from Vietnam and the Southeast Asian mainland, the relationship between ASEAN and the Indochinese countries entered a new era. Military opposition has basically ended, and normal diplomatic relations have gradually been established or restored. Particularly between 1976 and 1978, encouraging progress was made in the relations between Vietnam and Laos and the ASEAN states. This was a period during which the atmosphere of peace, friendship and cooperation between the countries in the region was better than ever before, promising well for the transformation of Southeast Asia into a zone of peace and stability.

However, the situation did not develop to the expectation of the nations involved. As a result of China using the Pol Pot clique to wage a war of aggression against Vietnam from the southwestern flank and sending some 600,000 troops to invade Vietnam from the north and the Carter administration's accelerating the playing of the "China card," the ASEAN states once again sided with the hostile forces against the Indochinese countries. [paragraph continues]

Because of the change in the balance of power in the region during the post-Vietnam period, this time the opposition of the ASEAN states is mainly on the political, economic and diplomatic front. The ASEAN countries have allowed China to inveigle them into the campaign of economic blockade and diplomatic isolation of the Indochinese countries. They have echoed China's slanderous allegations that Vietnam is the cause of the tense and unstable situation in Southeast Asia. They have deliberately refused to admit that the absence of peace and stability in Southeast Asia over the past 40 years has been caused by the imperialist and international reactionaries' aggressive and interventionist policy and that thanks to the struggles of the Vietnamese, Lao and Kampuchean peoples, these destructive factors have been eliminated, and the longest and fiercest wars of aggression by the imperialists have ended. The Kampuchean people's victory in overthrowing the genocidal Pol Pot clique--Beijing's lackeys--the Lao people's victory in opposing China's subversive and rebellion-inciting scheme and the Vietnamese people's victory in defeating the aggression by 600,000 Chinese troops have checked China's expansionist scheme in Southeast Asia.

Peace and stability in Southeast Asia is being jeopardized mainly by the fact that the Beijing reactionaries are colluding with the U.S. imperialists in continuing the policy of aggression against the three Indochinese countries and interfering in the Southeast Asian countries' internal affairs. The presence of the Vietnamese Army in Kampuchea is at the Kampuchean people and government's request to cope with the Chinese threat. Once that Chinese threat no longer exists, Vietnam and Kampuchea will agree on the withdrawal of the Vietnamese Army from Kampuchea, as they did on the two previous occasions after the French and U.S. wars of aggression. To demand the withdrawal of the Vietnamese troops from Kampuchea at a time when the ASEAN states support the Chinese threat to "teach Vietnam a second lesson," and when they openly intensify their interventionist and subversive activities against the Indochinese countries and continue to allow China to use Thai territory as a "sanctuary" for the genocidal Pol Pot clique and other reactionary Khmer forces to oppose the Kampuchean people, is tantamount to depriving the Vietnamese people and other Indochinese peoples of the legitimate right to self-defense and to acting as accomplices of the forces that are undermining peace and stability in this region. Some authorities from among the ASEAN countries also deliberately deny another reality, which is that the current tense and unstable situation in Southeast Asia is not developing between the three Indochinese countries and the ASEAN states. On the contrary, the tense situation is occurring between China on the one hand, and Vietnam, Laos and Kampuchea, on the other. Tens of thousands of Chinese troops are being massed in preparation for a new act of aggression against Vietnam and other Indochinese countries. The Beijing authorities have clearly stated that they continue their military pressure on the Indochinese countries, while at the same time maintaining the armed activities of the exiled Kampuchean and Lao reactionaries and the bellicose elements in the Thai Army against Kampuchea and Laos. China has long considered the Eastern Sea as belonging to it and has violated the littoral countries' rights to exclusive economic zones and the continental shelf.

In fact, the present situation in Southeast Asia shows that if there is any threat to peace and stability in the region as well as to the security of Thailand and other ASEAN states, it stems from the interference of Beijing expansionism rather than from that of the Indochinese countries. In point of fact, the Indochinese countries have always been victims of the various interferences and aggressions carried out by the imperialists and the Beijing reactionaries. History proves that the Indochinese countries have never waged any war of aggression against the ASEAN states. On the contrary, Thailand has waged three wars of aggression against Vietnam and many against Kampuchea and Laos. During the U.S. war of aggression against the peoples of the Indochinese countries, the ASEAN states took sides with the United States, and to varying extents, gave a helping hand to the latter in its war of aggression. Not only did Thailand and the Philippines offer their territories as staging bases for the U.S. armed forces to invade Vietnam and other Indochinese countries, they also sent troops to help the United States invade these countries. [paragraph continues]

The ASEAN states, especially Thailand, Singapore and the Philippines, made a fortune from their services to the U.S. war of aggression against the Indochinese peoples. The cause of the unrest in Southeast Asia has nothing to do with the Soviet Union or the Vietnamese-Soviet relationship. In its 60-year history, the Soviet Union has never invaded any country in the world. Among the five big powers which are standing members of the UN Security Council, the Soviet Union is the only member nation never involved in a war of aggression against the Southeast Asian countries. Instead, the Soviet Union has always sided with the Southeast Asian nations in their struggle for national independence and for peace in the region. It is due to the great support and assistance of the Soviet Union that the Vietnamese people and other peoples in Indochina were able to defeat the most aggressive forces in our times, regaining independence for their respective nations and contributing to restoring peace in Southeast Asia. Therefore, the Vietnamese-Soviet relationship, as well as the relationship between the Soviet Union and Laos and between the Soviet Union and Kampuchea, poses no threat to anyone. Instead, it has made significant contributions to the independence of the three Indochinese countries as well as to peace and stability in the region.

Obviously, there is no military confrontation between the Indochinese and ASEAN countries as there is between the Indochinese countries and China. There are, however, profound differences in regard to the causes of regional unrest and instability which lead to disagreement on a solution for the problems of Southeast Asia. Between the Indochinese and ASEAN countries, there are also basic common interests in achieving regional peace and stability. Although there is no possibility that these differences can be settled in the immediate future, there is a common basis for the Indochinese and ASEAN countries to seek a solution to the problems in the region. The nations in Southeast Asia now have only one choice: either to continue confrontation as the ASEAN countries have done over the past 2 years--the path leading to a tense and critical situation which has been used by the imperialist and expansionist forces in the past 40 years to divide and rule our nations--or to continue the process of peaceful coexistence between Indochina and ASEAN which satisfactorily took place in the 1976-78 period. For the interests of all nations in Southeast Asia, efforts must be made by everybody to turn the process of peaceful coexistence between the two different social systems into a firm and irreversible basis. This is the road to success in ensuring peace and independence for each nation, bringing about friendship and cooperation among the nations in the region, and turning Southeast Asia into a zone of peace and stability. Based on the principles of peaceful coexistence, respect for each other's independence, sovereignty and territorial integrity, nonaggression against each other, noninterference in each other's internal affairs, and equality and mutual benefit, all nations in Southeast Asia, especially the Indochinese and ASEAN countries, should discuss and reach agreement on regional questions in a spirit of mutual understanding, equality, mutual respect, nonimposition of views on each other, and opposition to imposition from outside. The affairs of Southeast Asia should be settled by the Southeast Asian countries themselves. This way--which has been used by various European, Arab, African and Latin American and many other countries in the world to settle problems in their regions--is fully in conformity with the spirit of the UN Charter and international law.

Some ASEAN countries maintain that they are not opposed to a dialogue with the Indochinese countries. However, on the other hand, they relentlessly try to impose the UN resolution on Kampuchea on the Indochinese countries and use the question of solving the so-called Kampuchean issue as a pre-condition for the settlement of problems concerning the region and the relations between Indochina and ASEAN. This is not the way to achieve peace and reconciliation, but to continue a policy of supporting the schemes of aggression and intervention of the imperialists and the Beijing reactionaries against the peoples of the three Indochinese countries. The Kampuchean people have not sacrificed their lives in order to be imposed upon by one resolution or another. [paragraph continues]

Resolutions on Kampuchea issued without the participation and discussion of the Kampuchean People's Revolutionary Council--the sole legal and legitimate representative of the Kampuchean people--are void. The UN decision to retain "the seat" of the Pol Pot genocidal clique--a regime already outlawed by mankind--by a majority vote is an act of opposition against the Kampuchean people, against peace and stability in Southeast Asia, and against international law. For this reason, the UN resolution of Kampuchea is illegal and void.

While the peoples in the world have been enjoying peace, the peoples of Vietnam, Laos and Kampuchea have had to live under a state of war for 40 years. Therefore, the peoples of these three Indochinese countries have no greater aspiration than to be allowed to live in peace and friendship with all nations, espeically those in Southeast Asia. Proceeding from this earnest and honest desire, after the end of the U.S. imperialist war of aggression, the peoples of the Indochinese countries tried to forget the past and were ready to promote friendly relations with the ASEAN countries. At present, despite the existing differences between them, the Indochinese countries tend to put these differences aside temporarily so that they can discuss with the ASEAN countries the issues that concern each side on the basis of equality and mutual agreement aimed at ending confrontation and gradually turning Southeast Asia into a zone of peace and stability. All the proposals put forth by the foreign ministers of the Indochinese countries at their conferences in Phnom Penh, Vientiane and Ho Chi Minh City were designed to achieve negotiation and agreement. Public opinion in the world has clearly seen the goodwill attitude and fair and reasonable stand of the Indochinese countries. We are waiting patiently for a response from the ASEAN countries. However, recent developments in Thailand show that this country still pursues a policy of tailing after the U.S. imperialists and colluding with the Chinese expanisionists against the Indochinese countries. This policy, however, cannot bring about peace and stability for the Indochinese countries or for Thailand and the other ASEAN countries. Meanwhile, those who actually benefit from it are the Beijing hegemonists. It is likely that the revolutions in the three Indochinese countries will have to go through numerous difficulties and ordeals. However, that period of most dreadful ordeal is already over. No reactionary force--not even the strongest one in the world--can reverse the current situation in Indochina.

Some 40 years ago, Southeast Asia was the solid backyard of the three long-standing and most powerful colonialist forces. Since the end of World War II, this region has been one of the largest spheres of influence of U.S. neocolonialism and the biggest target of expansion for Beijing's hegemonism. That is the reason for the fierce struggle in Southeast Asia between the two opposition forces of the epoch--the forces of peace, independence and socialism and the forces of colonialism, militarism, imperialism and expansionism and other reactionary forces.

The victories of the national liberation movement in Southeast Asia, particularly those recorded by the peoples of Vietnam, Laos and Kampuchea, have alternately brought about the total collapse of old colonialism, caused U.S. neocolonialism to go seriously bankrupt, and further pushed back Beijing's expansionism, thus turning Southeast Asia from a backyard of imperialism into a frontline of the world people's struggle for peace, national independence and socialism. Today, the balance of power in Southeast Asia has undergone great changes conducive to peace and the revolutionary movement. For the first time in history, three independent and sovereign countries have emerged on the Indochinese peninsula and are closely united in their struggle to advance to socialism. Meanwhile, a new situation has taken shape in Southeast Asia. That is the situation in which peaceful coexistence between two types of national regimes with different social, political and economic systems and mutual peace and stability are necessary for the sake of their progress. With their peace-oriented and independent foreign policies, Vietnam, Laos and Kampuchea can further develop their role as a positive factor for peace and stability in Southeast Asia.

BROADENING AND GUARANTEEING THE FINANCIAL INDEPENDENCE OF INSTALLATIONS AND IMPROVING THE CENTRALIZED, UNIFIED FINANCIAL MANAGEMENT OF THE STATE

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 35-39

[Article by Vo Tri Cao]

[Text] In financial management, it is necessary to insure the highly unified nature of the state financial system and the centralized management of the state on the central level; on the other hand, it is necessary to strongly develop the role and function of the state apparatus on the local and installation levels and create the conditions for the localities and installations to display a high spirit of collective ownership, perform good economic and financial management, become the masters of their plans and budgets and take the initiative in using financial tools and credit to support economic construction and development.

As a result, broadening and guaranteeing the financial independence of installations, especially the financial independence of enterprises, is a pressing and practical requirement in improving the financial management of the state with a view toward stimulating the development of production. The state-operated enterprise is the basic unit, is the basic organization of the unified socialist economic system. The enterprise is the place that directly produces material wealth for society and, on this basis, provides the most important and basic part of accumulated socialist capital. The enterprise is the place that vividly and concretely reflects the right of collective ownership of the working class and reflects the effectiveness of the economic management of the socialist state.

In economic relations and legal relations, the enterprise is a basic unit that has the full status of an individual under the law, has a separate account in the bank and has the capacity to assume material responsibility, specifically, it has the right to fully practice cost accounting, the right to sign economic contracts and so forth. The enterprise has the tasks of completing and exceeding the norms of the state plan, delivering the required products and sources of revenue to the state, scrupulously complying with state law, policies, regulations and discipline, improving management skills, scrupulously implementing cost accounting regulations and economic contracts and insuring a profit.

To insure the highest possible results with the lowest possible expenditures, it is necessary, for the sake of the interests of society, to coordinate the principle of collective leadership with tapping the creativity of the manual workers and civil servants at enterprises. Depending upon the situation and the level of management within the national economy and the specific management capabilities of the enterprises, the state grants a suitable degree of economic and financial independence to enterprises.

The state provides to enterprises instruments of production, assets and liquid capital and demands that enterprises thoroughly implement approved production-technical-financial plans. In this two-way relationship, the enterprise has the responsibility of performing the initial jobs in social production and state finances well; at the same time, it has the right to demand that the management agency on the upper level properly perform its task of supplying necessary and reasonable capital and instruments of production to it. Having been granted the right to use these instruments of production and liquid capital, the enterprise must first scrupulously comply with the legal norms of the state; if, after meeting the norms of the state plan, the enterprise still has surplus production capacity, it has the right to produce additional products outside the state plan with a view toward providing more commodities to society and meeting the varied needs of the market, which also earns additional profit for the enterprise. In order to perform its yearly production task, the enterprise also has the right to establish a suitable organization of production and production command; it has the right to sign production cooperation contracts and economic contracts with other units in order to implement its production-business plan in the manner deemed most profitable by the enterprise; it has the right to determine how to use the various types of allocated capital and to calculate exactly how much capital must be borrowed from the bank in order to achieve the highest possible returns; it has the right to establish the various enterprise funds and to use these funds to make technological improvements and improve the standard of living of the manual workers and civil servants within the enterprise; and it has the right to use economic levers, wages and bonuses to stimulate and provide incentive for production and business.

The realities of financial management in the recent past have proven the need to improve financial management by broadening and guaranteeing the financial independence of installations with a view toward strongly developing the production of goods for society.

Due to the need to improve financial management, the government has revised the tax policy and improved tax activities, revised the system of enterprise profit distribution, expanded the use of loans in place of budget allocations, improved financial management at installations, broadened the application of the various forms of piecework wages, etc.

To date, many installations have expanded the independent manufacture of products and the production of subsidiary products, implemented many forms of contract wages and begun buying and selling products at negotiated prices besides directed prices. As a result, numerous installations have produced many additional consumer goods. Many enterprise directors have been using financial tools in management as a measurement of and a lever to stimulate economic development while limiting negative actions. The various forms of contract wages and improved bonuses have provided incentive for workers to produce with enthusiasm. Gradually, many installations have emerged that truly practice cost accounting, are truly the masters of their finances; allocations from the state budget have gradually been reduced and completely eliminated in some cases by means of enterprises making their own investments in their development and meeting their own needs for more liquid capital.

As regards the state, the payment of business revenues and the inclusion of business profits in the budget of the state in accordance with the state plan are being supplemented more and more by contributions resulting from the independent manufacture plans and plans to produce subsidiary products of installations. The new sources of revenue of the state are based on the development of products and services of installations that supplement the product plan of the state; at the same time, the possibility for reduced state budget expenditures is based on the development and strengthening of cost accounting and the increased financial independence of the enterprise.

The right of financial ownership of the installation has truly begun to have an impact by encouraging increased product production and services at installations, thereby benefiting the masses in a practical way while also benefiting the state and the collective. This increase in products is also the first factor that must exist in order to achieve stability in the value of our currency and stability in state finances.

In conjunction with broadening and guaranteeing the financial independence of the installation, it is necessary to strengthen the unified, centralized financial management of the state and heighten the role played by the state in unifying the management of sources of goods and sources of money in order to stabilize state finances.

The circulation of goods and money is constantly developing between the countryside and the cities, among the various provinces and cities, between production and service installations, among the various segments of the economy and so forth; in this circulation, some relations are organized while others are unorganized. The interests of all the people demand that installations, sectors and localities manage the circulation of commodities and money through the organizations of state commerce and the State Bank. For the sake of the interests of all the people, the state must organize and manage, in a centralized manner, commodity-money relationships in a way in which everyone can see that his interests are being satisfied. If everyone uses cash to purchase goods from state-operated commerce, the State Bank will immediately reclaim cash. If customers do not use cash but withdraw money on deposit at the State Bank to pay for their purchases at state-operated installations, the State Bank can immediately reclaim this money from the installations that make these sales, consequently, the State Bank can continue to allow purchasers to withdraw money to buy more goods. If the circulation of money and the circulation of commodities are not balanced, persons who have extra money can put it on deposit at the State Bank and the State Bank can use this money for persons who have commodities and still reserve money for loans. Thus, the circulation of commodities and money can increase many times in keeping with the rate of development of the circulation of commodities without the state having to put much more money into circulation.

The development of the circulation of goods and the circulation of money benefits the people in a practical way and, at the same time, benefits the state because part of the income of installations and the people is incorporated in the state budget.

As regards persons who have extra money because they have not been able to purchase goods, state finances demand that they deposit this money in savings accounts so that society can use the extra money at one place at another place that is experiencing a shortage of money. The State Bank must establish a balance between revenues and expenditures; if there is surplus money and it is deposited in the State Bank, this money can be used for loans when there is a shortage of money in society.

The stabilization of state finances is in sharp contradiction with acts of speculation and acts against public property; consequently, the people and the state must struggle against these negative activities in a constant and effective manner. In addition, partialism and localism in financial management also pose major obstacles to the effort to stablize state finances. At present, there are many enterprises and agencies that hold back many times more goods and money than stipulated under state standards and regulations for their own use, thus making it impossible for the State Bank to obtain enough cash to pay cadres, manual workers and civil servants on time at some times and places. Recently, more and more persons have denounced the phenomena of partialism and individualism, wasteful expenditures, the lack of full concern for the interests of the state and violations of the long-range interests of the working people, which have caused state budget expenditures to far exceed revenues, made it impossible for bank credit to oversee economic bases, slowed the circulation of money and commodities within the national economy and led to indebtedness that is too high.

These are incorrect practices that we must struggle to overcome in order to heighten the role of the state in providing unified management of commodities and money on the basis of upholding the right of collective ownership of the working people and the financial independence of the various sectors and levels.

Broadening and guaranteeing the financial independence of the installation and strengthening the centralized, unified financial management of the state are financial management activities that occur on a daily basis within the installations, sectors and localities and within the government in each decision concerning finances.

Financial management activities of similar types are conducted on all levels and consist of financial planning, organizing the financial apparatus, regulating finances and conducting financial inspections.

In the field of financial planning, the activities of the financial management cadres generally entail balancing the sources of materials, labor and capital with production and business results, maintaining a reasonable relationship between financial norms and economic-technical norms and insuring that the revenues and expenditures of units are closely linked to the financial balance of the unit, to the state budget; in actuality, however, bureaucratic centralism and financial subsidies caused the above mentioned requirements of financial planning to become requirements in the nature of bothersome red tap and gradually separated financial planning from the daily financial management activities of the installations, sectors and localities.

Today, now that the granting of financial independence to installations is having an impact as a result of the development of the circulation of goods and money, financial planning activities at installations are being restored and gradually perfected in accordance with flexible requirements regarding the plan norms of installations and urgent requirements regarding the planning period with a view toward making financial planning suited to the many activities that are being expanded, such as the independent production of products, the production of subsidiary products and so forth at many different permissible prices, such as directed prices, negotiated prices and incentive prices. Such a change at installations demands that financial planning on the level above the installation be improved to suit the management requirements of the sector, the local level and the central level.

In the field of organizing the financial apparatus, we have, in principle, established a system of organizations that specialize in financial work and extend from the Ministry of Finance to the financial departments of the sectors and the local financial services and to the financial components of installations; there is also a system of financial regulations established during the period of the war of resistance. Every element of this system of organizations is a manager of a lower level and is managed by the upper level; every element organizes the implementation of the financial management of the head of the basic unit, sector or locality. However, due to bureaucratic centralism and sweeping subsidies in management, this apparatus, has, in actuality, gradually lost its effectiveness and become increasingly cumbersome with the result that its activities are fragmented, each element conducts activities of a different style and the nature of the apparatus as a system has been lost. Today, now that the granting of financial independence to installations is having an impact and the financial independence of the sectors and localities has been heightened, the system of organizations specializing in financial activities must be perfected so that its activities are of a uniform and coordinated nature from top to bottom and bottom to top.

As both managers and organizations being managed, every element within the system of organizations must raise its level of financial planning, improve its ability to regulate finances, improve the effectiveness of its financial inspections and improve and perfect the various forms and methods of financial management in order to raise labor productivity and economic returns and heighten the skills of financial cadres and personnel.

As the organization that carries out the financial management of the head of the basic unit, sector or locality, every organization that specializes in financial activities must apply the various forms and methods of mobilizing the various sources of finances and must distribute and utilize these sources for the correct purposes and in a way that insures high economic returns and insures that everyone within the management system directly subordinate to the head fulfills the authority and responsibilities, including the responsibility to deliver products to the state, supply services to the state, contributing some of the money accumulated to the state and heightening the scientific nature of the decisions made by the head concerning financial management.

Each element within the system of organizations specializing in financial activities, regardless of whether it is being managed or is managing another element or is organizing the implementation of the financial management of the head of the basic unit, sector or locality, absolutely must organize its apparatus in accordance with a unified structure in order to insure the implementation of similar types of financial management activities on the various levels.

In the field of regulating finances, it has come time for the management agencies on the upper level to promptly implement the regulations on establishing and utilizing the various sources of capital in a manner consistent with the situation surrounding the development of production and business at installations and the requirements of the state; on the other hand, they must allocate money in exact accordance with regulations. Only in this way is it possible to provide all of the capital that is needed and make efficient use of the sources of capital in all areas, from the enterprise to the sector and locality, to the central level, thereby insuring that the state exercises unified, centralized financial management and guaranteeing the financial independence of the installation. In the immediate future, it is necessary to promptly change the current method of financial regulation with their many outmoded and ineffective regulations and rules: places that have surplus money do not distribute it to places experiencing a shortage of money and the various levels routinely fail to comply with the unified financial discipline of the state and are not promptly inspected, controlled or corrected.

In the field of financial inspection, the management agencies ordinarily practice cost accounting and compile statistics in order to develop economic information and have a basis for analysis, inspection and necessary action. However, because they have long been accustomed to the forms and measures of bureaucratic centralism and subsidies in financial management, accounting activities have been slow to be improved to be consistent with the financial-economic activities of installations under the new conditions that exist, financial management activities are not responsive or accurate and financial inspections are lax. The result has been that unorganized, undisciplined activities have the conditions needed to develop. In order to promptly meet the requirement of broadening the financial independence of the installations and strengthening the unified, centralized financial management of the state, the financial management agencies from the central to the local levels, from the sectors to the installations must improve their accounting activities and, at the same time, intensify their financial inspections and control work.

INVENTORY AND CONTROL IN THE INITIAL STAGE OF THE PERIOD OF TRANSITION TO SOCIALISM

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 40-46

[Article by Le Doan Ta]

[Text] Under socialism, inventory and control are actually the management of the socialist economy, the management of society and the upholding of the right of collective ownership of the working people.

Once the government of the proletariat has been established, the inventory and control work performed by manual workers and the laboring people can become the most comprehensive, detailed inventory and control of the entirety of the production and distribution of products. In this significance, the essence of inventory and control work is socialist transformation, is the inventory of labor and products and the control of the production and distribution of products. As a result, inventory and control are of prime importance in both the "organization" and the regular activities of socialism, the first stage of communist society.

At present, our country is in the initial stage of the period of transition. Our country is advancing from a backward agriculture characterized primarily by small-scale production to socialism without experiencing the capitalist stage of development. The long and savage war also left us with severe consequences, we have also committed shortcomings in organizing and managing the economy and managing society. Therefore, thoroughly understanding Lenin's viewpoint concerning inventory and control in the initial stage of the period of transition is of very important significance.

Lenin often pointed out that, after toppling the government of the bourgeoisie, the matter of inventory and control is "the matter of basic importance to the socialist revolution." The socialist state must carry out comprehensive inventory and control of the production and distribution of products. If it does not, the government of the working people and their freedom cannot be maintained and capitalism will surely be restored. He said: "Unless we are utopian, we cannot think that, after overthrowing capitalism, we can immediately perform work for society without the need for any legal standard whatsoever; moreover, the abolition of capitalism cannot immediately provide the economic premises for such a change."(1)

In the initial stage of the period of transition, the economy of every country consists of many different segments, primarily the following three: capitalism, small-scale commodity production and socialism. The socialist state must carry out the transformation of the non-socialist economic segments and develop the socialist economy so that socialism wins total victory.

The socialist state carries out the transformation of the private, capitalist economy, nationalizes the banks and large enterprises, assumes exclusive foreign trade rights, etc. However, the key to the matter, as Lenin said, does not lie in confiscating the assets of the capitalists, but in state control of the capitalists and all persons who might join with them. "Confiscation of itself serves no purpose whatsoever because confiscation does not provide any organizational factor, does not provide anything with which to control distribution to insure that it is correct."(2)

However, in the course of transforming this segment of the economy, the state permits the persons within this segment to do business to a certain extent. However, there is still business freedom, that is, still speculation. This cannot be overlooked. Moreover, in the initial stage of the period of transition, hoodlums and parasites, the twin brothers of the exploiters, show their true nature by committing more crimes and engaging in hoodlum activity, bribery and all sorts of vile and decadent activities. As a result, the socialist state must exercise close inventory and control over them and take severe action when it is necessary to suppress exploiters and hoodlums. For this reason, it is necessary to review and revise all laws against speculation and to clearly declare that every act of theft and every act, whether direct or indirect, covert or overt, of evading the inspection and supervision of the state can be severely punished.

However, in the realities of the Russian economy at that time, as well as in our country at the present, there was and is lax management and, as Lenin frequently stated, our government is too meek: it is usually more like jelly than steel. As a result, exploiters and other corrupt elements have taken advantage of the shortcomings and loopholes in our management to make the situation more unruly and confused. The failure of the state to control the sources of goods, control money and be the master of the market has caused much harm in the effort to develop production, distribute products and maintain the standard of living of the working people. For this reason, the struggle to determine "who defeats whom," which exists between the capitalist way of life and the socialist way of life, demands that the proletarian state strengthen its economic management and financial management, show itself to truly be a dictatorship of the proletariat state and scrupulously comply with Lenin's teaching: "Dictatorship is an iron government that possesses revolutionary bravery and suppresses exploiters and those who disrupt order rapidly and sternly when necessary."(3)

Small-scale, private production is the very broad base of capitalism, is a base that is very deeply and very firmly rooted. The proletarian state absolutely must transform this small-scale production and must struggle for every inch of progress, struggle to establish the system of earning a living collectively. However, this stage of transition, of course, lasts for a very long time and cannot be completed by means of hasty, administrative measures. There must be suitable stages of development and intermediary steps consistent with the state of production in order to increase production capacity. However, it must be clearly understood that the habits and traditions of the petty bourgeoisie oppose control by the state. Moreover, in a backward agricultural country that is advancing to socialism without experiencing the stage of capitalist development, we must tolerate a condition created by small-scale, decentralized production itself. We do not have developed material-technical bases and, in particular, have not developed the habit and practice of working in the large-scale industrial style. Managers have not been forged in the school of managing large-scale production. We even lack experience in serious administrative management.

All of these things point to one glaring fact: it is one matter to establish the state of the proletariat, but "the primary difficulty lies in the economic field: in implementing extremely tight inventory and control of the production and distribution of goods everywhere, raising labor productivity and truly socializing production."(4) Thus, inventory and control are not only a necessary rung in the ladder in order to eradicate the bad habits of capitalism and the remnants of private ownership, but are also positive and constructive in nature in that they have the purpose of establishing a new system of relationships and organizations, a complex economic system encompassing the production and distribution of essential goods to tens of millions of persons.

In the developed stage of the socialist revolution, inventory and control are specific in nature and the methods of inventory and control must be consistent with this specific nature.

The specifics of inventory and control discussed by Lenin were based on the realities of Russia in the early 1920's, the realities of the struggle against famine, against the economic bankruptcy resulting from several years of civil war and the realities of the implementation of the new economic policy in order to correct the situation mentioned above and restore and build the socialist economy. Lenin focused on the following several specific tasks:

First, it is necessary to nationalize the banks and organize the banks in accordance with socialism; this inventory and control tool of utmost importance, once in the hands of the proletariat, insures that the proletarian government has the conditions needed to stand firmly during the initial stage and later during the restoration of the economy and the building of the socialist economy. Lenin said: "A single, large national bank consisting of the largest banks and having many branch banks in each province besides each factory, comprises nine-tenths of the socialist apparatus itself. This is accounting on a nationwide scale, is inventory on a nationwide scale of the production and distribution of products, is the backbone of socialist society, if we can make such a statement."(5)

This raises an important matter, namely, that the socialist state must have a bank policy and must organize the bank in such a way that it truly becomes a unified agency, fulfills the functions of auditing and regulating economic life throughout the country and is the public accounting center under the socialist system. In reality, in our country the state has not always been the master of the management of the circulation of money. Money has fallen into the hands of the various strata of persons who are not workers, thus causing confusion on the market. This is due to many causes, including causes that lie in our specific economic and financial policies. For example, in the recent past, the price policy has been conservative and backward compared to the realities of life, thereby causing harm in the field of production as well as the field of distribution and circulation. Therefore, in the face of the new situation, we must endeavor to successfully implement the new policies of the 6th Plenum of the Party Central Committee and resolution 26 of the Political Bureau.

Secondly, it is necessary to implement a grain tax and grain purchasing policy designed to combat speculation and hoarding and alleviate hunger and necessary to take urgent steps to increase agricultural production. Lenin considered this to be a very basic and pressing task that had to be immediately performed regardless of the situation. He considered successfully implementing a grain tax and grain purchasing policy to be the standard for inspecting all work at that time, to lay the foundation for the implementation of plans; in the situation that existed at that time, a plan had to "have grain as its starting point because it is in grain that the roots of all major difficulties lie" and "second to grain was the matter of fuel."

We must remember that, in the early 1920's, because it had a poor and backward economy and had been ravaged by war, Soviet Russia fell into a state of serious difficulty: production had declined and the country stood before the abyss of serious famine. At that time, as a result of the new economic policy, production forces were strongly developing within agriculture. As a result, in only 1 year, peasants had paid their grain taxes in full, eliminated hunger and were pleased with their improved situation. Today, under the conditions of our country, our Party Central Committee has adopted policies that provide incentive for production and, in particular, has taken various measures to improve management, such as the use of product contracts within agriculture at this time, which are designed to closely link agricultural laborers to the final product they produce and correctly coordinate the three interests, the interests of the state, the collective and the laborer; these measures create the conditions for stimulating the development of production forces.

Thirdly, it is necessary to control and supervise the production and distribution of the social product, beginning with grain and food products, and necessary to strictly implement the principle of distribution in accordance with labor in order to accelerate production, raise labor productivity and supervise and control exploiters, parasites and those who are lazy.

Lenin frequently said that no product, not even a kilogram of bread, can be allowed to escape control because socialism, above everything else, means control. Because, the objective of inventory and control is insuring that everyone is well fed, well clothed and educated or, in other words, insuring that everyone enjoys the fruits of socialism. During the first years of the Soviet government, when the country was still beset by difficulties, production was developing slowly and deprivation characterized everyday life, the problem faced was that of carrying out fair distribution so that every working person had the minimum conditions needed to devote his efforts to building the new society. However, under the conditions of socialism, we cannot rapidly free ourselves from the inherent economic and social conditions in the first stage of development of socialism. We cannot skip stages of development or go beyond the principle of distribution in accordance with labor.

As regards the matter of inventory and control of the production and distribution of products by private businessmen, Lenin paid particular attention to taxing their assets and income. The socialist state must force private businessmen to open accounts in the bank, declare each source of income and regularly pay all taxes due to the state; in this manner, we can heighten our sense of organization in inventory and control work.

Lenin also discussed the establishment of factory committees, considering them to be an organizational cell for managing all activities of the state; the establishment of collectives under the control of the state; the organization of consumer cooperatives, etc. All of these organizations are related to the inventory and control of the production and distribution of products, to economic management, to the management of society.

Lenin also demanded the implementation of a system of compulsory labor for hoodlums and the dregs of society.

Fourthly, it is necessary to inspect work, inspect compliance with socialist law, with internal rules, regulations, policies and so forth, establish a system of accurate reports, display a high sense of socialist organization and discipline, practice frugality and combat misappropriation, bribery, waste, bureaucracy, irresponsibility and so forth, which are decadent habits of the system of capitalist private ownership.

On the basis of the actual situation that existed in the early 1920's, Lenin reminded that it was necessary to inspect and control the national economic plan and economic and financial policies and inspect the organizational measures taken to implement lines and policies.

Concerning the national economic plan, Lenin often pointed out that the state plan is the second platform of the party and correctly reflects the line of the party adopted by the congress. Lenin reminded us that when formulating the national economic plan, "hopes should not be placed upon the best," upon the most favorable situation, but "on the results of actual experience in order to estimate the natural resources of the country and chart a more certain course for improving the living conditions of manual workers and peasants with a view toward continuing to carry out economic construction in a broader and more determined fashion." Therefore, it is first of all necessary to inspect the economic plan to determine whether or not it correctly reflects the general line of the party and necessary to inspect the relationship between accumulation and consumption as well as the relationship between the potentials for implementing the plan and the norms set forth within it.

One very important fact about which Lenin reminded us is the need to examine the various sectors of the economy within an organic relationship and know how to coordinate the activities of these sectors in order to eliminate conflicts, procrastination, departmentalism, partialism and conservatism.

Once thorough research has been conducted, a plan has been formulated and efforts are being concentrated on carrying out the important economic tasks, it is necessary, according to Lenin, to intensify supervision and control, to "practice unceasing supervision, that is, to make it part of one's consciousness to insure the efficient use of fuel and wheat and insure maximum stockpiles of both of these items."(6)

Controlling economic and financial policies: correct economic policies act as levers stimulating economic development. An incorrect or conservative economic policy impedes production and even undermines production. For this reason, inspecting and controlling economic policies, from the grain purchasing policy to the price and monetary policies, in general, are very important. A correct economic line and correct economic policy open the way for the development of the economy. Therefore, a correct economic or financial policy is one that is consistent with the requirements of the development of production forces and which creates favorable conditions for the development of all sectors of the national economy.

In order for the national economic plan and the various economic policies to be fully implemented, conducting inspections to insure that work is being accurately performed and inspections of the implementation of work organizational rules is of major importance. Lenin paid special attention to the matter of inspecting compliance with the socialist law and emphasized the need to insure the uniform application and implementation of the system of law throughout the country. He frequently reminded us to display a high spirit of responsibility in the inventory and protection of socialist property, to practice economy and combat the maladies of misappropriation, waste, bureaucracy and irresponsibility in the protection of socialist property. He also frequently directed attention to the phenomenon of "getting around" the law, "getting around" the regulations and policies promulgated by the state. This practice is also very evident in our country at this time. Some factories, enterprises and so forth have at certain times taken advantage of loopholes in policies in order to "earn a living," have turned primary products into discarded products and have managed to "get around" the law in order to earn income for their collective without delivering the required quantity of products to the state. For this reason, establishing a system of accurate reports and heightening the sense of socialist organization and discipline are of special importance. We must "inspect all of our work by means of practical victories in economic construction so that our words are not empty words."(7)

In order to perform good inventory and control, Lenin especially emphasized the role played by the party in inspections. He required that the party give full attention to the various control agencies and heighten both the role and position of these agencies. Truly exemplary control agencies must be established. The persons selected for these agencies must be persons who possess good qualities and abilities, must be the best workers and must be absolutely loyal and "possess skill." They must be persons whom we can guarantee "will never take anything on face value and will never utter one word contrary to their conscience"; these persons must never fear any difficulty or withdraw in the face of any struggle in order to achieve the objective required of them by the revolution. Only with such a truly exemplary control apparatus and outstanding control cadres can control work, in general, and control work in the field of the economy, in particular, achieve results because, today, we are weak and lacking in the areas of organizing implementation, selecting personnel and inspecting compliance.

However, the matter does not stop there. The crux of the issue is the need to establish tight control and supervision by the laboring masses. As a result, the party and the socialist state must create every possible condition for gaining the participation of the laboring masses in inventory and control work. They must be made aware of the fact that controlling and supervising the production and distribution of products are jobs that they themselves perform, jobs that touch upon their vital interests and which they are fully capable of performing. The state must establish specific regulations to facilitate participation by the laboring masses in control and supervision. A system must be established for receiving the masses at all times and places, receiving the masses readily without the need for any permit, even on holidays and Sundays. The offices that receive the masses must have the obligation of responding, either verbally or in writing, to all of the questions asked by the people and must even write letters to the masses defending their decisions. Only in this way can we gradually overcome the malady of bureaucracy and the malady of abusing one's authority for the purpose of intimidating the masses and gradually establish the system of collective ownership of the working people, beginning in the field of the economy.

In the struggle to implement inventory and control, the socialist state plays the decisive role. The primary measure in insuring effective inventory and control is strengthening the socialist system of law. We must strengthen the role of the courts in economic management. The courts must become a better typical expression of suppression and compulsion under the conditions in which management has become the central task. The courts are also a tool for teaching discipline. Trials must be concise and resolute and each and every violation of the law must be brought to trial, even if it is the result of bureaucratic behavior or procrastination.

Revamping the apparatus and reorganizing the work methods of some economic agencies, such as the bank, the Statistics General Department and so forth, are of special importance in inventory and control work. These agencies must become effective agencies in economic management, must truly be the apparatus used by socialist society to meet the requirements of economic restoration and development in this stage of the history of the socialist revolution.

At present, we face many difficulties with the economy and living conditions. Our country is advancing to socialism from a backward agriculture that has been ravaged by war. We have experienced natural disasters for many years in a row. Subjectively, we have committed shortcomings in economic management and the management of society. One of these shortcomings has been our failure to take determined steps to implement a system of tight inventory and control in order to accelerate economic construction and improve the lives of the people.

In the face of our present economic difficulties, we have but one course open to us, the course of making every effort to implement the resolutions adopted by the party and very clearly comprehend the following teachings of Lenin: to not allow ourselves to become dispirited in the face of difficulties, to "build the firm foundation of socialism brick by brick, constantly endeavor to create a discipline, a self-imposed discipline and make every effort to strengthen everywhere the sense of organization and order, the practical point of view, smooth coordination among all the forces of the people and widespread inventory and control of the production and distribution of products--this is the course that will lead to military power, to socialist power."(8)

PROVIDING ADDITIONAL SCIENTIFIC AND TECHNICAL CADRES TO THE LEADERSHIP AGENCIES ON THE VARIOUS LEVELS

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 47-51, 63

[Article by Pham Quan]

[Text] Today, science and technology are constantly infiltrating the various fields of endeavor of man and stimulating these endeavors. Scientific and technical inventions and creations are having the impact of a material force upon production, yielding tremendous returns and sometimes bringing about leaps forward in production. Conversely, the price paid for a lack of knowledge, for incompetence is usually very high, and both can sometimes even be the causes of crime. For example, if we clear wilderness but do not know how to protect the forest, the destruction of forests will easily result; if we harvest the forests but do not know how to protect them, the danger of destroying certain species of plant or animal life can result; if we build factories without prior planning and without taking necessary measures, we will pollute the environment and might even cause immeasurable, adverse consequences to the health of the people.

To build and develop the economy, it is especially important that we not lack management knowledge, that is, the knowledge needed to build the economic structure with all of its complete apparata, the knowledge needed to manage work, implement control and so forth in order to achieve the highest possible returns in production and business. In order to provide skilled management, it is, of course, necessary to thoroughly understand the theory of Marxism-Leninism, thoroughly comprehend the lines and viewpoints of the party and clearly understand the realities of the country, the sector and the unit; at the same time, it is necessary to have knowledge of the science of management. Lenin maintained that the scientific nature of management lies in a system of sciences and one special science--the science of management--without which it is impossible to provide management. In a speech at the meeting of the Communist Party Group within the Central Council of All Russian Trade Unions held in March 1920, Lenin said: "...How can we provide management if we do not possess all the necessary knowledge, if we are not skilled in the science of management?... To provide management, it is necessary to understand the work to be managed and necessary to be a skilled management cadre."(1)

The realities of the fraternal socialist countries are showing more with each passing day that a skilled manager must have a firm grasp of many fields of science, such as mathematical models, the theory of probability, statistics, cybernetics, logic, the science of forecasting and so forth and must be able to use modern technical means.

At present, our party is leading the people in building socialism throughout the country, the central task of which is to build and develop the economy. In every locality, in every sector and in every leadership agency on the various levels of the party and the state, there must be the necessary ability and knowledge in order for this task to be carried out. Within the structure of these leadership agencies, in addition to a number of comrades who are well versed in politics and have diverse experience in the revolutionary struggle, there must be a suitable number of cadres who have a knowledge of science and technology, of economic management and the number of these cadres must increase in keeping with the development of political tasks. Only in this way can the leadership agencies on the various levels of the party and state achieve comprehensive ability and perform every job in every field well.

The need to increase the number of scientific and technical cadres and economic management cadres at the leadership agencies on the various levels is also due to changes in the persons who are being led and managed. Today, the level of political awareness and the cultural level of the working people of our country are very much higher than they once were. The majority of our cadres, manual workers and civil servants have received systematic training and possess the necessary technical and professional skills. The increasingly rapid development of means of information, books, newspapers and television has stimulated the exchange of knowledge within the country and between our country and other countries, thereby providing our cadres and people with a rather large amount of information each day and rapidly raising their level of knowledge. For such persons, a style of leadership that is general in nature, relies heavily upon political mobilization, does not delve into economic or technical matters in detail and lacks scientific organization and management is totally unsuitable. Cadres who only know how to provide this style of leadership and management must be replaced with cadres who possess necessary economic and technical knowledge, have the ability to adopt optimum plans, possess a high fighting strength and have the ability to scientifically organize the implementation of these plans. Only in this way is it possible to gain the enthusiastic participation of collaborators and the masses and complete all tasks well.

Over the past several decades, even though our economy has been underdeveloped and despite the prolonged war, we have, as a result of the very high determination of our party and state and the assistance of the fraternal socialist countries, trained a rather large corps of scientific-technical cadres and economic management cadres, the vast majority of whom are the children of cadres, manual workers or collective farmers and about one-third of whom have participated in production and combat. To date, some 260,000 cadres have a college level education, including nearly 4,000 who have a post-graduate education and more than 400 who are professors or assistance professors; some 600,000 cadres have a vocational middle school education. Having been trained in accordance with the principles of combining theory with practice, coordinating education with productive labor, closely linking the school to society and so forth, this corps of cadres, although it still has some weaknesses and shortcomings, is basically the corps of intellectuals of the working class and is loyal to the fatherland and socialism. This corps is a good social and political base for selecting persons who possess all the necessary qualities and skills to be trained as leadership cadres and management cadres on the various levels and within the various sectors. In recent years, we have begun to select and train such persons. As a result, our corps of leadership cadres and management cadres, which once consisted primarily of political cadres and specialized army cadres, has constantly been supplemented with many scientific and technical cadres. Scientific and technical cadres who have a college education constitute 22 percent of the total number of district party committee members, 32 percent of the total number of provincial party committee members, 50 percent of the total number of leaders of departments and institutes and 37 percent of the total number of the leaders of the ministries.

The gradual improvement of the corps of leadership cadres and management cadres of the various levels and sectors has yielded initial changes in the operation of the apparatus of the party and state, causing it to be better suited to the new tasks of the revolution. These results have confirmed that the guidelines employed to select scientific and technical cadres for training and assignment to the leadership agencies of the various levels and sectors are correct and necessary. We must continue to adhere to these guidelines. However, in order to implement them better, it is necessary that we achieve a higher level of agreement concerning a number of necessary matters.

To begin with, it must be realized that not every scientific or technical cadre, including those that have a degree or high level of education, can become a leadership cadre or management cadre. Leadership and management require the ability to set forth accurate work programs and the ability to organize the apparatus, guide work and cause the persons around themselves to follow them. The leadership cadre and management cadre must not only have knowledge of science and technology, but must also possess the necessary political qualities, have a clear personal history, have experience in revolutionary struggle, have the ability to unite others, have the ability to tap the talents of those who work with him and so forth; these are the assets that create the firm skills of leadership cadres and management cadres. Some scientific and technical cadres can endeavor to become scientific researchers, instructors or skilled technicians and even become the outstanding talents in these fields; however, they cannot become good leaders or managers if they lack the skills and special attributes needed for leadership and management work. If we know how to guide them in the best possible direction, we will not only develop the talents of each person well, but also benefit the revolution in a major way. Conversely, if we continue to "force" them to become leadership cadres and management cadres, that is, if we lead them into something for which they are not suited, we will fail to develop their talents and adversely affect our work as a whole because, in view of their character, they can, regardless of how much training they receive, only become average leadership cadres and management cadres or worse. Only cadres who can meet the requirements of scientific and technical management and possess the capabilities and special characteristics needed to become leadership cadres and management cadres should be selected for training as leadership cadres or management cadres. In general, these capabilities and special characteristics are:

--Knowing how to concretize the positions and policies of the party, establish tasks and set forth work programs for the unit, agency or sector of which they are in charge;

--Knowing how to organize labor and assign work, developing various forms of organization, methods and means for performing tasks and, in particular, being able to command, organize and inspect the activities of the lower level;

--Knowing how to rely on the collective, cooperate with others and gather and unite cadres;

--Knowing how to motivate, educate and organize the masses and launch revolutionary movements of the masses.

Due to the process of growth and the nature of the work of scientific and technical cadres, these capabilities and special characteristics might not first be clearly evident in each person. The sensitivity of persons in charge and the agencies specializing in organizational and cadre work lies in selecting scientific and technical cadres who possess these capabilities and special characteristics.

In order to make a correct selection, it is necessary to evaluate cadres in accordance with resolution number 32 of the Political Bureau on organizational work, which states: "It is necessary to coordinate self-evaluation by the cadre and observations of him by the agency and person responsible for managing him with consideration of the observations made by other cadres and persons who are close to him, who know him and his work."

Of the various scientific and technical cadres who possess the capabilities and special characteristics mentioned above, Attention must first be given to those persons who have experience in production and combat and have shown themselves to be steadfast in the face of challenges. These persons constitute the force that must be trained to become leadership cadres and management cadres on the various levels and within the different sectors.

Leadership and management skills are not something with which someone is born, rather, they are the result of painstaken study and training. For this reason, a process must be involved in preparing a scientific or technical cadre to become a leadership or management cadre. The extent and pace of preparation and the amount of time spent on preparation depend upon the position to which this person will be assigned and the "capital" possessed by him. This process encompasses many different stages of work; however, generally speaking, it is necessary to provide these cadres with necessary knowledge of politics, leadership and management and to gradually familiarize them with leadership and management work by means of practical activities. They can gradually be transferred from leadership and management positions on the lower level to the higher level, from leadership positions in the mass organizations and social organizations to leadership and management positions within the apparata of the party and state.

Attention must be given to the need to take determined steps to combat the thinking of sitting and waiting for scientific and technical cadres to meet the demands of leadership and management work in order to promote them without showing concern for training them. When we operate in this manner, the effort to assign scientific and technical cadres to the leadership agencies on the various levels is nothing more than a slogan, than a general appeal and is difficult to accomplish. Concerning this matter, the fraternal socialist countries have provided us with experiences in their thorough, painstaking work method. For example, in the GDR, the preparation of leadership cadres and management cadres generally follows the following procedure: selecting outstanding manual workers who have a middle school education and sending them for training at a college in accordance with the cadre planning of the production installation. Once they have completed their studies, they return to the enterprise to perform scientific and technical work. There, they are put in charge of the Youth Union, the Trade Union and so forth and then sent to a party school (or sector management school). Next, they work in a specialized department of the party organization on the upper level for a period of time in order to develop a breadth of vision and have the conditions needed to grasp the lines and policies of the party. Then, they are sent back to their installation to serve as its deputy head and, from there, are promoted to head of the installation.

The purpose of assigning scientific and technical cadres to leadership and management positions on the various levels is to utilize their knowledge in leadership and management so that they can, in their new position and with broader responsibilities, achieve increasingly high results in their work. For this reason, it is necessary to be sensitive and reasonable when assigning cadres and necessary to make the highest possible effort to insure that each scientific and technical cadre can, in his leadership or management position, still make maximum use of his scientific or technical knowledge in the completion of his new task. We must combat the haphazard assignment of cadres, such as assigning a skilled professor to serve as assistant administrative dean at a college or assigning a scientist who has conducted many research projects as the head of a department that specializes in guiding mass movements.

The assignment of scientific and technical cadres to leadership agencies on the various levels must be carried out in an urgent but truly stable manner.

Urgency is required in order to quickly raise the level of knowledge and skill of the various leadership agencies within the apparata of the party and state so that these agencies are fully capable of leading and guiding the performance of new tasks, especially economic and technical tasks. This is a job of pressing importance because, at present, organizing and guiding practical work and managing the economy are the weakest elements in the operations of our party and state.

Urgency means not ignoring talents. Scientific and technical cadres who can participate in leadership and management and who, once they begin to participate, can contribute much more to the general cause, must be given training so that they can be assigned to the leadership and management agencies of the various levels and sectors. It is necessary to assign them to suitable positions because, in the case of persons who possess true talent, the higher their position and the broader the scope of their responsibility, the more they are able to have a good impact. At present, within the corps of cadres, in general, and the corps of scientific and technical cadres, in particular, there are still some talented comrades who have not been placed in the correct job. This is because, at some places, there are still backward viewpoints concerning the evaluation of cadres. Therefore, in special cases, it is necessary to promote cadres to the next level above the level to which they would ordinarily be promoted.

Urgency also means not allowing jobs to be unfilled. On each level and within each sector in the apparata of our party and state, leadership agencies must have a reasonable percentage of scientific and technical cadres. In particular, at places that regularly deal with economic and technical problems, it is best for leadership agencies to have as many scientific and technical cadres as possible.

Stability in the assignment of scientific and technical cadres to leadership agencies on the various levels is expressed in making correct, cautious selections, making thorough preparations and providing painstaking practical training. The step from being a scientific and technical cadre in a position of implementation and execution to being a leadership cadre or management cadres involves a change in function and in the guidelines under which one operates. If, in his new position, a cadre has a good impact, the revolution will be benefited in a practical way. Conversely, if he is ineffective in the face of his new task, he will cause many adverse consequences because the higher the position of a cadre is, the greater is the harm caused by his incompetency and poor qualities. Therefore, it is necessary to be very cautious when examining, evaluating and selecting cadres, necessary to resolutely combat every manifestation of being hasty and impetuous when replacing or promoting cadres. To insure stability in the assignment of scientific and technical cadres to leadership agencies on the various levels, the persons in charge and the agencies that perform organizational and cadre work must find reserve cadres who are suited to each job description. To accomplish this, when assigning cadres within an organization, importance must be attached to continuity and succession in terms of both qualifications and profession and it is necessary to insure both stability and the timely replacement of cadres with cadres who are better qualified.

As is the case with every other activity in cadre work, the assignment of more scientific and technical cadres to the leadership agencies on the various levels is a type of work involving personnel, work in which haphazardness, the lack of preparation and the lack of careful consideration absolutely cannot be tolerated. We should not simply think that "the banner can be waved by whoever is holding it." To be able to wave the "banner," a person must possess the skills of a "standard bearer." When the "banner" is given to the wrong person by mistake, the price that must be paid to correct this mistake is generally not small. Lenin's thoughts concerning the selection of cadres after the successful Russian October Revolution are still a useful lesson to us today. He taught: "Let us continue to follow our course and give our attention to finding and challenging, in an extremely patient and extremely cautious manner, persons who truly possess organizational talent, persons who are wise and possess practical skills and persons who are loyal to socialism and have the ability to quietly (despite the clamor and chaos), firmly and smoothly organize the common work of a large group of persons within the scope of Soviet organization. Only these persons will be promoted by us to positions of leading the labors of the people, to management positions and they will only be promoted after they have been challenged dozens of times by assigning them various tasks from the most simple to the most difficult..."(2)

By firmly adhering to the substance of this teaching of Lenin, we will surely develop the best possible guidelines and methods of working.

IDEOLOGICAL ACTIVITIES: SOMETIMES HATRED...AND SOMETIMES LOVE...

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 52-54

[Article by Nguyen Trung Thuc]

[Text] In cadre work, Lenin established very strict principles for selecting and utilizing cadres. He frequently taught that we must select and assign cadres on the basis of the organization, on the basis of work and absolutely not arrange work and the organization around cadres. It is on the basis of the work skills and political qualities of a cadre that we must assign him to one job or another, to one position or another; we absolutely must not make this assignment because we "like" or "dislike" the cadre, because we "love" or "hate" him or because he is "obedient" or "not obedient." Lenin wrote: "Let us continue to follow our course and give our attention to finding and challenging, in an extremely patient and extremely cautious manner, persons who truly possess organizational talent, persons who are wise and possess practical skills and persons who are loyal to socialism and have the ability to quietly (despite the clamor and chaos), firmly and smoothly organize the common work of a large group of persons within the scope of Soviet organization. Only these persons will be promoted by us to positions of leading the labors of the people, to management positions and they will only be promoted after they have been challenged dozens of times by assigning them various tasks from the most simple to the most difficult."(1) Le Duan has written: "We must, on the basis of the very specific requirements of each organization and each function, establish very specific personnel standards and, on this basis, correctly select and assign personnel."(2)

For a long time, we have selected, assigned and utilized cadres on the basis of such principles. For this reason, "our party now has a large corps of cadres and party members who, for the most part, are good as a result of being forged and challenged in combat and construction and gradually being provided with additional knowledge through training. Generally speaking, this is a corps that is loyal to the party, to the system and withstands difficulties and hardships; many of its comrades have devotedly served on the battlefield and in the mass movement."(3) However, it is very regrettable that, at some agencies and units, persons still select, assign and utilize cadres on the basis of whether they like them or not, on the basis of whether they love them or hate them as mentioned above. Le Duan has called this situation "sores on our body."(4)

The specific manifestations of this situation are: it is not very important to these persons whether you are a young or an old cadre, whether you are competent or incompetent. All they know is that you are a cadre under their management. And, because you are under their management, the first requirement of you is that you agree with them. You absolutely must do whatever they say, be it right of wrong, and follow their orders, be they reasonable or unreasonable.

--Do you oppose them when they are wrong? Very good! They will get rid of you. If you are an elderly cadre (even if you are still in good health and have much experience in your job) and they give the reason that young, competent, healthy and educated cadres should undertake some of the work of which you are in charge, which is a very understandable reason, they will transfer you to a job not suited to your abilities and strengths, send you far away or force you to retire. Are you a young cadre who is in good health, is competent and possesses zeal and daring? Good! They will accept you. However, will they tolerate you? Will they promote you? Wait a minute, they will say! They will argue that it is necessary to proceed with caution, that time is needed to challenge you first. This is surely how they will respond. Thus, they will find a way to "hold you back," to keep uou in the so called "reserve" force and only assign you secondary tasks and miscellaneous jobs while waiting for persons who hold important positions to retire. By that time, your hair will have turned gray and, during the time spent waiting, you will have exhausted all your zeal and intensity.

--Conversely, if you please them, everything will go smoothly. If you are an elderly and frail cadre who is less than fully competent, they will say that special consideration must be shown for veteran cadres, that we must respect their experience and so forth. This gives them a reason for keeping you in your position. And, if necessary, they can even promote you to a higher position. And, what happens if you are a young cadre but incompetent? Actually, if you are incompetent, your young age should mean nothing whatsoever. This, however, does not bother them! They will argue that it is necessary to give attention to young cadres, to not be too strict with them, to not demand that they immediately have an impact in their new job position. They will boldly assign jobs to young cadres which they might not be able to perform well at first; however, with the help of leadership, of the collective, these comrades will, they argue, surely succeed. We should not be conservative, narrowminded or prejudiced. If, at some point in time, they feel that you do not possess the necessary health or are incompetent, you will have to "voluntarily give your position" to another young cadre and so forth. And, when they state the matter in this manner, who would dare oppose them? Thus, they promote you and give you a new position.

And so it goes!

It gives no one any pleasure to discuss such improper practices. However, they do exist. These "sores" continue to cling to our bodies.

Why do these sores still exist?

A good and experienced unit head is always acting on the basis of the interests of the revolution and always thinks about the best way to organize and assign cadres, about whom should be assigned more difficult tasks, whom should be assigned less difficult tasks and whom should be assigned to which position; he knows how to train and promptly assign competent cadres who possess good qualities to higher positions and replace incompetent cadres. Conversely, the unit head who does not firmly grasp the viewpoints of the party, who lacks experience and resolves problems not on the basis of the interests of the revolution, but only on the basis of his personal thinking, of his subjective desires will surely create sores such as those mentioned above.

On the other hand, it must be stated that there are still significant shortcomings in our cadre work. These shortcomings are the long-standing practice of building the corps of cadres in a spontaneous manner lacking both short-term and long-term planning; the failure to promptly amend or revise many points in the cadre policy and regulations that have become outmoded; cadre management that is still administrative in nature and characterized by bureaucratic centralism; the lack of clear regulations concerning the evaluation, promotion and utilization of cadres; lax inspections; the failure to promptly correct mistakes, etc. These shortcomings provide a very favorable environment for negative phenomena to arise and develop in cadre work.

It can be said that correctly selecting and correctly utilizing cadres are the crux of every issue, are the key permitting us to develop, as effectively as possible, the tremendous potentials of cadres in order to serve the revolution. Conversely, selecting and utilizing a cadre on the basis of personal feelings, on the basis of whether he is liked or disliked, whether he is loved or hated, whether he can or cannot be easily "bossed" lays the basis for significant and even very serious harm. It causes this cadre (whether he be "loved" or "hated") to fail to develop his skills and strengths. It causes the cadre who is "loved" to think that he possesses true virtue and talent and that he is making such "progress" as a result of a "wise" unit head; this, in turn, gives rise to complacency, to self-satisfaction, to disdain for the collective, to only giving attention to flattery and pleasing the unit head. It causes the cadre who is "hated" to easily become dissatisfied and bored with his work or to yield and not continue to struggle to protect the truth but only try to please the unit head. It causes factionalism, a loss of internal unity, weakens the organization to the point of destroying it and causes cadres, party members and the masses to lose confidence.

Evaluating, selecting and utilizing cadres on the basis of "love and hatred," of tolerating incompetence but treating persons who possess talent poorly are flagrant violations of the Marxist-Leninist principles concerning cadre work.

RESEARCH: FROM THE 25 YEARS OF DEBATING THE MATTER OF THE FORMATION OF THE NATION OF VIETNAM

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 55-63

[Article by Professor Phan Huy Le]

[Text] Reviewing the History of the Debate

When and on which basis the nation of Vietnam first formed and how it has developed and changed through the various periods of history, these are questions surrounding an important matter in the history of our nation: the formation of the nation of Vietnam.

Research and debate concerning this matter of major scientific and practical significance began in 1955 and can be divided into two stages:

The first stage: the debate was rather heated in 1955, 1956 and 1957 and gradually subsided from then until 1962 and 1963.

The debate led to very differing views concerning the formation of the nation of Vietnam. Some persons sought to prove that our nation formed at an early date but the specific dates suggested by them varied very widely, either the 10th Century, the 15th Century or the 18th Century. A smaller number of persons saw that a certain number of aspects of nationhood had been formed by the 18th or 19th Century but maintained that Vietnam was still not a fully formed nation by the time of the August Revolution in 1945. The formation of the socialist nation of Vietnam has also begun to be discussed. Some persons consider the founding of the vanguard party of the Vietnamese working class in 1930 to mark the starting point of this process and consider the Democratic Republic of Vietnam to be the first nation state in the style of a socialist nation.

From a theoretical point of view, all of the specific opinions presented above revolve around two different basic viewpoints.

The first viewpoint is based on the definition of a nation by J.V. Stalin, which considers a nation to be a historic category closely linked to the period of birth and development of capitalism and considers the bourgeois nation to be the first form of a nation in the history of man. This theoretical viewpoint denies the possibility that nations formed prior to capitalism.

However, when applying this theoretical viewpoint to the history of Vietnam, different tendencies have developed.

One is the tendency to demand the strict application of the standards of a bourgeois nation and the four basic characteristics set forth by J.V. Stalin. These authors maintain that the rudiments of capitalism, which arose in the 18th and 19th Centuries, only opened the way for the process of formation of nations. Subsequently, under the rule of French colonialism, capitalist production relations were impeded and developed very weakly. The process of the formation of a nation continued to occur but failed to result in the creation of a true nation. Vietnam did not experience the period of capitalist development, consequently, it lacked the complete basis needed for the formation of a bourgeois nation.

The other tendency is the desire to more flexible apply the standards of a bourgeois nation to the specific conditions of Vietnamese history. These authors maintain that the development of the commodity economy and the rudiments of capitalism in the 18th Century combined with the special characteristics of our country, primarily the need to resist foreign aggression, made it possible for the nation of Vietnam to form at an early date and possess all of the special characteristics contained within J.V. Stalin's definition.

The second viewpoint is based on the theory of V.I. Lenin and the definition of a nation by J.V. Stalin but seeks to prove that, while confirming and deeply researching the bourgeois nation, J.V. Stalin did not deny the possibility of the existence of a form of a nation prior to capitalism. According to the author, in western Europe nations were born with capitalism but, in eastern Europe, nations were formed under the conditions in which capitalism was still weak and the feudal system had not been abolished; in the Far East, nations could have emerged prior to capitalism when the feudal system was still ruling society.

In the first stage of the debate, the first viewpoint was clearly dominant. The second viewpoint was criticized and, at times, even denounced but it has still not lost support completely.

The second stage of the debat began after 1965 and has lasted until the present day.

The general direction of thd debate in the second stage has been to prove the early formation of the nation of Vietnam.

Some persons maintain that our nation formed during the country-building period of the Hung Kings. Together with the emergence of the first state, the Viet nation was established as a nation, as a rather stable community.

A number of other persons maintain that, in view of the specific conditions of Vietnamese history, the process of building and defending the country was also the process of the formation and development of the nation. This means that the process of the formation of the nation began during the country building period of the Hung Kings with the gradual emergence and development of the various factors needed to establish a nation. However, it was not until after a process of formation that the nation of Vietnam was established as a unified national community. Some persons place this date in the 10th Century with the establishment of the independent government of the Ngo Dynasty and the reunification of the country under the Dinh Dynasty; other persons place it in the 11th Century and consider the centuries from the 11th to the 15th to represent the stage of establishment and growth of the nation.

There are also persons who maintain that the nation of Vietnam only began to form in the 10th Century with the establishment of the government of the House of Khuc and was completely formed in the latter half of the 16th Century after the Ly Dynasty firmly strengthened the united national government and following the victory over the Tong and the pacification of the Chiem.

In theoretical terms, the new tendency of the persons participating in the debate is to go beyond the limitations of the definition of the bourgeois nation and raise the matter of the possibility of the existence of a form of nation before capitalism.

One person returned to the concept of "nation" of C. Marx and F. Engels to prove that, according to the viewpoint of the founders of Marxism, nations formed from tribes when the age of barbarity gave way to the age of civilization, that is, nations formed along with the emergence of the state. According to the author, nations have evolved on the basis of the various socio-economic systems; before the bourgeois nation and the socialist nation there were the slave ownership nation and the feudal nation. Another person returns to the concept in the classical works of Marxism-Leninism, which views the term "nation" as having two definitions: the ordinary broad definition and the narrow definition, which is considered a scientific term, that a nation is only one stable community. Concerning the second definition, the viewpoints of C. Marx, F. Engels, V.I. Lenin and J.V. Stalin are identical. In many European countries, such national communities were already in existence by the time capitalism developed. In Vietnam and a number of other countries, nations formed before capitalism because the historic circumstances and conditions of these countries differed from the characteristics of the slave ownership system and the feudal system in many countries of Europe.

Deserving of attention is that in the second stage of the debate the matter of building the socialist nation of Vietnam has had the concern of many more persons and been raised as an important subject and a political task.

In the opinion of many persons, the victory of the August revolution in 1945 began the process of the formation of a socialist nation in Vietnam. This was an historic inevitability that was prepared for when the vanguard party of the working class was established and assumed leadership of the Vietnamese revolution. Following the victory of the national-democratic revolution on a nationwide scale and together with the building of socialism, the process of the formation of a socialist nation has constantly been accelerated. One person discussed the special characteristics of the socialist national community of Vietnam and the guidelines for strengthening the solidarity and unity of a national community that consists of many different nationalities and for developing upon traditional cultural values in order to build the new socialist culture and stimulate the process of establishing a unity of language in the relationship between the Vietnamese language, the common tongue of the national community, and the languages of the ethnic minorities in Vietnam.

The Achievements That Have Been Recorded

The debate is continuing and will surely continue for quite some time to come. However, after 25 years of research and debate involving nearly 40 treatises and works on the formation of the nation of Vietnam, not including the volumes of history and the specialized research projects that have dealt with this matter to some extent, we can and must describe the achievements that have been recorded.

The first achievement is that we have, through the debate, become increasingly aware of the importance and significance in many areas of the matter of the formation of the nation.

The formation of the nation, which is one of the basic matters in the history of the nation, is of scientific significance, practical significance and tremendous political significance. Researching and correctly defining the process of the formation, development and change of the nation of Vietnam provide a very important scientific basis for understanding the laws and the special characteristics of the development of the history of Vietnam and for explaining numerous economic, political, social, cultural and ideological matters. We will be unable to fully explain the extra-ordination vitality of the nation, the nature of the national culture, national traditions, the characteristics of the peasant movement, the socio-economic structure and the political system of Vietnamese feudal society if we ignore the formation of the nation.

The matter of the nation's formation is closely linked to the nation, in general, and not only deals with the past, but is also one of the pressing matters of the Vietnamese revolution, in the national-democratic revolution as well as the socialist revolution. Brandishing the two banners of national independence and socialism, our party highly tapped the strength of our times and advanced the Vietnamese revolution to increasingly brilliant victories. Correctly understanding the course and the characteristics of the structure of the nation of Vietnam with all of its strengths and weaknesses is the scientific basis needed for our party to resolve the national question on the basis of the stand of the working class and creatively apply the theory of nationhood of Marxism-Leninism to the specific conditions of our country. The tasks of accelerating the formation of a socialist nation as well as the work of building socialism and protecting the Vietnamese socialist fatherland are raising many scientific questions related to the matter of the formation of the nation that we are debating.

On a worldwide scale, the formation of nations is also a matter of important significance to the existence and development of each country as well as the relations among the various countries in the world community. In particular, in the present age, an age in which the lofty goals of nations and of all progressive mankind are peace, national independence, democracy and socialism and an age in which imperialism and the reactionary powers are making every effort to undermine and take advantage of the national independence movement and provoke big country chauvinism or narrowminded nationalism, the national question assumes greater importance than ever before.

In the debate, many theoretical matters concerning the formation of the nation and the realities of the history of Vietnam have been raised. The opinions that have been expressed have differed and have even been contrary concerning a number of matters. However, an analysis of the trend of development of the debate readily shows that more and more persons, especially in the recent past, endorse the opinion that the nation of Vietnam was formed at an early date and is a type of pre-capitalist nation. Our nation formed not as the result of the requirements of the development of capitalism as a type of bourgeois nation, but as a result of the objective and pressing requirements of building and defending the country under the specific natural conditions and historic circumstances of the country. For this reason, the process of building and defending the country was, at the same time, the process of the formation and development of the nation.

Another matter that can be cited as an achievement, one recognized by many persons, is that our nation as well as every other nation in the world has changed in accordance with the various socio-economic forms of the countries. In the 18th and 19th Centuries, the first rudiments of capitalism emerged but were very weak. Under the rule of colonialism, capitalist production relations developed to some extent but were severely restricted. Together with the process of development of the rudiments of capitalism and capitalist production relations, a certain number of factors of a bourgeois nation emerged. However, Vietnam did not experience a period of capitalist development, consequently, the nation of Vietnam also did not experience a period of existence and development of a bourgeois nation. This is an important characteristic in the development and change of our nation. Before a bourgeois nation could form, the proletariat, through its vanguard party, took leadership of the Vietnamese revolution. As a result, after the victory of the August Revolution, Vietnam entered the process of the formation of a socialist nation. This was an historic inevitability and also marked the start of a new era in the development of the nation of Vietnam.

The Matters Being Raised

Besides the achievements that have been recorded, we face a host of complex theoretical and practical historical questions that we must continue to research and debate.

As regards theory, we all subscribe to the viewpoints of Marxism-Leninism. As regards the bourgeois nation, the viewpoints of C. Marx, F. Engels and V. Lenin are very clear and were later summarized by J.V. Stalin in his work "Marxism and the National Question." This bourgeois nation is a historic category closely linked to the period of development of capitalism. On the basis of the historic realities of many European countries, J.V. Stalin generalized the formation of bourgeois nations in two courses: the course of the nation-state and the course of multi-nation-state. However, do any of the classical works of Marxism-Leninism, either directly or indirectly, mention a type of nation preceding the bourgeois nation? This is a question that has frequently been raised not only in our country, but in many other countries when debating the matter of the formation of a nation.

On the basis of a sentence written by J.V. Stalin in his work "The Nation and Leninism," namely, "that there are all types of nations in the world," one person has maintained that, in addition to the bourgeois nation and socialist nation, J.V. Stalin's concept never denied the existence of a pre-capitalist nation. However, how do we explain this when J.V. Stalin himself harshly criticized a number of comrades in the Soviet Union in approximately 1929 for setting forth a viewpoint concerning the formation of nations prior to capitalism, when the feudal system was still in dominance. J.V. Stalin wrote: "They maintain that nations arose and existed even before capitalism. However, how could nations have arisen and existed before the capitalist period, that is, during the period of feudalism when all countries were divided into independent localities that were not closely linked to one another by national relations and even thoroughly denied the need for such relations? Contrary to the mistaken observation of these comrades, there never was and never could be nations during the pre-capitalist period because there were no national markets, no national centers, either economic or cultural; consequently, there were no factors for eliminating the economic fragmentation of a given nation and coordinating the various components of this nation which, at that time, were still separated into individual national entities."(1) The viewpoint of J.V. Stalin was very clear, unequivocal and consistent with the historic realities of Russia and many European countries.

One person analyzed, in a very detailed fashion, the concept of "nations" as contained in the works of C. Marx and F. Engels to prove that, according to C. Marx and F. Engels, nations formed from tribes at the same time as states were emerging. In Russia in the late 19th Century, a similar concept, one represented by N.C. Mikalopxki, was popular. However, V.I. Lenin criticized and ridiculed this viewpoint, analyzed the history of Russia and clearly pointed out that "only in the recent history of Russia (since the 17th Century) have all regions, territories and fiefdoms truly been united in one entity"(2), that is, the process of the formation of the Russian nation only began in the 17th Century.

Thus, is it possible that there is a contradiction among C. Marx, F. Engels and V.I. Lenin concerning the concept of the formation of nations? In fact, the foundation of the theory of nationhood of Marxism-Leninism was laid by C. Marx and F. Engels and the theory itself was perfected by V.I. Lenin. Any research into the theory concerning the formation of nations cannot stop at the works of C. Marx and F. Engels but must involve particular attention to the works of V.I. Lenin.

In cases in which they were specifically discussing the formation of nations, C. Marx and F. Engels as well as V.I. Lenin and J.V. Stalin agreed that it was not until the period of development of capitalism that the conditions existed for the formation of nations and, as a result, the bourgeois nation was the first type of nation. This observation is totally consistent with the historic realities of many European countries at that time. The formation of nations was researched and laid the basis for the above mentioned scientific generalizations.

The problem facing us is that we must, on the basis of the fundamental arguments of Marxism-Leninism, clarify the following several matters:

1. As regards the concept "nation," in our language as well as many other languages of the world, the term nation is used in both its broad and narrow meanings and this makes it very difficult to differentiate one meaning from the other and easily leads to mistakes in scientific work. We say the "nation of Vietnam is one" but we also say the "Kinh nation," the "Muong nation," the "Thai nation," etc.

As regards scientific terminology, it is necessary to more clearly define the concept "nation." One person has suggested that we use the concept "nation" [QUOOCS GIA] or "nation" [QUOOCS TOOCJ] to replace the narrow definition of the concept "nation." This matter must be more thoroughly debated and considered.

2. As regards the definition of nation, many researchers still use the definition presented by J.V. Stalin in his work "Marxism and the National Question," considering it to be a classical definition of nation. According to J.V. Stalin: "A nation is a stable community of persons that has formed through history, is based on a common language, territory, economic activities and psychology and is expressed in the form of a cultural community."(3) This definition was set forth after summarizing the formation of the bourgeois nation; therefore, it primarily applies to the bourgeois nation but is of general significance with regard to every type of nation, in general.

Thus, does this definition fully reflect the general characteristics of every type of nation and can it be considered a general definition of nation? These are questions with which many persons are concerned and which have yet to be satisfactorily answered.

3. As regards the evolution of the various forms of communities, did they develop from tribes into clans and then into nations or from tribes directly into nations? This matter has resulted in much debate in the world and must be resolved on the basis of combining the arguments of Marxism-Leninism with the latest results of research on the various forms of communities.

If resolved, the theoretical questions presented above will shine very much light on the formation of the nation of Vietnam as well as many other nations in the world, especially the Far East.

The formation of the nation of Vietnam as well as the other nations of the Far East was never studied in the past and, of course, was never generalized in the classical works of Marxism-Leninism. For this reason, the spirit of science demands that we creatively apply the general arguments concerning the formation of nations of Marxism-Leninism to the specific conditions of Vietnamese history.

As regards the realities of Vietnamese history, we have many more conditions in our favor for conducting research and conducting the debate. However, there are also many questions in this area that demand that we collect additional information and conduct deeper research.

1. Our nation formed at an early date primarily as a result of the objective requirements of the struggle to build and protect the country under the specific conditions and circumstances of Vietnam. Our country is not large and does not have a large population but it does have a long history and has existed and developed amidst circumstances of almost continuous, arduous struggle to overcome many natural disasters of a tropical, monsoon environment that is both beautiful and harsh and savage fighting against many aggressors. Excluding the semi-historical, semi-mythical pages in our history that deal with the resistance against foreign aggression during the period of the Hung Kings, from the time of the war of resistance against the aggressor army of the Tan emperor in the 3rd Century B.C. until the present day, our people have had to wage nearly two dozen wars to protect the country and stage very many uprisings and wars of liberation in order to win national independence. In their history, our people have had to contend with schemes of annexation, enslavement and genocide of the expansionist powers in China and many imperialist powers in the world. Thus, building the country in conjunction with defending it became a major characteristic controlling the entire course of Vietnamese history and profoundly influencing the process of the formation of the nation.

The circumstances surrounding the building and defending of the country obviously created a closeness in the common destiny of the entire community, heightened the unity of the nation and stimulated the early development of patriotism and national consciousness. However, one matter that must be researched in greater depth is the specific impact that these historical conditions and circumstances have had upon the process of development of the nation, not only as regards the entire process, but also as regards each factor that created the nation, such as territory, language, socio-economic life, culture, ideology and so forth.

Moreover, it is impossible to separate the early formation of the nation of Vietnam from the general process of world history. This is not a course of history peculiar to Vietnam, but is a characteristic of a number of countries, especially in the Far East. It is not surprising that when researching and debating the matter of the formation of nations in many countries of the Far East, the historians of these countries note that national unity developed at a rather early date and that nations did not begin to form until the period of development of capitalism. Thus, how were the socio-economic structures that existed before capitalism in the Far East, which C. Marx and F. Engels called the "Asian form," the "Asian mode of production," related to the formation of nations in the countries of Asia, Africa and Latin America and how did they influence the formation of these nations?

2. A nation is a stable community of persons that is established on certain indispensable bases and has certain indispensable characteristics.

As regards the nation of Vietnam, of the various factors that created the nation, the factors of territory and psychology-culture were established at a rather early date and are rather clearly evident (of course, they must be researched in greater detail).

However, as regards the factors of language and economic activities, not much information is available for many periods of time and these factors have not been thoroughly researched. We must still invest much more effort in these fields and must have the participation of linguists and economists.

When summarizing the characteristics of a nation, J.V. Stalin did not mention the factor of the state. This was totally correct with regard to nations that consist of many different nationalities. In these nations, there is only the state of the ruling class of the ethnic majority; the nationalities being ruled have no state of their own. For this reason, a state is not an indispensable characteristic of these nations. However, as regards Vietnam and the nations that consist of various nationalities, the formation of the nation was closely linked to the establishment of national unity, in which the central state played an important role. Thus, should the state be taken into consideration as a factor in the formation of the nation of Vietnam? This question has been raised but, to date, no firm conclusion has been reached concerning it either in terms of general theory or the specific conditions of our country's history.

3. From the time the nation was established, our country has consisted of many different nationalities. At present, on the basis of the results of research and verification by the Institute of National Studies and the Central Nationalities Commission, the Statistics General Department, on behalf of the Council of Ministers has promulgated a decision concerning The List of Nationalities in Vietnam, which consists of 54 different nationalities. Thus, how did the relations between the ethnic majority and the various ethnic minorities develop in the course of the formation and development of the nation?

In the debate, some persons have raised the matter of the formation of the nation of Vietnam while others have only raised the matter of the formation of the Viet nation.

The general trend in history has been for the ethnic majority to play the central role in uniting and rallying the various ethnic minorities within a unified nation and then gradually building a united national community consisting of many different nationalities. Research must be conducted in order to clearly define how this process was carried out in the various periods of history, to what degree it was carried out and how it has been completed within the socialist national community of today.

4. The nation of Vietnam was formed in the process of building and defending the country; however, at which point in time did this process create the full foundation needed for establishing a national community in the full meaning of the term?

Following its formation, how did our nation develop, grow and change through the various periods of history? Here, there is an important matter, namely, the establishment of the socio-economic base and the class makeup of the nation. In the history of Vietnam, the development and replacement of various socio-economic forms in a number of periods have not been fully researched and this has affected the effort to resolve the questions peesented above. The concept of a "pre-capitalist nation" is general in nature and clearly does not reflect the nature of this type nation.

5. On the basis of the history of the formation and development of the nation of Vietnam in the past, it is necessary to clearly define the internal characteristics of this process and analyze its strengths and weaknesses. On this basis, we must reach conclusions that help us to lay a scientific basis for the nationalities positions and policies of our party and state and which directly support the effort to build the present socialist Vietnamese national community. This is the relationship between the past and the present, between science and politics, between theory and practice.

CHINA: MANY YEARS OF ECONOMIC ADJUSTMENT

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 6, Jun 81 pp 67-70

[Article by Le Tinh]

[Text] The economic adjustment program, which replaced the bankrupted 1976-1985 ten year development plan, was first presented at the plenum of the Chinese Communist Party in late 1978. At that time, Beijing said that the 2 years 1979 and 1980 would be devoted to economic adjustment and that the new 5-year plan would begin in 1981. In June 1979, at the Chinese National Assembly Hua Guofeng said that 3 years would be devoted to economic adjustment, not 2 years. In March 1980, Hua Dieu Tan, deputy head of the Chinese Social Sciences Commission said that the adjustment would last until the end of 1982. The PEOPLE'S DAILY editorial on 2 December 1980 admitted that economic adjustment could not be completed in the next 3 or 4 years, but would require a longer period of time! The western press has said that this adjustment in China will not be completed until the end of the 1980's. Thus, after presenting its adjustment plan, Beijing has had to "adjust" the timing of the "adjustment plan" three times. What are they adjusting? China officially says that the adjustment is designed to reduce or completely eliminate every development plan resulting from the previous impulsive economic policy in order to restore the balanced development of the economy. In 1957, Chinese national income reached 95 billion people's dong and its gross social product reached 159.2 billion people's dong. According to MIRROR Magazine (Number 49, December 1980) of the German Federal Republic, the Chinese economy declined by 25 percent following the "great leap forward" in the years from 1958 to 1960. Then, China spent 5 years (1961-1965) making adjustments. Immediately thereafter, the "great cultural revolution" damaged the Chinese economy more than the great leap forward. Chinese authorities have admitted that China's economy was "on the brink of collapse." Between 1974 and 1976, the final 3 years of the cultural revolution, industry suffered a loss of roughly 100 billion people's dong (Hua Guofeng, 9 May 1978).

In the face of this tragic economic situation, the Chinese authorities still recklessly set forth the four modernizations program, which is in the nature of a leap forward and in which the "10 key years" are the 1976-1985 plan with the impulsive norms announced in August 1977. However, only 20 months later, they have begun to realize how reckless this decision was, as reckless as forcing a paralyzed person to run a race (Tran Van, April 1979). The economic adjustment has been under way for more than

2 years but, to date, "the imbalances in many areas have not fundamentally changed. The adjustment has not yielded any results whatsoever... During the adjustment, new problems have arisen that we did not foresee"(the 1 January 1981 issue of ECONOMIC NEWS, a weekly newspaper published in Hong Kong that reflects the viewpoint of Beijing).

In China at this time, agriculture is very unstable. Compared to 1976, industrial production increased 14 percent in 1977 and 13.5 percent in 1978. In 1979, when the adjustment began, industrial production increased 7.8 percent. In 1980, heavy industrial production only increased 1.6 percent with a nearly 3 percent decline in petroleum and coal production; however, as a result of a significant increase in light industrial production, total industrial production increased. Western economic circles predict that during the period of adjustment, the rate of increase will only be about 3 to 4 percent. Thus, the rate of increase will constantly decrease. The 1981 plan which was set forth in September 1980 has now been readjusted. Steel production has been reduced from 35 million tons to 33 million tons, petroleum production from 106 million tons to 100 million tons and coal production from 359 million tons to 339 million tons. Investments in capital construction have been reduced from 55 billion to 30 billion people's dong. In 1980, 7.6 billion people's dong were issued, thus causing serious inflation, which was officially recognized as 5 to 6 percent; however, western economic circles maintain that inflation was at least more than 15 percent. This year, instead of issuing currency, the Chinese authorities are issuing government loans (4 to 5 billion people's dong) and borrowing local funds (8 billion people's dong). These measures are a direct attack upon the living conditions of the people and thus pose more difficulties to the effort to adjust the economy.

According to the 5 December 1980 issue of PEOPLE'S DAILY, the imbalances in the Chinese economy center in the following several areas: first, the various economic sectors are seriously imbalanced. Secondly, agriculture and light industry are still backward and do not meet the needs of the daily lives of the people. Thirdly, there is much heavy industry but it is cumbersome, its technology is outmoded and it does not play a dominant role. Fourthly, the infrastructure is very thin and weak and impedes industrial and agricultural production. Fifthly, accumulation has been too high for many years, thus affecting consumption. Sixthly, the scale of construction has been too large and has exceeded manpower and material capabilities. Construction has far exceeded financial capabilities and resulted in the following situation: an acute shortage of materials, serious deficits, strained energy supplies, disrupted investment guidelines, very high accumulation, very low economic returns and a declining standard of living.

The 12 February 1981 issue of PEOPLE'S DAILY reviewed the present maladies of the Chinese economy as follows: first, norms are too high, accumulation is too high, light attention is given to returns and to consumption as well. Secondly, heavy emphasis is placed upon rate of growth while light attention is given to balance and synchronization. Thirdly, heavy emphasis is placed upon capital construction and light attention is given to production. Fourthly, more attention is given to production than to living conditions. Fifthly, too much importance is attached to production and light attention is given to circulation and distribution. Sixthly, importance is attached to the overall balance of the sectors but light attention is given to the overall balance of regions.

Comparing this adjustment to the adjustment in 1961-1965, the same newspaper article shows: first, whereas the previous imbalance was only an "acute" illness, this imbalance has lasted for a very long time and, moreover, is a comprehensive imbalance, an imbalance of a general nature that can be called a "general illness" or "many illnesses breaking out at the same time." Secondly, the previous adjustment was carried out at a time when practically everyone realized the pressing need for an adjustment. This time, there are numerous external factors that conceal the potential dangers of the economy, thereby causing many persons to not believe that there is a need for economic adjustment. Thirdly, the previous adjustment primarily involved small projects that involved small losses. Therefore, it was carried out relatively easily. This time, the projects that must be adjusted are, for the most part, large projects that will involve large losses and pose many difficulties. Fourthly, in the past, it was relatively easy to limit investments; now, because of the many different sources of capital, it is difficult to control investments. Fifthly, in the course of the previous adjustment, energy production continued to increase; now, energy production is unstable. Sixthly, in the previous adjustment, the state sent some 20 million manual workers and civil servants to the countryside to participate in productive labor; this time, this is not only impossible, but it is also necessary to provide work to tens of millions of unemployed persons in the cities. All of these facts prove that this adjustment is very difficult and complex.

ECONOMIC NEWS Newspaper described the imbalance among the various sectors as follows: compared to 1949, industry increased 38.2 times by 1978 but agriculture only increased 2.4 times; heavy industry increased more than 90 times while light industry only increased 19 times. As regards investments, between 1958 and recent years, the capital invested in light industry only equalled one-tenth the capital invested in heavy industry. Since 1958, accumulation has always been more than 30 percent, reaching 43.8 percent in 1959 and as high as 45 percent in 1 year. The very high rate of accumulation and the large investments in heavy industry have created a serious imbalance and affected living conditions very much.

Thus, according to official Chinese data, the Chinese economy is seriously imbalanced in every respect. As regards the rate of development, the rate of development of heavy industry is highest. Thus, of what does China's heavy industry consist? To begin with, there is the machine manufacturing sector, the majority of whose equipment represents technologies of the 1950's and 1960's with some equipment from the 1930's and 1940's, consequently, its efficiency is very low (PEOPLE'S DAILY, 12 March 1980). The 11 May 1980 issue of ECONOMIC NEWS pointed out many serious problems that exist in China's machine industry: it does not satisfy the needs of society, cannot support the effort to make technological improvements, the quality of its products is low and so forth. In its 25 May 1980 issue, this newspaper stated: "Our country's iron and steel industry has not met the needs of national economic development and is still very far from the advanced countries in terms of technical equipment, products, quality... At present, China must still import steel. Within the country, the ore mining sector and the steel rolling sector are backward compared to the metallurgy sector." The petroleum production sector and the coal sector have stood still for 2 years and it has been projected that they will not make much progress for many years to come because of the shortage of capital and technical supplies.

The bad economic situation presented above has forced the Chinese authorities to adjust the economy but this adjustment, according to them, is extremely difficult and will have extremely harmful consequences, consequently, it has given rise to serious dangers and created a state of panic and fear among cadres and the people. In Quang Dong alone, about 400 large and small projects worth more than 900 million people's dong have been suspended. On 21 January 1981, PEOPLE'S DAILY wrote: "This adjustment, the scope of upheaval of which is very large, will surely have a very large impact upon youths; the cutbacks in capital construction will create many more difficulties for the unemployed and many enterprises will reduce their production or cease production entirely, thereby affecting the income of manual workers and civil servants." On 16 January 1981, the same newspaper wrote: "The acts of speculation and hoarding in society, even by state-operated enterprises and collectives, and the scores of civil servants and manual workers of the state who earn their living illegally, engage in speculation and hoarding and smuggle goods of the state, including gold, silver, precious drugs and foreign goods, have seriously harmed the interests of the entire country, undermined economic order and the stability of the market, posed a direct threat to the stability of society and undermined the adjustment of the economy."

This adjustment by China has also caused harm to Japan and the western countries. As regards Japan, China has unilaterally cancelled 15 major projects that were under contracts with Japan, the total value of which was 60 billion dollars (from 1978 to 1990), thus causing Japan to immediately lose as much as 2 billion dollars.

In Hong Kong, the February 1981 issue of THANH MINH Journal, after printing four recent speeches by Tran Van, Deng Xiaoping, Trieu Tu Duong and Ly Tien Niem, reported that Tran Van himself predicted that the Chinese socio-economic situation is facing the danger of an explosion of riots among the masses in the cities and the countryside.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

COL GEN LE TRONG TAN ON ARMY EDUCATION, MANAGEMENT, TRAINING

Hanoi QUAN DOI NHAN DAN in Vietnamese 6 Aug 81 pp 1, 3

[Interview with Col Gen Le Trong Tan, Chief of General Staff: "To Act According to Orders and Regulations, It Is Necessary to Associate Education with the Management and Training of Troops"]

[Editorial Staff's Note: After being launched and implemented for more than a year, the all-army movement to act according to orders and regulations has scored initial results. All units have effected a substantial change in their sense of organization, discipline and of the pattern proper to a regular army. An accurate assessment of the results of this implementation and a clear perception of the remaining weaknesses and shortcomings are indispensable to a further advance of the movement. On this occasion, QUAN DOI NHAN DAN has interviewed Col Gen Le Trong Tan, chief of the General Staff, on the all-army movement to act according to orders and regulations.

[Text] Reporter: My Colonel General, the "all-army" movement "to act according to orders and regulations" has been launched for more than a year. We have obtained definite results in many fields. Please tell us what you have noticed about the results of the movement, the experiences drawn and the shortcomings requiring special attention as well as the guidelines for future efforts.

Colonel General: [The answer to] your questions would constitute a whole newspaper article. You twice mentioned the "all-army" movement "to act according to orders and regulations." Saying that it is a movement is not incorrect but may I draw your attention to the fact that in our entire army there is now only one great movement "to develop the good nature and to heighten the combat strength" of the people's armed forces which has been launched by the Party Central Committee Secretariat. It is precisely this great movement which has made an important contribution to the obvious change seen in the entire army's effort to act according to orders and regulations. The units which have satisfactorily carried out this great movement are those which have properly acted according to crders and regulations.

Reporter: If so, dear comrade Colonel General, how should we view the important role and implementation of the all-army-acting-according-to-orders-and-regulations slogan?

Colonel General: The "all-army-acting-according-to-orders-and-regulations" slogan stems from a resolution of the Military Commission of the Party Central Committee and is carried out by order of the comrade Minister of National Defense. The General Staff has also issued Directive No 78 on specific ways to execute that order.

Reporter: We must admit that when the policy on the necessity for the entire army to act according to orders and regulations had just been promulgated, we were concerned about its eventual results. The first reason was the negative manifestations occurring to society more than a year ago and the then difficult economic situation. On its part, our army had to fight the Chinese aggressors. The material conditions for carrying out orders and regulations were lacking. The contingent of grassroots cadres to assume the management and teaching of orders and regulations still had many weak points. In short, the lack of subjective and objective conditions favorable for taking actions in conformity with orders and regulations made us wonder about the results of their implementation.

Colonel General: It is right to worry about ways to best execute orders and directives issued by the high levels but it would be wrong to doubt the results of the actions taken according to orders and regulations. When formulating the "all-army acting according to orders and regulations" slogan, the Standing Committee of the Military Commission of the Party Central Committee was aware of the difficulties to be overcome. The organs which assisted the Military Commission of the Party Central Committee had enough conditions to assess the overall situation and the army's situation rather accurately. It must be admitted that the negative manifestations occurring to society over a year ago were somewhat worrisome and did have some influence on the army. This was because, willy-nilly, the army is a component of society. As a component of society, we must comprehensively examine the negative manifestations taking place in society, the interaction of all relationships and also the causes and development of negativism. However, it is important to accurately assess the nature of things versus phenomena, to clearly distinguish between the temporarily short term and the basically long one and also to know the upward trend of things. Lenin said: "He who refuses to look ahead turns his back to history; there is no middle course and there cannot be any one."

During the war, our army and people overcame tremendous difficulties and accomplished deeds thought to be impossible by the enemy. Since our country has become completely independent and unified and is enjoying new, basically favorable conditions, is it conceivable that our army cannot act according to orders and regulations? The present situation is evidently more favorable than over a year ago. The economy is starting to develop. Many new factors are emerging. The recent fifth-month rice crop grown from Binh Tri Thien Province northward has given us an additional 220,000 tons of paddy. Life is being stabilized gradually. Correctly associating the three benefits in the agricultural and industrial fields, ceaselessly improving the socialist method of doing business and simultaneously consolidating and strengthening state organs are sound measures to manage the economy and society. It is certain that the negative aspect will gradually regress. The struggle to survive and to act according to the Constitution is being stepped up. It is my belief that the overall situation of society will improve gradually. All that has been exercising a positive effect on our army and on the fulfillment of the entire army's obligation to act according to orders and regulations.

That is surely not a simple problem, however, because it involves a struggle in consciousness, thinking and in the social and military life. Moreover, we must always remember that the enemy will continue to frantically carry out sabotage against us for a long time to come.

Reporter: My Colonel General, everyday QUAN DOI NHAN DAN's editorial staff receives numerous articles and news items from correspondents and collaborators on the results and progress obtained from actions taken according to orders and regulations. However, it is very regrettable that there still are letters sent in by readers complaining about violations of the law and orders and regulations committed by armymen outside their barracks.

Colonel General: Why do you consider it "regrettable"? The people's criticism of their children and younger brothers in the army is utterly indispensable. It is necessary to motivate social opinion to condemn incorrect and indecorous acts and also violations of state law and army discipline. Just as the press has done about [the heroic deeds of] Dinh Trong Lich and Nguyen Thi Minh, public opinion must, of course, pay more attention to praising militarymen who have satisfactorily discharged their duties. Public opinion must also criticize families and responsible persons in organs in some localities for failing to educate and motivate youths to fulfill their military obligation and for tolerating the violation of army discipline by their children and younger brothers.

Let me go back to the problem raised at the beginning: How is it that the call for "all the army to act according to orders and regulations" is not only an order to be urgently executed but has also been responded to as if it were a movement? Let us visit the border frontline. For the cadres who had been staying in border areas, the formulated responsibilities and systems had helped them fulfill their missions satisfactorily. For the soldiers who came to the battlefield for the first time and for the cadres who fought against the Chinese aggressors for the first time, the discipline enforced on time schedules, military operations, billeting and circulation and the systems concerning on-duty commanders, combat alert committees...enabled them to quickly get used to the steps and regulations essential and appropriate to combat realities since all that should be done or remembered had been put down in writing in orders and regulations. Orders and regulations had thus really contributed to further raising the combat readiness of troops, especially those stationed along frontline 1. Great progress was made by various branches of service such as the air defense and air force troops who clearly cut down the preparatory time before engaging in combat activities. Such a good system has clearly manifested its strength, led to good deeds, formed human beings with good hearts and good manners and enabled us to struggle against liberalism, against the tendency to act according to one's convenience and against indiscipline.

Along with political education and military training, the obligation to act according to orders and regulations has contributed to uniting all men, to heightening discipline and to transforming our army into a united bloc which is well managed and able to successfully fulfill heavy and complex tasks. The victories won in the battles in the border areas; the success of the maneuvers carried out for more than a year in various localities and involving the coordinated combat activities of different military corps, services and branches; and the situation in a great many battalions and regiments having put an end to indiscipline--all that has determined the position and role of the movement to act according to orders and regulations and has confirmed the initial changes brought about by it.

To sum up, the entire army has responded to the call for actions conformable to orders and regulations and has considered it as a movement just because the observance of orders and regulations in taking action has enabled everyone, every unit and the entire army to make progress. After acting according to orders and regulations for more than a year, we have noticed that all problems relating to training, fighting and combat readiness and to the execution of tasks are connected with orders and regulations.

Reporter: At present, a number of youths who are in turn joining the army think that acting according to orders and regulations amounts to putting constraints and restrictions on human beings. This is not so in actuality. For orders and regulations have helped the armyman to master himself and become an owner within the collective and have created superb men and units. Will you please make further remarks on this subject.

Colonel General: That is right. Acting according to orders and regulations has endowed everyone with the knowledge and skill to master himself, equipment and weapons. However, there really remain certain cadres and combatants--especially the new combatants--who are still harboring erroneous views which require correction. To put it bluntly, there still are many shortcomings which must be resolutely overcome.

First, it is the discipline to be observed in relation to the masses by groups on separate mission and by militarymen outside their barracks. It is necessary to refrain from violating the people's property, to buy or sell goods in all fairness, to return what one has borrowed and to indemnify the owner if it has been lost or damaged. This type of discipline has long become a noble life style of our army and is also part of our oath to the fatherland and people. That a number of combatants and cadres have not strictly abided by this sacred oath is really regrettable. Our cadres and combatants in grassroots units must know that the discipline toward the masses now has new, higher requirements. Anyone going to areas inhabited by the minority nationalities will notice that the politico-cultural standards of tribesmen are different from the past. Our people have matured throughout the two wars of resistance and the political struggle against the enemy. In Cao Bang, Lang Son, Hoang Lien Son, Ha Tuyen, Lai Chau and Quang Minh, many minority nationality youths have shouldered important tasks assigned by the party and state, graduated from domestic colleges or returned from their study abroad. It is the understanding and desire of the minority nationality people that their youths must become loyal and valiant combatants with combat skills and with a high-level, wholesome and rich cultural life. The minority nationalities thus hope and require that the army--the place where their youths in turn fulfill their military obligation--be really a youths' school.

It must be remembered that no matter how modern our equipment is and what our standards as a regular army are, we still are the army of the laboring people of the Vietnamense nationalities which fights for the people's happiness. Being an army of a heroic people who have a high political and cultural standard, we must all the more have a high degree of conscious discipline and know how to live and act in strictest accordance with the Constitution, law, orders and regulations.

Another noteworthy weakness is the failure of our cadres and combatants at the grassroots level to adequately maintain equipment and weapons. Any army which does not possess good equipment and weapons or which does not know how to properly maintain and use the good equipment and weapons at its disposal will not have a great combat power. To know how to properly maintain and use equipment and weapons is to display a high revolutionary consciousness and a high sense of collective ownership and is, at the same time, an indication of a high standard of scientific-technical knowledge and a high sense of organization and discipline. We have at our disposal many types of equipment and weapons worth millions of dong. Our economy does not yet permit us to produce such things. Nor do we have the maintenance facilities and spare parts for many such types of equipment and weapon. There must not be the simplistic notion that repairing an aircraft is as easy as repairing an automobile and that maintaining a telecommunications center is like maintaining a telephone switchboard. Everyone from the commander to the mechanic and the combatant must obey technical systems and regulations. Vehicle breakdowns, accidents, fires, explosions and violations of discipline and law have been caused by the failure to exercise strict command and management, to provide in-depth education and to carry out sufficient training to develop skills and habits.

Reporter: Will you please tell us your opinion on the commanding cadres' responsibility for the execution of orders and regulations.

Colonel General: I will speak first about the commander and the task of commanding.

The exemplary behavior of a commander is a tacit order for combatants. The commander of infantry regiment X is a young man with a lovely face who had displayed valor in combat. This regiment commander sported a rather long hair which (did not yet cover his nape but) appeared abnormally long compared with the hair style of other officers. Naturally, it was impossible for him to order soldiers in his regiment to have their hair cut according to regulations. Following a cordial but serious talk with the corps commander, our regiment commander had his hair cut according to regulations. With the rumor spread very quickly, in less than a week everyone in the regiment had his hair cut according to regulations. That is a trifling story. But that is the way to deal with both major and minor things. Since he plays a decisive role in maintaining orders and regulations, the commander must have a serious attitude and a scientific approach in maintaining discipline. Changes in equipment and weapons have placed new, higher demands on daily activities, study and especially combat. The commander must have the necessary knowledge of pedagogy, psychology and ethics to be able to find out the most scientific, effective and--in other words--appropriate method of teaching combatants to act according to orders and regulations.

Yet, no matter how keenly and tightly he exercises command, a commander cannot maintain it under all circumstances. Parts of our army must frequently go out on separate missions. Only well-educated and well-trained armymen will know how to consciously act according to orders and regulations at all times and in all places.

Despite this, there must also be a tight organization. It is absolutely necessary to assign a commander to such small groups. If we meet the requirement to provide a commander or a manager for every task, we can be sure that cases of violation of discipline outside barracks will be cut down drastically.

I want to remind you of something more about the teaching and management of orders and regulations in basic units and with regard to combatants. In this respect, the commander's activities include three important tasks the first of which is to study and thoroughly understand orders and regulations which are the law promulgated by the state in the army. Each provision in an order or regulation has a theoretical and practical substance. The commander's adequate understanding of orders and regulations is a guarantee of management and command according to these orders and regulations.

The second task is to organize implementation. For the question of who is to do what and how he must tackle it, what means are to be used to do the job, when the mission entrusted will be completed and so on, the commander must reckon, foresee and issue adequate directives.

The third task is to provide education to create a moral, political and psychological basis for making people act according to orders and regulations. In managing troops, the commander must also know who is doing this or that, which characteristics are noteworthy and what conditions of time and materials exist to carry out such tasks. Rigid imposition must be avoided. Persons with a tendency to rigid imposition usually allege that orders and regulations must be compulsorily executed so that they may neglect education. Persons who frequently use power are, more often than not, authoritarians. A propensity to display authority is usually conducive to paternalism and militarism. Most of the time, the persons who think and act in such a manner are afraid of losing time and reluctant to do specific, in-depth research. They dare not welcome the low level's criticism for fear of losing their "prestige" as commanders. We must remember that no matter whether we are commanding cadres, political cadres or rear service cadres, all of us are cadres of the party. The real prestige of a commander depends on his ability to motivate, lead and organize the masses and to win over everyone to his side for joint action. It is also necessary to mete out punishment to educate people and to maintain discipline but we must not misuse punishment. In addition, punishment must be handed down according to regulations. When punishing a faulty person, it is absolutely forbidden to hurt his dignity. In short, the commander must always wholeheartedly love his subordinates and soldiers, take care of them and respect their dignity. In this respect, I wish to emphasize that in whatever situation and especially under difficult and straitened circumstances, the commanding cadre must wholeheartedly care for the material and moral life of his unit. If this is properly done, it will create not only the necessary material conditions to maintain orders and regulations but also an atmosphere of unity and enthusiasm which will induce every cadre and combatant to strictly execute orders and regulations.

In providing education, it is necessary to make everyone understand that the promulgation of the Constitution, law, orders and regulations reflects the concern of the party and state for the ownership right of the people as well as of the militarymen in the army. The codes of law and the orders and regulations which have been promulgated reflect the major changes taking place in our country, in our economy, in the politico-social development of our country and also in our army. The orders and regulations enforced in our army also reflect its combat, training and education experiences over many years of building and maturity. To enhance the ideological aspect of education in teaching orders and regulations is to ensure that our combatants firmly grasp and absolutely execute all provisions contained in orders and regulations. Each study session on law and orders and regulations must be aimed at inculcating into the student a firm belief in the law and an additional knowledge of law and orders and regulations so that he will execute them consciously.

I would like to expatiate upon the need to train troops to make them act according to orders and regulations. In the past, our army was composed merely of the infantry so that, by implementing the system of 10 oaths and 12 disciplinary measures, we could teach cadres and combatants to fulfill their duties. Today our army comprises many services and branches with different types of weapon and equipment. Weapon and equipment developments now require a perfect knowledge and training on the part of the user. If a sapper unit is to become well trained, each of its combatants and detachments must have perfect skills but if a unit composed of different arms and branches is to become well trained, each of the component arms and branches must not only be familiar with its own equipment but must also be conversant with the fighting methods of the others. To meet the increasingly high requirements of coordinated combat, both commanders and combatants must have technical skills and be able to cleverly implement discipline. To this end, they must be well trained even in the minute details of their daily activities, ranks, etiquettes and behavior. Even in peacetime, our cadres and combatants must be prepared to cope with war. If we wait until war breaks out to start training, then it will be too late and we will have to pay a very high price.

In short, the key factor enabling the entire army to act according to orders and regulations is the need for commanders and cadres at all levels to closely associate the education of troops with their management and training--that is, education must go hand-in-hand with management and training. If we merely provide education without exercising tight management and giving training to form the habit of acting according to orders and regulations, we will have human beings who merely speak according to orders and regulations but who do not act according to them. Conversely, if we merely manage and train men without educating them, we will create only an outward appearance for them and they will reluctantly execute orders and regulations only in their barracks or in the presence of their commanders and will act according to their personal liking when their commanders are absent, when they are outside their barracks or when they are on separate mission. Linking the education of troops with their management and training is an indispensable requirement aimed at making the entire army act according to orders and regulations.

The period extending from now to the end of 1981 will be highly significant. The Fifth National Congress of the Party will be held by the end of this year. It will be an important event in the political life of our entire party, people and army. Prior to the National Party Congress, party organizations at all levels in the army will in turn hold congresses with a very high sense of responsibility and a very great determination in view of the situation and mission of the country. Through the congresses of party organizations at all levels, it will be necessary to create a new impetus and a new struggling power, to make frank criticism and self-criticism, to find ways to thoroughly eliminate negative manifestations in each unit and organ and to simultaneously help reduce negative manifestations in the society. Under such favorable circumstances, we will have to pay special attention to concentrating our leading and organization efforts on making the entire army act in strict accordance with the Constitution, law, orders and regulations.

I believe that by turning the changes effected within the party organizations into an all-army emulation movement to enthusiastically score brilliant achievements to greet the Fifth National Party Congress, many units will progress steadily and will be able to completely eliminate their weak points in matters of discipline and to satisfactorily fulfill their missions. By stepping up the all-army movement to act according to orders and regulations in the last months of 1981, our people's armed forces will certainly create a strong impetus to begin the year 1982 with a new spirit, a new quality and continuous efforts to steadily heighten their combat power and their standard of combat readiness.

Reporter: We take this opportunity to suggest that you make some remarks about QUAN DOI NHAN DAN, in particular, and the army's newspapers, in general, with regard to the all-army movement to act according to orders and regulations.

Colonel General: QUAN DOI NHAN DAN, TAP CHI QUAN DOI NHAN DAN and the People's Army's broadcasts have notably contributed to the propaganda to urge the entire army to act according to orders and regulations. For more than a year, QUAN DOI NHAN DAN has published plenty of editorials, special comments, articles dealing with experiences, news items and pictures to propagandize this topic and to lead the people's armed forces in this respect. That is a praiseworthy endeavor. I hope to have frequent occasions to read articles on experiences in educating, managing and training our troops. The articles aimed at inspiring armymen to behave well outside their barracks are also very necessary but it seems to me that there have not been many in-depth articles with a high combat spirit and a strongly communicative effect. I hope that you will make more efforts.

In the near future, all of us including myself and you will be responsible for urging the entire army to act according to the Constitution, law, orders and regulations and to do so more satisfactorily.

BRIEFS

PHU KHANH VICE CRACKDOWN--During a recent crackdown on criminals, the security sector of Phu Khanh Province disbanded many gangs of hoodlums, raided many gambling dens and discovered many cases of theft of socialist property, recovering hundreds of thousands of dong for the state. Some security combatants have been commended for upholding ethical integrity while performing their duty. Among them was one who refused a bribe of 14,000 dong and an expensive wristwatch from an organizer of illegal emigration. [Hanoi Domestic Service in Vietnamese 1100 GMT 6 Sep 81 BK]

HANOI THEFT TRIAL--The Hanoi People's Court on 26 and 27 August opened a hearing to try (Tran Van Hung) and his accomplices on charge of theft of socialist property. In August 1978, (Hung), a professional hooligan with a long criminal record, was sentenced to 8 years in prison by the Hanoi military tribunal on charge of stealing state property under military disguise. After successfully staging a jailbreak, he was reported to have committed another 13 break-ins involving a total of more than 50,000 dong. At the trial, (Hung) and his accomplices pled guilty. The court then handed down a death penalty on (Hung) while one of his accomplices was given a 12-year prison term and the rest received sentences ranging from 6-month suspension to 6-year imprisonment. CSSR PRESS CONFERENCE--Hanoi VNA August 27--Czechoslovak charge d'affaires A. I. Igor Grek held a press conference here today on the 37th anniversary of the Slovak national uprising. (August 29, 1944-81). At the press conference, Igor Grek spoke of the historic significance of the Slovak national uprising in the Czechoslovak people's long and hard struggle for freedom and independence. He said: Together with the Soviet Red Army, the Slovak people had bravely fought against the German fascists and completely liberated the country. Now with their industrious and creative labour in national construction they are actively contributing to the building of a developed socialist society in Czechoslovakia. LAO TRANSPORT DELEGATION--Hanoi VNA August 28--A delegation of the Lao Ministry of Communications, Public Works and Transport led by acting minister Khamphoui Keotualapha arrived here yesterday to sign a cooperation agreement with Vietnam. It was met by Dinh Duc Thien, minister of communications and transport, and Lao Ambassador Khampheun Tounalom. [Text] [OW281615 Hanoi VNA in English 1517 GMT 28 Aug 81]

SRV, GDR TRANSPORTATION ACCORD--Hanoi VNA August 31--A protocol on cooperation in maritime transport for 1981-85 between Vietnam and the German Democratic Republic was signed in Berlin on August 30. The signatories were Vietnamese Vice Minister of Communication and Transport Duong Bach Lien and his G.D.R. counterpart, Dr. Heinz Reiner. [Text] [OW311709 Hanoi VNA in English 1613 GMT 31 Aug 81]

TRADE OFFICIAL VISITS ALGERIA--Hanoi VNA September 2--Vietnamese Vice-Minister for Foreign Trade Dinh Van Tram visited Algeria from August 25 to 31, at the invitation of the Ministry of Trade of the Algerian Democratic and People's Republic. The Vietnamese vice-minister on August 26 attended the inauguration of the 18th international fair in Algiers in which 42 countries including Vietnam participated. The same day, Algerian Prime Minister Mohamed Abdelghani visited the Vietnamese stand at the fair. While in Algeria, Vice Minister Dinh Van Tram met Algerian state secretary for foreign trade Ali O'Bouzar and secretary general of foreign trade Mohamed Oussa and discussed with them on the further development of economic and commercial relations between the two countries. The Vietnamese vice-minister also called at a number of economic and cultural establishments in Algiers and other localities. [Text] [OW021553 Hanoi VNA in English 1534 GMT 2 Sep 81]

ISRAELI ATTACK ON LEBANON--Hanoi VNA September 5--Speaking at the 4th teach-in on the Palestinian issue on September 1-4 in Havana by the ad hoc committee of the United Nations on the implementation of the inviolable right of the Palestinian people, Ambassador Nguyen Huu Ngo, head of the Vietnamese delegation severely condemned the Israeli aggressors for attacking southern Lebanon, thus causing tension in the region. He said: "The Palestine Liberation Organization (PLO) is the sole authentic representative of the Palestinian people. The Vietnamese people fully support the Palestinian people's struggle for their fundamental rights including the right to set up an independent and sovereign state. The Vietnamese people always stand by the side of the people of Palestine and the other Arab countries in their struggle against Zionism." [Text] [OW051521 Hanoi VNA in English 1459 GMT 5 Sep 81]

FULFILLING 1981 STATE PLAN DISCUSSED

BK031521 Hanoi QUAN DOI NHAN DAN in Vietnamese 12 Aug 81 pp 1, 4

[Editorial: "Strive To Fulfill the 1981 State Plan"]

[Text] Various sectors, localities and army units throughout the country are enthusiastically participating in the seething emulation drive to score achievements to greet the Fifth VCP National Congress. This drive is of profound significance economically and politically. It is a strong force that pushes various units to surge forward to fulfill their tasks in an outstanding manner, and at the same time it helps manifest the revolutionary sentiment and attachment of each individual cadre and combatant toward his beloved party.

For army units to take part directly in the task of economic building, the general requirement of this emulation drive calls for the effort of every component and every person in their unit to fulfill outstandingly the 1981 state plan and to make satisfactory preparations for the Third 5-Year Plan—1981-1985.

Since our economy is still faced with numerous difficulties, the supply of material and equipment to various units is very limited, intensive efforts by each individual and unit is therefore necessary to fulfill the state plan. The recent implementation of the state policies on improvement of economic management, distribution and circulation has created new and positive factors at various production establishments.

However, at many units the effort to fulfill the state plan norms in the first 6 months of 1981 was still below the mark. Although army units participating in the economic building program have developed their tasks urgently and positively and a number of them have embarked on production with satisfactory results, in general, much more effort is needed to fulfill the assigned tasks.

This emulation drive opens up an opportunity for various units--based on their achievements--to develop their spirit of collective mastery and their dynamic creativity in order to exploit the available potentials in labor and land, increase technical facility, scientific and technological capabilities and develop strong points in disciplinary organization and uniform leadership so as to score ever greater achievements in productive labor. Despite normal or less facilities and materials provided by the state, we must render our utmost effort for better production and more property.

To work and produce on a large scale and with economic profit and loss accounting constitutes a new task for our army. In order to exploit our existing potentials, we not only have to realize the importance of our army's productive labor task and to resolve to do it, but mainly we should know how to set forth appropriate technical measures and to organize management properly. All units should draw upon the experiences in implementing the first half-year plan and firmly control the material and technical bases, work force and other production means both qualitatively and quantitatively, and on this basis, to find ways to exploit potentials effectively in production. We should concentrate immediately on resolving such problems as stabilizing organization, rationalizing production, raising the managerial standard, systematizing management and conducting training to increase the technical knowledge and skills of cadres and combatants. Moreover, along with educating troops to enhance their socialist awareness, we should study and implement various appropriate policies on granting material incentives to workers depending on the specific situation of each unit in order to encourage all cadres and combatants to devote all their zeal and creative efforts to overcoming difficulties and accelerating production.

While emulating in the struggle to fulfill the state plan, new factors and advanced models have always emerged. All units should watch the emulation movement regularly, detect and disseminate advanced experiences promptly, and take appropriately motivational action in order to advance the movement steadily while constantly detecting and overcoming negative manifestations in production organization and economic management.

Looking forward to the fifth party congress, let all cadres and combatants of those units directly engaged in economic building, actively participate in the emulation movement by using all their zeal and ability and by transforming their sympathy for and loyalty to the party's revolutionary cause into concrete action in the struggle to overfulfill the 1981 state plan so as to contribute to creating steady economic progress which will enable us to fulfill the Third 5-Year Plan well.

PROVINCE REPRESENTATIVES DISCUSS EMULATION DRIVE

BK100924 Hanoi Domestic Service in Vietnamese 0400 GMT 10 Sep 81

[Text] Representatives of people's committees from Hua Giang, Minh Hai, Kien Giang, Dong Thap, An Giang, Cuu Long, Tien Giang, Ben Tre and Long An provinces held a meeting in Can Tho Municipality, Hau Giang Province, on 5 September to discuss and decide on the launching of an emulation drive to score achievements to greet the Fifth VCP National Congress.

Based on the objectives and characteristics of each province, the meeting set forth various main tasks for the drive as follows:

1. Strive to accelerate the comprehensive agricultural production to fulfill and overfulfill the 1981 State Plan, especially plan norms for rice production and animal husbandry.

2. Despite difficulties in material and fuel supply, efforts must be concentrated on developing the spirit of self-reliance and self-sufficiency in order to accelerate industrial production to serve agriculture; strengthening artisan, handicraft and small industrial sectors for more production, and striving to fulfill and overfulfill the total output value of the 1981 plan.

3. Continue accelerating the emulation drive among the people's armed forces to improve their fighting strength and to consolidate national defense. As an immediate task, localities must satisfactorily fulfill their plan norms for troops recruitment and induction of the new recruits both quantitatively and qualitatively and according to schedule.

4. Carry out directives and resolutions of the party Central Committee and the government concerning distribution and circulation and the task of caring for the people, cadres and civil servants' daily life. Localities must promptly pay attention to fulfilling the state revised plan norms for the 1981 grain obligation, which include the collection of agricultural taxes and debts and the purchase of grain; achieving the balance of income and expenditure of the budget according to the state plan; delivering pork and other agricultural products to the state and supplying essential commodities to cadres, workers and civil servants on schedule and in accordance with the state specified quantity.

5. Carry out correctly and scrupulously various directives and guidelines of the Council of Ministers on tasks concerning import and export without violating the promulgated laws and fulfill plan norms on the delivery of goods for export and foreign currencies to the central authorities.

Representatives of the above-mentioned nine provinces discussed concrete and correct measures aimed at making this emulation drive a movement with profound political significance and of great economic achievement so as to contribute to accelerating vigorously the socialist emulation movement throughout the party, army and the people in order to fulfill the 1981 state plan satisfactorily and, through the seething revolutionary movement of the masses, to strengthen the building of the party, the administration and mass organizations.

Witnessed by Nguyen Tho Chan, head of the VCP Central Committee emulation department, representing the chairman of the Council of Ministers, representatives of nine provinces in the Nam Bo Delta enthusiastically signed their names on the emulation agreement to strive to score outstanding achievements to greet the Fifth VCP National Congress.

GOVERNMENT DECISIONS REORGANIZE ADMINISTRATIVE UNITS

OW051315 Hanoi Domestic Service in Vietnamese 1430 GMT 4 Sep 81

[Text] On 1 September 1981 the Council of Ministers issued a decision approving the reorganization of An Son and Ninh Hai districts in Thuan Hai Province into the city of Phan Rang-Thap Cham and the districts of Ninh Son, Ninh Hai and Ninh Phuoc.

Phan Rang-Thap Cham city includes nine wards called Kinh Dinh, My Huong, Thanh Son, Phu Ha, Phuoc My, Bao An, Dao Long, Do Dinh and Tan Tai and three villages called Van Hai, Khanh Hai and Thanh Hai.

Ninh Son District includes the villages of Phuoc Binh, Phuoc Hoa, Lam Son, Tan Son, Quang Son, Hoa Son, Tay Phuoc, Tuong Phuc, Phuoc Tien, Phuoc Thank, Phuoc Tan, Phuoc Dai, Phuoc Thanh, Phuoc Trung, My Son and Nhon Son. The district's main office is located in Tan Son village.

Ninh Hai District includes the villages of Phuoc Chien, Phuoc Khang, Cong Hai, Loi Hai, Vinh Hai, Tan Hai, Xuan Hai, Ho Hai, Tri Hai, Phuong Hai, Nhon Hai, My Hai and Dong Hai. The district's main office is located in Tri Hai village.

Ninh Phuoc District includes the villages of Phuoc Son, Phuoc Ha, Nhi Ha, Phuoc Nam, Phuoc Huu, Phuoc Thai, Phuoc Van, Phuoc Hua, Phuoc Thuan, Dien Hai, Dinh Hai, Phuoc Hai, An Hai and Lam Hai. The district's main office is located in Phuoc Van village.

On the same day the Council of Ministers issued another decision approving the establishment of Ha Lang District and the assignment of Tinh Tuc town to Nguyen Binh district in Cao Bang Province.

Ming Long, Ly Quoc, Thang Loi, Kim Loan, Duc Quang and Dong Loan villages of Trung Khanh District and An Lac, Vinh Quy, Co Ngan, Thi Hoa, Thai Duc, Viet Chu, Quang Long and Thanh Nhat villages of Quang Hoa District in the same province were combined to form Ha Lang District, with its main office located in Thanh Nhat village.

Tinh Tuc town, formerly under the [direct] jurisdiction of Cao Bang Province, is now assigned to Nguyen Binh District in the same province.

FORMER SRV BATTLE ZONE CONTINUES RECOVERY

OW030809 Hanoi VNA in English 0738 GMT 3 Sep 81

[Text] Hanoi VNA Sep 3 --Cu Chi, a suburban district of Ho Chi Minh City, is fulfilling its plan of sowing and planting 17,000 hectares of main rice crop. It is also harvesting 870 hectares of summer-autumn maize and groundnut besides building a sugar refinery. The district is clearing some 1,500 hectares for a state farm specialising in sugar cane.

Since liberation, tens of thousands of bombs and mines have been deactivated or removed in that former "free bombing zone" to bring more than 10,000 hectares of waste land under cultivation. The tilled acreage was thus increased from 20,000 to 30,000 hectares. The inhabitants have built and put nearly one million days into digging small irrigation canals and ditches and erecting dykes.

Intensive farming with two or three rice crops a year is applied to two-thirds of the cultivated land, and rice yield has gone up from 1.7 to 2.3 to 2.3 (two-pointthree) tonnes per hectare. In 1980, the district brought in 62,000 tonnes of food, 53 percent more than in 1976.

Cu Chi had no cattle during the war. Now it keeps a herd of 30,000. There are more than 20,000 pigs and half a million poultry. The district has built two big piggeries.

Agricultural coopertivisation has resulted in 122 collectives and three cooperatives covering more than 9,000 households.

Industrial and handicraft production has steadily developed with 260 establishments and a full network of agricultural products purchasing and selling cooperatives.

Village and provincial roads have been repaired and two new ones are under construction, all transport facilities are put collective management. [sentence as received]

The district has built two big hospitals, several polyclinics, and many health stations.

Cu Chi District has opened 33 general education schools, one study-and-work school, one full-time complementary school, and 25 infant schools.

'NHAN DAN' ON RESULTS OF PRODUCT-BASED CONTRACTS

31 August Editorial

BK311609 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Aug 81

[NHAN DAN 31 August editorial: "Broaden and Perfect the Form of Product-Based Contracts in Agricultural Cooperatives"]

[Text] Giving out contracts based on finished products to workers is becoming the main form of contracting in the various cooperatives and whipping up a seething revolutionary socialist movement among the masses to advance the development of agricultural production. Since this is a new practice with a number of initial specific guidances slow in coming and considering the fast pace in broadening the movement, shortcomings are inevitable.

Judging from the assessment made by various localities, the new contractual form has basically been applied in accordance with the goals and principles set forth in the directive of the party Central Committee secretariat and with the instruction of the Ministry of Agriculture. The effect of the new contractual system in localities where it has been broadly applied such as the provinces in the lowlands, midlands, Bac Bo and former Zone 4, as well as in localities where it has been introduced on an experimental basis such as in the northern mountain provinces, the central coastal provinces, the central highlands, eastern Nam Bo and the Mekong Delta, has been evident primarily in the better management and utilization of manpower and land. The even increases in crop yields and the higher grain output in the recent winter-spring crop season resulted chiefly from the application of the new contractual system. In this 10th-month rice crop season, transplanting has been done rapidly and neatly in the best seasonal period; weeding has been carried out on time; ricefields have been better irrigated; and more active efforts have been made to prevent and control diseases and harmful insects than in other crop seasons. The application of the new contractual system has resulted in a more rational organization of labor and encouraged every worker and every family to closely associate themselves with collective production as well as with the finished products.

As the comrade general secretary of the party pointed out, the application of the product-based contract system in agriculture--combined with the various uniform measures for organizing production, improving management and making use of technological innovations--will be an important direction toward exploiting the vast capabilities concerning labor, land and the existing material and technical bases and bringing into play the favorable conditions of tropical agriculture and the great potentials concerning crop multiplication, intensive cultivation and reclamation of virgin and fallow lands. This will quickly increase the production volumes of rice and subsidiary food crops, establish large industrial crop zones, push ahead livestock breeding and develop agricultural production in a comprehensive and vigorous manner. This is an economic task of primary importance in the coming years.

The specific requirements for guidance in the immediate future consist of broadening and perfecting the giving of product-based contracts to workers, developing strong points and preventing and correcting shortcomings. On the basis of experience that has already been drawn, the cooperatives in the provinces of the northern lowlands, midlands and mountainous region, former Zone 4, the central coastal plains and the central highlands, as well as the cooperative and production collectives in the provinces of Nam Bo, will broadly and firmly apply the form of product-based contracts in strict accordance with the spirit of the directive of the secretariat and with the conclusion drawn at the conference held in Ha Nam Ninh to review contractual work. Along with establishing cooperatives and production collectives, the rapid introduction of the new contractual system into the managerial structure will ensure the cooperative members' right to collective mastery, correctly combine the three interests, consolidate the relations of production and develop production right from the start.

Product-based contracts must be uniformly applied to all branches and trades of agricultural cooperatives so that all workers will enjoy the general benefit of a unified system that gives material incentives to the producers and ensures comprehensive development of production for the collectives. Along with broadening and perfecting the product-based contract system in the production of grain and short-term industrial crops and in livestock breeding, experience must be drawn upon so as to expand its application to the production of long-term industrial crops and handicraft production in cooperatives.

In agriculture, the finished products are the results of the work of both the production and production-support branches. The workers performing various work operations in the entire production involving a certain type of crop or livestock must have their production responsibilities closely linked with the benefits derived from it through the application of the various forms of rewards based on their overfulfillment of the contract quotas. The units serving agriculture--first of all tractor stations, farmland water conservancy corporations, agricultural supplies corporations, seed stations and vegetation protection stations at the district level--are directly responsible for ensuring implementation of contracts with the workers and thus they play an important part in turning out the finished products. The application of an appropriate managerial system to link the workers of these units with the finished products will have the effect of stimulating the technical management organs of the district and consequently create the conditions for the district to become a center for developing the application of technological innovations in the cooperatives.

From the most general viewpoint, the perfection of the form of product-based contracts in agricultural cooperatives along these lines necessitates the implementation of various tasks with regard to research and actual guidance. It is necessary to closely combine the form of product-based contracts with the improvement of the whole cooperative management system and the strengthening of the district level so that the movement to apply product-based contracts can go into full swing and create the momentum for the comprehensive development of agricultural production.

10 September Editorial

BK100631 Hanoi Domestic Service in Vietnamese 2300 GMT 9 Sep 81

[NHAN DAN 10 September editorial: "Product-Based Contracts and Economic Results"]

[Text] For decades now, many economic analysts and leaders have shared the concern that economic production among agricultural cooperatives is not high enough, that productivity is poor, that labor and material costs are high, that management in many areas is still loose, that per unit production costs are on the increase while the cost of labor continues to be kept low, and that the income earned by cooperative members from collectivized economic activities is poor. As a result, various aspects of the collective interest are also limited. This is why cooperative members have yet to attach themselves closely with their cooperatives and why production relations have yet to be consolidated.

Final economic results should be regarded as the most important objective in economic management. In agriculture, the economic results of each unit depend upon many factors, ranging from the zoning of areas to production orientations and plans and management. In essence, they depend upon the process of production reorganization adopted by cooperatives and their efforts to improve various aspects of their activities.

Giving out contracts for final products to individual laborers is a realistic form of management over production. It has a direct effect on the rational organization of the labor force, helps attain equality in distribution and links the duties and rights of producers with the final products. Manpower will therefore be better utilized, both quantitatively and qualitatively; technical programs will be adopted more correctly; and crop output and yields will, in turn, increase.

In the recent winter-spring crop, from various northern provinces where product-based contractual work has been being expanded, rice output increased by 8.7 percent and rice yield increased by approximately 10 percent over last year. There was an increase of 220,000 tons of paddy in terms of final products and the rice yield obtained showed a more rapid increase as compared with other provinces. Thanh Hoa increased by 50,000 tons or 28.3 percent; Haiphong, 17,000 tons or 21.3 percent; Nghe Tinh, 40,000 tons or 19.6 percent; and Ha Nam Ninh, 40,000 tons or 15.1 percent. These four provinces alone increased their rice productivity by approximately 150,000 tons of paddy or 68 percent of the total increase in the north.

The winter-spring rice yield and output attained by districts which have actively and extensively given out contracts for products since the beginning of the crop season--such as Do Son of Haiphong city, Xuan Thuy and Kin Thhanh of Ha Nam Ninh Province, Yen Thanh and Can Loc of Nghe Tinh Province, and Hung Ha of Thai Binh Province--are higher than in other localities. Almost all cooperatives applying the product-based contract system have attained a higher rice yield and output.

Thanks to this new contractual system, laborers have been able to enhance considerably the sense of thrift in production, especially in the use of manpower, ricefields and funds for such materials as seeds and fertilizer. In addition, such negative manifestations as doing whatever one likes and whenever one is pleased and wastage in production, which remained serious and unsolved for many years, have gradually been overcome.

In cooperatives where the contractual system has been implemented in a satisfactory manner, the number of man days has been reduced by 10 to 15 percent while production has been firmly maintained and the quality of all field work has been improved.

A survey conducted in Thai Binh Province shows that by satisfactorily applying the product-based contract system in the recent winter-spring crop season, some cooperatives have been able to cut down 2,000 to 6,000 man days each. Another survey in Ha Bac Province confirms an average reduction of 1,000 man days by each of the five local cooperatives which have given out contracts for products in this crop season. Meanwhile, by economically using various funds, they have also been able to reduce the cost of materials involving each quintal of paddy by 5 to 10 percent.

The movement to contract laborers for finished products is encouraging us to reorganize the entire system of management of agricultural cooperatives. This movement, however, must be carried out in combination with the effort to reorganize production and improve management, not only in each cooperative but also on a district scale, which is considered most important. In so doing, we will be able to help cooperatives constantly achieve good economic results while increasing production and consolidating new production relations.

ECONOMIC PLANNING, TRADE AND FINANCE

SUGGESTIONS MADE FOR IMPROVING TRADE IN USED GOODS

Hanoi PHU NU VIETNAM in Vietnamese 24 Jun-1 Jul p 7

[Article by Thuy Trang: "About Buying and Selling Used Goods"]

[Text] Buying and selling used goods is a necessity for many people in many places. In Ho Chi Minh City, it is even more necessary because used goods exist in large quantities and there are many people who want to buy or sell them.

But how to avoid getting counterfeit goods, being cheated or paying unreasonable prices in buying and selling used goods? That is what worries both buyers and sellers. Only the state organ and state stores dealing in used goods that are conscientious and responsible make people feel reassured and trustful.

We have worked with the management of the Used Goods Corporation, visited quite a number of used goods stores and also listened to housewives speaking their mind about this matter.

In Ho Chi Minh City, the Used Goods Corporation was established in July 1977.

By now it has 24 locations throughout the city, 6 specialized in buying, 10 selling and 8 both buying and selling. It has eight repairing and reconditioning stations. Its task is not only to buy and sell used goods but also to buy discarded materials, to repair and recondition used goods, etc.

In the first quarter of 1981 alone, it bought in different provinces over 1 million discarded items to supply to production installations. Its turnover amounted to 3 million in 1979 and over 4 million in 1980 and will amount to 21 million in 1981. The city's bank will provide it with cash for its operations. It has recruited level-6 and level-7 workers specialized in electronics and refrigeration both to assist buyers in evaluating goods and to repair in the shops and in any locations requested by customers.

According to the Commercial Service regulations, the used goods sold by the corporation must be cheaper than market prices by 5-10 percent and the share of profit to be given to the state is 15 percent. The profit for some goods like aluminum items is less than 10 percent. Cadres and organs having letters of recommendation and getting approval from the management will pay 5-10 percent less than store prices. About buying procedures, customers having used goods to sell can bring them to the store or notify the latter, which will send people to their home to buy. The buying team consists of three persons: a technician, a store employee and a treasurer who jointly evaluate the goods. If customers do not agree to selling them, they can let the store sell them and pay a commission of 1-2 percent to the store.

We have visited a number of stores in Ben Thanh, Dan Sinh, Nguyen Van Troi and Binh Tay Markets, the used goods department of the Nguyen Hue store, etc. It is a very good thing if the corporation's plan is carried out. Both buyers and sellers feel reassured as the goods, anyway, come "from the state" and particularly the electric appliances are guaranteed.

The Third Precinct store alone in the first quarter of 1981 purchased 120,000 dong worth of goods and had sales amounting to 80,000 dong. These figures are rather small but clearly show the confidence of both sellers and buyers.

The stores at 135 Au Co Street in the 11th Precinct, 1092-K 3-2 Street in the 10th Precinct and 21-g Nguyen Van Troi Street have received a lot of praise from customers of used goods.

We greatly welcome the growth of the Used Goods Corporation and we think that it needs further expansion, mostly the stores that provide repairing and reconditioning service. However, about the buying and selling of used goods, we have these ideas:

1. Stores still have very few goods and, in some cases, only have goods for display, which are not for sale. The corporation should take some measures to encourage its cadres to purchase and to review prices so as to make prospective sellers want to sell their goods to the corporation rather than bring them to the market.

2. Sale procedures are still too complicated: goods are located elsewhere; prices can be anything; the way to have prices approved is very complicated, etc. We suggest that the corporation assigns used goods to the stores for direct management to avoid the trouble for customers to go back and forth.

3. As to purchase and selling prices, they must be carefully studied to agree to the market so as to ensure fairness. In the case of some goods, since the complicated procedures require price approval at one place and delivery at another place without posted prices, it can easily lead to secret offerings. The prices of some items as set by the corporation are too high as compared with the market: for instance, refrigerators at the Nguyen Hue store, blenders, electronic calculators, etc.

4. In the case of a number of goods, the corporation should reconsider since there is an opinion to the effect that having close acquaintances with store or corporation employees will let a person buy good items and at lower prices. Although the turnover may be large, where do the goods go? It is also necessary to have rigid control over the purchasing teams to ensure the people's trust and to avoid negative effects on the stores, for the used goods sector itself is very complicated and difficult to manage.

SHARP PRICE INCREASES MAKE HOUSEWIVES WORRY

Hanoi PHU NU VIETNAM in Vietnamese 24 Jun-1 Jul 81 p 3

[Article by Tran Long Ha: "Prices -- Worries of Housewives"]

[Text] In Ho Chi Minh City, every time there were rumors about cadres, workers and civil servants getting a pay raise, prices would immediately rise sharply. But perhaps this time the price increases make housewives worry the most. Prices of all kinds of goods, from foods used in the two daily meals to items needed in everyday life, or service goods like foods and beverages, clothes, etc., are up. A glass of sugar cane juice now costs 1 or 1.5 dong, up from 0.50 dong. A bowl of rice noodle soup costs 7-8 dong, up sharply from 4-5 dong. A special order of the same soup even costs 12-15 dong. Those restaurant owners who feel bad about raising the price of a bowl of rice noodle soup naturally have another way to raise it -- they increase the soup and reduce the solids. In Tan Dinh Market, all prices have gone up: rice has increased an average of 0.50-1 dong per kilogram -- nang huong rice from 8.5 to 9 dong and regular rice from 6 to 6.8 dong per kilogram. Pork shoulder has gone up from 43 to 48 dong per kilogram; beef from 50 to 60 dong; mackerel from 40 to 45 and even 50 dong per kilogram. As prices of all goods, particularly of the items used in the two daily meals, go up from day to day, how can we housewives avoid being worried?

Reasons for Price Rises

We must be fair to admit that price rises have been taking place for the last few years. Prices have gone up and down, and up again, on and off releatedly. And yet we women have not yet acquired any "experience" in guarding ourselves. Some of us would empty their pockets or run around to borrow money to buy goods whenever they heard rumors that prices would soon go up. As private merchants grasp this mental habit, they strive even more to hold back the goods. Furthermore, other women sometimes unintentionally become the propaganda "loudspeakers" for private merchants. For instance, although they have not yet bought anything that expensive (like beef at 75 dong/kilogram or nang huong rice at 10 dong/kilogram), they would still spread by word of mouth such "dreadful" prices. On the other hand, private merchants are very quick and sensitive. They are aware of and know when our state has a shortage of goods and does not have enough to supply to the people and then release their goods for sale at very high prices. Early last June there were rumors that the state would prohibit transporting goods into the city from other localities, so what happened was any vehicles that succeeded in carrying some goods into the city considered themselves having hit the jackpot and, of course, their owners were able to sell them at high prices and to find numerous customers for them. Another objective reason contributing to the high prices is the time that immediately precedes the rainy season, or the pre-harvest time for all grain and food crops. Every year at this time the season for catching fresh water fish has just ended but sea fish are not yet available in large numbers. The time for harvest of rice crops is only approaching. Nature also has a way of creating difficulties for us.

Measures To Overcome Difficulties

To stabilize prices we must have sources of goods in our possession. The measure to take to overcome this difficulty is mainly to step up production, but in addition to this the commercial sector, as well as other agricultural product and food sectors, must stress relations with the provinces in order to exploit and get hold of sources of goods. Next to it is market management. Ho Chi Minh City is busily completing the reviewing of business registration and declaration. If we do this job properly, we shall be able to know well the production installations and the quantities of goods produced and thereby to filter out the disguised production installations that make counterfeit or poor-quality goods.

Smuggling goods out of stores, deliberately altering quality, intentionally raising prices in some localities, etc. -- these are phenomena that our administration must take positive and stern measures to end.

For consumer cooperatives, to check again the selling prices is a very necessary job because under the "pretext" of dealing in self-supplied and self-exploited goods, hence selling at any prices after buying at any prices, they sell at different prices and the price differences are at such a level that they deserve our attention. For instance, the cooperative in Subward 9 of the Third Precinct has sold pork shoulder at the price of 38 dong/kilogram and fresh bacon 32 dong, but elsewhere the price of pork shoulder varies from 48 to 50 dong/kilogram.

Why do prices differ that much? Is it because some cooperatives have paid too much attention to doing business and making profit and have forgotten their major task of serving the people? According to the experience of Subward 9 of the Third Precinct, self-sufficient animal raising must be stepped up. The cooperative there has its own hog-raising farm, but it also assigns its members the raising of little pigs it has been buying from other places. This experience has helped the cooperative to be able to provide its members with pork at lower prices than elsewhere while creating jobs for a number of members' families having encountered difficulties.

To stabilize prices is a difficult and complicated matter, but it is also an extremely urgent one that must be resolved. As long as there still are excessive price fluctuations, they continue to cause instabilities in the living conditions of every cadre, worker and civil servants, as well as the working people, and to affect considerably the quality and productivity of labor.

VISITS TO SOME HANOI FOOD STORES REVEAL SERIOUS ABUSES

Hanoi PHU NU VIETNAM in Vietnamese 8-14 Jul 81 p 7

[Article by P.V. (Reporter): "Visiting Some Food Stores in Hanoi"]

[Text] For some time we have been greatly annoyed by the presence of the persons who stand or sit around food stores to buy and sell ration stamps and coupons. They usually gather and loiter around counters and stores to freely buy and sell ration stamps and coupons. As the situation of state goods is difficult, they take advantage of such buying and selling and connection with "sisters" in state stores to get good and scarce goods and to sell them in the free market at prices 7-10 times higher. It is obvious that everybody is angry and resents this illegal business of the dealers of ration stamps and coupons and a number of state store employees in the food sector. We have long wished to see and waited for positive and absolute measures taken by the commercial sector and the state to put an early end to these phenomena so as to contribute to stabilizing the standard of living, but we have waited in vain.

At present, we are trying to stabilize prices to stabilize the market, for the purpose of stabilizing the standard of living for workers and civil servants. As this movement is being carried out in an enthusiastic and total manner, everybody feels encouraged and confident in this present work.

However, the "food dealers" at the stores still operate normally! And they still have "priority" in buying state goods from the stores and counters. Let us cite some examples:

At the Le Quy Don Street food store these dealers are constantly present to wait for the arrival of goods which they voluntarily help to unload and carry inside. They help to place big chunks of ice-covered fish and pieces of fresh pork butts and bacon on the shelf, with the best pieces on top. After they have finished helping to put away the goods behind the counter, they would immediately stand in front of the counter, push back customers who had been standing in line and occupy the space at the end of the line to be the first buyers. Customers of this store seem to have been "used to" this kind of "priority" treatment that the store gives to these dealers as few of them would show any reaction. Whenever somebody said something, another person would explain that since they had "unloaded the goods," they would have priority in buying first. And so pieces of delicious fish and meat, big pieces of bean cake, still hot, etc. were hurriedly brought to Le Quy Don Market about 20 meters from the store! And these items were immediately put on sale on private merchants' flat baskets: sea fish was to be sold at 8 dong/kilogram, instead of 1.05 dong/kilogram in the store; pork butts and bacon at 60 dong/kilogram.

Who have given the "dealers" that "priority" right? Why is the unloading and arranging of goods at the store done by these dealers? If there is a need for people to unload and carry goods, why does the store avoid hiring other people, who do not constantly take goods from the store and resell in the free market at exorbitant prices detrimental to consumers? Why do employees of the Le Quy Don state food store and others in Hanoi who know very well the gangs of dealers still sell to them delicious and good items openly in front of customers? Is it true that the leadership of these stores consider it a natural "way of doing business" on the part of the state store employees in their sector?

At the food store in Ngoc Ha Market, the selling of food to these dealers holding detached ration coupons (coupons without stubs) is not uncommon, either. In the morning of 5 June 1981, when the store opened to sell bean cakes, the first customer who bought 3 kilograms with detached coupons and the second customer who bought 5 kilograms also with detached coupons were both dealers! The first big and delicious pieces of bean cake were put in their basket and hat first.

In the afternoon of 12 June, we saw another employee of the same store sell fish sauce to dealers with detached coupons. We did not know how many coupons and how much money were involved, but we saw the buyer standing in front of the counter give a folded bank note to the seller standing behind the counter. And then grade 1 fish sauce was poured into 5-liter and 3-liter cans by the seller, who said that she was selling only 4 liters to that lady who was an acquaintance living near her home out of personal consideration... ! Those who were present that day had no way of checking to see if she was telling the truth or checking how many liters of grade 1 fish sauce had been sold to dealers with detached coupons. (In spite of the fact that the store has often reminded her that the practice would be strictly prohibited.) When their misdeed was denounced and they were blamed for it, those two state store employees both showed an attitude of playing down their wrongdoing. We stayed for only 5-10 minutes at each counter, and yet at both counters we saw employees sell goods in violation of regulations.

Only a week separated the two violations at that counter that required the writing of a formal report! (We did not know whether "drawing up formal reports" was followed by any disciplinary action.) Is it true that selling foods to dealers having detached coupons is a familiar "way of doing business" on the part of irresponsible state store employees? Through what happened we find that those employees' way of making money while the state is encountering difficulties is systematic. Instead of joining with the food sector and the state in trying to reduce the difficulties encountered by workers and civil servants, they have lent a helping hand to dealers, created obstacles and disturbances in the market and reduced the people's confidence in our party and state.

To put an end to this situation, we suggest that the food stores in Hanoi, as well as in other provinces and cities, take positive and absolute measures against those employees who have no virtues and conscience. These measures will surely make a considerable contribution to stabilizing the overall living conditions of cadres, workers, civil servants and working people.

AGRICULTURE

REVIEW OF LATE AUGUST AGRICULTURAL ACTIVITIES

BK311359 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Aug 81

[Review of agricultural activities over the past 10 days]

[Summary] "According to the General Statistics Department, over the past 10 days, all provinces and cities throughout the country transplanted 10th-month rice on another 30,000 hectares, thus bringing to nearly 2.8 million hectares the area already planted with this rice and fulfilling more than 70 percent of the planned norm."

To date, the northern provinces and cities have basically finished the cultivation of 10th-month rice on more than 1.3 million hectares. This year, thanks to abundant fertilization and good care, 10th-month rice has developed more satisfactorily than previous years.

Last week, thanks to fairly ample rain from typhoon No 5, the area of rice affected by drought has decreased considerably. "However, as many as 30,000 hectares of ricefields are still in need of water. The most serious problem at present is the area of rice affected by brown leafhoppers, which remains relatively large." According to the plant protection department, the density of leafhopper eggs in some localities has reached 6,000 per square meter.

"To date, the southern provinces and cities have planted 10th-month rice on nearly 1.5 million hectares. This figure, which represents more than 70 percent of the planned acreage and produces an increase of almost 20,000 hectares over the same period last year, shows that the cultivation of this rice is still slow compared to schedule."

In recent days, the water level in the Mekong River has risen, submerging some areas of summer-fall rice and 10th-month rice in Dong Thap and An Giang provinces. These provinces are intensively combating waterlogging along with accelerating the cultivation of 10th-month rice on the remaining area.

"In addition to the cultivation of the 10th-month rice, the southern provinces and cities have harvested summer-fall rice on more than 200,000 hectares on nearly 40 percent of the cultivated area."

To date, the cultivation of summer-fall subsidiary and industrial crops has concluded throughout the country. "According to the General Statistics Department, the entire country has planted these crops on only more than 440,000 hectares in this summer-fall crop season. This figure shows a decrease of more than 7,000 hectares compared to the same period last year."

The northern provinces and cities are satisfactorily fertilizing and caring for the area of subsidiary crops while preparing seeds for the forthcoming winter-spring crop season. "According to their plans for this year's winter crop season, the northern provinces and cities will plant about 70,000 to 80,000 hectares of potatoes and 16,000 hectares of soybeans."

In addition to crop cultivation, new progress has initially been made in animal husbandry over the recent past. "Thanks to the adoption of the product-based contract system, the number of hogs raised by families in many provinces has increased. The number of cattle has also increased over the same period last year. However, epizootic diseases, especially anthrax, still linger on in some localities--including Thanh Hoa, Son La and Lang Son provinces--killing hundreds of head of cattle."

NEW LAND OPENING INTENSIFIED IN MINH HAI

Hanoi NHAN DAN in Vietnamese 7 Aug 81 p 2

[Article by Dao Viet: "Minh Hai Expands Land Clearance"]

[Text] Over the past 5 years, Minh Hai has opened 86,000 hectares of new land to expand the production area most of which is situated in the zone reclaimed by the people. The new economic zones including state farms, cooperatives and production collectives have opened new lands and broken the soil on 10,000 hectares and have commissioned over 5,000 hectares. The newly opened lands have yielded their products despite the scarcity of material-technical bases and the lack of experiences in carrying out production on new lands. The state farms and new economic zones have delivered more than 6,000 tons of paddy to the state. People living in regions where they have opened new lands on their own have not only become self-sufficient in grain but have also sold to the state several tons of grain and more than 10 tons of soybeans.

However, the rate at which new lands have been opened and broken is still slow and this task has not yet been organized in a comprehensive manner. Throughout the province, wasteland still covers up to 150,000 hectares including many continuous stretches of hundreds or thousands of hectares each as well as numerous patches each of 5 to 7 hectares of fallow land intermingled with cultivated areas. Wasteland still exists in almost all districts and in the city.

To increase the land clearance tempo, the provincial authorities intend to continue to build and strengthen state farms, cooperatives, production collectives and new economic zones and, at the same time, to intensify land reclamation on a relatively large scale in regions having large and continuous expanses of wasteland while broadening the task of opening new lands that are intermixed with the cultivated ones and of transferring people to regions with small extents of wasteland. Following the "joint action by the state and people" motto, localities which still possess wasteland and those which send laborers out for land reclamation are responsible for organizing life and production on the new regions in a spirit of mutual love and assistance and collective ownership in order to rapidly turning the wasteland into a grain producing one.

The province has tried to complete the assessment of the total wasteland area from the hamlet and village level upward in early August, to draw up plans to open and break new lands and to reorganize the labor force and the population, and also to formulate specific production guidelines and plans for each wasteland area--thereby creating the necessary conditions for transferring the population prior to the production season. Villages are the units mainly responsible for fulfilling the abovementioned tasks in accordance with the peculiar situation in each village and hamlet.

A group of cadres from Ha Nam Ninh including chairmen of district committes and cadres of the new district and provincial economic committees recently visited Minh Hai to cooperate with the cadres in the brotherhood districts in this province in assessing the wasteland situation on the spot and to jointly discuss uniform plans on population transfer, land reclamation and the building of new production installations. In addition to the need for a sufficient labor force to open and break new lands and to carry out agricultural production, the districts and villages in Minh Hai will also need a large labor force for sea fishing, forestry, building materials production, education, public health, small industry and handicrafts--which are the sectors for which the local labor forces are insufficient.

Fully aware of the importance of the task of opening and breaking new lands, expanding the production area and relocating the population and labor forces on a nationwide scale, the Minh Hai Provincial Party Committee has issued directives to all levels and sectors in the province on the organization of the reception to be extended to laborers and people coming from the sister provinces to open and break new lands and build new economic zones. The Provincial People's Committee and the Provincial New Economic Committee have held a conference to disseminate and study Decision No 254-CP of the Council of Ministers--which is an addendum to the policy of encouraging the opening and breaking of new lands--and to discuss measures aimed at fulfilling at all costs the land reclamation norms set by the Second Provincial Party Organization Congress--that is, commissioning an area of 100,000 hectares to grain production between 1981 and 1985 and an area of 40,000 hectares in the immediate years of 1981 and 1982.

AGRICULTURE

BRIEFS

PHU KHANH DROUGHT--Due to prolonged drought in Phu Khanh Province more than 3,200 hectares of ripening rice is faced with water shortage. The provincial water conservancy sector has assigned technical workers to various drought stricken areas to help peasants improve irrigation system to bring sufficient water to these ricefields. [Hanoi Domestic Service in Vietnamese 1100 GMT 3 Sep 81 BK]

QUANG NAM-DA NANG DROUGHT--Despite recent moderate rainfalls in various areas of Quang Nam-Da Nang Province, more than 40,000 hectares of summer-fall rice are faced with water shortage. The provincial irrigation service is striving to bring sufficient water to these ricefields to save them from being damaged. [Hanoi Domestic Service in Vietnamese 1100 GMT 2 Sep 81 BK]

AN GIANG RICE--As of late August, An Giang Province had harvested 68,000 hectares of summer-fall rice with an average yield of from 2.6 to 3 tons per hectare. Due to the recent adverse weather conditions more than 10,000 hectares of 10-month rice in the province were damaged by flash floods and drought in various areas. DUTCH-AIDED BRAILLE PRINTING PLAN INAUGURATED

Hanoi NHAN DAN in Vietnamese 7 Aug 81 p 4

[Text] Yesterday morning, 6 August, the Vietnam Association of the Blind inaugurated a Braille printing plant built with the aid of the Dutch Committee II on the occasion of the International Year of the Disabled. Nguyen Kien, vice minister of War Invalids and Social Welfare, attended the ceremony.

Representing the Dutch side at the inauguration was [Schuvert], secretary of the Embassy of the Netherlands Republic.

With the wholehearted assistance of the Dutch specialists, after 3 months of equipment installation and study, the workers--most of whom are the Vietnamese blind--have been able to skillfully use typewriters, stereotype printing presses [mays in banr kemx] and raised-dots printing presses [mays in chwux nooir]. With a capacity of more than 10,000 pages a day, the plant recently printed more than 6,000 volumes of two works titled: "Forever Grateful to Great President Ho Chi Minh" and "Constitution of the Socialist Republic of Vietnam". In the near future, the plant will print works on the party, the state and respected and beloved Uncle Ho for the blind's use as study documents.

INTERREGIONAL LABOR TRANSFER, MIGRATION DEPARTMENT SET UP

Hanoi NHAN DAN in Vietnamese 7 Aug 81 p 1

[Text] On 25 July 1981, the Council of Ministers issued Decision No 09/HDBT on the setting up of a mechanism to transfer labor and population among various regions of the country.

The system and mechanism entrusted with organizing the transfer of labor and population are established at the central level and include an Inter-regional Labor Transfer and Migration Department (abbreviated as Labor Transfer Department subordinate to the Ministry of Labor). The duty of the Labor Transfer Department is to combine the labor and population transfer and submitting them to the Council of Ministers for consideration and ratification; to set specific norms for interregional and interbranch transfer of labor and population on the basis of the state plan norms; to organize the transfer of labor and population on a national scale according to the set norms, policies and time schedules and by ensuring economic effectiveness; to cooperate with the sectors concerned in studying policies and systems on interregional transfer of labor and population and submitting them to the government's decision; and to guide and control the implementation of these policies by sectors and localities.

When a province, city or special zone subordinate to the central level is entrusted with transferring a large number of laborers and people, a Labor Transfer and Migration Branch (abbreviated as Labor Transfer Branch) will be set up with the duty to organize the transfer of labor and population (within and outside the province) according to the state plan norms assigned to the provincial or municipal level. When a district or equivalent level is entrusted with transferring a large number of labor and population, a Labor Committee subordinate to the District People's Committee will be set up with the duty to assist the District People's Committee in uniformly managing the tasks relating to labor and wages and in organizing the transfer of labor and population within the said district. In each of the villages which move the population away or receive the incoming migrants, a cadre will be assigned to this task.

The Council of Ministers entrusts the Ministry of Labor with specifically determining the function, duties and organizational structure of the system and mechanism in charge of transferring labor and population in a smooth and really effective manner.

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity.]

Lê Đức Anh [LEE DUWCS ANH], Col. Gen.

Is the author of an article in the cited source entitled "Promote Mobilization and Complete All Tasks." (TAP CHI QUAN DOI NHAN DAN No 6, Jun 81 pp 1-8, 71)

Cù Huy Cận [CUF HUY CAANJ]

*Vice Chairman of the Central Committee for Teenagers and Children; he is the author of an article in the cited source on matters pertaining to teenagers and children. (VAN HOA NGHE THUAT No 6, Jun 81 pp 2-3)

Đỗ Anh Châu [DOOX ANH CHAAU]

Vice Chairman of the State Nationalities Commission; attended and reported at a scientific conference held on 13 and 14 December 1980 in Hanoi by the Institute of Ethnography [Vien Dan Toc Hoc], State Social Science Commission. (TAP CHI DAN TOC HOC No 1, Jan-Mar 81 p 76)

Hoàng Bảo Châu [HOANGF BAOR CHAAU]

Head of the Institute of Oriental Medicine; is the author of an article in the cited source entitled "Combining Traditional Medicine With Modern Medicine." (TAP CHI HOAT DONG KHOA HOC No 4, Apr 81 pp 16-18)

Vương Như Chiếm [VUWOWNG NHUW CHIEEM]

*Deputy Director of the Museum of Fine Arts; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Trần Độ [TRAANF DOOJ]

Member of the VCP Central Committee; *Chief of the Culture and Art Department [Ban Van Hoa Van Nghe] of the VCP Central Committee; an interview with him by the cited source on current issues in the field of culture and art appears in this issue. (VAN HOA NGHE THUAT No 5, May 81 p 15)

Thế Đức [THEES DUWCS]

*Deputy Director of the National Library; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Nguyễn Nam Hồng [NGUYEENX NAM HOONGF]

*Head of the Organization Department of the VCP, Ben Tre Province; his article "Ben Tre Strengthens Grass Roots Installations in Preparation for the Party Congress" appeared in the cited source. (NHAN DAN 12 Aug 81 p 3)

Nguyễn Khai [NGUYEENX KHAI]

*Member of the VCP Central Committee; deputy chief of the Organization Department of the VCP Central Committee; attended a festival held in Hai Hung Province in April 1981 to commemorate the 20th anniversary of the movement to "Build the New Cultural Family" in Ngoc Long Village in My Van District of the province. (VAN HOA NGHE THUAT No 6, Jun 81 p 78)

Nguyễn Trung Kiên [NGUYEENX TRUNG KIEEN]

He is the author of an article in the cited source entitled "Some Matters Concerning the Use of Artillery in the War To Defend the Fatherland." (TAP CHI QUAN DOI NHAN DAN No 6, Jun 81 pp 35-42)

Nguyễn Đức Lộc [NGUYEENX DUWCS LOOCJ]

*Deputy Director of the Theatrical Institute, Ministry of Culture and Information; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Mai Thúc Luân [MAI THUCS LUAAN]

*Acting Editor-in-chief of VAN HOA NGHE THUAT, a monthly journal of the Ministry of Culture and Information; attended a meeting of collaborators of the journal held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Phạm Xuân Nam [PHAMJ XUAAN NAM]

Deputy Chief of the Institute of Historical Studies, Vietnam Social Science Commission; attended the first meeting of Vietnamese philosophers held in Hanoi on 21 to 23 January 1981. (TRIET HOC No 1, Jan-Mar 81 p 36)

Nguyễn Quang Nguyên [NGUYEENX QUANG NGUYEEN]

*Deputy Chief of the Capital Construction Department [Cuc Xay Dung Co Ban], Ministry of Culture and Information; he is the author of an article in the cited source on an architectural contest for designing district cultural centers. (XAY DUNG No 5, May 81 pp 7-8)

Trần Hữu Niên [TRAANF HUWUX NIEEN]

*Vice President of the Hanoi College of Economics and Planning; attended a national conference on innovations held in Hanoi from 17 to 20 June 1981. (DAI HOC VA TRUNG HOC CHUYEN NGHIEP No 6, Jun 81 p 32)

Bùi San [BUIF SAN]

Member of the Central Committee of the VCP; Secretary of the VCP Committee, Binh Tri Thien Province; recently he accompanied VCP General Secretary Le Duan on a visit of his province. (NHAN DAN 14 Aug 81 p 1)

Lê Thi [LEE THI]

*Deputy editor-in-chief and editorial secretary of TRIET HOC, the quarterly journal of the Institute of Jurisprudence, Vietnam Social Science Commission; attended a conference held on 8 January 1981 to review the work of TRIET HOC journal during the past 2 years. (TRIET HOC No 1, Jan-Mar 81 p 174)

Hoàng Trung Thông [HOANGF TRUNG THOONG]

Head of the Institute of Literary Studies, Vietnam Social Science Commission; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Nguyễn Thụ [NGUYEENX THUJ]

Deputy chief of the Motion Picture Department, Ministry of Culture and Information; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Nguyễn Văn Thưởng [NGUYEENX VAWN THUWOWNGR]

Head of the Institute of Animal Husbandry; is the author of an article in the cited source entitled "Developing Animal Husbandry in a Rational Framework." (TAP CHI HOAT DONG KHOA HOC No 4, Apr 81 pp 7-10)

Nguyễn Trung [NGUYEENX TRUNG]

*Deputy chief of the Department of Mass Culture, Ministry of Culture and Information; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Phạm Tuyên [PHAMJ TUYEEN]

*Chief of the Culture and Art Section [Ban Van Nghe], Central Television Station; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Nguyễn Đình Tứ [NGUYEENX DINHF TUWS]

Minister of Higher and Vocational Education and secretary of the Cadre Affairs Committee of the Ministry; presided over a meeting of VCP committee secretaries and heads of schools and organs under the Ministry convened by the Cadre Affairs Committee in mid-May 1981 to discuss implementation of Resolution 36/NQ-TU of the VCP Central Committee Secretariat. (DAI HOC VA TRUNG HOC CHUYEN NGHIEP No 6, Jun 81 p 30)

Trần Vượng [TRAANF VUWOWNGJ]

*Deputy Editor-in-chief of SAN KHAU magazine, the journal of the Vietnam Stage Artists Association; attended a meeting of collaborators of VAN HOA NGHE THUAT magazine held on 3 and 4 April 1981. (VAN HOA NGHE THUAT No 5, May 81 p 78)

Nguyễn Vy [NGUYEENX VY]

Acting Chief of the Institute of Pedology, Ministry of Agriculture; is the author of an article in the cited source entitled "Ten Years of Activity of the Institute of Pedology." (TAP CHI HOAT DONG KHOA HOC No 4, Apr 81 pp 11-13)

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

[Speech by VCP General Secretary Le Duan, at 25 June opening of the first session of the Seventh National Assembly, in Hanoi TAP CHI CONG SAN No 7, Jul 81 pp 1-16--translation previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 127, 2 Jul 81, pp K1-K13]

[Text] The presidium and comrade deputies:

On behalf of the VCP Central Committee, I warmly greet the comrade deputies of the Seventh National Assembly--the outstanding representatives elected by the people in the 26 April 1981 election.

The Sixth National Assembly has accomplished an important mission--the formulation and adoption of the SRV Constitution.

The birth of the new Constitution is a great event marking an important step in the development of our revolution.

The new Constitution reflects all the great revolutionary achievements recorded under the leadership of the VCP since the August 1945 revolution and through two extremely difficult but very glorious wars of resistance against the French and the Americans. It institutionalizes the Vietnamese revolutionary line in the new stage laid down by the fourth party congress and is an effective weapon for our entire people to continue the struggle aimed at firmly defending and consolidating national independence and successfully building socialism in our fatherland. That is the Constitution for the transition period to socialism and for the system of socialist collective mastery of the laboring people in our country.

The Seventh National Assembly is duty-bound to fully develop its role as our people's highest state organ of power in consolidating and improving the system of collective mastery, implementing the new Constitution and introducing the institutions of this Constitution into the actual life of our society.

Comrade deputies, The 5-year tenure of the Sixth National Assembly was a period of special importance in the advance of the Vietnamese revolution. The most salient event in the past period was our people's victory in the two wars of aggression engineered and directly conducted by the Chinese expansionists. Beijing has long been nurturing a plan to conquer Vietnam and the Indochinese peninsula as a whole in order to pave the way for realizing its dream of expansion into Southeast Asia and of bringing the latter under its sway.

One odious thing is that, colluding with the U.S. imperialists, the Beijing rulers tried to carry out that scheme as soon as our country had emerged from the resistance against the imperialist ringleader, with the aim of knocking our people down by two strategic thrusts, one from the south and the other from the north.

Using the Pol Pot-Ieng Sary-Khieu Samphan gang in Kampuchea as mercenaries, they waged war on our southwestern border with the aim of occupying many important areas from Ha Tien to Tay Ninh in order to create opportunities for reactionaries in southern Vietnam to rise up against and sabotage the socialist revolution which had just begun. After being defeated together with its henchmen in southern Vietnam, Beijing impudently launched a large-scale war of aggression, throwing 600,000 troops into an attack along our entire northern border in an attempt to subdue our people.

Comrades, as you already know, our party and state have done all they could to settle through negotiations the conflicts left by history between Vietnam and China. However, the reactionary clique in the Beijing ruling circles is stubbornly pursuing a hostile policy against Vietnam. Through that criminal war, they exposed themselves as our people's direct and dangerous enemy. At the same time, they revealed to the world the extremely barbarous and crafty nature of Chinese expansionism and hegemonism--the biggest international reactionary force threatening national independence, peace and stability in Indochina and Southeast Asia.

Developing the great strength of the system of socialist collective mastery and upholding the nation's tradition of Dien Hong [a national conference convened in ancient times when Vietnam was faced with invasion from China], our heroic people and armed forces smashed both enemies at the two extremities of our country, thus successfully defending those sacred border areas of our fatherland. At the same time, we fulfilled our international obligation in helping the fraternal Kampuchean people to overthrow an unprecedentedly barbarous and genocidal regime. Then, together with the Lao and Kampuchean peoples, we created a firm and interrelated strategic position for revolution in the three Indochinese countries. With their struggle and victory, our people have helped to enhance the three revolutionary currents of our epoch, thus making a worthy contribution to the world's people's struggle against imperialism and international reactionaries and for peace, national independence, democracy and socialism.

The victories of our two wars of national defense are of great historic importance. Through those struggles, our people have seen through the odious and treacherous nature of the reactionaries among the Beijing ruling circles and have further heightened their vigilance against them.

At the same time, we have good grounds to affirm that the Vietnamese people now have the strength and capability to defeat their new enemies, no matter how cruel and vicious, if they recklessly unleash another war of aggression against our country.

Closely connected with these victories are strategic achievements in strengthening the militant solidarity between our people and the peoples of the fraternal countries in the socialist community. The special relations among the three Indochinese countries have developed to an unprecedented level. The treaties of friendship and cooperation between Vietnam and Laos and between Vietnam and Kampuchea have greatly affected the safeguarding of the independence and security of each country and the consolidation of socialism in this part of the world.

The signing and implementation of the treaty of friendship and cooperation between Vietnam and the Soviet Union--a great event which embodied the all-round cooperation between the two countries--has made a very important contribution to the victory of our people in the war for national salvation and given firm guarantees for our socialist construction and national defense. Our participation in the Council for Mutual Economic Assistance and the signing of treaties of friendship and cooperation with other fraternal countries have marked a new qualitative development in the relations between Vietnam and the socialist community.

We have smashed the perfidious and vile schemes of Beijing, aided and abetted by the United States, to encircle and isolate our country and lower its prestige. The SRV continues to widen its diplomatic relations, which it now shares with almost all countries in the world. It is also acting to enhance its international status and has gained broad sympathy and support from countries which cherish peace, national independence and freedom and from all revolutionary, progressive and peace-loving forces throughout the world.

Socialist construction throughout the country has been very successful. The speedy reunification of our country on the state level has helped to strengthen the political and moral unity of our people, develop national solidarity and unity to a new stage under the banner of independence, freedom and socialism. The system of proletarian dictatorship has been firmly established on a nationwide scale while the working people's right to collective mastery has been initially established.

In spite of serious economic and social changes resulting from a protracted war, we have firmly maintained political and social security and public order. The rebellions and bloodbath perfidiously prepared for the postwar period by the U.S. imperialists through their Vietnamization of the war have not occurred as they had predicted and dreamed of. This represents a brilliant success of the consistent policy of broad national unity pursued by the new system.

On the economic and cultural front, we have quickly made up for the heavy damage caused by the wars of aggression of U.S. imperialism and Chinese expansionism and promptly solved many urgent economic and social problems. In the south, the comprador bourgeoisie have been completely eliminated and private trading and industrial enterprises have been basically transformed while agricultural collectivization has achieved initial success. In the north, the new relations of production are being perfected, economic establishments which were devastated by war have been largely restored and, in some respects, production has developed to higher levels than before.

Social labor forces have been initially reallocated on a nationwide scale and a number of new economic zones have taken shape. Millions of working age people have been given jobs. The material and technical bases of the national economy have been strengthened considerably. The fixed assets of socialist economy in production branches have increased by 91 percent.

In agriculture, more than 1 million ha of virgin land have been reclaimed and a further 1.8 million ha have been planted with crops. More than 20,000 assorted tractors have been used in agricultural production, and 37 percent of the land is now tilled mechanically.

In industry, productive capacity has been boosted with an additional 200,000 kilowatts of electricity, 2 million tons of coal and 500,000 tons of cement.

With regard to communications, almost 1,500 km of new railways, 3,800 km of motor roads and 4,000 meters of wharves have been built. Many industrial projects have been placed under construction such as power stations, cement factories, engineering plants, shipyards, harbors, textile factories, sugar and paper mills. These projects are very important to our economy. Without these projects, we cannot advance toward large-scale production. In the 1981-85 plan period, many factories and establishments now under construction will be commissioned.

Notable progress in culture, education and public health has demonstrated the superiority of the new system. Illiteracy has been basically eliminated in the south. The number of students in general education schools, colleges, universities, complementary courses and vocational schools has increased to almost 16 million. On the average, one out of every three Vietnamese is going to school.

The scientific and technical branches have solved a number of important problems of the national economy and defense. Good results have been achieved in the eradication of neocolonialist culture. The elimination of social diseases and vices--products of the U.S. puppet regime--have brought a new life to hundreds of thousands of people.

In the struggle for national defense and in the building of the new society, increasing numbers of collectives and individuals have emerged, setting examples of the workstyle and virtues of the new socialist man.

However, the achievements of the socialist revolution, especially in the economic field, still remain negligible considering the demands and the costs of manpower and materials. The problem of grain and food has not yet been firmly resolved. Social labor has yet to be utilized to its fullest potential. There now exist strains in connection with energy, raw material and communications and transportation. The gap between exports and imports still remains wide. The market and prices are subject to fluctuations. The lives of workers, civil servants and peasants in areas affected by natural and enemy-caused calamities is fraught with difficulties. The socialist emulation movement and the new workstyle have yet to successfully repel the habits of small-scale production and the old business system. Discipline and law have been loosely observed and the laboring people's right to mastery has been violated in many localities.

These difficulties first of all stem from the weakness of our national economy which is still predominantly characterized by small-scale production and which has been heavily ravaged by one war after another and seriously devastated by frequent natural disasters. In almost 3 of the past 5 years we have waged a war for national defense. The mobilization of an important part of our manpower and wealth for national defense has made it impossible to achieve many targets of the 1976-80 plan in a normal manner. Meanwhile, the enemy has continually tried by every means available to sabotage us in all fields. Moreover, the shortcomings and mistakes committed by party and state organs in economic and social management have further prolonged a number of difficulties and aggravated some imbalances at certain times and in certain places.

Due to the failure to fully understand the party's line and firmly grasp the actual situation, shortcomings have been made in organizing its implementation. Notable are the shortcomings in economic planning and investment, in economic management and in the struggle against negativism. The investment structure and production arrangement of many sectors are still irrational. In economic management, we have been slow in eliminating red tape, officialdom and subsidization, and in overcoming the spirit of dependency in order to shift to the system of socialist business management, economic measures for management are not given due attention; nor are they closely combined with administrative and ideological measures. This has resulted in the slow overcoming of negative phenomena in the economy and social life.

We sternly point out our shortcomings and mistakes in order to find the right way to redress them. To make a judicious appraisal, however, we should view our economic situation in the context of the allround development of the revolution in our country over the past 5 years. The Beijing expansionists want our collapse, but we have come through difficult trials and are standing firm. We have smashed a dangerous counterattack of the enemy. We have made extraordinary efforts and have warded off famine. More than that, the people's living conditions in many rural areas have undergone significant improvements. We have taken one step further in increasing the productive capacity of our economic sectors. We have created a new force in all fields to advance steadily.

The past 5 years have been a period of great successes. Our people have added a glorious page to the epic of our heroic struggle for the fatherland's independence and freedom, and raised the Vietnamese revolution to a new strategic posture firmer than ever before in our history. Never before have our people been so capable as they are today to defend the fatherland and build socialism.

The successes already achieved stem from the stable leadership of the VCP--a party boundlessly loyal to the fatherland, the nation, Marxism-Leninism and proletarian internationalism. Reflecting the people's confidence and trust in the party, the new Constitution confirms that the party is the sole force in leading the state and society and the main factor deciding all the successes of the Vietnamese revolution. In the resolution of its fourth national congress, the party set forth the line for the socialist revolution and a correct economic line. Realities of the revolution in the past 5 years show that the party has promptly caught up with the complex developments of the situation and adopted resolute and clear-sighted strategic viewpoints with which to decide the correct path for the revolution at the crucial and pressing moments.

The successes already achieved again testify to the heroic character and creative ability of our people and armed forces in defence as well as in construction. Our National Assembly warmly commends the people throughout the country--from north to south--the compatriots of minority ethnic nationalities in the border provinces, and all the cadres and combatants of the armed forces and people's security forces for having united single-mindedly, fought valiantly and scored outstanding exploits in the two wars of national defense to firmly defend the fatherland's territory, airspace, seas and offshore islands and to firmly maintain political security and social order and safety.

Our national assembly warmly commends the working class, the peasantry, intellectuals of both sexes, scientists and managerial and technological cadres for having striven persistently to overcome difficulties, develop innovations and score important achievements in restoring and developing production to meet the minimum material and cultural demands of the people's life.

On this occasion, we express our people's sincere and profound gratitude to the Soviet Union, a reliable comrade and brother, for promptly giving our people the most comprehensive, effective and greatest assistance. We express our sincere and profound gratitude to the fraternal Lao and Kampuchean peoples, friends of the same combat trench who have stood shoulder to shoulder with us in opposing the common enemy and wholeheartedly assisted our people in combat and construction. We are grateful to other socialist countries for their unstinting and great assistance to our people's revolutionary cause. We sincerely thank friends all over the world for giving our people their extremely strong and precious international support.

Comrade deputies, after the great victory of the anti-U.S. war of resistance, our country entered a new era in which it has won complete independence and unification and is advancing toward socialism. In more than half a century of struggle under the party's leadership, our people have devoted 45 years to national liberation. Just as in the past 5 years, the historic task for our entire people in the future is to struggle hard to successfully build socialism and gradually move the country on the path of progress and modernization.

Our socialist revolution faces the hostile policy of the Chinese expansionists and hegemonists. At present, Beijing, aided and abetted by the war-mongering U.S. forces, is waging a type of all-out war of destruction against Vietnam, Laos and Kampuchea. They apply pressure and make provocations and military encroachments. They resort to psychological warfare and espionage to sow discord within our nation and sabotage our security. They are carrying out a policy of economic blockade while sabotaging production and causing disturbances in our markets. They try everything to slander and discredit Vietnam internationally. They muster traitors and their henchmen in each country and organize international reactionaries to oppose the revolution of the three Indochinese countries.

Sliding down the counterrevolutionary path, the Beijing authorities are stubbornly planning to weaken our country as well as fraternal Laos and Kampuchea, and are preparing conditions for a large-scale war of aggression to conquer all of this region. Our country, therefore, finds itself in a situation in which peace is threatened by the possibility of war.

We are struggling resolutely to maintain peace and to lose no time in building socialism. However, we must always be fully prepared to defend our fatherland. Independence and freedom are still the primary cause of our people and the fundamental and strong motivating feature of the revolution in our country.

Over a long historical period, our entire party, army and people will have to carry out two strategic tasks simultaneously--successfully building socialism and being constantly ready to fight and firmly defend our socialist fatherland and resolutely defeat every scheme and act of aggression of Chinese expansionism and hegemonism and international reactionary forces, thus contributing to the world revolution.

In a spirit of constant vigilance against the Beijing reactionaries and the bellicose imperialist forces, we must mobilize the efforts of our people and armed forces in all fields, and at the same time we must make the best use of the assistance of the Soviet Union and other countries in the socialist community to make our country strong enough to defeat the enemies under any circumstance and in any type of war they may provoke.

We must continue to develop the people's armed forces so they can be strong enough to serve as the main pillar of all-people national defense and as the core force in the people's war for national defense. It is necessary for the people's army to undergo intensive training in order to become a mighty and increasingly modern and regularized revolutionary army with an unshakable will to win, while at the same time participating in production and economic development in appropriate ways.

As for socialist construction, we will definitely continue to follow the general line as well as the economic line laid down by the fourth party congress, the basic concept of which consists of firmly upholding the proletarian dictatorship, simultaneously conducting the three revolutions, developing the collective mastery system in all respects, proceeding with socialist industrialization, establishing a large-scale production system with a modern industrial-agricultural structure, combining the central economy with regional economies within an integrated national economic structure and linking the economy with national defense. This line will be valid for the entire transition period for advancing our country, with an economy predominantly characterized by small-scale production, directly to socialism.

Imbued with that line and proceeding from the present economic conditions, we deem it necessary to work out a socioeconomic program for the 1980's with the following objectives:

1. To stabilize and take a significant step forward in improving the people's material and cultural life--first and foremost, to definitely solve the grain and food problem and meet the basic clothing needs of the entire society.

2. To overcome the most serious economic imbalances, create considerable sources of accumulation from within the national economy and establish the key features of the material and technical infrastructure for socialism.

3. To fully meet the needs of national defense and maintain national security.

The current situation indicates that the slow development of agriculture as regards the production of grain, food and industrial crops and utilization of labor and land is the main obstacle to realizing the three objectives mentioned above. Meanwhile, the greatest potential for development of our national economy at present lies in agriculture itself. Therefore, in the 1980's the primary economic task is to vigorously develop agriculture and take a significant step forward in advancing agriculture to socialist large-scale production within a rational industrial-agricultural structure. It is necessary to round up capital for investment, strengthen party leadership and improve state management in order to distribute and utilize most of our labor resources on a national scale; use to the fullest extent tens of millions of hectares of ricefields, forests and water surface; broadly apply science and technology so as to enable agriculture as well as forestry and fishery to fulfill the three basic tasks; fully meet society's demands for grain and food; supply light industry with raw materials to produce a large quantity of goods for export; and create firm bases for national industrialization.

All the economic sectors--especially industry, including heavy industry, communications and transportation and capital construction--must give first priority to developing agriculture. To develop agriculture as well as forestry and fishery along the line of large-scale production, we must use the district as the theater for organizing production and carrying out the division of labor; rationally utilize land and develop the various branches and trades; organize the people's material and cultural life; and build a new countryside.

To attain these objectives and orientations in the years ahead, we must firmly grasp and properly implement the following major tasks:

1. Highly concentrate the forces of the various sectors and echelons on the foremost important sector--namely agriculture--and ensure a stable supply of the minimum grain and food requirements for society while striving to promote consumer goods production.

By the use of uniform methods for organizing production, improving management and applying science and technology, we must exploit even better the advantages of our tropical agriculture and the great capabilities concerning crop multiplication, intensive cultivation and the reclamation of new and fallow land in order to quickly increase the production of rice and subsidiary food crops, set up major industrial crop areas and develop livestock breeding.

Along with developing agriculture, attention must be given to forestry and fishery. Importance should be attached to developing light industry for the production of consumer goods with domestic raw materials and to acquiring additional raw materials through imports so as to meet the most essential demands of the people for schooling, medication, household appliances and common transportation means. With the efforts of both the state and the people, we must take a new step forward in improving housing conditions, especially in the capital and the big cities.

2. Strive hard to quickly increase exports to finance imports, thus gradually overcoming the present trade imbalance and ensuring the supply of equipment and technical facilities for the ever-increasing demands of socialist industrialization.

Efforts must be made to increase the export of agricultural, forestry, maritime and mineral products and goods made to order, improve product quality and introduce major products of high value. In particular, we must satisfactorily export goods to CEMA member countries to honor the treaties already signed, gradually narrow the imbalance between exports and imports and advance toward balancing imports with exports. All sectors, localities and establishments are obliged to carry out this important strategic policy.

3. Focus construction work on a number of key projects and make the best use of existing heavy industry, communications and transportation establishments in order to boost agriculture, light industry and exports, and prepare for vigorous development of the national economy in the future.

Efforts must be made to develop electricity, coal, petroleum and gas exploration; produce more chemical fertilizers and other necessary raw material and supplies; and create conditions for gradually overcoming the imbalances in these respects. We must reorganize the engineering force as planned and increase investments, especially in-depth investments, in order to meet the demands for repair work, spare parts and common tools. At the same time, we must increase the engineering sector's capacity to systematically meet the demands for new technical equipment for various economic sectors. It is necessary to improve the organization and management of transportation; make appropriate investments to increase transportation means and expand communications networks; combine mechanized transportation with rudimentary transportation; pay utmost attention to transportation by water; and quickly increase the cargo handling capacity of the various ports and railroad terminals.

4. Speed up socialist transformation in the south and perfect socialist production relations in the north.

We must closely combine the transformation and reorganization of production with the development of production and consolidate cooperatives and production collectives throughout the country. In the south, the building of production collectives and cooperatives must be closely linked with the reallocation of land. In localities where production collectives and cooperatives have yet to be set up, land reallocation must be carried out to ensure that every peasant has his own land to till. It is necessary to improve the various contractual policies and forms and encourage peasants to practice intensive cultivation, increase crop cultivation and livestock breeding output and apply new scientific and technological processes to increase production volume. We must continue to transform private industry and commerce, effectively utilize the various economic elements and consolidate and strengthen the state-run and socialist economic elements in all spheres of activities.

5. Develop the important role of science and technology in exploiting the existing capacity and potential of the economy.

We must encourage the various economic sectors and establishments to apply new scientific and technological processes, increase labor productivity, upgrade product quality, create substitute raw material and supplies, and introduce new products. It is necessary to organize and step up the mass movement to develop innovations, rationalize production and improve technology. Every sector must strive to firmly master the science and technology related to its work, review and enrich experiences in production and management and supervise the production activities of its establishments with increasingly more progressive economic and technical norms. We must promulgate specific policies to motivate scientists to resolve practical and pressing problems facing the economy and make appropriate investments in scientific and technological research, application and development.

6. Improve economic management and the distribution and circulation of goods.

We must reorganize social production, overcome the state of fragmentation characteristic of small-scale production, set up the various economic-technical sectors, strive to develop regional economies while building the central economy in accordance with a rational structure and pay special attention to building the districts. Resolute efforts must be made to eliminate the system of management by bureaucratic subsidization, vigorously shift to socialist business management methods, realize collective mastery at the three basic levels, ensure agreement among the three interests and give appropriate encouragement to the laboring people. Attention must be given to ensuring economic results, upgrading labor and product quality and absolutely practicing thrift. Efforts must be made to cut expenditures by 10-15 percent in all activities, especially with regard to savings in grain, gas, oil, electricity, coal, raw materials and supplies, considering this a major policy of the state. We must strongly improve planning to correctly reflect the party's economic line, develop all potentials and meet all rational demands. It is necessary to correctly apply the principle of democratic centralism, establish a planning system consisting of three levels and pay attention to the plans developed by basic units and the districts.

In planning, it is necessary to apply the goods-money relationship and implement the system of economic accountability. Along with this planning, we should use and manage the unplanned market well. In managerial work as a whole, we should bring into full play all the economic levers, perfect management organizationally, improve cadre training and modify and improve working methods.

We should revamp trade and improve the systems of finance, banks, prices and wages to promote production, rationally distribute state revenues, gradually stabilize and improve the laboring people's livelihood, establish order in distribution and circulation on a new basis, ensure the concentration of staple commodities and materials into state hands, firmly control the currency, expand the organized market, guide and control the free market, eliminate speculation and contraband and overcome negativism.

7. Promote cultural, educational, public health and social activities and develop a new type of people and a new style of family life.

We should firmly maintain and develop our education consistent with the situation in each region, positively carry out educational reform, conduct training for skilled cadres and workers on a rational scale and after a rational pattern in line with the requirements of economic development, use technical and scientific cadres well, train more economic management cadres, qualitatively develop and enhance cultural, literary, artistic, sports and physical training activities, continue to struggle against reactionary and decadent culture, intensify disease and epidemic prevention and environmental sanitation, exploit domestic pharmaceuticals, ensure sufficient medicines for treating ordinary diseases, step up birth control, attentively care for mothers and infants and implement social welfare policies toward the wounded and invalids.

In the economic field, the greatest concern of our party and state is to step up production and stabilize and gradually improve the people's living conditions. The resolutions of the party Central Committee plenums, especially the resolutions of the sixth and ninth plenums, and the Political Bureau resolution on improving distribution and circulation, have been worked out to bring new positive factors in the mass movement into full play and to rectify mistakes in economic management. The struggle to implement these resolutions, especially to improve the forms of contracted quotas in agriculture and industry, has stimulated zeal in production and brought fruitful achievements.

This year, in normal weather conditions, the whole country has harvested a good spring-winter rice crop, with an output 220,000 tons higher than last year. The cooperatives which applied the contracted quotas system have been successful: their crop yield and output have considerably increased, the cooperative members' incomes are much higher, food deliveries to the state are speedier and the cooperatives have been truly strengthened.

In industry, despite difficulties in the supply of energy and raw material, some enterprises have introduced many innovations, initially overcome the bureaucratic administrative system of subsidization and have shown flexibility in production and business, thereby overfulfilling the state plan, getting more money for the budget and improving the workers' living conditions in accordance with the principle of distribution according to labor.

Whether we can achieve many and quick results in developing production and stabilizing and improving the people's living conditions depends largely on the dynamism, awareness, sense of discipline and struggle efforts of all our people. Spurred on by the achievements already scored, let all sectors, echelons and primary production units strive to overcome difficulties and fulfill the country's requirements.

With an amount of technical facilities and materials equal to or less than the assigned amount, we must produce better than before to turn out more assets for society. Every worker should actively surge forward to be a courageous and talented combatant and a diligent and intelligent master on the production and distribution front. Only by so doing can we cause an important change in the national economy, overcome the present difficulties, fulfill the immediate requirements and contribute to accelerating the socialist industrialization of our country.

Comrade deputies, over the past 5 years, following the U.S. imperialists' defeat in Vietnam, the three revolutionary currents have become increasingly stronger and have united into a powerful force rapidly changing the world balance of power. The struggles waged by the people of various countries for peace, national independence, democracy and socialism have constantly developed and won ever greater successes.

Seeking a way out of the economic crisis and attempting to regain their lost superiority, the war-mongering U.S. forces are pitting themselves against the revolutionary currents and turning their spearhead at the Soviet Union and other socialist countries. In this plot, they have found a new ally--the Beijing expansionist and hegemonists. The collusion between the Chinese reactionaries and the U.S. imperialists has become a prominent feature of the present international situation and poses a threat to world peace and stability, especially in Southeast Asia and Asia.

The main cause of world tension now arises from the aggressive and belligerent policies of the U.S. imperialists--ringleaders of the imperialists and international reactionaries. The U.S. imperialists are frenziedly increasing their military budget, stepping up the arms race on an unprecedented scale, introducing medium-range missiles into Europe, creating a cold war atmosphere and disrupting international detente. They are working hand-in-glove with other reactionary forces to interfere in Poland's internal affairs and split that country from the world socialist system.

More seriously, the U.S. authorities are colluding in the military field with the Beijing reactionaries and playing the China card. They are supplying more weapons to the dictatorial reactionary regimes in southwest Asia and Central America, and lending a hand to Israel in the Middle East as well as to the apartheid regime in South Africa. All these moves are aimed against the national liberation movements and at threatening the independence of many nonaligned countries.

Our people sternly condemn these bellicose schemes and actions of the imperialists and international reactionaries. We warmly welcome and fully support the Soviet Union's very important peace initiatives put forth by Comrade Brezhnev at the 26th CPSU Congress and its recent peace proposals relating to the Persian Gulf and the Mediterranean, aimed at clearing the international atmosphere and enhancing confidence among countries.

The SRV National Assembly and the entire Vietnamese people fully sympathize with the appeal of the USSR Supreme Soviet made by Comrade Leonid Brezhnev on the 40th anniversary of the Soviet people's Patriotic War against Hitler's fascism. This was a noble call of a nation and country which has made the greatest sacrifices and the greatest contributions to the peaceful life of all mankind. We firmly believe that this urgent call will be warmly welcomed by and will echo deep in the hearts of hundreds of millions of people on earth.

Peace is the prerequisite for human existence and the common fruit of the struggle of the peoples of all nations. Defending peace is the primary political task of all nations. All people of conscience in the world are deeply aware that the gains of world peace and detente must be defended. The dark and adventurous designs of the belligerent imperialist and reactionary forces must be checked. The SRV National Assembly and the Vietnamese people are determined to work hard for world peace, security and cooperation.

Our party and state reaffirm the continuation of the foreign policy laid down by the fourth party congress--a principled policy which has been tested by experience and proven to be correct.

We have done our best to develop all-round cooperation with the Soviet Union and other socialist countries on the basis of Marxism-Leninism and proletarian internationalism. We consider all-round cooperation with the Soviet Union under the Vietnamese-Soviet treaty of friendship and cooperation as a foundation stone of the international line and foreign policy of our party and state, as a matter of principle stemming from the revolutionary nature of the two Marxist-Leninist parties and socialist states sharing the same ideals. This is a long-term, basic strategy ensuring the success of our people in national defense and socialist construction and the strengthening of socialism on the Indochinese peninsula.

To consolidating and developing the special relationship between our country and fraternal Laos and Kampuchea is vital to the destiny of the three countries. It is a firm guarantee of the defense of independence and successful socialist construction in each country and an important factor for peace and stability in Southeast Asia. On the basis of mutual respect for independence, sovereignty, territorial integrity, respect for each other's legitimate interests and equality and mutual trust, we have wholeheartedly accomplished our international obligations toward the two fraternal countries and joined them in close cooperation in all fields to ever more effectively serve the economic construction and national defense of each country.

We express our heartfelt support for the struggle of the Polish United Workers Party and of the communists and people of Poland against the reactionary forces to smash their counterrevolutionary plans and to defend the revolutionary gains and the vital interests of socialist Poland. We reiterate our strong solidarity with the communists and fraternal people of Poland. We firmly believe that with the support of the Soviet Union and other countries of the socialist community, they will win victory in this difficult and complex struggle.

We are resolved to support the fraternal Afghan people who, with the support of the Soviet Union and other socialist countries, are struggling to defend the gains of the Sawr revolution. We support the just struggle of the Palestinian Arab people under the leadership of the Palestine Liberation Organization against Israeli expansionism for the recovery of their fundamental national rights, including the right to set up their own state.

Our people sternly condemn the Israeli expansionists' provocative attacks against Syria and the Lebanese people and strongly denounce Israel's bombing of a nuclear reactor in the Republic of Iraq, which we consider a blatant act of aggression that creates a very dangerous situation in the Middle East.

Our people highly value India's role and warmly support the proposals made by India and other nonaligned countries aimed at easing the international situation and contributing to peace and stability in Asia and the rest of the world.

We have always sided with the peoples of Cuba, Nicaragua and Grenada in their struggle against the U.S. imperialists' threat of aggression. We fully support the Salvadoran people's courageous struggle to overthrow the fascist junta and to block U.S. intervention. Our people express warm sympathy and wholehearted support for the fraternal Namibian people and other nations in southern Africa struggling for national independence and against domination by the South African apartheid clique.

We are against the convening of the so-called international conference on Kampuchea masterminded by the Chinese authorities and aided and abetted by warmongering forces in the United States and international reactionaries to interfere in the internal affairs of the PRK. Recently, the three Indochinese countries made new proposals aimed at solving, through direct dialogue and negotiations, problems in relations between the ASEAN and Indochinese countries. Once again, we reaffirm that these are correct solutions fully in line with the interests of the Southeast Asian countries, namely peace, friendship and cooperation.

The Vietnamese people are resolved to struggle to foil all schemes of aggression and annexation by the Chinese powerholders against our country. But we are not opposed to the Chinese people; we unite with the Hoa people who have long lived in our country and regard them as Vietnamese citizens.

Upholding our friendly policy toward the Chinese people, we wish for normalization of relations between the two countries on the principles of peaceful coexistence, mutual respect for each others' independence and sovereignty and the settlement of disputes by negotiation. However, the Beijing authorities have rejected all of our proposals for negotiation and are creating tension in relations between the two countries. The Chinese side must bear full responsibility for all consequences arising therefrom.

Dear National Assembly deputies, in order to implement the Constitution and develop the laboring people's collective mastery, it is imperative to struggle and perfect the system in which the party leads, the people control and the state manages. As an immediate task, we must truly arrive at various appropriate and effective forms of activities and working methods to reflect the correct relationship among the party, the state and the people and create an integral strength of collective mastery over various fields and at all echelons.

The party must further enhance its leadership, especially its organizational ability, on the economic battlefront. It must always firmly control the situation of production and life and the development of the mass movement in order to promptly set forth and perfect various guidelines and policies by intensifying its inspection and control tasks, promptly detecting new factors and quickly correcting deficiencies.

The party must attentively develop the state by promoting the efficiency of the state machinery in economic and social management and by resolutely overcoming the situation in which the party takes on the duties of the administration. A strong and firm state reflects effective leadership by the ruling party and constitutes a guarantee of the laboring people's collective mastery.

The party's leadership must be manifested through the activities of various party organizations, cadres and party members who have complied with various policies and guidelines for transformation and construction, have implemented and protected the people's collective mastery, have observed labor discipline and have respected and abided by state law.

The party must struggle resolutely against degeneration in its ranks and deal severely with those cadres and party members who have misused the socialist assets, accepted bribes and oppressed the people.

In order to develop and contribute effectively to building a system of collective mastery, every worker must profoundly realize his role and responsibility as a master. He must clearly fulfill a citizen's duties and understand the benefits as stipulated in the Constitution.

Under the party's leadership, the laboring people implement their collective mastery--mainly through the state--and at the same time through various revolutionary organizations and organizational and operational forms and methods they themselves create in line with the different conditions of their economic and social lives. The laboring people implement their collective mastery at all three levels, especially at the grassroots level where the three revolutions usually take place with a direct impact on the lives and interests of each citizen.

Collective mastery must be manifested in the emulation movement for production and thrift in rural areas, cities and cooperatives, factories and state farms. The mass organizations are dutybound to mobilize, organize and foster the revolutionary movement, making it constantly seething and uninterrupted. The state agencies must establish by all means a managerial system that can strongly stimulate the laboring people to work hard in the interests of the society, the collectives and themselves. In this connection, we can draw many valuable lessons from the experience of advanced models. All sectors and echelons must review and popularize these lessons in support of the socialist emulation movement.

Our state must be a major tool with which the laboring people implement their collective mastery and the dictatorship of the proletariat. It must ensure that the National Assembly--the highest organ of state power--truly develops its role in making decisions concerning laws and other major problems of the country, and in supervising and controlling the operations of various central government agencies. It must ensure that the people's councils at all levels actually operate and contribute effectively to the comprehensive development of their localities in order to continue to be the local agents of state power responsible to the local people and the higher administrative echelons.

The state must also ensure that the people's elected agencies maintain a regular relationship with voters in order to reflect the masses' legitimate suggestions and aspirations.

In this first session of the Seventh National Assembly, we will elect the National Assembly chairman and vice chairmen, the State Council, the Council of Ministers, the chief justice of the People's Supreme Court, the chief procurator of the People's Supreme Procuratorate, the National Defense Council, the Council of Nationalities and the various commissions of the National Assembly in accordance with the provisions of the Constitution.

This National Assembly must perfect the organization of state agencies and improve their operation. It must specifically emphasize the perfection of economic management agencies from the general to the sector management agencies in close connection with the establishment of a new economic structure and a new managerial system. We must make the economic management machinery more streamlined and more dynamic so that it can stay close to and support primary production units, reducing the number of intermediary levels. We must clearly determine the functions, duties and operational methods of production and business organizations and administrative and economic management agencies. The responsibility of central and local governments for labor division and management classification must be clearly defined to ensure smooth, systematic and effective operation of the economic management machinery from the higher to lower levels.

While trying to eliminate the administrative ill of subsidization, we must relentlessly struggle to overcome bureaucracy, authoritarianism and officiousness which cause trouble for the people.

Strengthening the socialist legal system is an urgent requirement to enhance the effectiveness of state management, ensure the people's collective mastery and fulfill the function of the proletarian dictatorship. This requires that we urgently establish, complete and perfect step by step the legal system of our state, especially economic laws, and ensure good support for the implementation of prescribed fundamental tasks. Attention should be given to conducting basic and advanced training of judiciary cadres and to perfecting and strengthening the agencies in charge of judicial work.

We must establish a social management system according to law, conduct propaganda to explain the Constitution and laws to the people of all strata and instill a law-abiding sense in the people, making them voluntarily respect and scrupulously observe laws. The party and state must take stern action in the struggle against all violations of the people's mastery, severely punish those cadres and personnel who abuse their authority by violating laws and resolutely suppress counterrevolutionaries, exploiters dodging rehabilitation, villains, thieves, grafters, speculators and smugglers.

The state must firmly maintain social discipline, oppose all manifestations of nonchalance and adequately use both political and economic powers to prevent all negative phenomena and stop the situation of disregard for the law.

Dear deputies, our people are now faced with a very heavy historic mission. We have just begun socialist construction throughout the country, which entails a host of new and complicated duties. The Beijing expansionists still continue their aggressive plots and have regularly sabotaged us. Our people must surmount several obstacles and difficulties to carry out their revolution. Nevertheless, the prospects for our revolution are very bright. We are on the correct path. We have abundant capabilities to develop production and the economy. We have a powerful force to firmly defend our fatherland. Our allies are reliable and our friends are sincere.

In the past 5 years, we have faced very serious ordeals and have won great victories. In the days ahead, we will certainly be able to develop our advantages, exploit our potential well, overcome immediate difficulties and continue to move the Vietnamese revolution steadily along the path of independence, freedom and socialism. No enemy can subdue us and no difficulties can check our people's advance!

The slogan for our action now is "All for the socialist fatherland and the people's happiness." The people of all nationalities throughout the country--workers, peasants, intellectuals, youths, women and the people's armed forces--unite, devote all their wisdom and strength to the struggle and advance bravely!

Implementing great President Ho Chi Minh's sacred testament, the Vietnamese Communist Party resolves to struggle and sacrifice for the fatherland and the people and to remain worthy of the confidence of all people throughout the country.

We are convinced that the Seventh National Assembly will outstandingly fulfill its mission to unite and mobilize our people of all strata to victoriously build and firmly defend Socialist Vietnam, thus making a worthy contribution to the world's people's revolutionary cause.

SPEECH BY COUNCIL OF STATE CHAIRMAN TRUONG CHINH

BK051433 Hanoi Domestic Service in Vietnamese 1100 GMT 5 Jul 81

[Speech at closing meeting of first session of the Seventh National Assembly on 4 July in Hanoi TAP CHI CONG SAN No 7, Jul 81 pp 18 & 20--previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 128, 6 Jul 81, pp K5-K7]

[Text] The presidium, comrade deputies: On behalf of the comrades elected to the leading organs of our state and in my own name, I sincerely thank the National Assembly for its confidence.

We are profoundly aware that, by electing us, the comrade deputies have granted us a great honor and, at the same time, entrusted us with very weighty responsibilities. First of all, we have the responsibility to apply the line and policies of the VCP so as to successfully build socialism; firmly defend the socialist fatherland; firmly maintain public order and security; develop the people's right to collective mastery; and strengthen the state in all respects, thereby enabling the state apparatus to effectively manage the economy and society.

We will strive to ensure that the National Assembly and the people's councils at all levels operate in a practical and effective manner, worthy of being organs of state authority at the central and local levels, and that the popularly elected deputies regularly meet with voters and satisfactorily fulfill their duties.

Together with the National Assembly, we will strengthen our supervision of the implementation of the Constitution and Laws; continue to concretize the Constitution by enacting laws and regulations; strengthen the socialist legal system; build the social management system according to law; firmly maintain state law; oppose all criminal acts; combat bureaucratism, authoritarianism and officialism; struggle against speculation, embezzlement and bribery; and oppose regionalism, departmentalism and individualism.

We will make every effort to carry out the socialist transformation of the national economy; build and perfect socialist production relations; improve economic management; end the administrative system of subsidization; and establish socialist trade. In the immediate future, we will strive to satisfactorily carry out distribution and circulation, and stabilize and gradually improve the material and cultural lives of our people.

It is our belief that, through our own efforts and benefiting from the supervision of the National Assembly and the cooperation of all comrade deputies. we will be able to fulfill our duties and will not betray the confidence of the National Assembly and people throughout the country.

Comrade deputies: Five years ago, on 2 July 1976, at this same historic Ba Dinh Conference Hall, the Sixth National Assembly decided to name our country the Socialist Republic of Vietnam.

Since then, our state has been incessantly consolidated and our people have recorded extremely great successes in the struggle against the Chinese expansionists and their henchmen, the Pol Pot-Ieng Sary clique. We have defended our beloved fatherland, helped the Kampuchean people eliminate the scourge of genocide, promulgated the new Constitution, achieved national reunification in the state field, initially built the material and technical bases of socialism, strengthened our friendship and cooperation in all fields with the Soviet Union and other socialist countries, strengthened our solidarity with Laos and Kampuchea, and contributed to the defense of peace in Southeast Asia and the world.

As Comrade Le Duan, general secretary of the VCP Central Committee, stated in his important speech at the opening of this National Assembly session, our people are faced with extremely heavy historic tasks and their revolutionary cause still has to overcome many difficulties and obstacles, but the prospects are very bright and fine for the revolution in our country. We have good reason to affirm that under the leadership of the VCP, with ardent patriotism and love for socialism, with profound internationalist sentiments and with the traditions of unity, diligence, valor and creativity, it is certain that our people will victoriously carry out the strategic tasks of the Vietnamese revolution, successfully build socialism, firmly defend their beloved fatherland and fulfill their international obligation.

We pledge to devote all our hearts and minds to serving the fatherland and the people, fulfill the important tasks entrusted by the National Assembly and to strive, along with the entire people, to realize Uncle Ho's last wish to successfully build a peaceful, independent, democratic, prosperous and powerful Vietnam and make a worthy contribution to the world revolutionary movement.

We pledge to strive to take part in the struggle of nations and peoples throughout the world for the lofty objectives of our times--namely peace, national independence, democracy and socialism--and for international detente and security.

In this spirit, we heartily welcome and totally support the 23 June 1981 appeal by the Supreme Soviet to the national assemblies and peoples of various countries. This is a very important document typical of the Leninist foreign policy of the Soviet Party and state that is aimed at constantly waging a struggle to ease international tension and protect world peace. This document clearly reflects the will of parliamentary circles, responsible statesmen and billions of peace-loving people who desire to replace confrontation with dialogue in the current tense international situation caused by the policy of pursuing the arms race, intervention and aggression of imperialism and international reactionaries.

Dear comrade deputies, at present our people are launching a socialist emulation drive to greet the fifth national party congress with achievements. I hope that you will, in your official capacity, enthusiastically participate in this drive and encourage the people of all walks of life to do the same in order to successfully carry out the 1981 state plan and create the impetus for the rising emulation movement to implement the resolution of the forthcoming party congress.

I ask the comrade National Assembly deputies to convey, upon returning to your localities, our warm greetings to the compatriots and combatants throughout the country.

May the comrade deputies have good health and record outstanding achievements in productive labor, work, combat and study so as to make a worthy contribution to the cause of building a peaceful, independent, unified and socialist Vietnam!

SPEECH BY COUNCIL OF MINISTERS CHAIRMAN PHAM VAN DONG

OW051251 Hanoi Domestic Service in Vietnamese 1438 GMT 4 Jul 81

[Speech at 4 July closing session of the first session of the Seventh SRV National Assembly, published in Hanoi TAP CHI CONG SAN in Vietnamese No 7, Jul 81 pp 22-23--previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 128, 6 Jul 81, pp K7-K8]

[Text] Presidium members, comrade deputies: On behalf of the comrades of the Council of Ministers newly elected by the National Assembly, I wish to express to the comrade deputies our sincere and profound gratitude. [applause]

The trust you place on us is tantamount to being a rigorous demand, a rational expectation. At the same time it is the ardent, pressing demand and expectation of our people in the situation facing our country and our people for carrying out their tasks of building and defending our beloved socialist Vietnam fatherland. Each and every member of our Council of Ministers, through his sense of responsibility and revolutionary conscience, manifests his staunch and persevering will to struggle to fulfill his functions and tasks in accordance with the letter and spirit of the Constitution and the law on organizing the Council of Ministers newly adopted by the National Assembly. We pledge to devote all our energies and talents to develop the great past achievements, the available and widely emerging advantages we can find in all fields so as to overcome step by step the various difficulties, especially our weaknesses and shortcomings in our overall managerial tasks, mainly in managing the national economy and the people's lives.

An advantage that we must particularly develop is our country's splendid overall relations with the Soviet Union, with neighboring Laos and Kampuchea, with all other socialist countries, and its broad relations with fraternal countries and many other countries for the sake of the peace, friendship, national independence, democracy and social progress all over the world. We will strive to apply creatively and effectively the party's line whose major points were presented by Comrade Party General Secretary Le Duan at the National Assembly. They are the strategic policies that lead us in our steady advance along the path of developing our national economy at present and in future. We will strive to stimulate, motivate and promote the overall potential of all sectors, localities and grassroots levels so as to create a comprehensive strength, a comprehensively strong posture, which at the same time are an extremely great strength and posture that will vigorously grow in the process of carrying out the right to collective mastery under the socialist system of our laboring people as institutionalized in many forms, at all levels and in all domains.

Based on all this, we will strive to strengthen the managerial capabilities of the state--an instrument of the dictatorship of the proletariat. We will strive to satisfactorily carry out state plans to manifest the superiority of the socialist system through practical deeds in everyday life and in the political, economic and cultural spheres. In carrying out our overall tasks, we will strive to act in accordance with the sacred testament of venerated and beloved President Ho Chi Minh. We will strive to be faithful servants of the people because only by being faithful servants of the people can we become their good servants. That is our most splendid, highly cherished aspiration.

We must all be deeply aware that our Vietnamese nation, our laboring people, our people in general are very rich in revolutionary mettle, valor, intelligence and creativity. Our people are always willing to struggle selflessly for the sake of their fatherland and socialism. They have established immortal, epic deeds in past and contemporary history and now, with the SRV's growth, will score victories whose importance we cannot yet assess. [applause]

Through this statement we reaffirm once again our weighty and noble tasks and at the same time express the enthusiasm and boundless confidence that we, that all of us, place in our Vietnamese people's glorious undertaking. [applause] In so doing we also invite the clearsighted and strict supervision by the National Assembly, by the comrade deputies who represent our heroic Vietnamese people.

Devoting everything to benefit our socialist fatherland, our people's happiness, let us steadily advance. [applause]

SRV NATIONAL ASSEMBLY'S STATEMENT RESPONDING TO THE SUPREME SOVIET'S 23 JUNE 1981 APPEAL TO THE NATIONAL ASSEMBLIES AND PEOPLES OF VARIOUS COUNTRIES OF THE WORLD

OW041613 Hanoi VNA in English 1548 GMT 4 Jul 81

[4 July 1981 statement, published in Hanoi TAP CHI CONG SAN in Vietnamese No 7, Jul 81 pp 24-25--previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 128, 6 Jul 81, pp K8-K9]

[Text] Completely sharing the assessment of the world situation and the present primordial task of defending peace as pointed out in that noble appeal, the National Assembly of the Socialist Republic of Vietnam considers that the fundamental cause of the present tension in the world is the warmongering and aggressive policy of the U.S. imperialists.

They are frantically increasing military expenditures, stepping up the arms race, carrying out the plan of deploying medium-range nuclear missiles in Western Europe aimed at obtaining military supremacy, rekindling the cold war and sabotaging international detente. U.S. imperialism is using the other imperialist forces and other reactionary forces to interfere into the international affairs of Poland with the aim of severing Poland from the socialist community. It has increased its arms supply to the reactionary regimes in Southeast Asia and Central America, increased support for the Israeli aggressors in the Middle-East and the racists in South Africa in order to oppose the national liberation movement, threatening peace, security, national independence and sovereignty of many non-aligned countries.

A striking feature of the present international situation is the increasing collusion between the United States and the Beijing reactionaries against the Soviet Union, the socialist community the revolutionary movement and world peace. With the complicity of U.S. Imperialists, the Chinese reactionary ruling circles are intensifying their policy of expansionism and hegemonism, continuing to provoke and threaten to invade Vietnam and Laos, support the genocidal Pol Pot-Ieng Sary clique, grossly interfere in the internal affairs of Kampuchea, press a number of countries to participate in the so-called "international conference on Kampuchea", thus undermining the genuine revolutionary cause of the Kampuchean people, sowing division between the ASEAN and Indochinese countries and causing tension in Southeast Asia.

In face of this situation, the Supreme Soviet calls on the parliaments and peoples of all nations in the world to actively work for peace, international security and cooperation. At the same time, it declares that the Soviet Union is threatening nobody, and is not striving to gain military superiority nor wants confrontation with any other country, but is [word indistinct] to conduct right now negotiations aimed at checking the arms race, carrying out disarmament and maintaining and promoting detente. Following the peace program presented at the 26th Congress of the Communist Party of [the] Soviet Union, the appeal of the Supreme Soviet reflects a high sense of responsibility of the Soviet Union, a multinational state which has made the most sacrifices and the best contributions to the peaceful life of humanity, and is playing the role of the firm bastion of world peace and revolution.

The National Assembly of the Socialist Republic of Vietnam fully supports the appeal of the Supreme Soviet of the USSR and is confident that it will win positive support from the parliaments and national assemblies of all countries and of the ruling and responsible circles throughout the world as well as warm response from the entire progressive mankind.

The Vietnamese people have made untold sacrifices in the protracted struggle against the most brutal imperialist and reactionary forces for independence, freedom and national sovereignty. That is why they are all the more conscious of the value of peace and deeply aspire for peace in order to rebuild their country. The National Assembly of the Socialist Republic of Vietnam and the entire Vietnamese people pledge to struggle side by side with the Soviet Union and the other socialist and peace-loving countries and the whole progressive mankind against the warmongering, aggressive, expansionist and hegemonistic policies of the imperialists and international reactionaries, for a peaceful, stable, friendly and cooperative Southeast Asia, for a lasting common peace on our planet.

RESOLVED TO ACHIEVE SUCCESS ON THE GOODS DISTRIBUTION AND CIRCULATION FRONT

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 26-33

[Article by Do Muoi]

[Text] The situation concerning the economy and life urgently calls for drastic and comprehensive changes in the activities related to the distribution and circulation of goods. To bring about these changes it is necessary to carry out actively relatively uniform measures and policies in all spheres of activities--financial, trade, market management, pricing, wages and so forth--in accordance with the orientations and viewpoints set forth in resolution number 26 of the Political Bureau. The most important task is to push production ahead vigorously and intensify control over the sources of goods so as to create the conditions for stabilizing life, finances, prices, the currency and the market. The crucial problem in the distribution and circulation of goods at present is that of prices and wages.

Prices constitute an economic category that bears a highly synthetic character; they are influenced not only by the law of value but also by many other economic laws as well as by economic, political and social conditions; and they reflect in general many major relations in the economy. Therefore, prices constitute the most complicated problem related to the interests of all classes and strata of people in society; and this problem has become especially complicated in the first stage of the transition period toward socialism in our country--a stage in which the economy still consists of various elements and the struggle between socialism and capitalism is going on fiercely.

Upholding the dictatorship of the proletariat, the state can and should use prices as a sharp and effective tool to control the national economy. In view of this, the state should devise a correct pricing policy that is suitable for each stage of the revolution and that varies flexibly to meet the requirements of the political and economic tasks of that stage.

By 1964, after 10 years of socialist transformation and socialist construction in the North, our party and state had established a relatively rational pricing policy that had the effect of stimulating the development of production, controlling the sources of goods, insuring market order and stabilizing the people's life. However, since 1965, due to the war, we have not had stable conditions to continue establishing and perfecting the pricing system. Our shortcoming is that at a time when the situation and tasks of the revolution have undergone basic changes as a result of the transition from peace to war and then back to peace and national reunification, the pricing system, instead of being adjusted promptly, has been "stabilized" in a rigid manner. Although some prices have been adjusted, this has only been done as a passive patchwork job, resulting in new irrationalities. Therefore, the current pricing system, with its many contradictions and weaknesses, is no longer suitable and causes many negative effects. Prices are now no longer based on value because the bases for determining the value of goods have changed drastically--including the changes in the costs of production and circulation, the serious imbalance between supply and demand and the rapid increase of prices of imported goods on the international market. The patchwork job done in the adjustment of prices has rendered irrational the ratio of prices of agricultural products over the prices of industrial goods. Prices are now no longer capable of fulfilling their functions regarding calculation, distribution and incentive. Irrationalities in the pricing system have hindered production and the circulation of goods and money, resulting in even higher state expenses to cover losses. Prices thus no longer serve as a sharp tool for the state-run sector to struggle effectively against the "free" market.

In view of this, the objective requirement of economic construction in the new stage is to establish a new pricing system; overcome a situation in which selling prices can neither cover production expenditures nor insure a rational margin of profit for production establishments and the accumulation of capital for the state; and eliminate falsely low prices brought about by the policy to compensate for losses and low prices that has so far been widely practiced under the financial subsidization system. However, this is a big and difficult task as prices cannot be adjusted en masse ina hasty manner.

We know that prices and wages are closely related to each other. Given a fixed income, a change in prices will affect real income and the living standards of workers and civil servants will change accordingly. Therefore, in studying the problem of prices, especially retail prices of consumer goods--prices that are directly related to wages--we should not fail to consider the relationship between prices and wages.

In our country, during the period 1955-65, relations between wages and prices were tackled in a relatively satisfactory manner. The livelihood of office and manual workers and of the people of the various strata was further improved. Relations in income between workers and peasants were relatively rational.

Since then, due to the war and its consequences, many aspects of the economy have become imbalanced. Labor productivity has not shown any increase but has declined. We have not had favorable conditions to improve the wage system and decide on a wage increase. The wage system established in 1960 basically remains unchanged even though wages have increased nominally. Faced with the need to insure the livelihood of office and manual workers, the state has to maintain the retail prices of consumer goods, especially those essential for their livelihood. Due to economic difficulties, the quantities of goods provided by the state at established prices are too insufficient to be used to compute wages. Office and manual workers have had to use their salaries to buy additional goods from the "free"market at a much higher price than the state-established retail price. The relatively rational relationship between prices and wages previously established has been destroyed and the livelihood of office and manual workers has faced many difficulties.

What we have to do now is to strive to re-establish gradually a rational relationship between prices and wages. In a situation where the economy is still fraught with difficulties, we have no choice but to readjust prices at a time when conditions are inadequate for improving the wage system and affording wage increases. Therefore, in order to insure the people's livelihood, when dealing with prices and wages, we must adopt appropriate measures, taking into account the effect of prices on real wages. We must take necessary steps to insure that changes in prices will not adversely affect real wages, but instead will create conditions to increase real wages gradually, thus contributing to stabilizing and improving the livelihood of office and manual workers.

Facts show that we would be unable to stabilize the economic and financial situation, step up production and trade and, at the same time, stabilize the livelihood of the laboring people, especially office and manual workers, if we failed to tackle the problems of prices and wages.

That is why the Political Bureau has given this instruction: "At present, conditions are inadequate to improve prices and wages. Relying on the party's and state's main guidelines and regarding plans as an essential base, we must consider further improving the state-established price system in such a way as to suit the actual situation and then progress gradually toward the establishment of an official price system. We must not use the free market price (which is fraught with profiteering and sabotage factors) as a control base for prices and economic activities. We must take control of two price systems: the first one is the relatively stabilized price system determined and enforced by the government (the purchase price for goods obtained from compulsory sales, the selling price for production means under two-way economic contracts, the retail price for essential goods and so forth). The second one is the price system applied flexibly in the trade transactions between the state-owned trade sector and cooperatives.

In parallel with further adjusting the price system, we must give wage subsidies to office and manual workers. The state-run trade sector must seek every way possible to insure the supply of all kinds of essential goods. All production sectors must base themselves on government policies and correctly apply various contractual forms such as piecework and product-based pay systems in order to increase incomes; and must strive to insure that the real salary of office and manual workers will not diminish, but will instead become more and more stabilized."(1)

Guidelines for distribution in accordance with the spirit of the Political Bureau's directive number 26 consist of: "Improving prices and wages and proceeding toward abolishing subsidies in order to return to the normal trading form of using a mono-price system." Presently faced with a situation in which the economy has yet to be stabilized and wherein there remains a great imbalance between supply and demand; however, if we increase the price of goods and adopt a mono-price system in trading in order to equalize supply (total amount of goods in stock) and demand (total buying power), we would only be able to achieve a temporary balance in the total. This can in no way solve other aspects of balance within the structure of goods in stock and the demand by various kinds of consumers for different items. Although the total amount of goods in stock, especially those goods essential for the people's livelihood (the price of which is now under state subsidy) has been kept up with the total buying power, we still cannot get enough supplies of these goods and their prices will certainly continue to fluctuate extensively. Additionally, in a situation in which goods are still in short supply, affluent people (whose money is earned primarily from their dishonest businesses) will compete for the purchase of all available goods, leaving nothing for people with limited budgets (most of them being office and manual workers). The state can also adopt a subsidy system to maintain a price very close to that of the "free market." In so doing, however, the state-established price will depend on the "free market" price (which is affected by the profiteering and sabotage factors). This will result in constant wage increases and the circulation of an increasingly larger amount of cash.

Experience gained by countries that have gone through wars shows that only after restoring production and achieving a balance between supply and demand (by increasing labor productivity, intensifying collection and purchase, and preparing a fairly sufficient source of goods and supplies), will it be possible to eliminate the supply system, stamps and coupons and the dual-pricing system; establish a new system of prices that are higher than supply prices but lower than commercial prices; and at the same time, effect wage reform (wage increases).

We know that if the supply system is retained, there is the possibility of abuse, speculation, shady dealings, theft and so forth. At a time when the economic situation is not yet stable and a serious imbalance still exists between supply and demand, however, we must choose between the two alternatives--either to retain the supply system with its possible abuse, speculation, shady dealings, theft and so forth and cope with these negative practices resolutely, or drop the supply system and let workers and civil servants buy goods on the market (either state-run or private) at prices that they cannot afford.

We retain the system of supplying essential commodities to workers and civil servants but we do not tolerate the system of subsidization; and it is necessary to reduce both the number of supply items and the number of recipients. We can, depending on the development of production and the market situation in the various areas (rural or urban), appropriately determine the variety of supply items. At the same time, we must actively take measures against speculation, theft and so forth; improve the methods and organization of supply; isolate supply stores from commercial shops and form them into a separate network; intensify control and management; and strengthen state discipline.

We deem that in the present situation, the party and state are following a correct line and adopting a rational policy in adjusting the pricing system along with giving wage allowances to workers and civil servants and supplying them with essential commodities at stable prices so as to guarantee their real income.

To carry out the aforementioned orientations and viewpoints for solving the problem of prices and wages, it is necessary to effect the following measures in a uniform and active manner:

1. It is necessary to continue improving activities in the field of goods distribution and circulation so as to insure satisfactory development of production and state control over the sources of goods.

The results of the task regarding grain sales and the procurement of grain and other farm produce in the Mekong River Delta in the past show that the procedures and policies on buying and selling prices in practice between the state and peasants are appropriate. We must, on the one hand, continue to perfect buying and selling procedures and the new price system applied for grain and other farm produce on the basis of determining a rational price indexing relationship between industrial goods and agricultural products--which is now gradually taking shape--and of making studies as to how to apply the new system of the price indexing relationship to other products. On the other hand, we must consider establishing a rational and stabilized buying and selling system to be applied in trading transactions with agricultural cooperatives and production collectives.

The North and various provinces in former Zone 5 must, in this 5th month-spring crop, maintain the directed prices in compulsory trading transactions under two-way contracts signed between the state and agricultural cooperatives, and simultaneously must increase the buying and selling of agricultural products in excess of their quota (or the barter trading of goods in kind in accordance with a rational system of the price indexing relationship). Additionally, it is necessary to consider gradually adjusting the directed-price system for buying and selling activities in such a way as to suit the current actual conditions on the basis of establishing a more rational price indexing relationship between industrial and agricultural goods. With regard to the fishery, artisan and handicraft sectors, the state must consider readjusting the buying and selling prices in such a way as to suit the newly-established system of the price indexing relationship in industry and agriculture.

Scrupulously implementing directives 25-CP, 26-CP and 64-CP of the Council of Ministers in order to gather the sources of goods produced by the state-run economic sector into the hands of the state, enterprises must submit all the products they made under the three-part plan to the state-run trade sector. We must not let any enterprise, sector or locality retain some of their products without permission to trade them in "many ways" or to distribute them among their own members. The state must also take control of an absolutely great part of the source of goods in the areas of artisan industry and handicraft.

2. Satisfactorily manage the market.

Actual experiences have shown that, in order to satisfactorily manage the market, the state must uniformly and comprehensively apply three kinds of measures--economic, administrative and educational--of which economic measures are the mainstay. Recently, economic measures have not yet been satisfactorily applied in market management. The state-operated trade sector and marketing cooperatives have continued to flounder in confusion regarding trading methods. They have not yet overcome red tape, bureaucratism and subsidization, have not broadened their trade and service activities in the three fields of collection and purchase, wholesale and retailing and service, and have not vigorously and flexibly implemented the dual-pricing policy. For this reason, they have not yet been able to effectively struggle against the "free" market. Moreover, we have failed to closely combine economic measures with administrative and educational measures and to promptly punish acts of speculation, smuggling and economic sabotage. We have also failed to satisfactorily educate the masses so as to prompt them to join the state in struggling against and checking speculation, smuggling, economic sabotage and so forth, as well as in satisfactorily managing the market and maintaining public order and security.

In the coming days, in order to promote production, control the market, normalize the people's living conditions and stabilize prices and finances, the state must resolutely carry out stringent market management measures such as promulgating an order prohibiting private individuals from trading a number of commodities on the market which fall under the exclusive management of the state--including gold, foreign currencies, gasoline and oil, fertilizers, insecticides, cigarettes and so forth, and some luxury imports such as foreign-made cigarettes, beer and win. Any violator of such an order must be dealt with according to the law and his goods confiscated. Anyone engaged in trade must register and display the prices of his goods. We must strictly control all trading activities in the market. Any violation of the state regulations on market management such as failure to register one's business, selling goods above posted prices, and so forth must be dealt with severely. We must coordinate the activities of the economic public security forces with mobilizing the masses at the grassroots level to track, unmask and punish speculators and smugglers. We must pay attention to punishing cross-border traffickers, embezzlers, bribe givers and takers and economic saboteurs.

Along with implementing administrative measures, we must urgently expand socialist trade in all the fields of collection and purchase, wholesale, retailing and service so as to control most of the wholesale activities, dominate retailing and exert mastery over the market. We must expeditiously develop the state store and marketing cooperative network to satisfactorily sell goods to the people, supply goods to cadres and workers and take over the market. We must immediately establish a collection and purchase network and link it with the network for the procurement of supplies and commodities--such as gasoline and oil, fertilizers and so forth--and the bank network so as to satisfactorily meet the requirements of production and collection and purchase while making shopping more convenient for the people. The central sectors and local authorities must take the initiative in adopting all necessary measures to increase goods supplied and firmly control the sources of goods in the state-operated sector, in cooperatives, in individual hands, in the production sector and in the trade system. This is for the purposes of promoting the retailing of goods, lowering prices in the "free" market and preventing sudden increases in market prices.

3. Satisfactorily carry out goods distribution.

In view of the scarcity of goods, goods distribution is a very important measure aimed at insuring that the various party and state positions and policies regarding distribution and consumption are satisfactorily implemented. We must adopt a correct stand and policy concerning goods distribution.

At this juncture, our goods distribution policy must fully reflect the following principles:

--The rear must care for the front, and the state and the people must care for the armed forces;

--Grain and foodstuffs must be concentrated for the cities and industrial zones; adequate amounts of industrial goods must be set aside for distribution to the rural areas; this distribution must be coordinated with the implementation of the collection and purchase policy;

--Children and sick persons must receive adequate care;

--Greater attention must be given to production and the livelihood of the people in mountainous areas so as to clearly reflect the party's policy regarding various nationalities; and

--The entire country must care for the capital.

4. Manage prices.

Prices concentratedly reflect numerous policies and bear on many relations in the economy, such as relations between accumulation and consumption, relations between agriculture and industry, relations between workers and peasants, and so forth. Therefore, in fixing prices, we must take into account many factors, proceed with care and guard against arbitrariness. We must revise without delay the system of collection and purchase prices, supply wholesale prices, factory wholesale prices and industrial wholesale prices so as to provide incentives for production, rationally cater to the three economic interests, and concentrate goods and money under state control. We must revise retail prices to eliminate irrational loss-compensation appropriations in the budget. Such a revision, however, must be carried out gradually, carefully and differently with each type of goods. We must implement more broadly the dual-selling price policy on the condition that the provision of necessities to workers, civil servants and the people at stable prices can be insured and that we have sufficient goods to sell regularly and to effectively compete with market prices.

5. Insure realistic wages for workers and civil servants.

By satisfactorily concentrating goods and money under state control and satisfactorily managing distribution, the market and prices, the state will be able to firmly maintain realistic wages and living standards for workers and civil servants by rationing staple commodities such as grain, meat, fish, sauce, sugar, fuel, monosodium glutamate, fabrics, soap, vegetables and salt. It will also be able to insure the distribution to workers and civil servants--according to appropriate procedures--of commodities such as bicycle spare parts including chains, sprocket wheels, inner tubes and tires; rush mats, waterproof plastic sheets, small table electric fans, thermos bottles and tea.

On the other hand, the state must broaden the application of the contract-based and product-based wage systems, and the payment of allowances to compensate for fluc[illegible]ions in the prices of commodities, including some commodities the prices of whi[illegible]e increased by the state.

To insure the supply of staple commodities in fixed amounts and at state-directed prices to workers and civil servants, the home trade and grain sectors must step up the collection, purchase and circulation of goods, improve the goods distribution methods, and apply increasingly progressive standards and procedures in the supply of these commodities. The financial and home trade sectors and the Vietnam Conferderation of Trade Unions [VCTU] are responsible for devising supply procedures and methods and closely controlling their implementation so as to insure that authorized persons can buy the goods intended for them.

The Ministry of Labor must work in coordination with the VCTU to closely supervise the implementation of decision 26-CP of the Council of Ministers on contract-based and product-based wages and to guide the formulation and application of a new compensation plan based on basic wages plus allowances. After the new compensation plan comes into effect, we must correct all errors and violations of the general regulations and prevent the arbitrary formulation and application of compensation plans and norms related to the payment of contract-based and product-based wages.

6. Uniformly manage finances.

Along with the aforementioned measures, the state must promote measures aimed at placing finances under uniform management; increasing revenue (including that derived from the state-operated sector's income and from taxes collected from the collective sector and individuals); reducing expenditures, especially capital construction, national defense and administrative expenditures; and strengthening state unity and discipline regarding finances, the issuance of currency, prices and wages. We must adequately concentrate the sources of revenue of the state budget and the sources of cash. At the same time, we must absolutely reduce spending so as to provide money for the collection and purchase of goods, the payment of wages, the supply of goods according to the new price system, the application of a new compensation plan, and the achievement of budgetary and cash balances. We must improve the management and regulation of cash flow, broaden cashless settlements and improve the organization and work of receiving and paying savings. On the other hand, the state must study the revision of the various financial policies and systems so as to improve and strengthen the financial management of enterprises according to economic accounting procedures. It must improve the decentralization of financial management and broaden the financial independence of localities and grassroots units on the basis of the principle of democratic centralism. At the same time, the state must improve banking operations so as to transform the banks into state organs for credit, monetary and settlement management and also into business and accounting organizations for the entire financial sector. As such, the banks must assume responsibility for the unified management of the insuance of currency. On the other hand, they must bear full responsibility for the effectiveness of the distribution and use of their capital and for any losses incurred in their operations. The state banks must expand their credit operations according to the principle that economic effects must be insured, that debts must be collected on schedule and that capital invested must produce profits. Together with various enterprises and organs, the state banks must examine the cash funds of these enterprises and organs and set new limits for these funds so as to concentrate capital in the banks. In so doing, however, the banks must avoid hindering production and trade activities. Settlements by cash transferred through the banks must be expanded. The bank network must be broadened, savings promoted and all sources of revenue promptly concentrated to meet expenses and satisfactorily serve customers.

We are carrying out the 1981 economic tasks at a time when the material and financial imbalances in our economy have not yet been overcome. Therefore, we must hold fast to the concepts, policies and measures laid down by the party and the state and correctly carry out the spirit of the Political Bureau directive, which said:

"Supporting and promoting production and supporting the people's life must be the primary objective of all distribution and circulation activities.

We must revise the various distribution and circulation policies, systems and procedures so as to encourage production and to insure the constant development of the socialist economic sector in conjunction with satisfactorily using and managing other economic sectors. We must continue to overcome the mode of management characterized by red tape, bureaucratism and subsidization, implement the principle of democratic centralism and to broaden the independence of localities and grassroots units in financial and trading operations. At the same time, we must resolutely struggle against fragmentation and arbitrariness and promptly check disorganization and the lack of discipline.

We must correctly combine three kinds of measures--of which economic measures are the mainstay--while vigorously applying administrative measures. We must struggle against speculation and smuggling, oppose the negative practices in society and restore order in the economy and the market. We must intensify ideological indoctrination so as to prompt all people to see the present situation and their tasks more clearly, to actively carry out production and their duties, to build the country in an economical manner and to be alert to all the insidious schemes of the enemy."

In order to achieve success in the struggle on distribution and circulation, we must be able to increase production and the state must be able to control goods, money, prices and the market. If the state fails to gain control of goods, all its good intentions to improve the situation will be worthless. By the same token, if the state fails to gain control of the market and to effectively struggle against the scourge of speculation and smuggling which is upsetting the economy and the market, it will not be able to carry out its correct policies regarding distribution, circulation and production development and, especially, it will not be able to resolve the current wage and price problems.

This struggle is a test of the organizational skills of the state of the proletarian dictatorship. The present difficulties must be overcome, the economy and the people's living conditions must be improved, and the economic order must be restored--these are the aspirations of all the people. The factor deciding the success of this struggle is that the ranks of our fighters must be united in their will and action, must take the initiative in continuously launching attacks until final victory, and must not fall into skepticism as this will lead to irresponsibility and failure.

FOOTNOTE

THE FUNDAMENTAL PROBLEMS OF THE PRESENT PRICE POLICY

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 39-46

[Article by Professor Doan Trong Truyen]

[Text] Prices occupy an important position within the economy and within the socialist economic management system. They serve the function of calculating value and measuring the amount of social labor expended. Through this function, prices become an indispensable tool in the planning of the national economy.

Within the economic management system, prices are an effective and flexible tool for organizing the various economic relationships through the price functions of distributing national income and serving as economic levers.

In socialism, the long-range interests of society, the interests of the collective and the interests of the individual worker are, for the most part, identical; however, there are minor, temporary antagonisms that must be correctly resolved. The price system must insure the good coordination of these three interests.

In the period of transition, due to the existence of antagonisms among the different segments of the economy (the socialist economic segment and the non-socialist economic segments), prices have the effect of resolving these antagonisms and insuring the victory of socialism in the struggle between socialism and capitalism.

The improvement of the price policy and price system at this time must be placed within the framework of improving economic management, establishing the new system of economic management and thoroughly comprehending the party's economic construction and development line. We must take a comprehensive point of view, that is, must view the price problem from the point of view of the national economy as a whole, must make planning the central tool, correctly express the three economic interests and closely coordinate price levers with the other economic tools in order to have a coordinated impact upon the national economy in keeping with the guidelines and objectives of the party and state.

The previous state price system was incomplete and inefficient in many ways. For a period of 15 years, due to the circumstances of the long war, we could do very little to adjust the price system. Since then, especially since the South was liberated and the country was reunified, economic and social conditions--the objective bases of the price system--have undergone many changes in a number of important areas:

1. Production costs and commodity circulation costs have changed and caused the value of commodities to increase: now that intensive cultivation and multicropping are starting to be practiced in agricultural production, it has not only been necessary to invest additional labor, but also to provide an increased supply of fertilizer and petroleum products, especially in the Mekong River Delta; the opening of new farmland in wilderness areas, which are less fertile, has caused initial costs to rise; the harvesting of timber and other forestry products has moved gradually into the deep forests, thus causing transportation costs to rise, and we have had to concern ourselves with protecting the forests and replanting new forests in order to have timber to harvest later; many minerals cannot be mined as easily as previously; the production of many goods in local industry and small industry has had to be shifted to production by hand using sources of substitute materials or discarded materials, consequently, processing costs are higher; because equipment and machinery are broken and not well matched, because energy and raw materials are in short supply and because of poor management, the prices of important industrial goods and communications-transportation prices have risen significantly compared to the 1960-1965 period and some are even higher than they were in 1975 and 1976. This rise in the value of goods reflects the objective conditions of production and business at this time, which are more difficult than they once were; however, another important reason is the subjective causes found in planning, organization and management.

2. The prices of materials on the international market have been high since 1970; however, as a result of the Soviet Union maintaining development prices for us, we have been able for a long time to keep the wholesale prices of materials at a very low level but the state has incurred large losses. If they were calculated at world market prices and actual exchange rates, the prices of imported materials would be many times higher. Because domestic labor productivity and the efficiency of the use of imported materials have not changed at all, increases in the wholesale prices of materials and the production costs of many types of industrial and agricultural products have been inevitable.

3. The ratio between agricultural product prices and the prices of industrial goods has become unreasonable. For many years, due to the need to support agricultural production, the state frequently increased the purchasing prices of agricultural products but kept the prices of instruments of agricultural production and essential consumer goods at a stable level. This led to a very unreasonable ratio between the prices of industrial goods and the prices of agricultural products (1 kilogram of urea = 1 kilogram of paddy; 1 liter of diesel fuel = 0.8 kilogram of paddy; 1 meter of fine cloth = 4 kilograms of paddy and so forth). This situation has posed many difficulties to the effort to balance the budget and the supply of money, to establishing the relationship between industry and agriculture, between the living conditions of manual workers and farmers and is not consistent with the objective requirements of economic development in the initial stage of the period of transition.

4. The amount of money in circulation has been constantly increasing at a time when production has been developing slowly, commodities are in short supply and the purchasing power of the dong has declined. These factors have had a major impact upon the formation of prices and the specific level of prices; recently, however, these factors have not been taken into consideration, thus causing the directed prices of the state to become artifically very low.

In view of the changing conditions mentioned above, "the system of state prices is no longer suitable and is having a negative impact in many areas. Prices are no longer based on value...; the ratio between the prices of agricultural products and the prices of industrial goods has become unreasonable. Prices are no longer able to fulfill the function of calculating value, the function of distributing income or the function of serving as an economic lever..."

As an economic category, prices are formed on the basis of certain socio-economic conditions and are governed by objective economic laws. For this reason, whenever these socio-economic conditions change, the price system must be suitably adjusted as this is the only way to develop the impact of the various functions of prices in order to support the economic and political tasks of the party and state in the best possible manner.

Prices have no objective "of their own." Prices are designed to serve the economic and political objectives set forth by the party and state during each period. In the immediate future, the improvement of the price policy and price system must be directed toward the following primary objectives:

1. Stimulating and supporting the strong development of production, most importantly agricultural production, the consumer goods industry (including small industry and the handicraft trades) and the production of export goods. To accomplish this, prices must cover production costs and provide a satisfactory profit to production units; prices must not only provide incentive at places that have favorable conditions, but mutt also provide incentive for production at places that have difficult conditions and low productivity but produce products needed by society.

2. Prices must help to stabilize and gradually improve the living conditions of the working people, with the most pressing need being the need to prevent the real wages of manual workers and civil servants from declining further and providing a reasonable income to farmers, fishermen and handicraftsmen so that they produce with enthusiasm.

On the other hand, prices must help to bring about the redistribution of national income among the various strata of society and regulate the unreasonable income of those who earn their livings illegally (speculators, smugglers and so forth).

3. Prices must help to stabilize the national financial system, reduce unreasonable losses, accumulate capital for the state and strengthen the purchasing power of the dong. Only by developing production and raising the economic returns from production and business is it possible for calculations concerning the adjustment of prices for the purpose of increasing the accumulation of capital for society and increasing the revenues of the state budget to have the necessary foundation. For this reason, prices

must first of all stimulate and provide incentive for millions of laborers to work with enthusiasm, increase their economic efficiency and lay the basis for increasing the accumulation of capital and budget revenues.

On the basis of developing production, prices play an important role in establishing a satisfactory relationship between accumulation and consumption, centralizing the sources of accumulated capital in the hands of the state and balancing the budget. Therefore, it is of pressing importance to adjust the wholesale prices of materials and revise enterprise wholesale prices and industrial wholesale prices so that they are consistent with present production and business conditions. We must closely link the lever of wholesale prices to the state-operated enterprise revenue system and the profit distribution system in the form of an effective economic mechanism for enterprises designed to orient the operations of enterprises toward raising labor productivity and improving management in order to reduce production costs and, on this basis, correctly coordinate the three interests: the interests of society, the interests of the enterprise's collective and the interests of the individual worker.

4. Through the price policy, it is necessary to support socialist transformation by insuring that prices help to consolidate and strengthen the forces of the socialist economy (state-operated and cooperative) in the field of production as well as in the field of distribution and circulation and applying a preferential, discriminating price structure for cooperatives and production collectives as opposed to private farmers in order to help collective economic organizations develop their production, improving the living conditions of their members and strengthen the new production relations. We must implement a cost of living mechanism in both purchases and sales in order to help socialist commerce centralize the sources of goods, broaden its business and service network, gradually become the master of the market and expand its role in leading and transforming the "free" market.

5. Prices must help to abolish the style of management characterized by administrative bureaucracy and subsidies and truly implement the socialist mode of business. As an important factor of the economic management system, prices must be adjusted or established in a well coordinated manner (from the wholesale prices of materials to enterprise wholesale prices and industrial wholesale prices); there must be close coordination between prices and the other economic levers, such as profit, wages, bonuses, credit and so forth, in order to develop the effectiveness of the system of economic levers and implement the new mode of business based on cost accounting.

The adjustment of prices must be carried out on the basis of the following primary principles and foundations:

1. Correctly resolving the price problem in the relationship between value and use value.

Prices are the expression of the value of goods in the form of money. V.I. Lenin stated: "Value is the law of prices." Prices express value in the form of money but the essence of value is the amount of social labor needed to create use value.

Use value and value are the two aspects of a commodity. Under socialism, use value becomes the objective of the production of goods and, as a result, the objective of prices. The relationship between use value and value is the relationship between objective and means; use value and value go hand in hand. For this reason, socialist prices are also the means for achieving the objective of social production, namely, creating much material wealth at the lowest possible cost in order to satisfy the rising needs of society and man.

Prices must compensate for the costs of production and circulation in accordance with strict ceilings on the consumption of labor and the consumption of materials that are consistent with the realities of the production and circulation of each type product; as regards agricultural production, fishing and the mining of minerals, prices must compensate for costs on the basis of the natural conditions of each area, the conditions involved in accelerating intensive cultivation in place of non-intensive cultivation, the conditions involved in mining minerals and harvesting forestry products, which are becoming increasingly difficult and costly, etc.

While concerning ourselves with providing incentive for production under difficult conditions, we still must always try to overcome the practices of "operating at any cost," of not calculating economic returns and of taking advantage of lax cost accounting to push prices upward artificially, to conceal misappropriation and waste of materials and capital of the state and to keep profits for one's unit, which lead to the devaluation of the dong. On the other hand, for many years to come, our country must do everything possible to create a large use value by making full use of our abundant labor force, which is still experiencing a shortage of work, and good use of the existing capabilities that lie in our natural resources, arable land, forests, ocean waters, minerals, etc. Prices must help to absorb additional labor in production at places where production conditions are more difficult; this might result in lower labor productivity due to the need to utilize manual labor and to higher production costs but the social labor productivity of 25 million employed workers will create a larger gross social product.

2. Taking the prices of the international market into consideration.

An increasingly broad division of labor among countries and increasingly close international economic relations are trends of development in the present age. Under these conditions, prices become a very important standard reflecting the interests of the countries participating in the world economic system.

Changes in prices on the international market directly affect the prices of our country. Taking these changes in prices on the international market into consideration is an objective necessity. Moreover, this is a requirement in calculating the economic returns from exports and imports.

For many years, due to the fact that our country's economic relations with the world (first and primarily with the Soviet Union) have been established through the system of development prices, we were temporarily protected from the negative impact of price changes on the world market. At the same time, however, due to shortcomings on our part, this caused domestic prices to be artificially low, to not accurately reflect the standards of economic returns in international trade relations and to cause waste within the country. For this reason, the adjustment of the prices of imported materials has become a pressing need. The wholesale prices of imported goods must be calculated on the basis of new import prices for the period from 1981 to 1985 and the new balance of accounts exchange rates; generally speaking, wholesale prices will increase rather significantly. This will have a very large impact upon the economy; therefore, we must correctly and thoroughly calculate the factors involved in the formation of prices (import prices in foreign currency, exchange rates, the profit level in the wholesale prices of imported goods and enterprise wholesale prices, the level of state-operated enterprise revenues and other revenues in the state budget and so forth).

3. Prices must be consistent with the purchasing power of the dong.

On the one hand, prices are under the impact of the quantitative factors in the value of goods and, on the other hand, under the impact of the value of currency itself. When the purchasing power of the dong declines, prices increase; this is unavoidable. One of the shortcomings in pricing activities in the recent past has been the slowness with which prices have been adjusted to correspond to the decline in purchasing power of the dong, the failure to promptly adjust prices accordingly in order to compensate for production costs (especially with regard to products produced by farmers, fishermen and handicraftsmen, who must live partially on the basis of "free" market prices) and the failure to promptly adjust prices in order to regulate supply and demand, which have become seriously imbalanced due to the issuance of additional currency.

Prices must be adjusted in such a way that they are consistent with the purchasing power of the dong, not adjusted on the basis of the purchasing power standard of the dong on the "free" market, but the socialist market; on the other hand, the value of the dong must be strengthened and prices must be stabilized on the basis of regulating the flow of money, tightly managing cash, making effective use of monetary tools, prividing incentive for the development of production, strengthening the state's control over the sources of goods and improving market management.

4. Establishing the correct relationships within the national economy, primarily the relationship between industry and agriculture as expressed in the ratio between the prices of industrial goods and the prices of agricultural products.

The ratio among prices is always one of the basic matters in price planning. A reasonable ratio reflects the relationships involved in the expenditure of social labor to produce commodities by the various parties participating in trade. At the same time, the price of each product can be separated, within a given scope, from the value of the product, consequently, the ratio among prices can also be separated from the ratio among the production costs mentioned above. By using this ability to separate one from the other, the state can implement various policies designed to provide incentive for or restrict the production and consumption of different products.

In adjusting the ratio between the prices of agricultural products and industrial goods in the present stage, it is necessary to resolve the following problems:

+ At present, this price ratio is narrow and very unreasonable and significantly affecting economic relationships; therefore, the ratio between these prices must be broadened. In broadening this ratio, it is necessary to act in a cautious manner and on the basis of sound financial foundations. The first standard that must be taken into consideration when establishing this price ratio is that producers must earn a profit, farmers must be satisfied and enthusiastic in production and the state must accumulate a reasonable amount of capital.

+ The economic returns achieved when using the instruments of agricultural production vary from one area to another, from one mode of farming to another and even from one season to another; therefore, it is necessary to establish different price ratios for each area, even for each different season, and to take into consideration the costs of clearing land or initiating intensive cultivation or multicropping on a widespread basis.

+ The state uses the different price ratios to distinguish between collective farmers (in cooperatives and production collectives) and private farmers in order to help consolidate and strengthen the new production relations in the countryside.

+ The price ratio relationship mentioned above should not be viewed as immutable, rather, it must be regularly examined and adjusted to be consistent with the characteristics of economic development during each period of time.

5. Establishing a satisfactory relationship between prices and wages, between maintaining living conditions and increasing the accumulation of capital for the state.

Prices (especially the retail prices of consumer goods) and wages are closely interrelated. With nominal wages set at a specific level, if prices change, real wages and the standard of living of wage earners also change. Therefore, when thinking about adjusting the prices of retail goods, the close relationship between prices and wages absolutely must be taken into consideration.

In the present situation, one pressing requirement is the need to maintain the standard of living of manual workers and civil servants and improve it somewhat instead of allowing it to decline. However, the effort to resolve the problem between wages and living conditions at a time when commodities are still in short supply, the monetary pressure in circulation is very high and the incomes of the various strata of the people vary very widely demands the selection of effective measures. If we merely adjust supply and demand in terms of value by increasing the prices of all goods close to market levels in order to sell them normally and, on this basis, raise wages accordingly, market prices will surely soar, manual workers and cadres, even with their newly increased wages, will be unable to purchase sufficient goods and large difficulties will surely be encountered in their daily lives and the entire economy.

Therefore, it would be more correct to take the following measures:

+ Providing a supply at stable prices of a number of essential goods under ration standards stipulated for cadres and manual workers by the state. The commerce sector should have a separate supply system for these products and the state budget should compensate the commerce sector for its losses.

+ Raising the income of manual workers and civil servants by creating additional work for them, improving the way in which they are paid (contract wages, piecework wages) and improving the bonus system.

+ Adding a cost of living subsidy to wages.

As regards goods that are not used to meet the essential needs of everyday life, the state should implement a normal sales policy in order to struggle against the "free" market, regulate supply-demand and income and compensate for the losses incurred in the sale of essential goods at low prices.

While adjusting purchasing prices in order to develop production and establish the correct relationship between retail prices and wages, we must also establish the correct relationship between accumulation and consumption to insure that the economy develops steadily and to create the conditions needed to carry out socialist industrialization. The price policy must insure that enterprises and cooperatives operate normally and earn a profit and that the state accumulates capital. When establishing agricultural product purchasing prices by area, consideration must be given to concentrating a portion of the land rent differential in the hands of the state in areas that are blessed by nature. Adjusting prices in order to eliminate unreasonable losses does not mean that every product must yield an equal profit or that the price of every product must accurately reflect its value. If prices were established on the basis of this principle, prices would, in actuality, be turned into a simple tool of calculation and lose all of their value as a tool of distribution and a lever; it would be impossible to establish the various relationships correctly and also impossible to resolve the problem of the wages and living conditions of manual workers and civil servants. Conversely, we can, on the basis of applying the price mechanism, separate value from the price of each type product and implement the policies of the party and state; some products can be sold below their value and some can be sold above their value in accordance with the law that the total price equals the total value of all goods.

6. Establishing the correct relationship between planning and the use of market relations, between the directed prices of the state and "free" market prices.

Our country's present market structure consists of two types: the planned market and the unplanned market; as a result, there are two price systems that are under the control of two different types of laws. These two markets lie within the same entity; they cannot be separated, rather, they have an impact upon one another and are clearly evident in the field of prices. For this reason, in the guidance of prices, it is necessary to use planning as the main tool, that is, prices must be formed in a planned manner in accordance with the requirements of the line and policies of the party. It is necessary to avoid two incorrect tendencies:

+ The first tendency is the tendency to view "free" market prices as the standard that correctly reflects the social value of goods and, as a result, the standard of every price adjustment.

+ The second tendency is the tendency to view the system of state prices as the only system, to not take into consideration the objective existence of prices on the unorganized market and not take the initiative in using directed prices to have an impact upon the formation and application of prices on the "free" market and guide it in a direction in which it develops in the same orb as and is dependent upon directed prices.

For this reason, now, more than ever before, the guidance of prices must be based on the directed prices of the state and involve the correct application of the two price system: the relatively stable prices set by the state and "flexible" prices in order to wage the market struggle, regulate supply and demand and endeavor to stabilize prices on the "free" market.

On the basis of the present situation and the objectives that prices must support, the price policy guidelines for the coming period are: "adjusting prices in order to stimulate production, especially agricultural production; eventually improving the entire system of state prices so that prices more fully reflect reasonable costs in production and circulation and insure that producers earn a satisfactory profit; prices must be consistent with the purchasing power of the dong and reflect consideration of the price of imports from the world market; unreasonable losses by the state must be eliminated as must the practice of production and business enterprises operating at a loss due to incorrect prices..."(Political Bureau resolution number 26 NQ/TU dated 23 June 1980). The immediate guidelines are: "Gradually adjusting the system of state prices to be consistent with the actual situation and gradually establishing a new price system; not using 'free' market prices, 'including the factors of speculation and sabotage,' as a basis for guiding prices and economic activities; controlling and guiding both price systems: the system of relatively stable prices established and announced by the state (purchasing prices for purchases made under obligations, the prices of instruments of production under two-way economic contracts, the retail prices of essential goods and so forth) and the system of flexibly applied prices in the business activities of the state and cooperatives"(Political Bureau directive 109 dated 19 May 1981).

In order to carry out the price guidelines and tasks mentioned above, it is necessary to firmly adhere to the formula of the price policy for the immediate future: "Gradually adjusting and stabilizing prices, struggling to maintain prices and pull prices on the 'free' market downward while gradually establishing the new price system." Establishing a new price system on a sound economic basis, a system that reflects the value of commodities and insures that prices fulfill their function as an effective economic tool is a very pressing demand of the economic development task in the 1981-1985 state plan and is an objective of price activities in the coming period.

However, in a situation in which the economy is not stable, the supply-demand relationship and the relationship between money and commodities are not balanced and the market is changing, the bases upon which prices are formed are also changing. Therefore, it is impossible to immediately establish a new, reasonable and stable price system, rather, a gradual process of adjustment is required. In conjunction with adjusting prices, we must gradually stabilize prices and struggle to become the masters of the "free" market. Many such adjustments will help to develop the economy in a more stable and balanced manner, that is, will lay the premises for establishing correct bases for forming a new, reasonable and stable system of prices. This will involve an arduous struggle to carry out socialist transformation and socialist construction, develop production, stabilize the economic situation and living conditions, gradually build material-technical bases, reorganize and improve management and strengthen our dictatorship of the proletariat and system of socialist collective ownership.

THE DIALECTICAL RELATIONSHIP BETWEEN THE NATIONAL FACTOR AND THE INTERNATIONAL FACTOR

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 47-53

[Speech by Hong Chuong at the International Conference on Scientific Theory held by "Issues of Peace and Socialism" Journal in coordination with the Central Committee of the Hungarian Workers' Socialist Party at Balaton Lake from 5 to 7 May 1981]

[Text] Dear Comrades and Friends,

We are very happy and excited to participate in this International Conference on Scientific Theory held by "Issues of Peace and Socialism" Journal in coordination with the Central Committee of the Hungarian Workers' Socialist Party. On behalf of the persons engaged in theoretical work within the Vietnam Communist Party, we extend to you are warmest greetings. We also extend our deepest thanks to our hospitable hosts, our Hungarian comrades.

Deal Comrades and Friends,

As the sons of a nation that was oppressed and exploited by imperialism for 117 years, a nation that relied upon the international solidarity of the socialist countries, of the communist and worker movement, of the national liberation movement in order to struggle to win back its national sovereignty, we are very concerned with the theme set forth by the organizers of this conference: "The dialectic of the nation and the world within the international communist and worker movement." This theme is of interest to us because it is related to the theoretical work and practical work of our party. Shedding light on this theme from a theoretical point of view will help up to perform our practical work better. We are firmly confident that, through the exchange of opinions conducted at this conference on scientific theory, we will learn much of value.

Below, we have presented a number of experiences of the Vietnamese revolution that are related to the theme "the dialectic of the nation and the world within the international communist and worker movement."

Dear Comrades and Friends,

Practically all of the communists of Vietnam have travelled the course travelled by Ho Chi Minh, the person who founded and forged the Vietnam Communist Party, that is, the course from patriotism to communism. At first, we, the patriots of Vietnam, knew nothing about Marxism-Leninism. As persons who had lost their country, we searched for a course that would save the country. After many setbacks and much suffering, we discovered Marxism-Leninism. We found in this philosophy a scientific theory, an effective weapon for struggling against the aggressors and liberating our country. We also found in it the guidelines for building our country once it had been liberated from foreign domination. In the revolutionary struggle, while studying Marxism-Leninism and performing practical work, we came to understand that only socialism, only communism could liberate the oppressed nations and laboring people of the world from the yoke of slavery. As a result of adopting Marxism-Leninism, the Vietnamese revolution had a correct course to follow and faced the prospect of victory. The victory of the Vietnamese revolution is the victory of Marxism-Leninism in our country.

Whereas, in the western capitalist countries, the communist parties were born on the basis of combining Marxism-Leninism with the worker movement, in Vietnam the communist party was founded on the basis of combining Marxism-Leninism with the worker movement and the patriotic movement. For this reason, the Vietnam Communist Party not only has a base in the cities and industrial complexes, where the working class is concentrated, but also has a base throughout the vast countryside, where there is no working class, only farmers and other strata of patriots. This insured that the leadership of the party encompassed the entirety of our country. The party also drew into its ranks outstanding elements within the stratum of patriotic intellectuals. From the very outset, the party emerged as the leader of the patriotic movement, brandishing the banner of national independence and the banner of socialism. The party is the vanguard unit of the working class, practices Marxism-Leninism and is recognized by the Vietnamese people as the leader of the cause of national liberation, as the vanguard unit of the entire nation. Because the number of persons within our party from the working class was small, our party has attached particular importance to teaching Marxism-Leninism and the proletarian stand to its cadres and members.

Because it operated under the circumstances of a colony, our party firmly grasped the close relationship between the colony and the "mother country." Ho Chi Minh compared imperialism to a leech with two suckers, one sucking the blood of the proletariat in the mother country and the other sucking the blood of the proletariat in the colonies. He also compared the proletarian revolution to a bird with two wings, one of which is the national liberation revolution in the colonies and the other of which is the proletarian revolution in the mother country. The relationship between the proletarian revolution in the "mother country" and the national liberation revolution in the colonies is a relationship of mutual support. The support of the proletariat in the "mother country" has a positive impact upon the revolution in the colonies. The national liberation revolution in the colonies also has a reciprocal impact upon the proletarian revolution in the "mother country." While placing the revolution in the colonies in a close relationship with the revolution in the "mother country," our party maintained that the revolution in the colonies should not wait until victory has been won in the revolution in the "mother country" to break out. Our party emphasized the independent nature of the national liberation revolution in the colonies and asserted that, in the present age and under certain favorable conditions, the national liberation revolution can win victory in the colonies first and become a source of tremendous support and inspiration to the proletarian revolution in the "mother country." Ho Chi Minh said that the colonies, the places that supply food and soldiers to the imperialist countries, are of very important significance in the survival of imperialism: "If we want to defeat the imperialist countries, we must first deprive them of their colonies."

All of the peoples in the colonies have a common enemy, imperialism, and must unite together to fight this common enemy in order to win their national independence. The enemies of the oppressed peoples in the colonies are also the enemies of the working class and laboring people in the "mother country." The oppressed peoples in the colonies and the working class and laboring people in the "mother country" must unite to topple their common ememy. However, to win independence and freedom, every oppressed nation in the colonies cannot rely upon or wait for the victory of the proletarian revolution in the "mother country" to bring them their liberation, rather, they must first rely upon their own forces, must liberate themselves.

Our party maintains that, in the present age, only by following the course of the proletarian revolution is it possible for the national liberation revolution to develop in exact accordance with the objective trend of history and win firm victory. Ho Chi Minh wrote: "There is no other path for saving the country and liberating the nation than the path of the proletarian revolution." Our party maintains that only socialism and communism can bring true and total independence to each nation and insure that the oppressed nations are forever freed from the yoke of slavery and enjoy a life of comfort and happiness. The national liberation revolution is an integral part of the proletarian revolution on a worldwide scale; the national liberation revolution must develop into a socialist revolution in order to win total victory. Our party maintains that there is a close relationship between the liberation of the nation and the liberation of society.

Our party has always maintained that the national liberation revolution in Vietnam had to be led by the working class. In a colony, farmers constitute a very high percentage of the population. Our party has attached particular importance to mobilizing farmers and establishing the alliance of workers and farmers; however, our party maintains that farmers must be under the leadership of the working class in order to develop the tremendous revolutionary capabilities of the alliance of workers and farmers, which must be led by the working class in order for the revolution to win victory. Ho Chi Minh emphasized this fact as early as 1923. At the 1923 International Peasant Conference, Ho Chi Minh said: "In the present age, the working class is the only class that has the historic mission of leading the revolution to final victory by means of its alliance with peasants. The trends toward opportunism, toward idolizing peasants and considering them to be the primary force, the only moving force of the revolution, the most revolutionary corps will only lead to adventurism, to anarchy and ultimately to the betrayal of Leninism." Our party rejects the viewpoint of Maoists who overemphasize the role played by farmers and deny the leadership role of the working class in the revolution.

Our party advocates building and strengthening international solidarity. Ho Chi Minh said: "The proletariat of the entire world are brothers." We advocate strengthening the solidarity within the international communist and worker movement on the basis of Marxism-Leninism and proletarian internationalism. Solidarity with the Soviet Union, the great achievement of the October Revolution, the first socialist country, the pillar of peace and the firm foundation of the world revolution, is an important manifestation of socialist internationalism. We always concern ourselves with strengthening our solidarity with the Soviet Union. We have strengthened our solidarity with Laos and Kampuchea, with the other fraternal countries and united with the fraternal communist and worker parties, with the nations struggling for independence and freedom. We advocate uniting with the countries in the non-aligned movement, with the peace and justice-loving people of the world. International solidarity has the purpose of achieving the support and assistance of the revolutionary and progressive forces of the world for the Vietnamese revolution and allows the people of Vietnam to make a positive contribution to the struggle of the people of the world for peace, national independence, democracy and socialism.

International solidarity was not only necessary for the struggle to win political power, for the war to liberate our country from foreign aggressors, win independence and freedom and reunify the fatherland, but is also very necessary in socialist construction and the protection of our socialist fatherland.

In the present age, the economic ties among countries are very close. No nation can live apart from the other nations as Robinson Caruso did on his island. Economically, international solidarity and cooperation are an important prerequisite to successfully building socialism within a country, especially the newly independent colonies.

Economically, every colonialist power, which consists of the "mother country" and the colonies, is a unit in which each colony is a constituent component and a dependent component. After being liberated, the colonies encounter very many economic difficulties because they cannot find within themselves the necessary balances, such as the balance between industry and agriculture, between heavy industry and light industry, between the production of the instruments of production and the production of the instruments of consumption, between production and circulation-distribution and so forth. Only by uniting and cooperating with the Soviet Union and the other socialist countries is it possible for the country to gradually create these balances. And, only through this international solidarity and cooperation can this country gradually build an independent economy to serve as the basis for the political independence it won.

Lenin taught that the colonies, after their liberation from the domination of imperialism, can rely upon the assistance of the countries that have successfully established dictatorships of the proletariat in order to advance to socialism without experiencing the stage of capitalist development. In keeping with this teaching of Lenin, after winning its independence and reunification, Vietnam signed the Treaty of Friendship and Cooperation with the Soviet Union, joined CEMA and established a comprehensive alliance and cooperation with the Soviet Union and the other genuine socialist countries. These correct measures have had the positive impact of insuring our people of the ability to build socialism in their country.

Vietnam was once a colony of imperialism, a colony with a backward economy in which production was primarily small scale. In the past, our fatherland was nothing more than a large mine supplying various types of ore to the industry of the "mother country" and a large market for the industrial goods of the mother country. After liberation day, our country's economy was seriously imbalanced. We encountered numerous difficulties in the effort to restore and develop the economy. Only through the comprehensive alliance and cooperation with the Soviet Union and the other genuine socialist countries were we able to successfully build a socialist economy in our country.

On the one hand, our party has shown our cadres, party members and people that we must, in socialist construction, strengthen our comprehensive solidarity and cooperation with the Soviet Union and the fraternal socialist countries and actively participate in the international division of labor and cooperation among the socialist countries. On the other hand, our party has reminded our cadres, party members and people to make the greatest possible effort to build the country without relying upon aid from the fraternal countries. Our party has shown everyone that under the present international circumstances, in which the socialist countries are existing and constantly developing, every nation can, after freeing itself from oppression and exploitation and winning the right to be the master of its country, successfully build socialism through its own effort.

Dear Comrades and Friends,

Imperialism and the reactionary powers of the world are collaborating with one another to oppose the forces of revolution. The international solidarity of revolutionary forces is essential in winning victory over imperialism and the reactionary powers.

Today, nations are awakening. Patriotism is the strong moving force behind the revolution in every country.

With a firm grasp of the dialectical relationship between the national factor and the international factor, we will conduct good revolutionary propaganda, stimulate the struggle of the peoples of all countries, gradually repulse the imperialist and reactionary powers, gradually win victory for the revolution and eventually win total victory, thereby stimulating the transition of the world from capitalism to socialism.

The widespread propagandizing of the viewpoints of Marx, Engels and Lenin concerning the national and international questions is very necessary at this time. This work demands a determined struggle against bourgeois nationalism and opportunism of all types. One of the dangerous philosophies at this time is Maoism. Maoism is the most harmful kind of bourgeois nationalism. Hiding behind the billboard of Marxism-Leninism, it is a reactionary type of chauvinism. Maoism is great nation expansionism and big country hegemony. Its ambition is to establish China's rule in East Asia, and throughout the world. It is collaborating with imperialism, led by the U.S. imperialists, and the other reactionary powers to oppose the socialist community, the communist and worker movement and the national liberation movement. This communist mask of theirs is the worst kind of anti-communism. The ture face of Maoism was totally revealed when the Maoist ruling clique in Beijing sent some 600,000 troops to wage a war of aggression against the Socialist Republic of Vietnam, a country that had recently won its independence after more than 1 century of domination by imperialism and more than 30 years of a war of resistance against imperialism, a country that is building socialism on the pile of rubble of war.

The Maoism ruling clique in Beijing has volunteered to serve as the counter-revolutionary assault unit against the Soviet Union which they falsely accuse of being the "big hegemonist." They have ranted about teaching "a second lesson" to Vietnam, which they falsely accuse of being the "small hegemonist." They preach national discrimination. They provoke the most base national sentiments among the Chinese in a vain attempt to provoke the people of China into opposing the Soviet Union, Vietnam, Cuba and the other genuine socialist countries. They direct divisive propaganda toward the various nationalities in Indochina and Southeast Asia in a vain attempt to set one nation against another to their advantage. They have pursued a policy of "filling in the vacuum" in Southeast Asia as the imperialists are gradually pushed from this region.

Several decades ago, the Japanese imperialists set forth their great East Asian plan with a view toward annexing the countries of East Asia. Following the defeat of the Japanese imperialists in World War II, the great East Asia plan of Japan went up in a cloud of smoke. Today, the ruling Maoist clique in Beijing is scheming to implement the great East Asia plan of China in a vain attempt to establish China's hegemony over East Asia. Following in the tracks of the overturned vehicle of the Japanese imperialists, Chinese expansionism and hegemony will surely suffer the same tragic defeat that their forerunner did.

Dear Comrades and Friends,

Following more than 30 years of waging a war of resistance against the French imperialists and the U.S. imperialists, the people of Vietnam had no other aspiration than to live in peace in order to rebuild their country, restore and develop the economy, improve their standard of living and expand their relations with the other nations of the world. However, the Maoist ruling clique in Beijing considers a unified, socialist Vietnam that adheres to an independent line and practices pure international solidarity to be the greatest obstacle to its scheme of expansionism and hegemony in Southeast Asia. They used the Pol Pot-Ieng Sary clique as a tool of aggression to start a war on the southwestern border of Vietnam and sent more than 600,000 troops to commit aggression against North Vietnam. However, the Chinese expansionists and hegemonists suffered shameful defeats. The army and people of Vietnam, maintaining the sovereignty and territorial integrity of the fatherland, repulsed the aggressive attacks of the Chinese reactionaries and, at the same time, helped the people of Kampuchea overthrow the genocidal Pol Pot-Ieng Sary regime, thus ushering in a new stage in the militant solidarity of Vietnam, Laos and Kampuchea.

Unwilling to accept defeat, the reactionaries within Chinese ruling circles are frantically preparing to teach Vietnam "a second lesson." They have persuaded the imperialist countries and the reactionaries of countries to establish an economic embargo against the three countries of Vietnam, Laos and Kampuchea. They are committing acts of sabotage within Vietnam, Laos and Kampuchea by many ways: a war of economic sabotage, a spy war and a pshchological war. At present, they are occupying a number of islands of our country and many places in North Vietnam near the border. They have massed troops along the northern border of our country and routinely engage in provocation and instigate military conflicts. They have publicly called for a counter-revolutionary rebellion to overthrow the leadership of our party and state.

In the face of the threat of Chinese aggression, the Vietnamese people today face very weighty and very glorious new tasks. Our country, although it is at peace, must constantly be prepared to resist a war of aggression by the reactionaries within Beijing ruling circles. This situation demands that the entire party, all the people and the entire army of Vietnam constantly be vigilant and make extraordinary efforts to build socialism and firmly protect our socialist fatherland.

In the fight against imperialism and against Chinese expansionism and hegemony as well as in the work of building socialism, we always have the sympathy, support and assistance of the fraternal countries and the fraternal parties within the socialist system and the international communist and worker movement. We shall forever be deeply grateful for this valuable sympathy, support and assistance.

Dear Comrades and Friends,

Marxism-Leninism is invincible. By firmly grasping the viewpoint of Marxism-Leninism concerning the dialectical relationship between the national factor and the international factor, we will surely perform our work well and advance our revolutionary cause to increasingly large victories.

My comrades and friends, thank you.

MAKING STATEMENTS

BK041403 Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 54-56

[Article by Trong Nghia in "Ideological Section"--previously published in FBIS Asia and Pacific DAILY REPORT, Vol IV, No 174, 9 Sep 81, pp K7-K9]

[Text] "Order-giving statement," "instruction-giving statement" and "judgment-passing statement" were phrases used in the old days to denote the transmission of opinions of kings, emperors, judges or superiors to their subordinates and the people. These phrases were rarely used in the daily life of ordinary people. In other words, only kings, mandarins, powerholders and influential persons loved to make highhanded statements.

Some of us have slipped into the practice of "making statements," and the charge of "making statements" is now made quite frequently and somewhat sarcastically.

Following are some examples:

A responsible leading cadre--instead of expressing practical views, actually engaging in work, thoroughly understanding what should be done, and organizing, at all costs, the implementation of party directives and resolutions--has "made statements" in a very general manner. It seems that his sole responsibility is to "make statements." He considers his responsibility as being fulfilled after he has "made a statement."

At times, because he has failed to understand a certain problem, he has been able only to "make some general and useless statements." This has prompted many people to remark that "making general statements" is an easy job and that anyone can do it. And the remark "organ leaders are only capable of making general statements," which is fairly widespread in some organs and units, is designed to ridicule the style of such leading cadres.

There are also many comrades who are good only at speaking. They say, for instance: "We must be exemplary before the people. Our work must match our words. We must lead an honest life and must not be corrupt and steal public property. We must maintain party discipline and share weal and woe with the masses. We must..." This is very correct! But the trouble is that persons who have made such beautiful statements have not squared their actions with their words. At times, they have spoken about one thing and acted in another way. Therefore, their beautiful words are insignificant, and these comrades are known to be good only at making statements.

Some other comrades are not even careful in making statements. As "decision-making" leaders in their organs, when faced with a new and complex task or event, they immediately "make statements" without carefully studying the issue. In important matters such as evaluating cadres' performance and assessing the work situation, these comrades have also made hasty and inconsiderate remarks. When going on a study or inspection tour of a locality, they do not wait until they understand the actual situation there before they express "important" and at times "daring" views (even though, in some cases, they do not assume any responsibility for that locality).

As a result, "making statements" is first of all a phenomenon often seen among influential cadres. Although this phenomenon is manifested in several ways and under many forms, it is generally a manifestation of subjectivism and an overbearing attitude which often denotes poor knowledge and weak methodology. If we look carefully, we can see that those who like to "make statements" are usually those who like to stand a head above others, to "show off" and to "lecture" others. They normally hold their views as the truth and "golden rules.: They mistakenly think that once they hold some authority, whatever they say the people and their subordinates will listen. They do not remember that they must be very careful in making judicious statements since they are responsible people in charge. If they do not take pains to study and scrutinize the facts, listen to the people's views and understand their work thoroughly, and if they rely only on their poor knowledge and few experiences to make "statements," they will not resolve anything and they might even cause some adversities. At times a wrong "statement" and a hasty conclusion has affected an entire movement, confusing all the work and making good cadres misunderstood and good deeds culpable or vice versa. As an example, one time, a provincial cadre went to a ricefield and told the peasants to grow soybean. The following day, a district cadre came and told them to plant sweet potato. Finally, a central department chief came and ordered them to grow another crop. Too many "cooks" spoil the broth.

What about the prestige of those who give such "instructions"? If their words do not match their deeds, whom can they persuade?

Nevertheless, do not think that only those who wield some authority like to give "instructions." In reality, there are quite a lot of people who do not hold any position but still like to give "instructions." Faced with the present difficulties and negativism in daily life, they act like "judges" and outsiders and pass judgments very subjectively and casually.

They criticize this and that and accuse this or that person while they themselves either remain inert or are among those who have done wrong and acted irresponsibly. Some people have even gone so far as to reject all of the party's correct lines and policies and to speak casually and inconsiderately, acting as if they are the only clear-sighted and skilled persons and are reason and truth itself. Sometimes, they give "instructions" in complete ignorance or on the basis of rumor inconsiderately and irresponsibly. They have at times served inadvertently as loudspeakers and relay stations for the enemy psychological warfare force.

Unfortunately, those people erroneously think that they have the "courage to struggle" by making such "statements." They do not understand that such manifestations of disorganization are alien to the constructive spirit of those who have some sense of mastery.

Generally speaking, those who make unorganized "statements" lack a sense of responsibility and suffer from subjectivism. They look at things and evaluate the situation in a superficial and simplistic manner. They know little but want to show that their knowledge is wide. While still unable to grasp the entire issue, they nevertheless hurry to give "instructions" and make "statements" without caring whether what they say is true or not.

One of our adages says: "Answer when knowing well; remain silent and listen when in ignorance." This adage should be a motto of action for our cadres and party members. It will help us become more wise, judicious and careful, and show our respect for others as necessary.

Obviously, we cannot mistakenly say that all promptly made observations, criticisms and guidances are hasty and culpable. As a matter of act, when faced with complicated problems many learned and experienced comrades can present prompt and judicious views and have taken correct and clear-cut decisions. Such a character is completely necessary. We treasure and respect these cadres and their work method.

We will not suggest mechanically that only those who are familiar with their areas of knowledge should be entitled to express their views on their areas. Our party always requests all cadres and party members to uphold their revolutionary will and militancy to do their utmost and frankly present their constructive views without being overly circumspect to the point of shrinking and withholding their criticism, daring not to struggle.

The important thing is that when expressing an opinion or an observation, or when giving advice, we must adequately determine our responsibility and adopt a correct method. This calls for careful study and thinking so that we can speak of the right thing and at the right time and place with adequate consideration of the effect and consequences of our speech. We will not make "hasty" or "wanton" and "careless" statements. The higher our positions and the heavier our responsibility, the more careful we must be.

OUR PARTY'S TRADITION IN THE PUBLICATION OF JOURNALS: THE FIRST ISSUE OF TAP CHI CONG SAN

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 57-60

[Text] Editorial Note: theoretical work is the foremost concern of our party. During the first years following its founding, our party, together with publishing newspapers, published TAP CHI CONG SAN to teach theory and policy to its cadres and members. The first issue of TAP CHI CONG SAN, the theoretical organ of the party, was published on 1 February 1931. In the introductory note, TAP CHI CONG SAN clearly stated that its main purpose was to "explain the policies of the Communist International and our party and strongly attack erroneous thinking and the trends of opportunism and factionalism in order to establish a unity of thought and action within the party."

Due to the difficult and violent circumstances surrounding the struggle in those years, the journal of our party could not be published regularly or continuously. There were many times when the name of the party's journal had to be changed to suit the revolutionary strategy and tactics of the party during the various periods.

Despite encountering very many difficulties, our party tried to publish its journal in order to propagandize Marxism-Leninism and the lines and policies of the party.

On the occasion of preparing for the 5th Congress of the Party, were hereby respectfully present to readers the introductory note of the first issue of TAP CHI CONG SAN together with an article entitled "It Is Necessary To Expand the Practice of Self-Criticism Within the Party," which was one of the articles printed in that issue.

First Year
Number 1

1 February 1931

CONG SAN
The Organ of the Indochina Communist Party

Introductory Note

The revolutionary movement in Indochina has risen to a high level; the revolutionary struggles of the mass of workers and peasants are becoming increasingly fierce and spreading with each passing day. From the North to the South, in all regions of

Indochina, strikes, meetings and displays of power against the French imperialists, the landowners and village officials are occurring on a continuous basis. The suppressed and exploited base of the imperialists and the landowners has been shaken; therefore, the imperialist government is doing everything possible to annihilate the Indochina Communist Party and undermine the revolutionary movement of workers and peasants.

The revolutionary situation within the region is improving with each passing day and the number of persons participating in the struggle is constantly increasing. However, our party is still in its infancy, is less than 1 year old. As a result of encountering very many jobs at such a young age, the leadership of the party is not perfect. The various party organization levels and party members do not have revolutionary experience, generally analyze the situation incorrectly and make mistakes when implementing the policies of the party. Moreover, since the period of major revolutionary activity broke out in Indochina more than one-half year ago, very many very important events have occurred regarding the revolutionary movement throughout Indochina and more than a few trends toward factionalism and opportunism have arisen. However, our party has not had an organ with which to resolve these questions and propagandize and explain its correct policy. This has been a very major shortcoming in our daily work. At present, the work of the party has begun to be reorganized and TAP CHI CONG SAN is being published to rectify this shortcoming. The objectives of TAP CHI CONG SAN are to explain the policies of the Communist International and our party and strongly attack erroneous thinking and the trends of opportunism and factionalism in order to establish a unity of thought and action within the party. TAP CHI CONG SAN will gather and present experiences gained in the struggle and the leadership of the struggle by the party members and party organizations in Indochina and the experiences gained in the struggle by the fraternal parties throughout the world so that our party rapidly develops. TAP CHI CONG SAN will be the common forum for party members to discuss each and every matter of importance to the Indochina revolutionary movement and the entire world. TAP CHI CONG SAN will also be the publication that prints articles researching the political and economic situations within the region and throughout the world in order to contribute material to the party for use in planning the struggle. Finally, TAP CHI CONG SAN will also be the common forum for party members to criticize mistakes and shortcomings in the daily work of the party and express new opinions so that they can follow the correct political course together.

At this time, the party is preparing to convene its party congress, and the jobs mentioned above must be performed in a very urgent manner. For this reason, every party member must enthusiastically participate in the work of TAP CHI CONG SAN; every party member must regularly express his opinions, contribute his experiences, discuss matters of importance, practice self-criticism, etc. The task of TAP CHI CONG SAN is very large and important. If every party member does not do his part in performing this task, TAP CHI CONG SAN will be unable to perform it.

One point to which party members should give their attention is that TAP CHI CONG SAN is designed for use by party members and is not an organ for propaganda among the masses.

CONG SAN

It Is Necessary To Expand the Practice of Self-Criticism Within the Party

Admitting our mistakes, finding the causes of these mistakes, examining the situation that led to them and diligently looking for ways to rectify these mistakes are proof that this is a correct party, fulfill the duty of the party and teach and train the class and masses.(Lenin)

The mass movement is becoming increasingly intense, the struggle by the mass of workers and farmers is constantly spreading and the responsibility of the party is becoming increasingly large; if we do not expand the practice of self-criticism within the party, it will be impossible to fulfill the tremendous task we face at this time, that is, the task of winning over the broad masses. A few comrades think that "the slogan 'self-criticism' is a device for signalling to the guidance agencies or maintain that our party is new and we should not expand the practice of self-criticism because it will cause the masses to misunderstand and waver." These concepts are very incorrect. Not only are they incorrect, they are harmful as well. The history of the Russian Communist Party shows us: the practice of self-criticism makes the guidance provided by the party increasingly strong in order to carry out the tremendous tasks of the proletariat. Without practicing self-criticism, the Russian Communist Party would not have become a party that is as strong as iron and the German Communist Party would not have become a party that serves a very large number of workers. One recent example is the American Communist Party. If the American Commnnist Party did not expand the practice of self-criticism last year, it would not have strongly attacked and reversed the erroneous trends within the party or revised its methods of operation and serve as many people as it is this year. A much more distant example occurred at the time the Bolshevik Party was founded: if Lenin did not criticize the mistakes within the party during the first few years following its establishment, if the party did not broaden the practice of self-criticism, the Bolshevik Party would not have become as strong as it is today.

The flame of Bolshevik self-criticism has made the communist party increasingly strong. Self-criticism is an integral component of democracy within the party without which democracy within the party cannot survive. Comrade Ma-nun-xit-ki /Vietnamese phonetics/, on behalf of the Communist International, said during the Conference of the Standing Committee of the Youth Communist International: "In normal times or times when the wave of revolution is surging, no party, either a communist party that has established a dictatorship of the proletariat or a party that is struggling to establish a dictatorship of the proletariat, can ignore the practice of self-criticism. Only through self-criticism is it possible to train the cadres within the party. If we do not harshly criticize the mistakes of leadership and ourselves on the basis of the countless experiences in the world of workers, what other method can we use to win over the broad strata within the working class, how else can we teach them to follow a correct strategy?" The practice of self-criticism is the subject of one of the resolutions of the 10th Standing Committee Conference of the Communist International. Without practicing self-criticism, it is impossible to implement all of these resolutions...; however, we must skillfully practice self-criticism of the Bolshevik style. True Bolshevik self-criticism has the interests of the proletariat as the highest interest; true Bolshevik self-criticism is designed to make the party strong and stable; true Bolshevik self-criticism is criticism of political mistakes for the purpose of revising and improving our practical work. The practice of self-criticism must be carried out under certain conditions: first, there should be few declarations about the practice of self-criticism and more criticism of deficiencies and mistakes; secondly, there must be a method for practicing self-criticism, that is, the Party Central Committee must explain what self-criticism is, must develop the practice of self-criticism and must lead the effort to rectify that which is criticized, otherwise self-criticism will be useless and no method will exist for practicing it; thirdly, everyone from the lower level to the upper level must have political responsibility so that the party can question persons regarding their responsibility for setbacks and everyone must combat the practice of concealing one another's mistakes; fourthly, everyone must voluntarily rectify his mistakes. Only by meeting these conditions is self-criticism truly Bolshevik self-criticism. True Bolshevik self-criticism is very necessary to our party at this time. If we do not expand the practice of self-criticism within the party, how can we clarify the mistakes that we have been making; if we do not practice self-criticism, how can we take steps to rectify these mistakes? Our party is a party of the revolutionary proletariat; therefore, we should not be afraid to discuss our mistakes. Lenin said: "A communist party is better than other parties because it is impossible to destroy a communist party that knows how to criticize its mistakes and rectify these mistakes." While practicing criticism, attention must be given to the fact that only true Bolshevik self-criticism helps to party-ize the Bolshevik; only true Bolshevik criticism can teach and train the proletariat and the laboring masses. Expanding the practice of Bolshevik self-criticism is a prerequisite to our party fulfilling its tasks in service of the broad mass of workers and peasants in order to prepare for revolution. The practice of self-criticism is a necessity. In order for all mistakes to become general lessons to all party members so that they rapidly rectify their mistakes, all self-criticism must be printed in this journal. Therefore, you must pay particular attention to this matter and write in TAP CHI CONG SAN.

SEVERAL MATTERS REGARDING MODERN WESTERN LITERATURE

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 61-66

[Article by Nguyen Chi Tinh]

[Text] In modern western literature, there are backward, reactionary tendencies that openly support the political and economic schemes of the international bourgeoisie as well as progressive, Marxist tendencies. There are also tendencies that are bourgeois in nature but which appear to be "in the middle," which have spread rather widely and which constitute the clearest and most easily recognized form of modern western bourgeois literature. This article only deals with the tendencies of the third type, or, more correctly stated, with a number of matters related to them.

I. The Relationship Between Literature and Reality

To us, persons who practice Marxism-Leninism, the relationship between literature and reality, which is a basic issue in the nature of methodology, is basically explained as follows: a genuine artist always recognizes an objective reality and tries to faithfully reflect it. However, western bourgeois writers (1) have an entirely different concept. According to them, literature also reflects a reality; however, it is the reality of literature, that is, the reality of the writer himself and only the writer. The literary world is the world in which the mind and heart of the writer can roam at will with no regard for any natural or social reality. The French novelist Alin Robbe grillet stated that the writer might feel the world around him but is not the least bit concerned with it; the writer must also struggle to throw off the traditional world left behind by history; in the end, there is only the mystical world within the imagination of the writer himself, and this is the only true reality of the writer. However, Alin Robbe Grillet and the other western writers say nothing at all about how and under which circumstances this imagination is born and formed or by which conditions of the social life in which the writer exists as a member but from which he cannot hide is it controlled. They maintain that before they pick up a pen, they face a huge blank space, a "boundless" horizon not hampered by any semblance of real life, not by the events occurring in society or even the insignificant memories of the past, thus, everything seems to suddenly arise from their personal spirit, everything seems to gush forth and spill onto their paper and becomes the philosophy, the works, the real world of the writer, becomes a reality in which the writer is fully taken with himself, explains himself to himself without any consideration given to any objective laws of man's existence. He proclaims himself as not being the least bit responsible to anyone who wishes to question him when these persons point out the very significant, even shocking, differences between what they write and the obvious reality of life.

It can be readily seen that this concept of "subjective reality" in literature in recent years, regardless of how it is embellished, regardless of the figurative names given to it, such as "the sacred world of literature" and so forth, is still in the same vein as subjective idealism in philosophy that broke down in the face of the offensive power of Marxist philosophy.

Attention must be given to the fact that the concept described above is generally closely associated with the scornful attitude of western writers toward socialist realism. Denounced as having ignored objective reality, they have redoubled their efforts to prove--in vain, of course--from a theoretical point of view that socialist realism is incapable of reflecting genuine reality and is only a contrived concept, even one of no literary significance!

II. The Function of Literature--The Relationship Among Literature, Politics and Society

To begin with, we must mention the concept of "turning one's back on every concept," which, in itself, is a concept. They maintain that literature is a totally independent space, one called "literary space"(l'espace litteraire in the words of Maurice Blanchot). This space is in no way related to politics or society. Literature and politics are like two lenses that are so far apart from each other that they have no effect upon each other. Literature, they maintain, has been in existence for a long time and is an entity unto itself; the question regarding the relationship among literature, politics and society is, they maintain, forced upon them by persons who understand nothing about literature. When questioned about this relationship, the writer Claude Simon curtly replied: "I do not understand the question." It is on the basis of this concept that western writers maintain that literature should not be forced to fulfill any political or social role or function; literature is a function unto itself: it finds itself in iteself; the writer should not concern himself with political or social matters or situations even within the country in which he lives.

Unfortunately, this "irresponsible" concept is not supported by real life. The political and social events of the West, even of the entire world, have an impact upon the fate of each person and control the endeavors of the writer. The government leaders of the western countries also fail to respect their very solemn pledge that they will not intervene in the creative labor of writers. These political and social activities demand a response from literature.

More than 30 years ago, Jean Paul Sartre wrote his famous essay "What Is Literature?" in which he forthrightly stated that literature must use its artistic weapon to consciously struggle for political and social ideals. To Sartre, participation by the writer in political and social activities is not only possible but also necessary to train the writer to fulfill his literature responsibility. At the same time, Sartre demanded that writers be totally independent and absolutely free, that is, that they live, think and create art without being tied to any philosophy or political system. According to Sartre, the writer should not proclaim himself as belonging to the "left" or the "right" but can, in specific circumstances, endorse one side or the other or even endorse both. Of course, this demand for metaphysical freedom has led to contradictions of a tragic nature in the spiritual lives of writers such as Sartre; however, Sartre's concept of "submersing himself" in society and politics does encompass progressive factors and, on the basis of these factors, Sartre carried out clearly positive literary and social activities.

Some writers acknowledge the unavoidable relationship among literature, politics and society and admit that the writer must have his own political views, his own political and social attitudes; on the other hand, however, they still advocate that the writer not directly participate in political and social activities. According to them, such participation would harm the creative work of the writer, which is a type of delicate work that must be protected in the most complete manner possible; to them, the social or political responsibilities of the writer lie only within the scope of his literary activities.

There are also writers who propose the concept of the "dual person," considering it to be a unique concept of the modern age: two facets, a political and social facet and a literary facet, exist side by side within the life of the writer; two persons, the political and social person and the literary person, exist side by side within the writer. Between these two facets and these two persons there need never be any logical similarity. The writer can participate in social and political activities and even become a member of the political party and fully carry out the specific political tasks assigned to him by the party; however, when writing literature or poetry, he can present to his readers an entirely different political or social attitude because he is then acting as the second person within the "dual person" of the independent writer; it is the artist within that person that is creating art. He can be a writer and the member of a political party but never be a writer-party member(!).

Some western writers indifferently recognize the infiltration by politics into literature but also maintain that literature should not directly deal with politics, should not bw based on the recognition of political concepts or phenomena. According to them, literature engages in politics by not talking about politics: "The power of these words lies in silence"(Hubert Juin). Taking this concept one step further, some persons, such as Marcuse, declare that the political potential of a literary work lies only in its aesthetic value and aesthetics can be appreciated by everyone without the need for political reasoning. According to Marcuse, there is within literature an "aesthetic stimulus" that lays the foundation of political strength. This concept opens the way for the pursuit of a general, pure kind of aesthetics.

The relationship among literature, politics and society is very diverse and complex among western writers; however, the primary aspect of their concept of this relationship is that they still turn their back on specific political and social responsibilities.

III. Modern Trends Deserving of Attention

From the basic issues of western literature mentioned above, a host of modern trends has arisen in literary creativity and research.

Structuralism caused quite a stir in western literature for a time. It involves researching and explaining a literary work only on the basis of its internal structure. As a result, the researcher need not know the author, need not know the historic circumstances or any of the objective conditions that underly the work of art; rather, he needs only to delve into the work of art itself and perform jobs of a mathematical nature, such as compiling statistics on the use of a certain term within the work of art, on a type of action by a character in the work of art and so forth and then reach literary conclusions. Understanding the internal structure of a literary work and viewing it as an objective entity are necessary; however, how can a literary research project be scientific if the literary work is separated from the author and from specific, objective historic circumstances? Yet, it is the ambition of structuralism to replace Marxism! Even though this ambition has today become obviously hopeless, the signs of it in literary research projects have not disappeared and, in the West, many projects still employ the spirit of the methodology of structuralism.

The "new novel," which some persons consider a school of literature, was a trend that had the attention of public opinion for some time and has generated much debate. The "new novelists" have declared the end of the traditional novel. In the "new novel," the concept of stories and the concept of characters are not what they once were. The development of events is not described in an orderly time sequence. The language employed does not comply with established standards of language and frequently becomes a play on words. Thus, numerous questions are raised: in the present age, does the novel retain the standards and character that it did in the last century? How are story-line and characters to be understood? Is there anything deserving of thought and useful in the various technical forms of the "new novel," such as "stream of consciousness," "concurrence," "psychological time" and even the abandonment of the traditional standards of language? The newer expressions of the "new novel" frequently originate in things that are only slightly plausible; therefore, even in the West, it is difficult for these novels to win over the public. Consequently, the "new novel" has very few readers and, in order to win new readers, the "new novel" frequently requires an explanation of itself by "new novelists."

The role of the subconscious in literature has been heightened. The activities of the subconscious are mental activities that are not felt, are a form of activity of the brain outside the consciousness of the person even though they are closely linked to the complex process of handling information under given conditions. In recent years, the role of the subconscious both within and outside the field of literature has been discussed more and more, especially when persons proclaiming themselves to be the "new Freuds" began explaining their viewpoint. Reflecting the tendency to emphasize only the role of the subconscious, some research projects have been designed to prove that a work of art is primarily the result of the activities of the subconsious, the subconsciousness of the author and of the work itself. There are some literary works in which every incident and every action originates in the subconscious of the character. Thus, through literature, they have submerged the consciousness of man, which is closely linked to historic circumstances and social impact, and, instead used the subconscious to explain every phenomenon of life. Having done so, some of the "new Freuds" declare that they are never opposed to Marxism, that they are only supplementing Marxism, that they are delving deeply into the "human" aspect of life, in general, and literature, in particular, an aspect which Karl Marx, because he was so concerned with political and economic matters, was unable to discuss in appropriate detail! Actually, the role of the subconscious in literary activities cannot be ignored; however, emphasizing the subconscious as much as the "new Freuds" are spreads mysticism and disorients the effort to understand life.

The question of the fate of man has been especially evident in the literary works of the West since World War II. It can be said that ever since then, western literature has been a tragic lament about the fate of man, about a suffering, exhausted and desperate man. Many western writers have become icons for a time simply because they dealt specifically with this gloomy mood of readers who witnessed the cruel war. In recent years, they have bragged that western society has reached the level of a consumer society in which the problem facing man is not the production or distribution of wealth, but the consumption of material wealth produced in over-abundance. In keeping with this line of reasoning, the consequences of the war have been overcome and the tragic fate of man that was closely linked to poverty and backwardness has come to an end, consequently, literature, when talking about the fate of man, must do so in optimistic and bright terms. However, such is not the truth. In literature, the human heart is not one shade brighter, the voice of human feelings is not one bit clearer and the fate of man is still unusually tragic: tragedies of all descriptions shatter every dream, even the dream of living in peace; characters writhe with pain in repeated tricks of fate, consequently, many characters take their own lives with no regret.

Deserving of attention is the fact that western writers never offer an appropriate explanation and sometimes no explanation whatsoever concerning the fate of man as it is expressed in literature. The lament over fate, which is very often a cry of anguish, goes unheard. The misery of man in the age of industrial development is still colored by predestination. All events of major historical and social significance that are closely linked to the nature of political systems are also viewed by western authors from the point of view of personal fate. For example, a war in which one side clearly represents a just cause and the other side clearly represents an unjust cause is merely an adventure, a conflict of personal fates; both criminals and their suffering victims suffer pitiful "fates"! Some western writers, as if they wish to present a way to escape the fate of modern-day man, have looked to nature and the past and denounced the entirety of modern civilization, denounced the period of betrayal that drew man far from peace and tranquility and from the primitive sources of happiness. One person wrote in a very refined fashion: "We abandoned the forests in which we lived in tribes. We built cities and circled the earth. However, we are not happy. And, now there is a constant yearning in us to rediscover our roots in mother earth, and it is from here that the strength of the forests is arising."

IV. Literature and the Scientific-Technological Revolution

The scientific-technological revolution has had an impact upon all of western society, including literature and writers.

Modern scientific and technical means permit literary works to be disseminated much more widely than previously; they are taken into the theater, read on radio and "performed" on television. There are strata of specialized "writers" for the various forms of dissemination of modern technology. Large numbers of persons read literature simply to kill time. In each western country, hundreds of millions of pocket books are published each year; these books are easily purchased, easily carried and can be thrown away once they have been read. More than a few new genre have emerged: "novels for the air waves," "novels for the cinema," "picture novels," etc. There is one style of abbreviated prose called the literature of the "age of speed." Some persons compile essays and books entirely by piecing together excerpts from the works of other writers, from the classical to the modern, and declare: "If, in science and technology, the reuse of an invention by a person is never denounced, it is also very natural in literature to repeat a sentence or passage that has already been written and put it in a new scene."

All of the phenomena mentioned above, both the phenomena of form and phenomena of genre, comply with the law of profits in western capitalist society in that they arise or disappear generally in accordance with commercial requirements.

More deserving of attention in the relationship between literature and the scientific-technological revolution is the subjects reflected by literature. Here, literature must not only reflect the life of persons who possess the unsurpassed conveniences of modern science and technology or almost mythical stories about machines replacing man. Of primary importance is that literature must reflect the view of the author toward the future of mankind, of each person and man's attitude in the face of the strong development of science and technology. On the momentum of the development of science and technology, how do the character and feelings of persons develop, how do persons deal with one another and so forth? Sadly, western writers generally paint a dark picture filled with suffering of the present and make pessimistic predictions about the future. In their works, especially their fictional and futuristic works, man is portrayed as becoming depraved as he follows the advance of science and technology, as being emersed in material consumption while his soul becomes increasingly impoverished and distorted and he eventually breaks all ties with the most beautiful ethical and cultural traditions. In their works, mankind uses formidable modern means, becomes embroiled in wars and ultimately will destroy itself and the planet on which it has recorded countless achievements. Here, we also see that western writers, while presenting the darkest possible observations and predictions, never offer any explanation for them. No one ever deals with the basic issue concerning the strucutre of society in order to answer the question: "Thus, in whose hands are science and technology?"

The above mentioned tendencies that appear to lie in the "middle" of western bourgeois literature are of many different forms and types and are constantly changing as if they seek to escape the life of man in western society. However, this escape does not lie in the bourgeoisie and even those who are constantly "in the middle" cannot free themselves from the vicious cycle, from vexation and frustration.

COMMENTARY: THE GREAT VICTORY OF THE DEMOCRATIC FORCES IN FRANCE

Hanoi TAP CHI CONG SAN [COMMUNIST REVIEW] in Vietnamese No 7, Jul 81 pp 67-70

[Text] In both May and June of this year, the democratic forces in France won major victories.

In the presidential election held on 10 May 1981, Mr. Francois Mitterrand, the leader of the French Socialist Party, won the election with 52.29 percent of the vote and became the 21st president of France with a 7 year term. Mr. Giscard d'Estaing, the leader of the French Democratic Alliance Party who sought re-election at the end of his term as president, only won 47.71 percent of the vote and was defeated. The office of president in France has thus been taken from the hands of the leaders of rightist parties and put into the hands of the leaders of a leftist party!

In the elections of Parliament delegates on 14 June and 21 June 1981, the rightist parties in France also suffered a tragic defeat: they won only about 150 seats and became the minority faction in the French Parliament. The leftist parties (which include the Socialist Party, the Communist Party and a number of other parties) won a major victory: they won more than 330 seats and became the overwhelming majority within the 491 seat Parliament of France.

In the presidential election, the votes cast by French communists made a decisive contribution to the victory of Mr. Francois Mitterrand. In the Parliamentary elections, the votes cast by communists again made an important contribution to the creation of a new majority within the French Parliament.

Immediately after the Parliamentary elections, the delegates of the Communist and the Socialist Parties met and issued a joint declaration expressing their "determination to pursue the new course chosen by the men and women workers of France" by voting for the left. The two parties pledged to "bring about change by means of the democratic process." This change will especially involve new measures rggarding social justice and new measures to raise the income of the poorest in society. The two parties have come to an agreement with regard to expanding the state-operated sector. In the joint declaration, the two parties cited the need to draft a 2-year economic reconstruction plan in order to create the codnitions for new economic development and effectively combat unemployment. The two parties declared their support of a policy to reduce social injustice. The two parties have also agreed that they "will act to guarantee and broaden freedom, develop the rights of the working people and democratize the life of the country."

Internationally, the two parties pledged to support international actions by France "for peace and gradual disarmament with a view toward simultaneously disbanding military alliances." The two parties also express "solidarity with the nations of the third world, such as El Salvador and Nicaragua, that are struggling for national liberation, for the development of their social freedom and democracy." The two parties declared to use the points agreed upon as the basis in every field and, at the same time, confirmed the desire of each side to maintain its individual characteristics and basic stands.

Of course, in the capitalist countries, there is generally a gap between platforms and the implementation of these platforms. Despite this, the agreement reached between the communist party and the socialist party of France to take joint actions to bring about a change in France might be the beginning of a change in a new direction.

After the Parliamentary elections, President Mitterrand gave Pierre Mauroy the responsibility of establishing a new government. On 23 June 1981, a new government was established consisting of 44 ministers, 4 of whom represent the French Communist Party, Charles Fiterman, Political Bureau member and secretary of the Party Central Committee, was given the post of Minister of Communications and Transportation; Jack Ralite is Minister of Public Health; Anicet LePors is Minister of Civil Service and Administrative Reform; and Marcel Rigout is Minister of Vocational Training.

After 34 years of being excluded from the government, the French communists are again participating in the government of France. This event marks a new change in the situation in Franch, a change in a direction favorable to the forces of peace and democracy.

The democratic forces in France won this major victory against a background of French capitalism becoming increasingly mired in a general crisis. The period of temporary stability and development of French capitalism following the war is now in the past and will never return. Paid rather handsomely by the United States in the "filthy war" in Vietnam, the French imperialists received a rather large sum of dollars with which to retool the French economy. As a result, capitalist France enjoyed a period of prosperity and relative stability. Old France was somewhat "rejuvenated." However, this golden period did not last for long. During the past several years, the French economy stopped growing and began to decline. Inflation soared to 13 percent. Unemployment reached a frightening level: 2 million persons! More than 150,000 farm families went bankrupt. Scores of medium and small enterprises had to close their doors. The steel, coal, shipbuilding, tool manufacture, textile and other industries had to reduce the scope of their activities. In 1980, the balance of trade showed a deficit of 80 billion francs. Competition from Japan, the German Federal Republic, the United States and so forth has made the French economy even more unstable. The fundamental antagonisms of the capitalist system in France have become increasingly deep.

Of the difficult problems being encountered by capitalist France, unemployment is an important problem, one that directly influenced the results of the elections. The working people of France cannot forever tolerate the authorities driving them into unemployment, thus making it impossible for them to earn a living and support their families. In these elections, the voting age was reduced from 21 to 18 years of age. The number of youths who voted increased very much and these youths included some who only recently began earning their livings and immediately found themselves without a job. These young voters increased the forces of the persons demanding a change and made an important contribution to changing the balance of forces between the left and the right in the elections in France.

The results of the elections in France reflect the hatred of and the total lack of confidence in the capitalist system in France on the part of the majority of the French electorate. They also indicate the ineffectiveness of the powerful capitalists in France as regards resolving the problem facing France. They reveal the antagonisms and division within the right wing of the powerful capitalists in France.

Mr. Mitterrand ran for the office of president as the leader of the French Socialist Party. Although it contains many negative points, the platform on which Mr. Mitterrand and the Socialist Party ran does, to some extent, satisfy the aspirations of the majority of French voters who desire a change.

The victory of the left in the elections in France proves that the majority of French voters are becoming enlightened. This victory is the result of the solidarity of the forces of the left in the struggle for change.

One important reason for the victory of the forces of the left in the elections was the flexible tactics employed by the French Communist Party in the election campaigns. Everyone knows that Mr. Mitterrand only won 25.84 percent of the vote and Mr. D'Estaing won 28.31 percent of the vote in the first round of the elections; however, in the second round, Mr. Mitterrand won 52.29 percent and Mr. d'Estaing won 47.71 percent of the votes cast. Why did this sudden [illegible]nge occur. It occurred as a result of the votes cast by the 4.5 million communist voters. The French Communist Party appealed for votes for Mr. Mitterrand in the second round in order to defeat the right and create the conditions for establishing a leftist government in order to bring about change. The 4.5 million voters who voted for the Communist Party in round one voted for the head of the Socialist Party in round two, consequently, they helped to put Mr. Mitterrand into the Elysee Palace.

In the Parliamentary elections, the flexible tactics of the French Communist Party had a decisive impact in defeating the parties on the right in the Parliament and throughout the entire country. By voting for the candidates of the Socialist Party in round two, communist voters helped the socialist Party win 283 seats, 170 more than it held in the previous legislature of the Parliament. This represents a major step forward by the Socialist Party and indicates the unjust nature of the voting system in France: with 38 percent of the votes, the Socialist Party won 60 percent of the seats in the Parliament! The Communist Party only won 44 seats in the new Parliament; this is not consistent with the true prestige of the Communist Party among the people of France; based on the precentage of votes cast for it (16 percent), the Communist

Party should have won twice as many Parliamentary seats. In the recent election campaign, the French Communist Party had to contend with rightist forces that control huge mass media facilities. On the other hand, the party had to deal with the democratic social trend which has much influence among the middle classes in France. Although it lost one-half of the seats it held in the previous Parliament, the French Communist Party still plays an important role in the political life of France. The party played an indispensable role in defeating the right. The communist candidates withdrew during the second round in order to deliver the votes cast for them to socialist candidates in all regions in which the lead held by the Socialist Party permitted it to win a large victory in the Parliamentary elections.

The results of the elections have brought about a new situation in France: there is a leftist majority, a very clear majority, within the country and an even broader majority in the Parliament. Thus, the conditions exist for fulfilling the pledges made in the election campaign, the pledges concerning the economic and social fields as well as the fields of democracy, national independence, and disarmament.

The implementation of the new policy promised by Mr. Mitterrand in the election campaign will surely encounter resistance by employers and the right. Therefore, the solidarity and cooperation of leftist forces are necessary in order to bring about a change in the direction desired by the left. For this reason, President Mitterrand invited representatives of the Communist Party to join the new government. Whether they want to or not, Mr. Mitterrand and the Socialist Party must give attention to the aspirations of the majority of the voters of France, the persons who voted for them and put them into power.

The change which the leftist parties in France are making every effort to bring about is limited to the framework of the bourgeois Constitution and law of capitalist France. Basically, this change does not involve the structure of the comtemporary social structure in France. Despite this, if this change is brought about, it will partially satisfy the interests of the working class and laboring people of France, limit the oppression and exploitation by them of French monopolistic capitalists, strengthen the national independence of France and somewhat reduce France's dependency upon foreign countries.

The right in France is unwilling to accept defeat. Using the huge means at its disposal, it is looking for ways to thwart and oppose every change that could harm the monopolistic capitalists. For this reason, the struggle to bring about change is also a struggle against the right and the monopolistic capitalists who represent it. Only by relying upon all of the forces of the left, by relying upon the majority of the electorate who voted for the left can this struggle achieve results.

The international reactionary forces, especially the U.S. imperialists, are bitter about the ascension to power in France by the left. They are making every effort to impede and oppose every change in France toward peace and democracy. Will the new administration in France resist the pressure of the foreign imperialist powers or not?

France is in a frustrating position. The people of France demand change. In their election platform, Mr. Mitterrand and the Socialist Party promised to bring about a change. This was why the majority of French voters voted for Mr. Mitterrand and the Socialist Party.

Today, Mr. Mitterrand has become the president of France. The Socialist Party constitutes the majority in the French Parliament. A government consisting almost entirely of members of the Socialist Party has been formed. Mr. Mitterrand and the Socialist Party have favorable conditions for implementing the program announced by them during the election campaign. The question raised now is whether Mr. Mitterrand and the Socialist Party will keep the promises made during the election campaign.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

NEW POLICE IDENTITY TAGS DIRECTIVE ISSUED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 30 Jun 81 p 1

[Article by Pham Hong Giang, Security Guard Police Municipal Bureau: "New Identity Tags for People's Police Forces"]

[Text] Carrying out directive 06/CT/BNV (Ministry of Interior) on wearing people's police identity tags pursuant to a Council of Ministers' new regulation, and under the guidance of the Standing Committee of the Municipal VCP Committee and the Municipal People's Committee, on 23 June 1981 the Municipal Public Security Service board of directors issued notice 2926/KCS, regulating the wear of people's police identity tags as follows:

Beginning 0600 hours of 1 July 1981, all people's police cadres and combatants of the Ho Chi Minh City Public Security Service when wearing uniforms must wear uniform people's police identity tags in accordance with the new model set by the Council of Ministers: red background, yellow letters, 3 cm wide and 6 cm long. As for precinct and district police forces, the precinct or district name should be inscribed on the tag.

The people's policy identity tag must be worn right in the middle and close to the flap of the upper left pocket. The board of directors of the Municipal Public Security Service reminds all people's police cadres and combatants of the need to carry out strictly and properly all regulations concerning the wearing of the new identity tag, and at the same time it suggests that cadres, workers, civil servants and all the people in the city follow and help the people's police forces in properly fulfilling their task.

ADMINISTRATIVE CADRES CONVICTED OF BRIBERY, EMBEZZLEMENT

Hanoi TIEN PHONG in Vietnamese 4-10 Aug 81 p 7

[Article by Le Van Ba: "They Take Bribes and Embezzle!"]

[Text] Who Are They?

The first to be mentioned is Le Trong Luu, head of the Labor and Wages Bureau of Building Corporation No 1 of the Ministry of Building. Though aged 50, he still looks young and wears neat clothes. He is a cadre who outwardly seems to set good examples and to constantly respect the principles, systems and polices promulgated by the state and who also requests others to respect and strictly implement them. Who would have thought that Luu had taken bribes and acted quite contrary to law and ethics? Luu's accomplices are Nguyen Xuan Thuong, Trinh Van Phuc, Lai Quang Ha and Le Xuan Tan. These are administrative cadres and concurrently heads of collectivized households belonging to Enterprise No 106 (which builds the Cultural Club of workers in the Yet Kieu-Tran Hung Dao area), to Enterprise No 104 (which builds the Children's Hospital in the Giang Vo area), to Enterprise No 107 (which builds factories in the area of Ba Vi District), to the Motorcycle Repair Workshop and to the Technical Workers' Training School of the Building Corporation. The post of head of collectivized households confers great power and proves profitable though. With the household registers of their respective units at their disposal, these heads of collectivized households have managed to contact places where they have some acquaintances to rapidly solve problems relating to the cancellation of the outgoing persons' names from the household registration book, the transfer of certain households, the registration of the incoming ones and the application for and issuance of ration stamps and coupons necessary for household members to purchase grain, food products and canteen commodities. Of the many go-betweens, the most remarkable is a driver at the Machines Repair Enterprise who assumes the task of negotiating, setting prices, receiving moneys and gifts, giving parties and sharing bribes between accomplices.

They have worked together for many years and been rather well organized. They seem to have abided by a special rule and by a pledge that they would trust only the members of their group and that he who betrayed would be punished. How dreadful the punishment might be has been understood by each and everyone when he looked into the eyes of his accomplices.

It has long been rumored among the people that "to enter one's name in the household registration book of Hanoi, spending a few thousand dong will quickly do the trick!" That has now been confirmed by proof.

Subtle, Brazen Tricks

How could the Luu-Thuong clique have blindfolded the responsible organs and entered the names of 574 persons from other provinces--a figure reached after preliminary investigations--in the Hanoi household registration book? First, by taking advantage of the laxity of labor management at the work sites and the system of enrolling students in technical workers' training schools and assigning male and female students upon their graduation from these schools, the Luu-Thuong clique compiled all the necessary curricula vitae and documents for turning the persons from whom they had taken bribes into workers of the enterprises or students of the Technical Workers' School of the corporation. This was the most important step. As a result, an underhand dealer automatically became a concrete pouring worker on the rolls of a state enterprise! Here is the second step: Taking the production sector's requirements (!?) into consideration, the head of the Labor and Wages Bureau of the corporation signed a decision to transfer the abovementioned persons to the Hanoi urban enterprises. Afterward, the head of collectivized households in turn "made arrangements" to pick out these persons one by one, to register them as separate households and to provide them with books to purchase each 20.5 kgs of grain per month according to the workers' standard, plus ration stamps and coupons as well as fuel purchase tickets.

All of these steps seemed lawful and conformable to the household registration formalities established by the public security service and also to the requirements of the food and trade sectors. However, a number of documents were genuine while others were phony. For example, though the regulations had stipulated that school enrollment should be extended only to students from Ha Son Binh, Ha Nam Ninh and Thanh Hoa, those from Hai Hung, Thai Binh and so forth were also accepted simultaneoulsy. Nevertheless, everything went right!

We called on Tran Thi Ky, 61 Hang Dao Street. Though having no legitimate occupation, she had long been a building worker at Enterprise No 104. When asked, she replied with embarrassment that she knew neither the location of the work site nor the name of the head of her production team or unit. After beating about the bush for a moment, she produced a sick leave permit and said in a honeyed tone: "I quit my job long ago. Please understand."

Diamond cuts diamond. The permit was retrieved and when looking at it, Hung, the director of Enterprise No 104, exclained: "This is not my signature!"

To divert the attention of the organs of law, usually the Luu-Thuong clique cleverly put the names of persons qualified for transfer to Hanoi on top of the household transfer list or mixed these persons' documents with phony curricula vitae.

After working in Ba Vi for many years, Nguyen Van X., a single young worker, received a decision on his transfer to Enterprise No 104. He never knew that on the transfer list, his status was that of a...head of household. He was thus tranferred to Hanoi together with his "family" composed of his wife and a 2-year old daughter. His "wife" was an underhand dealer from whom the Luu-Thuong clique had taken a bribe long ago but had not yet found ways to legally enter her in the Hanoi household registration book. As for the daughter--a dependent member of the family--, she was merely a "ghost" name.

How could the Luu-Thuong clique take bribes?

Many unqualified people have obstinately stayed in Hanoi or have wished to return to this city because they do not want to go to faraway places. A man would pay a visit to the house of one of these persons with the intention of studying the situation of his family and making down-to-earth insinuations. Knowing that Ms Mac Thi Ty had just received a Hitachi 8080 radio set from her relative in France, the middleman insisted on taking the radio and estimated its price at 3,000 dong but also requested her family to give him a further 6,200 dong in cash, adding that the affair would be settled only if she accepted his conditions. Likewise, Ms Tran Thi Ky, 61 Hang Dao Street, lost 6,000 dong; Pham Viet Phong, 154-A An Duong area, 1,500 dong; Ms Ngo Thi Lien, Lan Ba Lane, Kham Thien, had to hand over a bicycle worth 6,000 dong and Nguyen Manh Hai, 31 Ngu Xa, two coats. In a single case of illegal household registration for six families, the clique admitted having received birbes totaling 61,000 dong, not to speak of banquets and gifts.

On receiving money, they wrote down a receipt duly stating that they had borrowed such and such amount (clearly written out in figures) from that family and promising to give it back in full next month. It was thus easy for them to cheat naive, credulous people.

When sharing money between themselves, they also made out "IOU's" as in a very "fair deal."

Naturally, they used the bribes taken to make great expenditures, to defray parties and to buy commodities and they lived much more plentifully than before. They were cunning wolves though. Luu and Thuong tried to conceal their riches by wearing ordinary, sometimes homely, clothes. A member of their clique usually rode a Peugeot motorcycle, saying that he borrowed it from a friend of his but this was a lie. In particular, another member named Phuc--relying on the fact that he had got a sick leave permit a half-year ago [and that his status was thus legal]--squandered money buying three houses and building a fourth one in his native village in Tu Liem District.

The Victims Were Also the Accomplices

The people using money to bribe the Luu-Thuong clique were first those who earned their living by illegitimate profession connected with populous areas and complex environments in cities. They were pitilessly exploited by the Luu-Thuong clique. Though having to pay money, they did not stand to lose because once allowed to legally reside in Hanoi, they would have opportunities to get in touch with each other, to carry out dishonest commercial dealings, to illegally pursue their occupations and to disrupt the open market, streets and bus stations.

How about the second category of people?

We met with Ms Nguyen Thi L., a member of the Youth Union and an employee at the finance bureau of Enterprise S. A native of Nghe Tinh, she was assigned to work in Quang Ninh after graduating from a finance and accounting school.

We asked her: "How much money did you give him to obtain your transfer to Hanoi?"

She cried but refused to admit that she had to offer any money and gift.

Because of her bleak look, we did not want to ask any more questions. If she now regretted what she had done, it would be too late.

Following is the case of a comrade working at the People's Organ of Control in Hai Ba Trung Precinct. (It is quite regrettable that we have to speak about him in this newspaper article.)

Our comrade had a son named Bui Cong Tuyen, 23, who was unemployed and lived in his native province of Thai Binh. Our comrade asked this clique [Luu and Thuong] to compile documents and certificates attesting that his son was a worker at Building Corporation No 1 so that the latter could be entered in the Hanoi household registration book. Actually, Tuyen never attended any vocational school and never spent any day working at the construction site. Afterward, by his own devices, our comrade managed to have his son assigned to a post in the Industrial-Commercial Tax Bureau in Hai Ba Precinct by virtue of Decision No 296 of the Organizational Commission of the Hanoi Municipal Administration.

What kind of relationships existed between our comrade and the Luu-Thuong clique? Does a man like Tuyen deserve to be allowed to continue working with the Industrial-Commercial Tax Bureau? This question will be appropriately settled by the responsible organs. Any how, the lesson drawn from this case is that lending a hand to persons who counterfeit documents and take bribes will have unforeseeable consequences.

Why so? How Many More People Were Involved in This Case?

Three years ago, people in the same Building Corporation No 1 had found out that when making a decision to transfer a worker from another region to the Hano urban area, the Labor and Wages Bureau surreptitiously added four persons more to the transfer list. At that time, cadres and workers talked a great deal about bribery in the corporation and expressed their discontent. Why was their opinion not heeded by leaders? Many people wondered why Le Trong Luu--who was merely head of the Labor and Wages Bureau--had the right to sign decisions on the recruitment and transfer of the corporation's personnel, a function which should lie within the power of the corporation director? To take bribes, the Luu-Thuong clique seriously violated the principle on student enrollment and on the training, recruitment, assignment and transfer of laborers. In ever unit, [for control purposes,] there was a student enrollment council of which the Youth Union chapter was a component. If so, how could the student enrollment council in Building Corporation No 1 carry out its activities in such a manner as to allow so serious a violation of the masses' right to collective ownership?

Moreover, very strict regulations governed the entry of a person's name in or its cancellation from the household registration book, the distribution of grain and any increase or reduction in the number of rations, the issuance of ration stamps and coupons according to standards and so forth. If so, how could Luu, Thuong, Tan and Phuc have settled these problems in the past several years, especially when these matters fell under the competence of the grain and commercial offices of the Ba Vi District and the Dong Da and Hoan Hiem Precincts?

According to still incomplete figures, the Luu-Thuong clique has transferred 574 people to Hanoi but investigations have revealed that only 336 of them are presently working in units subordinate to Building Corporation No 1. Where are the remaining 238 and what are they doing? How many real persons are living in the Hanoi urban area thanks to the household registration books they have obtained through bribery? And how many of them are "ghosts" and not human beings?

At present, investigations and interrogations are under way.

Male and female young workers at the work sites are providing assistance for the comrades in charge of investigating this case.

In particular, four young members of the public security forces and Youth Union named Vu Ngoc Loi, Nguyen Van Thanh, Nguyen Thanh Tung and Nguyen Thien Hung together with a number of other comrades have overcome all difficulties and displayed valor and cleverness and have thus been able, within a short period of time, to uncover this case of bribery and counterfeit and to seize the culprits with all the evidences.

REFRESHMENT BAR OWNER SENTENCED FOR USING OLD MUSIC

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 4 Jul 81 p 1

[Article by X.TH: "Court Opens Session To Try Case of Circulation of Illegal Music"]

[Text] Bui Thi Long and Bui Thi Duyen of Ward 20, Precinct 6, were brought to trial before the People's Court of Precinct 6 on 30 June 1981 for using decadent music and also for opposing and despising cadres and personnel on official duty.

At 2000 hours on 14 May 1981, the unit in charge of inspecting the extermination of decadent cultural products of the Cultural and Information Section of Precinct 6 discovered that the refreshment bar owned by Bui Thi Long in Ward 20 was using illegal music. When the unit carried out the administrative inspection task pursuant to the law, Thi Long violently opposed and offended executors of the law.

Many bad music tapes being used were confiscated and a written record has been made.

Before the court, the two defendants at first stubbornly persisted in justifying their violating the law; however, in the face of obvious evidence, witnesses and exhibits of confiscated objects, they finally bowed their heads and admitted their guilt. The People's Court of Precinct 6 sentenced Bui Thi Long, the main culprit in storing and circulating decadent music, to 24 months in prison and confiscated all evidence, and Bui Thi Duyen was sentenced to 16 months in prison for condoning the misdeed and for complicity.

MILITARY AFFAIRS AND PUBLIC SECURITY

BRIEFS

DONG NAI MILITARY DRILLS--The Dong Nai Provincial Military Command recently organized combat drills and formulated many combat projects for its militia force. This was aimed at maintaining combat readiness among members of the provincial militia force in order to enable them to fight the enemy under all circumstances. The province is trying to establish a battalion or platoon size combat militia force at each of its coastal village and district. [BK101205 Hanoi Domestic Service in Vietnamese 2300 GMT 7 Sep 81]

AWARD TO FALLEN COMBATANT--On 12 September the Hanoi municipal party committee and public security service held a solemn ceremony to receive the VPA hero title awarded by the state to fallen combatant (Nguyen Tai Hai), a former deputy chief of the Hoan Kiem Precinct public security post. On this occasion the Hanoi municipal public security sector also reviewed the emulation movement to learn from the example set by this fallen combatant. Over the past 2 months the Hanoi People's Public Security Force has scored many achievements in ensuring political security and social order and safety in the capital. The local police force has also detected and dealt with 325 cases involving speculation and smuggling, thus confiscating a quantity of goods worth more than 3 million dong. [BK171353 Hanoi Domestic Service in Vietnamese 2300 GMT 14 Sep 81]

BORDER DEFENSE UNITS IN 5TH MR--In the 5th Military Region, grassroots-level border defense units have pursued the three-prong policy of holding the ground, staying close to the people and closely following the situation. They have joined various localities in motivating the people to satisfactorily carry out the party's policies, stepping up production and maintaining combat readiness. They have also participated in firmly maintaining public order and security in hamlets and villages, on the sea and offshore islands and in the border areas. Border defense units in Thuan Hai Province have solicited the opinion and criticism of the local party committee echelons, administration and people regarding relations between the various border defense posts and the localities concerned so as to gain experience in satisfactorily achieving army-people unity. In Quang Nam-Danang, Nghia Binh and Phu Khanh Provinces, border defense units have closely coordinated with militia and self-defense forces in constantly following the situation; conducting patrols; mounting guard, controlling arrivals and departures of ships and boats; promptly checking and dealing with illegal trade activities and attempts to flee the country by sea, encroachments on our territorial waters and sabotage activities; and firmly upholding all border defense regulations. BRIEFS

CUBAN-AIDED HOSPITAL--The construction of the Vietnam-Cuba Friendship Hospital in Dong Hoi, which officially started on 20 August 1975, has just been completed. The 450-bed hospital, designed by Cuban architects and built on a 6-hectare plot of land, will be inaugurated and put into use on 9 September. [BK101205 Hanoi Domestic Service in Vietnamese 1000 GMT 6 Sep 81]

HO CHI MINH AVENUE IN LUANDA--On 31 August SRV Ambassador to Angola Vu Hac Bong held a press conference in Luanda. Attending the press conference were the vice chairman of the Angolan Committee for Friendship and Solidarity With People of Other Nations, a representative of the MPLA Foreign Relations Committee, and many Angolan journalists and radio and television correspondents. On 1 September the Angolan Committee for Friendship and Solidarity With People of Other Nations, the Luanda party committee and the MPLA Foreign Relations Committee jointly held a ceremony to name an avenue in the Angolan capital after President Ho Chi Minh. [BK101205 Hanoi Domestic Service in Vietnamese 0400 GMT 6 Sep 81]

CUBAN AID PROGRAMS PRAISED--Cuba has always supported Vietnam in difficult times. "That is the sentiment of all Cuban cadres, experts, engineers and workers who have joined us in building the cattle ranch at Moc Chhau, various chicken farms at Luong My in Ha Son Binh, the Xuan Mai-Ba Vi road, the Thang Loi Hotel and the Dong Hoi Hospital." Assistance from fraternal Cuba is not limited only to these five projects. "As we know, despite numerous difficulties due to the economic blockade imposed by the U.S. imperialists, the party and government of Cuba have for the past 18 years sent tens of thousands of tons of sugar annually as aid to our people. The Cuban comrades have also sent the best breeder oxen to our country together with all the necessary equipment and competent technicians to help our people increase the number of breeder cattle and dairy cows." In September 1973, following Comrade Fidel Castro's visit to Vietnam, specific decisions were made by the party and government of Cuba for the construction of various projects in our country under a Cuban aid program. "These include the Moc Chhau cattle ranch, which was completed in March 1975; the Luong My chicken farm, which was completed in June of the same year; the Thang Loi Hotel, which was basically completed on time in July 1975 to accommodate international guests attending our 30th National Day; the 60-km Xuan Mai-Ba Vi road--a project built in accordance with international standards--which was completed and opened to traffic in December 1977; and the modern Dong Hoi Hospital which was inaugurated recently." [By (Pham Dinh Loi)] [BK131006 Hanoi Domestic Service in Vietnamese 0400 GMT 13 Sep 81]

PARTICIPATION IN HAVANA CONFERENCE--On 15 September the 69th inter-parliamentary conference opened in Havana, Cuba, with the participation of delegations from more than 90 countries in the world. Fidel Castro, chairman of the State Council, and other Cuban leaders and members of the diplomatic corps attended the opening session. The SRV delegation is headed by Phan Anh, vice chairman of the National Assembly. [BK171353 Hanoi Domestic Service in Vietnamese 2300 GMT 16 Sep 81]

AID TO KAMPUCHEAN PROVINCE--The people of Ben Tre Province have recently sent large quantities of materials and equipment together with cadres and workers to the Kampuchean province of Kandal to help its people build many projects in support of economic and cultural development. Ben Tre Province has earlier helped its sister province of Kandal build two water pumping stations, a vehicle repair shop, a foundry, a candy factory, a sugar processing factory, a wired radio station and many kindergartens, creches, movie theaters and medical establishments. [BK171353 Hanoi Domestic Service in Vietnamese 1100 GMT 13 Sep 81]

SOLIDARITY DELEGATION VISITS CONGO--Hanoi, VNA, September 8--A delegation of the Vietnam Committee for Solidarity With Afro-Asian Peoples led by Doan Tran Canh, Presidium member of the committee, recently visited the People's Republic of Congo. It held talks with a delegation of the Congolese Association of Friendship Between the People. In their joint statement, the two delegations fully supported the Kampuchean people's national rehabilitation and reconstruction and vehemently condemned the Pol Pot-Ieng Sary-Khieu Samphan clique's genocidal crimes. They demanded that the United Nations recognize the Kampuchean Government founded following the general elections on May 1, 1981 as the legal representative of that country at this international body. The two sides denounced the Reagan administration's recent decision to produce neutron bombs. They completely supported the Soviet Union's peace initiatives announced by Leonid Brezhnev at the 26th Congress of the Communist Party of the Soviet Union and the U.S.S.R. Supreme Soviet's appeal. The Congolese side supported the peace proposals as expounded in the statement of the Indochinese foreign ministerial conference in Phnom Penh on June 14, 1981 for the interests of the regional peoples. [Text] [OW080945 Hanoi VNA in English 0716 GMT 8 Sep 81]

LAO, KAMPUCHEAN DELEGATIONS--Hanoi, 12 Sep (VNA)--Two delegations, respectively from the Lao province of Savannakhet and the Kampuchean province of Siem Reap-Oddar Meanchey, have visited the central Vietnamese province of Quang Nam-Danang. They were received by Ho Nghinh, alternate member of the VCP Central Committee and secretary of the provincial party committee, and Mayor Hoan Minh Thang. The guests visited various economic and cultural establishments and historical relics in the province. [Text] [OW201421 Hanoi VNA in English 1509 GMT 12 Sep 81]

GDR LECTURERS--Hanoi, 17 Sep (VNA)--A group of lecturers of the Socialist Unity Party of Germany (SED) led by Prof. Dr Hildegard Neumann, secretary of the Dresden party committee, has made a week-long speaking tour of Vietnam. They visited the house of the late President Ho Chi Minh in Hanoi and gave lectures in this city, in Ho Chi Minh City, and in Ha Bac Province. On September 14 they were received by Hoang Tung, member of the Communist Party of Vietnam Central Committee and head of the party's Commission for Propaganda and Training. NEW BOUNDARIES OF HUE, DONG HA ANNOUNCED

BK180923 Hanoi Domestic Service in Vietnamese 0400 GMT 16 Sep 81

[Text] The Council of Ministers has recently issued a decision extending the territorial boundaries of Hue municipality and Dong Ha city, and redelineating the boundaries of Huong Dien, Huong Phu, Ben Hai and Trieu Hai Districts of Binh Tri Thien Province as follows:

The villages of Huong Hai, Huong Phong, Huong Vinh, Huong So, Huong Long, Huong Ho, Huong Binh and Huong Tho, except Duong Hoa hamlet, are now incorporated into Huong Phu District of Hue municipality. The hamlets of Thanh Tru, Co Buu, Bon Chi, Bon Pho and An Luu of Huong Chu village, Huong Dien District, are now incorporated into Hue municipality.

The villages of Thuy Bang, Thuy Dieu, Thuy An, Thuy Duong, Phu Thuong, Phu Duong, Phu Mau, Phu Thanh and Phu Tan and the hamlets of Con Chau, Co Thanh, Vuong Trau and Dong Giap of Thuy Van village, Huong Phu District, are now merged into Hue municipality.

So, the expanded Hue municipality includes Thuan Thanh, Thuan Loc, Thuan Hoa, Tay Loc, Phu Thuan, Phu Hoa, Phu Cat, Phu Hiep, Vinh Loi and Vinh Minh Wards and the villages of Thuy Truong, Thuy Phuoc, Thuy Xuan, Xuan Long, Huong Hai, Huong Phong, Huong Vinh, Huong To, Huong Long, Huong Binh, Huong Tho, Thuy Bang, Thuy Dieu, Thuy An, Thuy Duong, Phu Thuong, Phu Duong, Phu Mau, Phu Thanh, Phu Tan and Thuy Phu including Dong Tac hamlet, Huong Luu village including Con Trau and Co Thanh hamlets, Huong Ho village including Thanh Tru, Co Luu, An Luu, Bon Tri and Bon Pho hamlets.

Cam Giang, Cam Thanh [with low falling tone], Cam Thanh, Cam Thuy, Cam Hieu, Cam Tuyen, Cam Chinh and Cam Nghia villages, Ben Hai District, and Trieu Luong and Trieu Le villages, Trieu Hai District are now merged into Dong Ha city. So the expanded Dong Ha city includes Wards 1, 2, 3, 4 and 5, and Cam Giang, Cam Thanh [with low falling tone], Cam Thanh, Cam Thuy, Cam Hieu, Cam Tuyen, Cam Chinh, Cam Nghia, Trieu Luong and Trieu Le villages.

PARTY ACTIVITIES AND GOVERNMENT

SECRETARIAT DIRECTIVE FOR 5TH PARTY CONGRESS

Hanoi NHAN DAN in Vietnamese 18 Jul 81 p 1

[Article: "Holding of VCP Organization Congresses at All Levels and Election of Delegates to Attend the 5th Party Congress"]

[Text] On 14 July 1981 the Secretariat of the VCP Central Committee issued a directive on holding Party organization congresses at all levels and elections of delegates to attend the 5th Party Congress.

On this occasion Party organization congresses at all levels will be organized in two phases. In the first phase there will be doctrinal discussions on the situation and mission, some problems concerning changes to the Party Statutes will be discussed and delegates will be elected to participate in Party organization congresses at higher levels or at the National Congress of Delegates.

The 2d Phase will be conducted following the National Congress of Delegates to review implementation of the resolution of the previous [4th] Party organization congress, to thoroughly understand and discuss the implementation of the resolution of the 5th National Congress of Delegates, to determine the new mission of Party organizations during the period of the 1981-1985 Five Year Plan (primarily during the upcoming term of office of Party committee levels) and to elect new executive committees where terms of office have expired or have nearly expired. At other places elections may be held to fill vacancies or to replace Party committee members if the Party organization congress deems this necessary.

In the first phase Party organization congresses at all levels will begin being held at the lowest levels from the end of September 1981 and will culminate by the end of October 1981 with Party organization congresses at Provincial and Municipal levels and at Party organization directly subordinated to the Central Committee. In the 2d Phase Party organization congresses will be conducted at the province and municipal levels in the 1st quarter of 1982 followed by congresses in districts, precincts and basic level organizations.

Election of delegates to higher level congresses and to the National Congress of Delegates must be conducted with full consideration to insure strict adherence to standards for delegates.

In the progression of Party organization congresses at all levels leading up to the 5th Party Congress, Party committees at all levels will review the points enunciated in the letter sent by the Central Committee to all levels on the convening of the National Congress of Delegates and will promote a strong mass emulation movement to implement the 1981 Plan.

REGULATIONS ON GOVERNMENT CONTROL OF GOLD, SILVER, PLATINUM, DIAMONDS

Hanoi NHAN DAN in Vietnamese 6 Aug 81 p 2

[Article: "Regulations on State's Unified Management of Gold, Silver, Platinum and Diamond"]

[Text] The State Bank of Vietnam announces:

Based on Decision No 39-CP on the state's unified management of gold, silver, platinum and diamond, the State Bank is given the responsibility of implementing the unified control on behalf of the state of gold, silver, platinum and diamond. Following are the concrete stipulations regarding the matter:

Article 1: The state recognizes the people's legitimate ownership of gold, silver, platinum and diamond, irrespective of the volume or amount, whether it has been processed or not into adornment or art objects.

To protect the people's legitimate right to ownership in gold, silver, platinum and diamond, and to fight against their illicit trade, the State Bank stipulates regulations regarding their management, organizes their reporting, and issues certificates of ownership for people to use and keep them.

Article 2: Those in possession of gold, silver, platinum, and diamond have the responsibility of listing and declaring at the required time the amount of gold, silver, platinum and diamond both processed and unprocessed into adornments or art objects which they presently keep on themselves or keep at home so as to receive certificates of ownership.

In the case of minors the ones in charge have the responsibility of declaring in their own names; only in the cases where the minors do not have parents or guardians, as confirmed by village authorities or those of similar level, are the minors entitled to make declarations in their own names.

Article 3: Everyone has the right to carry on himself or herself jewels and art objects made out of gold, silver, platinum and diamond. Those carrying on themselves jewels and art objects weighing less than 37.5 grams in gold, 37.5 grams in platinum, 375 grams in silver, and 3 carats (0.600 gram) in diamond do not have to carry with them certificates of ownership.

Those carrying on themselves gold, silver, platinum and diamond, which are either unprocessed or only half-processed, and those carrying the same on themselves in the form of jewels and art objects but above the above-stipulated must carry with them the certificates of ownership issued to them by the State Bank at the time of declaration.

Article 4: The sale and purchase of gold, silver, platinum and diamond, and gold, silver or platinum plating must all be under the unified control of the state and be done through the companies and stores run by the State Bank dealing with gold and silver. Private persons are not allowed to sell or purchase gold, silver, platinum and diamond among themselves or use them as pawns, to pay one another or to carry out trade among themselves.

In minority nationality areas if the provincial people's committees have the agreement of the State Bank, the compatriots from these nationalities can use in accordance with their national customs silver ingots and silver coins in such occurrences as funerals and weddings or to make adornments without previous authorization.

Article 5: Collective organizations that are allowed to engage in processing and repairing jewels and art objects made out of gold, silver, platinum or diamond must exactly follow the regulations dealing with registration and taxes, plus the stipulations of the State Bank regarding the processing and repair of jewels and art objects, and submit to the unified control of the State Bank.

Those engaged in gold panning must declare and sell to the State Bank the entire amount of gold they gather.

Article 6: Those who found through digging, diving underwater, or picking up by chance gold, silver, platinum or diamond must report the find at once to the nearest public security organ and turn it over to the nearest branch of the State Bank. The author of the find gets a reward from 10 to 30 percent of the value of the gold, silver, platinum or diamond found, with a ceiling set at 5000 dong.

Each concrete reward level is to be determined by the provincial or city people's committee involved and decided upon on the basis of the recommendation of the provincial or city bank.

Article 7: The export and import of gold, silver, platinum and diamond is carried out in accordance with the regulations controlling foreign exchange in the Socialist Republic of Vietnam, which apply to both Vietnamese and foreign nationals.

When entering the country, every person has the right to bring with him or her gold, silver, platinum and diamond in processed or unprocessed form, in unlimited quantity, but he or she must declare and follow all the procedures called for and demanded by the customs authorities at the first port of entry (at the frontier, at a port or at an airport). When leaving the country, besides the amount of gold, silver, platinum and diamond already declared when entering the country, if the person wishes to bring out some jewels or art objects made out of gold, silver, platinum and/or diamond bought from the gold and silver companies and stores run by the State Bank, he or she must have a bill in good form to show.

Exceptional cases must have the permission of the central State Bank.

Article 8: The customs organs are responsible for controlling the import and export of gold, silver, platinum and diamond; in places where there are no customs authorities, such control is the responsibility of public security organs.

The public security and tax organs are responsible for controlling the sale and purchase, transportation, fashioning, processing and repair of gold, silver, platinum and diamond in the domestic market.

Article 12: This decision is applicable to all the citizens of the Socialist Republic of Vietnam, to the cooperatives (or work cooperation teams), to the religious and social organizations, and to the foreign nationals as well.

Decision No 39-CP is being implemented in the entire country. The State Bank organizes the means whereby the people can make their declarations and issues the certificates of ownership in gold, silver, platinum and diamond so as to confirm the legitimate ownership rights of the people, including the right to bring along on one's body jewels made out of gold or silver when moving from one locality to another. The listing and declaration of the above materials must be implemented on the basis of absolute security to safeguard the secrets of those having gold or silver to declare.

UNDERHAND DEALINGS AT STATE SHOP DEPLORED

Hanoi PHU NU VIETNAM in Vietnamese 5-11 Aug 81 p 7

[Article by Nguoi Tieu Dung [Consumer] in "Readers' Opinion" Column: "What Will Be Left for the Consumer?"]

[Text] The sun is shining. Customers are lining up to buy meat in front of the (Hang Be shop) counter at 79 Nguyen Huu Huan Street. They are waiting patiently but actually everyone anxiously wishes that her turn will come soon. This is because the city has not sold much meat since the beginning of the month and because today's meat seems to be fresh and appetizing. Now and then, the customers crane their necks to see whether there still remains some meat in the counter.

"Is there much meat left, Madam?", a little girl asked.

The salesgirl kept quiet and continued cutting meat. A group of "underhand dealers" was gathering round the counter.

Suddenly, a stout lady of more than 40 years of age came and silently went behind the counter. When leaving, she carried in her hand a plastic bag containing loin pork and pig's legs. The customers looked at the lady and then at each other as if to say: "This is surely a shop employee and that is why she enjoys "priority" and can buy meat so quickly." Later, a barechested, robust young man came out of an adjacant lane, went straight to the meat counter and returned to the lane with a piece of good-quality meat and a pig's leg in his hand. Both of them nonchalantly passed by the customers, indifferent to the latter's stare.

Losing patience after a long wait, I ventured into the side door of the counter (which was reserved for the employees). Seeing that there remained a large quantity of meat in a bamboo basket, I told myself: "Don't worry!" However, less than 15 minutes after, the salesgirl announced: "No more meat!" I felt confused and hopeless. All the people who had been quietly standing in line now silently picked up their bags and went home. To make sure, some of them looked again into the counter before leavleaving in peace.

"I stood in line ever since this morning but could not even buy some hundreds of grams of meat for my grandchildren!", an old lady murmured, a basket in her hand.

Tomorrow, people would have to come here earlier if they hoped they could buy some meat. The customers were almost gone. The two salesgirls had put their knives and chopping boards back in order. At that moment, a municipal workers' inspection team came to supervise the shop counter. [It discovered the following:] Under the counter, there were two square pieces of fresh loin meat weighing 5.8 kgs and many pieces of shiny lard neatly placed in a flat basket. That was not all. In a shelf, 5.5 kgs of pig's head meat which was brought into the counter since the morning still remained intact. Why were these pieces of good-quality pork, pig's head meat and lard left behind? And into whose hands would they go? In each of the drawers containing cash and ration stamps and coupons, there were also rolled-up banknotes with cutoff coupons inside. Was this a "flexible" method used by the state store employees to sell goods to their close friends? This morning (26 June), Nguyen Phuong Dung and Nguyen Thi Lan--the two state store employees cum salesgirls--sold meat to nearly 10 of their close friends, not to speak of 3.3 kgs of meat and 4.39 dong which vanished after the sale hours.

Selling goods to the people and serving them is a permanent task of state store employees. If they adopt an overbearing attitude and act as they please in selling goods to their close acquaintances, setting aside good-quality and rare commodities and sneaking them out of the state stores, what will be left for sale to the consumer? Since this practice has been prevalent in almost all food stores, it is necessary for the trade sector to think over its responsibilities and management methods.

CRACKDOWN ON CROOKED RICE DEALERS URGED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 2 Jul 81 pp 1, 6

[Article by N.A.: "Tricks for Raising Rice Prices"]

[Text] While prices on many commodities are gradually going down, rice prices in the market still remain at a high level and are gradually going up. White ordinary rice now sells at nearly 8 dong per kg, while top quality rice is much more expensive. Why is that?

According to our own findings, the volume of grain in the hands of the state during the month of June is larger than during May. And grain distribution continues to be good. To cite a concrete example, from 1 to 24 June the municipal grain branch has supplied more than 80 percent of the rice intended for distribution in normal quantities to families of cadres, workers, civil servants and other eligible persons. The Municipal Corporation of Grain Business and Cooperative Industry has brought tens of tons of rice down to precincts and districts for widespread retail sale in wards and markets at prices below 6 dong per kg.

Rice shipments by merchants from the provinces to the two An Lac and Tran Chanh Chieu market centers approximated 160-180 tons a day--the same amount as on previous days. Therefore, leading crooked merchants must have had a hand in the gradual increase in rice prices.

Circulating False Rumors

This is a very old trick of crooked merchants used to deceive gullible people. Recently, taking advantage of the fact that the state raised the pay of cadres, workers and civil servants, and took back grain ration cards to adjust the distribution according to age brackets and to give people enough to eat, these crooked merchants sent agents into markets with the rumor that the state would stop selling rice at official prices, and that supply prices would increase by 2 dong per kg.... These false rumors caused distress among a number of small merchants. As a result, at a number of markets people have scrambled for rice for fear of shortages, gradually pushing prices up.

Raising Prices

In the morning of 24 June, we arrived in Tran Chanh Chieu rice market. The market had 320 stalls, and each stall was replete with sacks and open containers chockfull of rice. We stopped by a stall and overheard its owner conversing with a customer, who owned a rice vermicelli-making shop.

"Sister, just 4 'gia' (a 'gia' is equal to 20 kg) of this 72-forest rice arrived today. If you want to take all, I'll ask my people to bag it up and haul it over to you."

"Same price as yesterday?"

"No indeed. Today's price is higher by 2 percent (that is 2 hao). If you don't buy, I'll reserve it for another customer. This rice is now in very short supply."

At another rice stall, its owner pursed her lips while talking to a small merchant, "If you go on complaining about high prices, you'll leave here late in the afternoon without being able to buy any rice to take home for retail! And I'll sell at these prices only if you take 1 'gia' per category. Otherwise, I have to sell 'soc nau' at 72 (that is 7.2 dong per kg), and 'nang tho' at 78."

"How about ordinary white round-grain rice?"

"Sixty-eight."

"My goodness! Yesterday, it was just 66."

"Yesterday was different from today."

So, obviously a number of stall owners have found this or that pretext to force small merchants to buy rice at prices dictated by them, and not at posted prices.

Vying To Buy and Hoard

Leading crooked merchants have also used wheelbarrow pushers as bait for raising rice prices. Waiting along the roads leading to a bus station or rice market, these men swarm toward buses arriving from the provinces, cling to them, and pull at the small merchants, snatching bags of rice from their hands, they then load their wheelbarrows with the rice and push the carts in the direction of their favorite stalls, no matter what the protest.

The rush for rice and the arduous haggling led many small merchants from the provinces to believe wrongly that rice prices have risen; and as a consequence, they asked unrealistic prices, triggering a falsely tense situation in the process. A number of small stall owners--newcomers to the rice trade with no established suppliers from the provinces--have given pushcart operators money for vying to buy rice for them. A number of owners of stalls in the neighborhood, dealing in other commodities such as sugar, beans, etc., were also drawn into the competition. They rushed in, stopping small merchants, buying as much rice from them as possible, raising prices, storing rice, and hauling it to other places for resale, etc.

Recently, the Tran Chanh Chieu Market management board prosecuted 41 cases of failure to post prices and revoked the business license of Nguyen Thi K, owner of stall 76 and dealer in green beans, for buying rice in competition and hoarding it for a third party.

Clearly, crooked rice merchants hidden in the dark have disturbed the market, pushed rice prices up, and caused difficulties to the laboring people's existence. Strong measures are needed to block their criminal activities.

READERS OFFER OPINIONS ON BRIBERY, HA DONG MARKET MANAGEMENT

Hanoi NHAN DAN in Vietnamese 6 Aug 81 p 3

[Readers Opinion column: "Palm Greasing" by Nguyen But and "Market Management in Ha Dong Town" by Huy Cuong]

[Text] "Palm Greasing"

For more than a year, the Ha Bac nitrate fertilizer plant has made full use of the coal detritus that has gone through one firing (and which in the past used to be thrown away) to sell to the people living around the plant so that they can use as fuel. The plant stipulates that the price of a ton of coal is 16 dong (not counting the 1.5 dong charged for loading) but because of loose management, the loading workers and the two labor cells of Bac Giang town who come to work according to contract have taken quite a bit of "tip" from the coal buyers. For each truck with a load of 5 tons, the buyer has to "grease the palms" of these workers with 70 to 100 dong. If it is a truck with a capacity of 4 tons, then it must pay 80 dong during the Tet season, or 60 dong at the going rate. Should anyone refuse to pay they would drag the work out until it is the end of day, and even then your truck would not be fully loaded. Only when the customer has had enough and agrees to pay do they load fast and the required amount of coal. Even oxcarts which come to get their own coal also have to pay 6 dong per cart, otherwise they would not allow one to get the coal. Thus, every day they collect thousands of dong from the people and from the various organs and cooperatives so as to split among themselves. In my own case, on 18 April 1981 I bought a truck of 5 tons. After queueing to get my bill and pay 87.50 dong, I went out to the pick up place but they would not load until I paid my 70 dong extra. I only had 62.5 dong on me and so I pleaded with the woman cell leader to accept the money less 7.5 dong, but to no avail. I had to borrow from the driver the missing money so as to pay her the full amount.

(Bac Giang town, Ha Bac Province)

Market Management in Ha Dong Town

Recently Ha Dong town has seen much progress in market management, in the posting of prices, in the control of business registration and in the fight against speculation and smuggling. Thanks to this progress the amount collected in industrial and commercial taxes has been doubled. The prices have kept their stability and in the case of some commodities have even gone down. These, however, have been only initial results. It is recommended that the provincial Party committee and the people's committee of Ha Dong town continue to fight the negative phenomena, improve upon the job of distribution and circulation of goods, thus creating the conditions for production to develop and stabilizing the living conditions. The commercial sector must do well the job of supplying the essential commodities according to criteria. This is because at the present time while there is not enough of some commodities, especially food, to sell to the workers who receive criteria-determined salaries the state commercial stores still have meat to sell at high prices. We still even have the phenomenon of internal distribution of commodities and that of collusion with outside smugglers to pilfer commodities from the stores. The sectors in charge in the town, especially the Yet Kieu ward, must increase their control rounds, control and regulate the people allowed to sell goods at this bus station; they must proceed to inventory the hoarded goods of a number of illegal trading families and come up with appropriate measures for dealing with them, including controlling the posting of prices and the sale of commodities at the exact stipulated prices; they must strengthen the management and pay even more attention to educating the masses, upgrade the quality of cadres in charge of market management so as to insure the exact implementation of policies, and fight the outside merchants' taking advantage of the situation.

To do the above, it is required that the town Party committee and the various wards concentrate and increase their concrete leadership role and that there be close coordination among the various sectors in the town and of Ha Son Binh province. The town people's committee must show a fair and resolute attitude in dealing with those intent on causing market speculation and appropriately reward those who have significantly contributed to the job of market management.

CRIMINAL ELEMENTS OPERATE OPENLY ON BIEN HOA HIGHWAY

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 2 Jul 81 p 1

[Article by Pham Viet Duyen, Bien Hoa Industrial Zone: "Prompt Reform Is Needed To Return Them to the Right Way"]

[Text] Our entire people are enthusiastically engaged in productive labor, each of us doing a job, looking forward to bringing the nation out of difficulties, and overcoming the consequences of more than 30 years of the war of aggression waged by imperialists and expansionists.

All of us, even small children with their eagerness to emulate in fulfilling small plans, are contributing to our affectionate fatherland everything, including small bits of paper. Shock youths on construction sites, armymen along the border, workers in factories, etc., all of them are striving to contribute intelligence and wealth to enriching and embellishing the country. It can be said that while the country is still going through difficulties, there is no other way successfully to build socialism than through urging everyone to achieve labor awareness and to take part in productive labor. Regrettably, a number of people have not yet recognized this truism. They dodge their obligations, and more seriously, they violate the laws and despise the people as well. Worse still, they create and nuture an environment designed to undermine human conscience, and debauch a number of people in enterprises and mass organizations.

Such things have happened every day and hour on a short portion of the Bien Hoa Highway. Day and night between Tan Van Crossroad and Project 4/2 (formerly the University Zone), a number of people including able bodied men, women and youths (probably draft dodgers) line the highway. They flag down military trucks or cargo trucks of organizations and enterprises with offers to buy all kinds of commodities, gasoline, oil, grain, fertilizer, etc., for later resale in the market.

There is also a more "ingenious" form of activity--negotiating to buy while riding a two-wheeled Honda along side a cargo truck. As soon as a deal is struck, they escort the truck into a side road for unloading. The straw huts built by them, purportedly for selling, coffee, gasoline and oil, are in fact places where they wait for cargo trucks and negotiate prices.

Worse still, in broad daylight robust youths are seen struggling to buy goods on the highway, disrupting order with their shouts. When they have nothing to do, they organize gambling parties right in these huts.

With a citizen's sincere heart and constructive spirit, we earnestly hope that the administrations of Ho Chi Minh City and of Dong Nai and Song Be Provinces will take coordinated measures to punish these sinful elements to set an example for other people to follow. They must be reformed so that they can return to the right way.

EDITORIAL URGES EFFICIENT USE OF FUEL

Hanoi NHAN DAN in Vietnamese 11 Aug pp 1, 4

[Editorial: "Effective and Thrifty Use of Fuel"]

[Text] Fuel--including both coal, and gasoline and oil--is a pressing problem of the economy. Due to fuel shortages, many branches, localities and production installations have encountered difficulties in production and business. Each year, our state imports a large volume of gasoline and oil, but because of foreign currency limitations and ever-increasing prices on the international market, it cannot import enough fuel to satisfy all need.. Coal sources exists in the country, but our mining capabilty is not yet big. Effective and thrifty use of fuel has become an important target of economic management and is part and parcel of the movement to practice thriftiness in general.

First of all, management must ensure that coal, gasoline and oil be used in keeping with the purposes, targets and norms of, and be rationally concentrated on urgent economic tasks. At present, a relatively widespread practice in many places is that fuel is used, not only in excess of norms, but also in contravention of economic purposes and targets, even using coal, gasoline and oil earmarked for plan norms as objects for barter, purchase and sale. Some places have exchanged coal reserved to produce cement or serve construction of water conservancy projects, for bricks to build houses, or for hogs to ameliorate life in enterprises. Other places have diverted gasoline allotted by the state for transportation and production plans, to ship goods from places of purchase to places of resale for lucrative purposes, under the guise of "auxiliary production."

Effective and thrifty use of fuel requires that management pay equal attention to all factors, from norms allocation and supply plans to utilization. Fuel allottment must be based on production and business plans, and on setting waste levels for each machine, tool and means, in relation to each unit of production or work. We must decisively stamp out the practice of fixing norms in an approximate manner, or of blowing up estimates in anticipation of possible cuts from above. This way of doing things has caused quite a few difficulties to the tasks of allocation, supply and storage, leading to fuel imbalance--plethora in some places and shortage in others--and to instability in fuel needs, and paving the way for embezzlement and corruption activities.

Fuel should be supplied in accordance with time-limits, with required quantities, qualities and types. A number of thermoelectric stations, simply because of insufficient coal supply and failure to ensure quality, on particular days had to use tons of oil in excess of norms, just for oven heating. Utilization in accordance with norms is the most efficient method for saving fuel, and is a scientific basis for planning work, and for carrying out economic accounting and improving enterprise management. In the face of limited and planned fuel supply, if only a few branches, localities and production installations overuse fuel it will create a general imbalance. Recently, with the help of the Ministry of Supply and the thermodynamics department of the Polytechnic College, many factories belonging to branches of light industry, food industry, and building materials industry, have determined the waste level for fuel in the process of making one unit of their product. Initial results at these factories show that there still are many possibilities to use fuel more efficiently and thriftily if shortcomings in production management and technical management are overcome in time. To that end, the important thing is to set norms for fuel use and carry out economic accounting; to apply scientific and technological progress and advanced experiences; and at the same time to combine education, reward and punishment, with methods of managing fuel use, to encourage everyone to practice thriftness, and to have a specific policy of binding material supply organizations and consumers together.

The question of efficient and thrifty use of fuel must be raised and concretely solved within each branch, locality and production installation. The direction of this effort is that each kilogram of coal, each liter of gasoline and oil will be used in the most agreed upon way, contributing to make products, raising labor productivity and economic efficiency.

CORRUPTION IN BRICK, TILE INDUSTRY CRITICIZED

Hanoi NHAN DAN in Vietnamese 1 Aug 81 p 3

[Readers Opinion column: "Large Numbers of Labor-Added Bricks Produced"]

[Text] In the last few years, the suburban districts of Hanoi have paid attention to developing various handicraft industries, paying particular attention to manufacturing labor-added bricks and tiles for the building materials supply sector. Many localities have done well this activity. Some cooperatives have been able to operate three brick kilns, each year providing the state with nearly 3 million bricks. The districts of Dong Anh, Gia Lam and Dan Phuong, have made many efforts to produce, procure and transport building materials. A number of agricultural cooperatives do business the way it should be, without collusion with others and making no arbitrary use of the products they put out. The development of building materials production bases in the cooperatives in order to supply the construction sector is a correct policy line, an endeavor of vast economic significance. The cooperative members' income also is raised in relatively significant measure because besides the production of food and animal husbandry, the members can get extra income from these activities.

Nonetheless there are still many cooperatives in the newly incorporated districts such as Phuc Tho, Ba Vi, Thach That, Hoai Duc, Soc Son, Me Linh, where the situation of coal assignment to the various organs, enterprises, and army units for the purpose of brick and tile production remains erratic, which is why various individuals have been able to collude with one another in order to enrich themselves to a very serious degree. These negative expressions are expanding into districts which in the past are reputed for strictly implementing the policy of handing over their products to the state. According to the stipulations of the city people's committee, the Hanoi construction sector delivers to the various cooperatives a certain amount of coal in exchange for manufactured bricks and tiles meant for the large and middle-scale local construction projects, leaving a certain proportion to supply to the center. But because sometimes there is not enough coal or simply because the coal is delivered late, the cooperatives have taken advantage of the situation to put everyone before a fait accompli, saying that there is no way to stop production, that stopping production would damage the kilns and that it would negatively affect the income level of the cooperative members. They therefore collude with a number of organs, army units and enterprises to get the coal they need for purposes of brick and tile making. Theoretically, after each phase of production the cooperatives are entitled to keeping only 30 percent of the bricks and tiles produced to provide to the local people and to supply the local construction sites. But here, in some cases the cooperatives have retained 50 percent, sometimes up to 70 percent of the building materials produced in order to sell at high prices and split the profit! On the customers side, some units also resell the whole amount of bricks and tiles produced by the cooperatives in exchange for cash.

In the face of this very grave situation, we petition the Hanoi city people's committee to investigate and reach conclusive determination, regulate the various production regimes, and distribute the building materials in an extremely tight manner; the committee must provide guidance for the cooperatives engaged in this field so that they do business correctly, implement the agreements that have been signed, deliver the full amount of bricks and tiles pledged to the construction materials supply sector, thus contributing towards the completion of major construction projects, especially the relatively large amount of housing projects being built at the present time. The district Party committees and the suburban people's committees must concentrate on guiding well this work. We must have severe measures taken to deal with the cooperatives and units engaged in collusion, in sabotaging the policies, and in market speculation in the sale and purchase of building materials.

LARGE SCALE OPPOSITION TO PRICE CONTROLS REPORTED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 Jun 81 pp 1, 4

[Article by Quoc Vinh: "What Progress Has Been Made in Price Posting and Sale at Posted Prices?"]

[Text] Good Changes

Along with measures designed to strengthen control of sources of goods by the state and to offer goods for sale as a contribution to stabilizing the market, the movement to direct merchants to register and post prices of commodities and services--which is expanding in the city--is lauded by the laboring people. Three weeks after the movement began, the market is taking a turn for the better. The Municipal Market Management Board has assessed that, except for prices of a number of commodities including rice, marine products and handicraft products, which still are high, those of many other commodities have fallen close to the 1 June level. The trend of small merchants to raise prices slightly has been efficiently restrained. As for laborers, the public display of selling prices has given them a basis on which to control the purchases and sales of small merchants while curbing the bad practice of asking unrealistic prices and making spurious price increases.

Nevertheless, the market still confronts complex developments. Our following observations will reflect a number of results and will focus on a number of weaknesses, which should be continually addressed.

Not Yet Evenly Done

In general, the markets have directed small merchants to register and post prices in a synchronized, but still uneven, manner. This has been done with relative speed in medium- and small-size markets. For instance, in Nguyen Van Troi, Vuon Chuoi (Precinct 3), Phu Tho (Precinct 11), Nguyen Tri Phuong (Precinct 10), Ba Chieu (Binh Thanh) markets, etc., from 70 to 90 percent of small merchants have posted prices. A number of markets with a large number of small merchants such as An Dong, Ben Thanh, Cau Muoi-Cau Ong Lanh, etc., have posted prices only on staple commodities, including rice, meat, fish, sugar, beans, duck eggs, etc. More than 40 percent of the small merchants at these markets have not posted prices. What deserves attention are markets where small merchants are not numerous; they could have done the job promptly but instead have lagged behind. These are Thai Binh, Tan Dinh, Hoa Binh markets, etc., as well as a number of markets on the city outskirts. In general, the area reserved for industrial goods in many markets still is empty; small merchants dealing in these goods are not yet eager to post prices, and prices on these goods now tend to rise slightly. Failure to post prices by small merchants usually occurs in places where they have not yet been organized into commodity teams, or where existing commodity teams have not yet been strengthened or are not in operation.

Retail Prices Still Marred with Irrational Discrepancies

According to our own findings, at present retail market prices on a number of commodities still conflict irrationally with each other, despite the fact that small merchants buy their goods at the same market center and that their overhead is roughly the same. Below are a few sample prices gathered by us on 24 June. On that day, the price of Nang Huong rice, category 1, at Tran Chanh Chieu rice market center was 9.2 dong per kg. A number of small merchants at An Dong market retailed it at 9.5 dong per kg, while those at Ben Thanh market retailed rice at 10 dong--5 hao higher. On the same day, the wholesale price of lean pork in hunks at An Lac (Binh Chanh) market center was about 37-38 dong per kg. Small merchants at Phu Tho and Pho Co Dieu markets bought lean pork at An Lac and retailed it at 47 dong per kg--the price on previous days. Meanwhile, small merchants at Cau Muoi-Cau Ong Lanh, An Dong and Ben Thanh markets bought lean pork at An Lac market at the same wholesale price, but retailed it at 53-55 dong per kg--6 to 7 dong higher per kg, as compared with Phu Tho and Pho Co Dieu markets.

Management of Service Prices Slackens

Management of service prices, as stipulated by a decision of the Municipal People's Committee, has slowed up in many places. At present, only a number of precincts--1, 3 and 5--have directed service trades to post prices on hair cutting, sewing, etc.; and even this has not been [illegible] done in wards. Increases in service prices, especially increases in fast foods and drink prices, usually cause market prices to go up.

As of now, a popularly priced haircut costs 5-6 dong--3 dong up from last month. At the Nguyen Thi Minh Khai street beef soup sector, the price of a bowl of beef soup has shot up to 10 dong.

Continue To Struggle To Curb Small Merchants' Negative Aspects

Everyone knows that directing small merchants to post prices is just one of many measures intended for market management. It will keep prices steady and curb small merchants' negative aspects if control and supervision are conducted regularly. What has happened in the markets over the past 3 weeks also shows that while a section of awakened small merchants has volunteered to sell at posted prices, a large majority of them continually find ways to dodge compliance through various schemes. Many market shoppers must indulge in hard bargaining to get small merchants to sell at the right prices. Small merchants also concealed price lists, displaying them only when requested, or relegating them to places hidden from view.

A number of small merchants sold meat, rice and fish at posted prices--but underweight. Pork buyers at Cau Muoi-Cau Ong Lanh market have regularly received underweight purchases. At Nguyen Tri Phuong market, Phung L, a small rice merchant, used a two-sided price list,, displaying the low-price side when a control agent showed up, and reverting to the high-price side as soon as the agent left the stall. A number of small merchants kept different high-price and low-price lists handy to use according to the circumstance. A number of rice stall owners in Tran Chanh Chieu market used hirelings disguised as genuine small merchants to offer prices higher than the ones posted with a view to inducing customers to follow suit....

The number of over 100 small merchants fined during the past 3 weeks represents only a tiny percentage of the tens of thousands of price list violations still going unpunished. Continuously struggling to restrain the negative aspects of small merchants is a task which should be pursued with resolve and over a long period of time. Precinct 11 has successfully addressed this problem: Through Women's Union chapters in the markets it has mobilized small merchants to strengthen commodity teams, combining it with the task of directing small merchants to post prices and sell at posted prices. Each commodity team is assigned the responsibility for directly managing prices. Moreover, Precinct 11 has offered pork and rice for sale in the markets in a very regular manner. Because of this, prices of staple commodities in markets across the precinct have gradually decreased.

The participation of shoppers also is an important factor in holding prices. It is regrettable that a number of people have not boldly struggled against the small merchants' practice of selling at the wrong prices, and that in some particular cases, they have even condoned these misdeeds.

In the struggle to hold prices and stabilize the laborers' existence, it is urgently needed to continue to press for price registration and posting, and for directing market vendors and shop owners to sell and accept payment for services at posted prices.

MINISTRY OF AGRICULTURE REPORT

BK171320 Hanoi NHAN DAN in Vietnamese 26-28 Aug 81 p 2

["Excerpts" from a report presented by the Ministry of Agriculture at the August 1981 Ha Nam Ninh conference held to review the implementation of the product contract system in agriculture--passages between slantlines originally published in boldface]

[26 Aug 81]

[Text] The product contract system applied in agricultural cooperatives has recently become a controversial issue. It has become controversial not only due to the performance of various cooperatives but also due to the follow-up efforts of various echelons and sectors throughout the country.

The giving of end-product contracts to individual laborers in agricultural cooperatives is a new, important economic policy of the party and the state. Since the introduction of the cooperativization system, there has been no economic policy which can be applied as quickly as the product contract system. This system has actually been able to ignite a seething emulation movement in the rural area to voluntarily engage in productive labor, a movement which has attracted the participation of millions of people and has contributed effectively to the cultivation of the 1980-81 winter-spring crop.

1. /The Providing of Guidance for the Giving of Product Contracts to Laborers in Various Cooperatives/

Earlier, due to requirements for the development of the winter crop, the form of giving end-product contracts to laborers had already been adopted by almost all cooperatives toward various kinds of winter crops. As a result of the outcome of the winter crop, many cooperatives have expanded this new contractual form toward various subsidiary food crops and certain industrial crops. A number of cooperatives have even applied this contractual form in rice cultivation. Embarking on the 1980 10th-month crop, faced with increasing demands by cooperatives and in order to obtain experience for use in study and guidance, the Ministry of Agriculture joined with the Vinh Phu provincial party committee and the Vinh Lac district party committee in directing a test-application of the product contract system in rice cultivation at the Tho Tang and Dong Van cooperatives and in following up the guiding work at 12 other cooperatives in Vinh Lac District. Haiphong municipality and Nghe Tinh Province were reported to have provided extensive guidance for the application of the contractual form. The Haiphong municipal party committee issued Resolution No 24 on the contractual form and on the need to apply it widely in various cooperatives. In Nghe Tinh, the provincial party committee agreed to allow a number of districts to experiment with and widely apply this contractual form in various cooperatives. In other provinces, there have been separate cases of cooperatives giving out product contracts in rice cultivation under various forms: contracting lands for the cultivation of high-yield rice varieties, contracting the cultivation of remote and poor-quality ricefields, contracting lands for animal husbandry and so forth. In the 10th-month crop production, despite the fact that some areas enjoyed favorable weather conditions while others suffered from serious floods caused by Typhoons Nos 4 and 6, all cooperatives which applied the end-product contract system in rice cultivation achieved remarkable results in many respects: production was increased; management cost was reduced; the three interests were ensured; and the sluggishness in productive labor was improved to greater extent.

The form of giving end-product contracts to individual laborers has all the more become an urgent demand in the wake of the issuance of a number of policies by the party and the state to encourage the development of agricultural production. The economic relationship between the state and cooperatives has started to be settled more satisfactorily. Cooperatives are required to consider and deal satisfactorily with all their internal relations in order to properly secure the interests among cooperatives, production teams and individual laborers, especially those interests from the contractual system which are regarded as the most important "link" to be dealt with.

After much discussion between the [party Central Committee] Secretariat and the Standing Committee of the Council of Ministers, on 21 October 1980, the Secretariat issued Communique No 22 urging localities to apply, on a trial basis, the new contract system to the rice cultivation. This communique was followed by the resolution of the ninth plenum of the party Central Committee, stressing the need to improve product contract work and broadly apply the contract system in cooperatives. Along this line, many localities prepared fairly satisfactorily and comprehensively for the implementation of the contract system. For instance, they readjusted the sizes of cooperatives; revised and complemented production guidelines; consolidated production units; streamlined excessively large units; improved the quality of cooperatives which practiced the "three contracts" [for output, expenditures and work-points] system with production units; conducted a preliminary summary of the work of cooperatives which applied the product contract system to the cultivation of the [1980] 10th-month rice crop; and guided cooperatives in understanding the main guidelines of the new contract system in the cultivation of the next winter-spring crop. Under the close direction of the Secretariat and the Standing Committee of the Council of Ministers, the Ministry of Agriculture held a conference with provinces and cities in Haiphong early in January 1981 to provide guidance for the implementation of the party Central Committee's communique and resolution. Comrade Le Thanh Nghi, member of the party Central Committee Political Bureau and secretary of the party Central Committee, and Comrade Vo Chi Cong, member of the party Central Committee and vice chairman of the Council of Ministers, attended the conference and heard delegates from provinces, districts and cooperatives express their views on and discuss the new contract system. They gave very important instructions on implementing it in cooperatives. The Haiphong conference marked an important milestone, initially clarifying basic views on the system and achieving high unanimity of views on the policy of widely carrying out the product contract system in agricultural cooperatives.

On 13 January 1981, the Secretariat issued Directive No 100/CT/TW urging the acceleration of the application of the new contract system in localities. The Ministry of Agriculture issued Circular No 05 guiding the implementation of the Secretariat's directive and opened training and refresher classes for cadres of cooperative managerial boards, provinces and districts, who will later be assigned to help cooperatives widely apply the new contract form. Northern provinces and cities have intensively organized conferences to guide cadres in how to apply the new contract system. Thirteen provinces and cities of the delta, midland and Zone 4 have provided elementary and advanced training for 81,832 cooperative and production unit cadres in the method of giving product contracts to groups of workers and individual workers, a method which will create very favorable conditions for the widespread application of the new contractual system.

The party Central Committee Secretariat's Directive No 100/CT/TW is a new policy on cooperative management. It reflects the practical activities of cooperatives and, therefore, satisfies the workers' aspirations. Under the close leadership of local party and people's committees at all levels, the implementation of this directive has aroused enthusiasm in developing production and consolidating cooperatives in the rural areas.

The various central-level sectors have overcome many difficulties and obstacles, wholeheartedly supported the new contractual system and scrupulously implemented the party's resolution and directive, thereby greatly contributing to the development of the contract movement. Party and state press organs and information and propaganda facilities at the central and local levels have made important contributions to reporting on the lively contract movement. They have disseminated Directive No 100 of the party Central Committee Secretariat, urged new examples in the movement, guided cooperatives and their members in their activities, corrected erroneous views and wrong methods, encouraged the development of the new contract system and ensured a strong and widespread public approval of it. The recent conference to discuss the theoretical and practical basis of the new contract system, the column: /Forum on Product Contract in Agriculture/, which lasted for 3 months in the paper NHAN DAN, the scientific conference of the Nguyen Ai Quoc higher party school, the exchanges of views between the Vietnam Confederation of Trade Unions [VCTU] and tractor stations and between the Ministry of Water Conservancy and irrigation stations, and the resolutions of the VCTU, the Ho Chi Minh Communist Youth Union and so forth, are a positive response and have exerted a strong effect on leadership over the vigorous, firm and widespread implementation of the system of giving contracts to groups of workers and individual workers in cooperatives.

There are also some difficulties in implementing the new contractual system. Apart from the sympathy and support of large segments of echelons, sectors, cadres and cooperative members, there are also a few comrades who are hesitant and fretful because they have not fully understood the party's resolutions and the real situation.

Facts on the new way of doing business in cooperatives have increasingly proved that the policy of awarding finished product contracts to workers is correct. In some localities, the higher authorities still carefully consider the application of the new system for this or that reason. Nevertheless, in these localities, the cooperative members have asked permission of higher echelons to apply the new contractual system, since they are mainly those who can choose the appropriate managerial method as directed by the party. However, due to their indecision, these localities have failed to provide close and adequate guidance for implementing the new contractual forms. As a result, the results of the last winter-spring crop season were poor.

Despite these shortcomings, the facts have vigorously promoted the mass movement. The movement to award product quotas to workers has developed quickly and widely. According to reports from various localities, during the 1980-81 winter-spring crop season, 3,948 out of the total of 4,816 cooperatives in the delta, central highlands and fourth region awarded finished product contracts to workers, accounting for 82 percent of the total number of cooperatives and 70 percent of the cultivated area. In the northern mountainous region, 631 of the total of 6,410 cooperatives have applied the system of product contracts, accounting for 9.8 percent of the number of cooperatives. In the coastal provinces of the central region, 341 cooperatives applied the new system on a trial basis during the winter-spring season and continued to expand it during the summer-fall season, accounting for 31 percent of the total number of cooperatives. In the midland provinces where the soil is fertile and the industrial crop area is larger than the rice crop area, 105 out of the total of 215 cooperatives have also applied the new system, accounting for 49 percent of the total number of cooperatives.

Excluding those localities where the new system is still being implemented on a trial basis, as directed by the party Secretariat, it can be said that large numbers of cooperatives in provinces of the delta and midlands and in districts of the Bac Bo plains and midlands of the fourth region have applied the system of assigning product quotas to groups of workers and individual workers during the last winter-spring season. Those localities with the highest percentages of cooperatives which have applied the new system are as follows: 97 percent in Haiphong, 95 percent in Thanh Hoa, 93 percent in Ha Bac, 88 percent in Ha Nam Ninh and 86 percent in Nghe Tinh.

The cooperatives in provinces of the delta, midlands and fourth region which have applied the system of product contracts during the winter-spring season are those cooperatives which have been rated advanced, satisfactory and poor. In Vinh Phu Province, out of the 200 cooperatives applying the new system, 56 (35 percent) are rated average and 34 (17 percent) are rated poor. This rating has agreed with the classification of cooperatives by provincial authorities. In Ha Nam Ninh Province, 80 percent of the advanced and fair cooperatives have applied the system of product-quota assignments. In the mountainous regions those cooperatives which have applied the new system on a trial basis are mainly located in the low-lying areas. In such provinces as Bac Thai and Quang

Ninh, the system has expanded to hundreds of cooperatives. Of these cooperatives, some are composed of both local and lowland people who have come to the mountainous region to develop the economy, whereas others are composed merely of local people representing different nationalities. The cooperatives which have applied the new system on a trial basis in the coastal provinces of the central region and central highlands are also classified into different categories of various levels to represent various production areas of the localities.

During the last winter-spring season, most of the cooperatives have applied the new system of assigning crop quotas, mainly to rice cultivation. Nevertheless, many of the cooperatives have applied the new system at the same time to rice cultivation, the planting of such long-term industrial crop as tea or corn and cassava, and the raising of pigs.

Large numbers of cooperatives have applied the new contractual system to all the cultivated area assigned to them, whereas a small number of cooperatives have applied the new system to only part of their cultivated area for the mere purpose of proving their implementation. The form of assigning product quotas to workers has been selected by most of the cooperatives. According to the combined reports from 11 provinces and cities in the delta, Bac Bo midlands and fourth region, out of the 3,948 cooperatives using the new contractual system, only 109 cooperatives have assigned product quotas to groups of workers, accounting for 3 percent of the total number of cooperatives where the new contractual system was implemented during the last winter crop season. Nearly all the cooperatives which have assigned rice transplanting quotas to groups of workers have shifted to applying a similar assignment to individual workers in this 10th-month crop season.

Those cooperatives which have applied the new contractual system normally assign three tasks (transplanting, caring and harvesting) to the work force along with the responsibility for the finished products. In some localities, due to some delay in their preparatory tasks, only two tasks (caring and harvesting) have been assigned to the work force. In some other localities, even the sowing task has been assigned to the members of those cooperatives which were originally weak, lacking seed storage facilities and sowing teams and in short supply of seed for this crop season. In those mountainous regions where draft animals are numerous, facilitating the plowing task, this task will be added to the transplanting, caring and harvesting tasks by cooperatives, linking them with the finished products after due discussion and agreement among the cooperative members has taken place.

/2. The Initial Results of Assigning Product Quotas in Cooperatives During the 1980-81 Winter-Spring Crop Season/

The report on production results of the last winter-spring crop season has asserted the significance of the results which were achieved. This report only mentions the results achieved under the new contractual system. Although the level of understanding and implementing central directives differs from one locality to another, in general, good and similar results have been achieved in several fields by all localities where the new contractual system is applied, be it the delta, Bac Bo midlands and fourth region or the Trung Bo coast, the northern mountainous regions and the central highlands. These results are concentratedly manifested through the following main facts:

/a. The labor potential can be exploited and developed to create a truly seething and voluntary labor movement in cooperatives./

In an agriculturally underdeveloped country such as ours where production is still low and manual labor still prevails, the fact that we have been able to optimally use all labor potential to promote and develop agricultural production is a very important matter. Peasants in our country are diligent and skilled. However, in the past, as a result of our deficient managerial task, labor in terms of amount, time and skills could not be exploited and developed in nearly all the cooperatives. Since the new contractual system went into effect, the situation of labor has improved in nearly all localities. The number of workers and the amount of work time have increased properly, enhancing the diligence and work quality of peasants.

Generally speaking, those cooperatives where the new contractual system is being applied have attracted a rather large number of workers who previously relied on some higher protection to shirk their responsibility and refuse to work for the cooperatives. The productive work force of cooperatives in Ha Son Binh Province has increased by 8-10 percent. In Ha Nam Ninh Province, approximately 15 percent of those workers who previously refused to work for the cooperatives have now accepted work quotas. In some cooperatives, the number of additionally mobilized workers accounts for from 25 to 30 percent of the total work force, such as in Tay Phu and Gia Thinh cooperatives. A similar situation can be seen in other provinces. Not only has the amount of work increased but also the daily work time can be used fully. Formerly there were only 5 or 6 hours of work daily. Now, 9 or 10 hours and at times up to 12 hours are worked daily, increasing the daily work time by 50-70 percent. The work results depend not only on the amount and time of work but also on the quality of work. By implementing the new contractual system in cooperatives, the quality of work has clearly improved. Such careless and sloppy work as transplanting rice densely on the perimeter and thinly in the middle of ricefields, unevenly applying fertilizer and weeding by merely stirring up water in ricefields is no longer observed. A movement is emerging from the members of cooperatives to learn from one another the method of working technically. As a result, crops can be cultivated as scheduled and cooperatives can save dozens of tons of rice which were used to feed workers in busy seasons and thousands of man-days of wages because of cooperative members' previous refusal to work, which forced cooperatives to "liberally hire" additional workers.

[27 Aug 81]

[Text] Moreover, as a consequence of the rain, typhoons, waterlogging and floods they experienced during the 1980 10th-month crop, members of many cooperatives in Thanh Hoa, Ha Nam Ninh, He Son Binh and other provinces faced numerous difficulties in daily life when they began production work in this winter-spring crop season. In previous years, such a situation would have forced laborers in these localities to seek work outside their cooperatives to earn their living, thus making it impossible for the cooperatives to mobilize their work force and eventually compelling them to abandon their ricefields. Since the advent of the product contract, laborers in these hard-pressed areas themselves have worked very zealously and earnestly and production tasks have been accomplished more promptly than in the previous years.

Obviously, the implementation of product contracts with laborers has helped overcome to a certain extent the sluggishness prevailing among laborers in various cooperatives in the past. This is because these contracts are designed to stimulate the laborers not only with the shares they get from their cooperatives in accordance with the number of days they work, but also with the bonuses in kind they are entitled to if they overfulfill their quotas. These contracts not only suit the psychology of laborers but also correctly reflect the principle of providing material incentives in management. They permit members of cooperatives to truly exercise mastery in labor and prompt them to work enthusiastically and voluntarily, thereby fostering a buoyant work spirit in the rural areas. This spirit is a major potential we should exploit. Only on the basis of exploiting this labor potential in production in the best manner can we bring into full play our advantages and limit the difficulties caused by weather conditions. Labor performed according to the division of work carried out by cooperatives is labor aimed at achieving the cooperatives' common objectives. This labor is characterized by cooperation. If we speak about division of work, we must also speak about the division of working conditions, tools and means. The better the division of work is carried out, the more effective cooperation will become. Therefore, we cannot say that the new contract system encourages the mode of "individualistic" labor.

/b. Make the best use of land, the material and technical bases and supplies in production./

Our land is limited, yet it has not been fully used; in many cooperatives, it has been wasted. With the implementation of product contracts with laborers, large areas of land allowed to lie fallow in the past have been used to the fullest for cultivation purposes in the recent winter-spring crop. In Ha Nam Ninh, cooperatives which implemented product contracts opened new land and reclaimed fallow land to expand their cultivated area by 2,500 hectares in the 1980-81 winter-spring crop. In Haiphong, Nghe Tinh, Thanh Hoa, Vinh Phu, Ha Son Binh, Hanoi and others, there has been no locality without a number of cooperatives which in the past used to allow land intended for winter-spring rice cultivation to lie fallow. After implementing product contracts, however, these cooperatives were able not only to plant rice on all of this land but also to increase their cultivated area by tens of mau. A number of small cooperatives, by making the best use of their land and practicing intensive cultivation, managed in the recent winter-spring crop to nearly double their rice output. For example, the Hoa Nghia cooperative in Haiphong increased its paddy production by more than 400 tons; the Huong Son cooperative in Ha Son Binh this year brought in 2,000 tons of rice while producing only 600 tons last year, and so forth.

Aside from making the fullest use of fallow land, another prominent feature of the use of land in the cooperatives which have implemented product contracts is the fact that the people's experience in planting companion crops has been revived and this has helped simultaneously increase output, improve the soil and boost the income of members of cooperatives. In Vinh Phu, excellent results have been obtained in the growing of leguminous plants as companion crops on 85 percent of the land under winter-spring subsidiary food crops.

Cooperatives which have implemented product contracts have satisfactorily used their material and technical base and supplies in production. One of the major difficulties facing cooperatives was caused by the lack of draft power, the limited availability of raw materials and fuel for use in irrigation and drainage, the fertilizer shortage and the waste of seeds. In those cooperatives which have implemented product contracts, this problem has been resolved fairly successfully.

The use of state-owned tractors together with draft animals belonging to collectives and members of cooperatives has made soil preparation easier for the work force of cooperatives, thus enabling laborers not only to keep on schedule but also to prepare the soil more carefully than before. The cooperatives' dependence on tractors has been basically overcome. In some localities, because of the failure of tractor stations to scrupulously honor signed contracts, cooperatives have resorted to the labor of their members for soil preparation. Many cooperatives have bought additional draft animals to carry out soil preparation more satisfactorily. This has created conditions for tractor stations to determine their areas of operation, to cut down on the time spent in unnecessary travel, and to increase the economic effects of their service.

Concerning water conservancy, hand-operated tools belonging to members of cooperatives have been put to the fullest use to support irrigation and drainage work in cooperatives, to make more rational use of water and to cut expenses. Although the amount of electricity used for the 1981 5th-month spring crop was equal to only 75 percent of the power consumed during the same crop in 1980, it was still enough for the tilling of all areas. In many localities, though electricity was not available until 19 February while the transplanting of spring rice must be completed by the end of that month, various cooperatives still managed to transplant their rice on schedule. Had product contracts not been implemented, such a fast tempo of production work would have been impossible.

With regard to fertilizer, cooperatives have been able to increase both its quantity and quality. At the same time, the application of fertilizer has been done more satisfactorily. In those cooperatives which have applied the new contract system, their members have more often than not devoted more labor to fertilizer preparation and have spent more money to buy nitrate fertilizer at high prices for the crops they grow under contract. In Ha Nam Ninh, a survey of 200 cooperatives has shown that, on the average, each of their member families has laid out 200-300 dong to buy fertilizer and that, in some isolated cases, certain families have invested as much as 2,500 dong for this purpose. In some places, following the introduction of the new contract system, the long-neglected technique of applying nitrate fertilizer directly to the roots of rice plants has been revived. In many localities, this new method has prompted members of some cooperatives who recalled the amounts of nitrate fertilizer supplied to them in 1974 and 1976 to remark: "Compared to this year, the way nitrate fertilizer was used in those years was very wasteful."

Seeds have also been used more rationally. Although rice has been transplanted more densely than before, the amount of seeds used has still decreased. In Hung Ha District, Thai Binh Province, the volume of seeds used has gone down from 1,600 to 1,200 tons, indicating a saving of 400 tons of seeds for the entire district and an average saving of more than 10 tons for each cooperative in which the new contract system has been applied.

In the conditions of limited supplies and technical equipment, the results obtained in making the best use of the material and technical base and supplies in production by the cooperatives which have applied the new contract system take on a very important significance. This is a real potential which we can put to good account in both the immediate and distant future in conjunction with advanced techniques and ever higher production standards.

/c. Step up the strengthening of the material and technical base and the application of advanced production techniques./

In applying the new contract system, many contractors have a common concern: Will the cooperatives resolve for them the problems of soil preparation, crop seeds, water, pest control, and others, in time? For this reason, there can be no situation in which the new contract system will lead to the breaking down of the existing material and technical bases and limit the building of new ones.

In fact, many of the cooperatives which implemented product contracts in this winter-spring crop have bought dozens of additional draft animals; repaired and built thousands of meters of canals and ditches; leveled hills and filled depressions; improved the soil in many fields; reorganized and strengthened seed production units; built more warehouses and bought more water pumps, threshers, and so forth. In Yen Thanh and Nghi Loc Districts, Nghe Tinh Province, cooperatives have purchased thousands of additional draft animals. In Hanoi, the Bien Ninh cooperative has bought 220 draft buffalo in the 2 years since the introduction of product contracts. Even the Vu Thang cooperative in Thai Binh Province, a frontrank unit for several years, has had to buy 42 more buffalo after adopting product contracts. In some cases, such as that of the Nga Trai cooperative in Hiep Hoa District, Ha Bac Province, when the cooperatives were short of cash, their members lent money to the collectives for the purchase of additional materials and equipment. A present difficulty is that we do not have enough materials and equipment to sell to cooperatives. There have also been other problems such as the death of cattle, the lack of some kinds of machinery, the abandonment of some stables and farms destined for collective livestock raising, and so forth. These problems have many causes. Some projects have been dropped because of the lack of planning and losses; some have been scrapped owing to the effects of the law of natural selection on living creatures of which we have not yet taken good care for many years; and some have fallen through due to the shortage of raw materials, fuel, spare parts, and so forth. Therefore, the real situation of each cooperative must be considered and accurately assessed. We must expand, preserve and maintain the existing facilities, readjust those which were not built in a rational manner, do away with those which are unusable, and so forth. We must not deal with every situation in a mechanical and unchanging manner.

Along with helping strengthen the material and technical base of cooperatives, the implementation of the new contract system has ensured an early application of advanced techniques in production. Reality has shown that cooperatives which have introduced product contracts have carried out technical production measures more satisfactorily. For example, rice seedlings have received good care; the soil has been thoroughly prepared; rice plants have been transplanted in a rational density; weeding has been carried out more frequently and on schedule; fertilizer has been applied at the right time, in a larger quantity and more satisfactory manner; embankments built to keep in water have been carefully maintained; cultivation schedules have been kept; and late tilling and transplanting have been reduced. Cooperatives have paid great attention to the selection of rice varieties. Instead of adopting a wait-and-see attitude or depending on the assistance of higher echelons, cooperatives have promptly put into production high-yield rice strains once they have been discovered. Cooperatives have also lost no time in dealing with harmful insects and diseases by combining the masses' experience with the use of advanced technical measures. For these reasons, the production level among different cooperatives, production units and laborers has become more even. The movement to apply technical knowledge in labor and to learn from one another's techniques is developing.

Many different measures can be applied to promote the development of production, but the most important measure is the one which ensures the implementation of technical regulations and advanced techniques. Application of the new contract system has created the conditions for the introduction of such a measure.

/d. Promote the development of production and ensure high economic efficiency in production./

The implementation of product contracts with laborers has truly helped promote production in developed cooperatives. Results of the winter-spring production season have shown that those localities with a high percentage of cooperatives adopting the new contract system have achieved high productivity and a large volume of production. Compared with the 1980 winter-spring crop, in 1981 Nghe Tinh Province increased its rice yield by 242 kg per hectare; Thanh Hoa Province, 500 kg per hectare; Ha Nam Ninh Province, 300 kg per hectare; and Haiphong, 500 kg per hectare. In each province, those districts which have expanded the application of the new contract system have also achieved higher yields than other districts. In Thai Binh, Hung Ha District, where 33 of the 34 cooperatives implementing product contracts managed to increase their rice yield in this year's winter-spring crop to 38.6 quintals per hectare--up by 6 quintals per hectare compared with 1980--has become the locality credited with the highest yield in the entire province. In Ha Nam Ninh, Xuan Thuy District, which in the past only ranked second or third in rice yield, has surged to the lead by achieving a yield of 33.85 quintals per hectare in this winter-spring crop, an increase of 3.6 quintals over 1980. Elsewhere in the same province, Tam Diep and Kim Son Districts, which used to be beset by many difficulties in production, were credited with a fairly high increase in the rice yield in the same crop season, with Tam Diep chalking up 23.6 quintals per hectare, up by 7 quintals, and Kim Son bringing in 24.6 quintals per hectare, up by 6 quintals compared with 1980.

A similar situation is seen in other provinces. Do Son (Haiphong), Trung Son (Thanh Hoa), Tan Yen and Hiep Hoa (Ha Bac), Phu Tien and My Van (Hai Hung), Vinh Lac and Tam Thanh (Vinh Phu), My Duc and Phy Xuyen (Ha Son Binh), and Yen Thanh and Nghi Loc (Nghe Tinh) are districts where the new contractual system has been expanded and where productivity and the volume of production has increased over other districts in the same province.

In a given district, the rates of developing production are also higher in those cooperatives using the new contractual system than in those not using the system. In Tam Dao District, Vinh Phu, there are 23 cooperatives using the new system. They have increased their production by 2,168 tons, an average of 94 tons per cooperative. Meanwhile, the production in the remaining four cooperatives, which do not use the new system, has decreased by 118 tons as compared to 1980. In Thai Binh Province, by comparing the two categories of cooperatives--using and not using the new contractual system--it is noted that the rice yield in eight cooperatives using the new system has increased this season over last season. Meanwhile, of the six cooperatives not using the new system, three have increased their rice yield, two maintain the same rice yield and one falls short of its rice yield norm as compared to 1980.

In those cooperatives where many contractual forms under the new system have been applied, the results are all the more clear. Tu Trung, Vinh Phu, is an advanced cooperative. Of its 19 production teams, 15 have adopted the new system of contracts and have achieved a yield of 150 kg of rice per 0.1 hectare whereas the remaining four teams have obtained only 130 kg per 0.1 hectare, 20 kg less than the other teams. Eight of the 15 teams in My Ha cooperative, Ha Nam Ninh, have adopted the new contractual system and have achieved 30 quintals per hectare, overfulfilling the quota norm by 180 tons, while the remaining seven teams fell short of the quota norm by 20 tons. In Phuoc Thang I cooperative, Nghia Binh, where several contractual forms are used, those production teams receiving contracts for projects as a whole can overfulfill their project norms by 7 percent; those teams awarding contracts for finished products to groups of workers can overfulfill their contract norm by 8 percent if the teams are large and by 16 percent if the teams are small; whereas those production teams assigning product quotas to individual workers can overfulfill their quota norm by 32 percent.

This situation proves that the new contractual forms have actually promoted the development of production. The results achieved are clearly due to the new contractual system since production has been carried out in similar conditions and under the same unified guidance.

The assignment of product quotas to individual workers not only has played the role of boosting productivity and the volume of production but also helps reduce production costs and secures high economic results in production. By assigning product quotas, we can basically overcome the practice of "increasing the number of man-days to get more work credits," reduce intermediary managerial work of an administrative nature, and avoid spending man-days on such services as guarding storage facilities, safeguarding courtyards and performing measuring and weighing duties in harvest.

A survey of those cooperatives in Thai Binh Province where the new contractual forms have been adopted, shows that each cooperative can save from 2,000 to 6,000 man-days. Nguyen Xa is an advanced cooperative where management is rather closely performed. By adopting the new contractual system, it has been able to reduce 34,000 man-days, an average of 130 man-days per hectare. As for the measuring and weighing duties, it can cut 70 workers a month for each harvest season. Under the new contractual system, 21 cooperatives in Phu Xuyen District, Ha Son Binh Province, have reduced their personnel by 80 managerial cadres who did unnecessary work in various components. The Truong Son cooperative in Haiphong has succeeded in cutting down 24,000 dong on the purchase of cheap and quickly expendable materials, and in reducing 10,000 man-days and 3 tons of seeds as compared to the last winter-spring season. In Ha Bac Province, statistics from five cooperatives in Hiep Hoa District show that each cooperative has indirectly saved more than 1,000 man-days. Similar achievements are also noted in other localities. It is mainly because of these achievements that local production costs--computed according to cooperatives' income in terms of man-days--have decreased. Vu Dong cooperative (Kien Xuong, Thai Binh) has reduced from 21.6 man-days and 26 dong of production cost for each quintal of rice to 13.7 man-days and 15.7 dong. Phu Khanh cooperative (Hung Ha) has also succeeded in a similar reduction from 19 man-days and 25 dong of production cost to 16.2 man-days and 21.7 dong. Although this method of computing is not really accurate, it reflects the realistic potential of the new contractual system in increasing labor productivity and reducing production costs. This is the main goal of the improvement of cooperatives' managerial tasks which we must struggle to attain in the coming years.

/e. Comprehensively enhance the standard of management for cooperatives and contribute to consolidating weak cooperatives./

Contracts constitute a form of management closely related to the other managerial tasks in cooperatives. Depending on the forms of contracts, the managerial tasks should be matched accordingly. The assignment of product quotas to individual workers calls for detailed and specific calculation to insure the three interests in production, and compels that all aspects and professions of management be improved. In this connection, those cooperatives which have adopted the new contractual system have recorded the most outstanding achievements in surveying and adjusting their organizational scales and in redividing their production teams in order to stabilize their organization. At the same time, they have more closely controlled their means of production, especially land, labor and draft force.

Moreover, the tasks of planning, establishing norms and profit-and-loss accounting are also fulfilled more satisfactorily. The planning task requires not only a detailed and careful calculation on each plot of ricefield but also a specific consideration of all technical measures to secure a balance between productivity and the amount of product quotas and investments to defray expenditures for materials and work credits so that the quota norms can be fulfilled. Under the new contractual system, cooperatives' plans have been discussed in a truly democratic manner among the people, whereas the tasks of determining norms and profit-and-loss accounting have been also emphasized. In the process of production, cooperative members can demand rectification of irrationalities and the control of damages and losses, and the management, financial and accounting sections, and production teams of the cooperatives must fulfill the cooperative members' demands accordingly. Several regulations on the management of production have been carefully discussed by the cooperative members. These regulations have been recorded in by-laws by some cooperatives whereas they are considered by others merely as agreements. Nevertheless, they are all accepted and implemented by the cooperative members who consider them as orders to be followed to insure close and unified guidance for the cooperatives.

Along with successes in improving and enhancing the managerial tasks of cooperatives, the assignment of product quotas to individual workers has helped consolidate weak cooperatives. Weakness of cooperatives stems from several causes, the main one of which is cheating in finances and work credits and declining production. The assignment of product quotas has further helped cooperatives overcome negativism in the managerial tasks. Cadres of the cooperatives no longer have the easy conditions to inconsiderately incur expenses as they did before. The new contractual system has linked cooperatives with their members more closely. The cooperativization movement in Hiep Hoa District, Ha Bac, used to meet with difficulty in harvest seasons because poor income forced hundreds of members to leave their cooperative. Since the new contractual system was adopted, the situation in the cooperative has been stabilized. New members' families have joined the cooperative, bringing the percentages of families in the cooperative from 90 percent by late 1980 to 95 percent in this winter-spring crop season. According to reports from Lap Thach District, Vinh Phu, and Hiep Hoa and Yen Phong Districts, Ha Bac, there were 52 weak cooperatives in these three districts or 35 percent of the total number of cooperatives in the districts. Under the new contractual system, 18 of the cooperatives have been consolidated and their production has developed satisfactorily. This is more than one-third of weak cooperatives noted in these three districts.

/g. [as published] Create conditions for satisfactorily achieving the three interests of the state, cooperatives and their members./

Production plays a decisive role in satisfactorily assuring the three interests of the state, cooperatives and their members. By implementing product contracts with individual workers, we can promote the development of production and secure conditions for achieving the three interests. With respect to obligations to the state as a whole, we have fulfilled them more adequately and quickly than in 1980. Many cooperatives which failed to fulfill their obligations to the state previously, could fulfill them in this winter-spring crop season, owing to developed production. Many of these cooperatives have fulfilled from 70 to 80 percent of their annual obligations, within a short period of time. Those who used to worry about the impossibility of fulfilling their obligations to the state under the new contractual system, now have no more reason to do so on account of the realities of this winter-spring crop season.

[28 Aug 81]

[Text] As for cooperatives, generally speaking, funds have been adequately established and a majority of cooperatives now can maintain larger amounts of funds as compared with those in last year. A number of cooperatives have had certain parts of their funds reduced but this reduction was necessary. For instance, the amount of seeds needed to be kept in stock now is smaller than before due to better maintenance and handling measures against waste. Grain funds previously reserved for use in supplemental diets when the production schedule was busiest now no longer exist. The collection of debts for cooperatives has also been satisfactorily accomplished in many areas.

With regard to cooperative members, almost all cooperatives have ensured the distribution of shares to cooperative members in accordance with the number of their scheduled workdays. Generally speaking, shares given to cooperative members have increased above those of last year both in terms of cash and material. Apart from this, cooperative members have also been given bonuses for work which exceeds their quota. The general situation prevailing in cooperatives which have applied the product contract system is: around 70-80 percent of households have overfulfilled the contracted quota; 10-15 percent of households have attained the contracted quota; and only 5-10 percent of households have fallen short of the contracted quota. It is worth noting that some households have overfulfilled the contracted quota by 1,000 kilos of grain or so. Overfulfillment of the contracted quota by 300-400 kilos was commonplace. The grain ration of households which failed to fulfill the contracted quota has been reduced but this reduction was minimal as each of these households was cut by only about a dozen kilos or a little more than a metric ton at the most. Households which fell far behind the contracted quota were usually the ones which did not apply agricultural production methods and which did not know how to deal with their business. As for those families with very little assistance, some of them have suffered from production shortfalls--but these shortfalls were minimal--while many others have achieved some increase in production. As a result, the quantity of paddy needed to be taken out for stabilization sales has, in general, been minimized greatly. Some cooperatives have even been able to minimize this quantity by 40-50 percent. Due to the application of the product contract system, many households have overfulfilled the contracted quota, thus creating some surpluses for the people and helping to relieve the state in the years when natural calamities and crop failures occur.

/h. The product contract system is also instrumental in consolidating and developing the role of various party, administrative and mass organizations at the grassroots level, in overcoming part of the negative phenomena in the rural areas, and in boosting the building of the new socialist rural areas more satisfactorily./

In areas where the product contract system is applied, the leadership provided by grassroots-level party organizations must be increased. Cadres and party members must involve themselves deeply in production; must stay close to the masses; and must be exemplary in productive labor. Due to the clarity and openness in the method of management over the product contract system, suspicions within the internal ranks of the party as well as among cadres and people have been reduced sharply. The relationship between the masses and the party, between the masses and cadres and party members, and between the masses and the administration at the grassroots level has been strengthened. The contingent of grassroots-level cadres has also become more elated and confident over the fact that the production in their localities has undergone some changes, that the masses have become very enthusiastic in their productive labor, and that their living standards have further improved in tandem with the increase in their savings and contributions.

The giving of product contracts to individual laborers is attracting everyone toward productive labor. Various aspects of cultural and social activities are also being directed toward serving this purpose. The product contract system has been contributing to building the new rural area program. Facts show that at cooperatives where the new contractual system is applied and where preparatory tasks are carefully made, the kindergarten and daycare activities have not decreased but have instead been consolidated more satisfactorily than before; the administrative management apparatus has been streamlined; and cadres have stayed much closer to ricefields than before without being lax in their work as they did before. Unnecessary meetings have been cancelled and mass organizations have adopted concrete plans with practical contents to educate and motivate the masses. All these things are generating a dynamic atmosphere in the rural areas.

These successes are ascribed to the total correctness of the party Central Committee's and government's policy of expanding the application of the product contract system in agricultural cooperatives. This policy is compatible with the demands dictated by the actual production situation and with the aspirations and the interests of the masses. It has been accepted by the masses quickly and the masses have transformed it with vigorous revolutionary action. All echelons and sectors must quickly become aware of the party's policy, must quickly control the mass movement, and must be persistent and determined in the organization of its implementation. Various propaganda and press organs of the party and the state at the central and local levels have carried out continuous and concerted propaganda activities in order to contribute to making the masses fully aware of the party's policy and to promoting and directing the masses to act in accordance with the party's policy.

/3. Shortcomings and Their Root Causes/

Although the product contract system is a new contractual form and its contents are very rich, the manner in which this system has been introduced is relatively hasty, thus making it impossible for us to avoid committing certain shortcomings and weaknesses. A check of the method of implementing the new contractual system at various cooperatives has found that none of these cooperatives are free of shortcomings. Serious shortcomings have also been found in certain areas. Many aspects of their concrete activities have been found to be imperfect. Here we only want to detail a number of relatively serious shortcomings:

a. The quota for contracted products and funds to cover expenditures for materials and for payment of labor services have not yet been adequately established. Generally speaking, the quota for contracted products has been established mainly by increasing the level of productivity attained in the past 3 or 5 years by 10-20 percent. Many localities have established a quota for contracted products even far behind the production level previously mentioned. There are also certain localities which have established too high of a quota for contracted products without taking into account the production conditions in the years when their plans were carried out. The norms for work points have continued to be maintained as they were before without being readjusted to suit the growth of production. Therefore, work points in certain areas have been set very high. The norms for material expenses of many cooperatives have not been practically calculated and have not met economical standards. These shortcomings have adversely affected the realization of the three interests and have limited the productive effect of the new contractual form. Although some cooperatives have achieved a substantial increase in output and productivity as compared with last year, their income in terms of man-days computed in money and paddy has not shown any increase or, if any, it has been unremarkable.

b. The targets to which work is contracted out has not been determined. Many localities have contracted out lands for cultivation by groups of people without specifying the number of people to be involved. They are reported to have considered three people as a laborer in the assignment of contracts. Some localities have associated the distribution of income for each household with the contracting out of lands for cultivation. Such erroneous phenomena in the contracting out of lands for cultivation have led to a situation in which some households have had to work too hard while others have had not much to do, thus making impossible for us to fully exploit the working capability of cooperatives. Furthermore, the assignment of lands received under contracts to cooperative cadres and to workers belonging to various trades and professions has been made at one's convenience. Some localities have underassigned lands to these cadres and workers while others have overassigned, thus more or less affecting their professional work. As for the families of fallen heroes, war invalids and soldiers who should have been given priority in the assignment of lands and the receiving of contracts, many cooperatives have yet to pay adequate attention to creating conditions for them or helping them in the carrying out of their contracts. As a result, a number of localities have failed to attain the contracted quota.

Although efforts have been made to limit the division of lands into small pieces, casualness continues to prevail in the contracting out of lands. Cooperatives continue to contract out lands indiscriminately without using contracted quotas as a means to offset the differences in soil quality and location of lands--good or bad, near or far. That is why, in certain cooperatives, there still exists a situation in which lands are contracted out in too small of pieces inconveniencing producers.

Guidance provided for various production links in the implementation of contracts has not been strict enough, as evidenced by the fact that many localities are not yet fully aware of the five principles and the three principles. That is why they have displayed many shortcomings in leadership. Some localities have inflexibly ordered collective (or concentrated) implementation. Many localities have exercised less control over the activities of the administrative boards of various production units. In certain areas, plowers have raised absurd demands to people to whom lands are contracted out. As for the three contractual principles of linking laborers with final products, many cooperatives continue to allow cooperative members to act as they please. Cooperatives and production units have not provided adequate supervision over the necessary assistance to cooperative members. It has been found through the implementation of the product contract system that cooperatives have displayed many weaknesses in the material and technical bases--especially in the draft force--in the management of plans, in leadership and so forth. These weaknesses must be quickly overcome in order to satisfactorily ensure the functioning of cooperatives in production.

Rewarding and punishing activities have yet to be carried out comprehensively and strictly. Generally speaking, cooperatives have paid attention only to the laborers who are given contracts for final products. The rewarding and punishing or production units as well as cadres of cooperatives and other services have yet to be dealt with adequately. Although many cooperatives have applied rewarding and punishing measures to production units and cooperative cadres, their rewarding measures have failed to provide incentives.

Guidance for implementation of contracts at certain cooperatives is not good enough. The number of cooperative members failing to attain a contracted quota is very great. The collection and delivery of products are sluggish. Rewarding and punishing have yet to be dealt with reasonably. The organization of distribution is slow and has been a cause of envy between the workers. Although this situation is not prevalent, it has adversely affected the new mode of contractual work.

Efforts have not been made to link contractual work with the reorganization of production and the improvement of various aspects of management for cooperatives. Relevant shortcomings displayed by those cooperatives which are applying the new contract system are: planning and accounting skills are poor; the managerial machinery has yet to be consolidated; and management activities in various fields have yet to be performed satisfactorily and are fraught with deficiencies. Many cooperatives have failed to formulate and present their income distribution plan along with their production plan to cooperative members at the time of assignment of contracts. Therefore, these cooperatives have been unable to detect and correct the shortcomings in the realization of the three interests. Cooperative members have also not been able to ascertain their income so as to put their mind at rest in carrying out productive labor for cooperatives. The management of materials at a number of cooperatives has lacked strictness--seeds have been left unattended for, thus resulting in damage, losses and a qualitative drop. Buffaloes have yet to be given good care. Instructions regarding the use and maintenance of machinery are not available. Due to the absence of concrete contract standards, machinery has been used at one's convenience. These deficiencies in management have adversely affected the implementation of contracts.

The objective reasons for their deficiencies are that the product contract system is quite new; the introduction of this contractual system occurred in the middle of the sowing season; the preparatory time for the implementation of this system was not adequate; and cooperatives had to proceed with the implementation of this system while drawing on experience to improve their implementation. That is why they have been unable to perfect their work quickly as desired. But there are also, however, subjective reasons for these deficiencies, especially in conception, leadership and guidance:

The purpose, principle and scope of the system for product contracts with individual workers have not been understood profoundly, adequately and comprehensively. When studying the Secretariat directive, we have failed to take the actual local situation into account which leads to a situation in which guidance is at times loose or restrictive and mechanical. In the course of implementing the directive, there have also been some differing views. In some localities and at certain moments, the directive has not been explained in a truly objective manner, making subordinates understand it differently. Moreover, while implementing the directive, the primary production installations have not been kept regularly aware of the basic issues of the directive. As a result, the good aspects of the directive could not be developed while shortcomings could not be remedied promptly.

The Ministry of Agriculture further admits some shortcomings in its guidance because it has to draw upon experiences while providing guidance. Guidance has been disseminated slowly and at times has not been specific. The demands of primary production installations for materials and technical services have not been adequately met. Moreover, the management committees of cooperatives which are to help the ministry in this matter, have not been assigned enough personnel to control the situation. The information system within the sector has not been closely organized, making the issuance of corrective instructions untimely while the primary production installations have failed to report their problems regularly to the responsible sectors for assistance.

The leadership of all echelons and sectors is limited in some respects. Although local authorities have concentrated their leadership on the movement to adopt the new contractual system in the primary installations, the movement is still irregular and weak. In some localities, the central directives have been disseminated and transmitted slowly and have been implemented reservedly, while follow-up action has not been closely exercised to provide guidance for cooperatives. In many districts, the agriculture committee is still weak and unable to help the district authorities control and guide cooperatives. Moreover, some of the tasks have not been shifted to the new contractual system on a timely basis, thus limiting the results of the implementation of the new system.

In summation, within only a short period of time, the signing of product contracts with individual workers in cooperatives has become a socialist revolutionary movement among the broad masses and has scored many successes in several fields. It has created new factors for consolidating cooperatives, promoting the development of agricultural production and accelerating the scientific and technical revolution. This was an outstanding achievement during the last 5th-month spring season. At the first session of the Seventh National Assembly, the party general secretary asserted: "Those cooperatives which have correctly applied the new system of contracts with groups of workers and individual workers, have all achieved good results. Their productivity and volume of rice production have considerably increased. The income of their members has clearly increased. Their obligations to the state have been fulfilled quickly and the cooperatives have been further consolidated." During the first meeting of the Council of Ministers in July, it was observed: "The expanded forms of product contracts have strongly attracted the people and have become an important motive to develop agriculture, consolidate the production relations and build a new countryside."

There are still many shortcomings, however, since the product contracts are a new issue which has been urgently carried out in connection with crop seasons. These shortcomings can be overcome because they only involve knowledge, the working method and the method of providing guidance for action.

We must develop our achievements and resolutely overcome shortcomings and deficiencies in order to expand and complete the conclusion of product contracts with individual workers in the 10th-month crop season of 1981, creating even greater steps in improving agricultural production in all areas of production and throughout the country.

HANOI REPORTS ON COLLECTIVIZATION IN AN GIANG

BK141610 Hanoi Domestic Service in Vietnamese 0400 GMT 14 Sep 81

[Text] Between late 1979 and the third quarter of 1980, the movement for agricultural cooperativization in An Giang Province made no further progress after 301 production collectives, 6 cooperatives and 779 solidarity teams were established. During the 1980 10th-month crop, the entire province had 40 production collectives and 3 cooperatives which fulfilled required qualifications.

After making a review of the movement, An Giang noted that one of its shortcomings in agricultural transformation was a failure to adopt concrete measures to actively consolidate weak production collectives and establish new ones when conditions permitted. To overcome this situation, the province instructed all echelons and sectors to implement Directive No 93 of the VCP Central Committee Secretariat and to apply it positively and firmly to local conditions.

During the last months of 1980 and in the early months of 1981, by adopting concrete measures, An Giang was able to combine agricultural transformation with the winter-spring crop and summer-fall crop production, thereby consolidating the weak production collectives, reorganizing production management and gradually improving the cadres' managerial skills.

In localities where conditions permitted, the province and its districts established new production collectives and increased the number of production teams while adjusting the size of certain production collectives and cooperatives to suit the ability of managerial cadres. Meanwhile, all fully qualified production teams with competent managerial cadres and high production output will be elevated to production collectives in the subsequent crop season on a voluntary basis.

During the first half of the year, An Giang trained nearly 600 cadres to take charge of production collective management and to serve as heads and deputy heads of production units and village and city ward management boards. Phu Tan and Phu Chau Districts have trained more than 300 cadres to support the expansion of the movement for agricultural cooperativization in their localities. By resurveying their land, these districts have allocated thousands of hectares of ricefields to needy peasants and production collectives and cooperatives.

To date, some 198 weak production collectives and three weak cooperatives have been consolidated and another 40 production collectives and 1,538 production solidarity teams have been established in An Giang Province. By formulating their own plans and by directing production in accordance with these plans, various production collectives have been able to increase production.

In the 1980-81 winter-spring crop season, production collectives and cooperatives in An Giang turned over to the state, under their grain obligations, a volume of paddy equivalent to about 30 percent of the total output. Many production collectives collected grain for the state from fields averaging more than 2,000 kg per hectare.

Through the winter-spring crop and summer-fall crop production, Phu Tan District--formerly with six production collectives and two cooperatives--has established another 23 production collectives and 2 more cooperatives. Many production collectives in the district have attained yields of 5-6 tons of paddy per hectare from their first crop under the collective form. Meanwhile, many production solidarity teams have even volunteered to elevate themselves to production collectives.

The movement for agricultural cooperativization in An Giang, however, has not developed evenly. It is still weak in (Thoai Son), Chau Phu and Phu Chau Districts and has not yet undergone any change in Tri Ton and Tinh Bien Districts. Some districts and villages still have not carried out propaganda work in a satisfactory manner but have resorted to coercive and authoritative measures or, on the contrary, have slackened in agricultural transformation. In addition, a number of production collectives have failed to develop the masses right to collective mastery fully.

AGRICULTURE

BRIEFS

NGHE TINH RICE--Nghe Tinh Province has planted fall rice on 15,089 hectares. Various districts are striving to harvest this rice as soon as possible to avoid flash flooding. The province has also planted 10th-month rice on more than 153,300 hectares, overfulfilling the planned acreage by 3 percent and producing an increase of 6 percent over the same period last year. [Hanoi Domestic Service in Vietnamese 0400 GMT 6 Sep 81 BK]

BEN TRE SUMMER-FALL RICE--Ben Tre Province to date has harvested 8,400 hectares of summer-fall rice, achieving 52 percent of cultivated area. The province has also planted 44,000 hectares of 10th-month rice, achieving 55 percent of the plan norms or twofold more than the same period last year. [Hanoi Domestic Service in Vietnamese 1100 GMT 8 Sep 81 BK]

HAU GIANG RICE--As of late August, Hau Giang Province had planted 270,000 hectares of 10th-month rice, fulfilling 80 percent of the plan norm--an increase of 16,000 hectares over the same period last year. To overcome the consequences of the July drought, all districts in the province have, with assistance from the state, sown additional seed to ensure full transplanting on the entire 10th-month rice area. [Hanoi Domestic Service in Vietnamese 1100 GMT 9 Sep 81 BK]

MINH HAI RICE--Thanks to regular rainfall since early August, Minh Hai Province has planted rice on 256,000 to 272,000 hectares, achieving from 80 to 85 percent of planned acreage. Vinh Loi, Gia Rai, Hong Dan and Phu Tan Districts have basically completed their rice planting. Besides rice, the province has also planted more than 2,000 hectares of soybean or 60 percent more than the same period last year. [Hanoi Domestic Service in Vietnamese 0400 GMT 9 Sep 81 BK]

SPRING CROP PRODUCTION--According to the Ministry of Food, as of 5 September, the northern provinces and cities had achieved 96.2 percent of the grain procurement target for the 5th-month spring crop. Of particular interest is the fact that they had attained 98 percent of the obligatory grain contribution quota, including 289,000 tons of grain to be paid as an agricultural tax. So far, 103 districts and 2,761 cooperatives have fulfilled or overfulfilled their obligations for the 5th-month spring crop. Following the fulfillment of their grain obligations, the northern provinces and cities are continuing to organize obligatory grain purchases at agreed-upon prices and the exchange of nitrogenous fertilizer for paddy. Despite numerous difficulties, various localities have thus far succeeded in purchasing more than 14,000 tons of paddy at agreed-upon prices and obtaining an additional 53,000 tons through the exchange of nitrogenous fertilizer for paddy. [Text] [BK110900 Hanoi Domestic Service in Vietnamese 1100 GMT 10 Sep 81]

CUU LONG RICE--As of 9 September, Cuu Long Province had harvested 36,300 hectares of summer-fall rice, achieving 82.5 percent of the transplanted acreage. Since the beginning of the crop the province has delivered to state granaries 112,000 tons of paddy. During the same period it has sown 125,000 hectares of 10th-month rice, achieving 70.6 percent of the plan norms or 28 percent more than that of the same period last year. Along with planting 10th-month rice, peasants in various districts have promptly saved 5,000 hectares of 10th-month rice from being ravaged by harmful insects. [Hanoi Domestic Service in Vietnamese 1100 GMT 11 Sep 81 BK]

HAU GIANG SUMMER-FALL RICE--To date Hau Giang Province has harvested 37,500 hectares of summer-fall rice, achieving 51 percent of the transplanted area. The province has planted 290,000 hectares of 10th-month rice, achieving 90 percent of the plan norms. Due to limited supply of fertilizer, the peasants are using animal and green manure to fertilize ricefields. [Hanoi Domestic Service in Vietnamese 1100 GMT 11 Sep 81 BK]

QUANG NAM-DANANG AGRICULTURAL TRANSFORMATION--Socialist transformation of agriculture in Quang Nam-Danang Province has basically been completed since late 1979. As a result, some 241 cooperatives have been established in the delta and midland regions of the province, nearly 85 percent of the cultivated land has been collectivized, and almost 93 percent of peasant families have engaged in production under collective forms. [Hanoi Domestic Service in Vietnamese 1100 GMT 13 Sep 81 BK]

NGHIA BINH PADDY COLLECTION--By 5 September Nghia Binh Province had collected almost 13,000 tons of paddy, thus fulfilling more than 53 percent of the grain obligation norm for the summer-fall crop season. Thanks to close coordination among the establishments, some 15 out of 23 cooperatives in An Nhon District have been able to fulfill the grain obligation norm for the summer-fall crop season at an early date. [Hanoi Domestic Service in Vietnamese 2300 GMT 13 Sep 81 BK]

DONG NAI 10TH-MONTH RICE--By 10 September Dong Nai Province had transplanted 10th-month rice on 31,000 hectares, fulfilling nearly 80 percent of the planned norm. Along with planting 10th-month rice, such districts as Chau Thanh, Long Thanh, Tan Phu and Xuan Loc have saved nearly 1,500 hectares of this rice from being destroyed by harmful insects and blight. [Hanoi Domestic Service in Vietnamese 1100 GMT 16 Sep 81 BK]

DONG THAP RICE HARVEST--Dong Thap Province recently harvested more than 12,000 hectares of summer-fall rice, representing 27 percent of the cultivated area. Tam Nong District alone accounted for more than 3,300 hectares. Despite waterlogging in some areas, the rice yield attained by the province in this 10th-month crop season is more than 3 tons per hectare. [Hanoi Domestic Service in Vietnamese 0400 GMT 14 Sep 81 BK]

BEN TRE 10TH-MONTH RICE--As of 5 September, peasants in Ben Tre Province had planted 10th-month rice on more than 41,000 hectares or 55 percent of the planned acreage. The province is striving to make an increase of 15,000-20,000 hectares of this rice over last year to make up for the shortfalls suffered in two previous rice crops. [Hanoi Domestic Service in Vietnamese 2300 GMT 13 Sep 81 BK]

HA NAM NINH GRAIN COLLECTION--After a 3-week campaign for grain collection, on 23 June Ha Nam Ninh Province delivered 76,000 tons of paddy to state granaries, overfulfilling its grain obligation norm by 1 percent. On 1 August the province delivered another 9,000 tons to state granaries, thus bringing to 85,000 tons the total volume of paddy collected under the forms of grain obligation and surplus purchase and fulfilling 100 percent of the total grain collection norm entrusted by the central government. [Hanoi Domestic Service in Vietnamese 0400 GMT 16 Sep 81 BK]

HA NAM NINH WINTER CROP--The agricultural sector in Ha Nam Ninh Province has guided grassroots units in zoning off and expanding this year's winter crop area to 50,000 hectares, an increase of 13,000 hectares over the last winter crop. Many districts have determined areas suitable for the cultivation of each particular crop. The provincial agricultural sector has also trained cadres and members of cooperatives in the technique of intensive cultivation suitable for various crops on various kinds of soil. To date, all cadres in charge of the cultivation of grain and subsidiary food crops in the districts and cooperatives in the province have been trained in the planting and caring for winter crops. [Hanoi Domestic Service in Vietnamese 0400 GMT 20 Sep 81 BK]

PHU KHANH DROUGHT CONTROL--Phu Khanh Province has striven to plant 20,000 hectares of rice in the current 10th-month crop, but as of 15 September, it had planted only over 10,000 hectares, 5,400 of which have already been destroyed by drought. To overcome the lack of water and to ensure the fulfillment of the cultivation plan, the provincial agricultural sector has sent many cadres to the grassroots units to help reclassify rice varieties and land to create conditions for applying the direct sowing method. These cadres have also guided cooperatives in selecting areas with adequate soil humidity for the planting of additional rice seedlings. [Hanoi Domestic Service in Vietnamese 1100 GMT 19 Sep 81 BK]

BEN TRE PEST CONTROL--Large areas of 10th-month rice in Ben Tre Province have been affected by leafhoppers, whose development has been favored by a prolonged drought. The province has guided various districts, villages, cooperatives, production collectives and the local peasants in making the best use of their means to dredge canals and trenches so as to irrigate the fields. The province has also quickly sent various kinds of pesticides to insect-affected areas to help in the pest control efforts. Ba Tri, Binh Dai and Giong Trom Districts have mobilized tens of thousands of laborers to dredge canals and trenches. Thanh Phu District, by devoting more than 70,000 man-days to building water conservancy projects, has managed to save 6,000 hectares of the 10th-month rice crop. [Hanoi Domestic Service in Vietnamese 1100 GMT 20 Sep 81 BK]

GRAIN DELIVERY, AGRICULTURAL TAX--According to the Ministry of Finance, as of 31 August southern localities from Quang Nam-Danang southward had delivered a volume of grain to state granaries as much as 73.3 percent of the agricultural tax obligation norm for 1981 or 101.1 percent of the total agricultural tax revenue in 1980. Paddy included in this volume represents 79.6 percent of its obligation norm for 1981 or 108.8 percent of the total quantity delivered to state granaries in 1980. Nine provinces in the Mekong River Delta region, which account for a large part of agricultural tax revenue, have fulfilled 74.2

percent of their agricultural tax obligation norm for 1981, thus producing an increase of 7.5 percent over their agricultural tax payment in 1980. Agricultural tax collection for 1981, however, still has not met its present requirements. Some localities such as Dong Thap, Ben Tre, Gia Lai-Cong Tum and Dac Lac have so far been able to fulfill only more or less than 50 percent of their obligation norm. ERRATIC DISTRIBUTION OF COAL CRITICIZED

Hanoi NHAN DAN in Vietnamese 11 Aug 81 p 3

[Article by Trinh Ngoc Bao, Quang Ninh Coal Purchase and Temporary Storage Corporation: "Distribution of Coal"]

[Text] Each quarter, the Ha Bac Nitrate Fertilizer Factory used to receive more than 10,000 tons of lump coal 2 and 3 according to plan. In the meantime, the Provinces of Thanh Hoa, Thai Binh and Nghe Tinh received only a few hundred tons each. This was not rational. The Ha Bac factory was given access to all warehouse gates on a special priority basis, regardless of how it fulfilled production plan norms and achieved economic efficiency. It was the only unit permitted to receive coal directly from the Cua Ong (Quang Ninh) Coal Selection Enterprise, bypassing other coal supply organs. Since it is a coal production organ, the coal selection enterprise concerns itself only with supplying coal without bothering to address accompanying requisites, such as amount of products, products to be delivered to the state, setting norms for coal use to make one unit of product, etc. In the meantime, the above provinces were not able to secure additional coal allotments although they have made many strenuous trips to and from supply organs. This has caused their installations in charge of processing tea, grain and food, producing glass, and forging portable agricultural tools and agricultural machinery to shut down because of lack of a couple of tons of lump coal.

To properly solve the problem of coal distribution to the benefit of production, we propose the following: From now on, the formulation of coal supply plans should be based upon realistic production requirements, ensuring overall balance between sectors and localities, and displaying unified management. Supplying coal to sectors and localities must be based upon production norms and upon correctly implementing the decision of the chairman of the Council of Ministers on norms for coal use, avoiding the situation in which coal is in short supply in places needing it, and vice versa. If necessary, it is advisable to close down a factory which wastes too much precious fuel without generating economic efficiency in order to feed thousands of installations, which are turning out products helpful to society.

RAILWAY SECTOR STRIVES TO FULFILL TRANSPORT PLAN

Hanoi QUAN DOI NHAN DAN in Vietnamese 11 Aug 81 p 1

[Article: "Railway Sector Overcomes Shortcomings and Increases Transport Capacity"]

[Excerpt] In recent days, the railway sector has not fulfilled transport plans signed with other branches. Contracted shipment of many goods, including apatite, supplies, iron, steel, etc., still lags behind.

With focus on the Fifth Party Congress, the sector is inspecting units, urging them to carry out management measures and organize transport to keep up the required tonnage and raise draft power with a view to boosting goods transported on the north-south line and toward the frontier.

The sector is striving to strengthen and develop installations for locomotives and car repairs, concentrating transport forces on supporting agriculture, the army, border provinces and economic zones.

As for mobilization of means of transport, the sector is beefing up the north-south line with strong locomotives, and exerting guidance to speed up the unloading of strategic goods. Nearly all locomotives in the Ho Chi Minh City zone, made by General Electric of the United States, have now been damaged, and spare parts are in short supply. The sector is transferring locomotives from northern railway zones and reducing the frequency of local freight and passenger trains with a view to giving north-south transport priority and solving difficulties in locomotives in the southern zone.

The sector is redistributing boxcars equally in order that supply to the coordination section will speed up unloading of imported goods at harbors and the transporting of grain and food on the north-south line. It is repairing and covering large railroad cars with tarpaulins for short-distance hauls. At the same time, it is carrying goods from the north-south line directly to the frontier via Giap Bat railway station, thus bypassing Hanoi and reducing congestion at this central railway station.

Along with other sectors, the railway sector is reviewing transportation plans and organizing waves of transport of goods with the spirit of providing high productivity and safety, making achievements to salute the Party Congress and at the same time, in close coordination with the chemicals sector, stepping up shipment of apatite to serve agriculture and phosphate fertilizer production installations.

EDITORIAL URGES REVAMPING RAILROAD TRANSPORTATION MANAGEMENT

Hanoi NHAN DAN in Vietnamese 6 Aug 81 p 1

[Editorial: "Revamp the Management of Railroad Transportation"]

[Text] Railroad transportation is one of our most important transportation sectors. This sector has the capacity to move a large volume of goods, serving about 90 percent of the passenger traffic moving among various localities in the country. Because of the trains that run day and night and because of the crowded and animated activities taking place at the stations and railroad warehouses, the railroad transportation work must be guided and managed in a very tight and unified fashion.

In the last few years the railroad sector has made many efforts to build its material and technical bases and to raise its transportation capacity. But the organization and management of these facilities so as to guarantee the optimum exploitation of these capabilities still shows many shortcomings. Though it is an essential link in transportation and communications, it is still a sector showing many negative phenomena.

While our means are still limited, the utilization of these means is still not very good, the turnaround rate of the wagons is slow, and many others are not even used. The trains are inadequately equipped with facilities and utilities, many trains are not protected and thus constantly subject to losses and damage. The sale of tickets is not being managed tightly. Whereas very large numbers of cadres, troops and passengers with urgent businesses to attend to have to wait for several days, a good number of tickets for the trains is reserved for those engaged in illegitimate businesses. A number of wagons have turned into smuggled good warehouses. The hailing and stopping of trains in many localities is still totally arbitrary, it is very rare that trains start and arrive on time. The procedures and principles of running the trains have not been respected.

Railroad transportation is a great transportation sector which serves a wide scope of activities and areas. Each one of its shortcomings is bound to cause no little damage to the property of the state and of the people, thus negatively affecting the life of the society.

We must resolutely and comprehensively revamp the entire railroad sector, from the reorganization of its structure and the reassignment of its cadres to the regimes of business management and directions of investment and equipment. To rectify the management is one of the most urgent measures meant both to exploit well our transportation capacity and to guarantee that the movement of people and goods be easy, orderly, safe and civilized. The railroad sector has the responsibility to contribute towards guaranteeing the life conditions of the cadres and people of various cities, of the industrial zones, and of the armed forces and people of border areas to the north, and to serve well the production of many industrial sectors. To fully utilize the means and equipment at our disposal and to rectify the management already constitute ways to raise significantly the sector's transportation capacity.

Railroad transportation management must create good relationships with the organs that use it and with the train passengers. We must aim at the objectives and expected results of service to have plans to revamp in time the work of train scheduling, loading and unloading, commodity delivery and receipt, and reception reserved to passengers that use the trains and get off at various stations. We must concentrate on managing well the repair and rational utilization of trains and wagons, especially the management of the north-south traffic, of the commodity unloading work in Haiphong Port, and of the transportation work serving the frontier provinces. We must reassign the cadres and workers in the railroad sector, raise their political awareness, ascertain a correct service viewpoint, and build up the regime and patterns of respect for procedures and principles. The railroad sector combines with other sectors, especially the public security units and localities where there are railroads going through, so as to insure public order and security.

Through revamping every aspect of management, the railroad sector can bring about a positive transformation raising its service capacity, building a solid cadre and patterns of activity that are organized and disciplined, worthy of an important economic activity sector.

ELIMINATION OF TRASHY PICTURE BOOKS FOR CHILDREN URGED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 1 Jul 81 p 2

[Article by Dinh Thi Bich Ngoc, Institute of Social Sciences, June 1981: "Readers' Forum: More About Harmful Effects of Trashy Picture Books"]

[Text] Recently, reactionaries and crooked merchants have illegally circulated old novels, music tapes and movie films while tossing on the market a kind of clandestine book--picture storybooks for children. These books are mimeographed on poor-quality, yellow and thin paper, 15 x 10 cm in size. Printing quality is very poor with blurred type, and difficult to read. It should clearly be stated that these are bad picture books, very harmful to children. They differ from each other in styles and contents, but all of them share the same aim of intoxicating children and turning them into dull and bad people. Let's briefly review a few samples.

In the first place there are novels of old-time adventure. Wrapped in the mantle of buddhas and deities who represent the good, fighting vicious demons who represent evil, these books feature a very bad content. They induce small boys to ape their fisticuffs and savage games, and attempt to transform their dynamism into thuggism. With shooting scenes between white men and Indians on horseback, these "good-guys versus bad-guys" stories also imbue in children the spirit of racial discrimination inasmuch as Indians are described as wicked people while cowboys and the U.S. Cavalry, who carry out the government's genocidal policies against colored people, are glorified as ideal heroes and knights. Still unable to control themselves and distinguish between right and wrong, children easily imitate the evil as well as good. Moreover, scenes of brawls in stories of old-time adventurers and cowboys are intended solely to promote crude force, individualistic heroism and to push children toward an egotistic and vagabondish lifestyle.

Also, we should clearly see the damaging effects on small girls of tear-filled romances such as "Lan And Diep," and those about hookers. How can these school-aged girls concentrate on their studies in light of early impregnation with tales of hampered, broken and tragic love? These novels muddy the unbiased and clear mind of children. They generate pessimism and dejection, and there is only a small distance between that depression and the tendency to live without restraint and without paying attention to the future. A great majority of people have seen the damage of these pictorial old-time adventure and love stories on their own children. There are, however, some people who still think that these stories are similar to old legends, and cause neither harm nor wrong. Reactionaries with their schemes of intoxicating children, have taken advantage of this in an extremely sophisticated manner. They have tossed into the market such absurd and trashy stories as "The Tiger-Husband" and "Princess My Le and Prince Huy Dat," mixing them with a number of familiar old legends, to doubt history. More dangerous is the fact that they have focused the children's curiosity on the idealistic and superstitious nature of these stories, distorting and deleting at will to suit their attempts to intoxicate.

Their fabricated stories brazenly disseminate superstition and mysticism. For instance, the pictorial story entitled, "Fate of Virtuous People" with the following synopsis: A wife maltreated by her husband for failure to bear children, left her conjugal home with the decision to marry the first man she met on the road. Listening to her, her "second husband" went out to find a good friend but to no avail. On the way home, he stopped by a pagoda where he turned statues of Buddha upside down and stuffed their mouths with food. Later, he lied to his wife that he had found a friend to whom he offered all the food. Then an epidemic erupted and there were rumors among the people that the deaths were caused by Buddha's dissatisfaction. Only the "second husband" knew how to cure the disease by putting the statues back to their standing position. For that, the king gave him an award and he became wealthy; as for the "first husband," he was broke as a result of drinking and debts. The story ended on this line, "Man proposes and God disposes." Here, superstition clearly prevails: marriage, wealth, illness, happiness and the misery of man are predestined by God. It can be said that this is a story typical of a deceptive and remiss writing style, and of a category of fiction designed only to dull the minds of children. If we don't thwart and expose the enemy in time in today's cultural and literary field, the old aesthetic bent molded by books published for children before Liberation Day will have an opportunity to revive and rapidly invade the tender minds of children.

We all recognize the need for publishing many books, both healthy, appealing in content and eye-catching in form, in order to attract young readers. At the same time, we should also recognize that resolutely blocking the dissemination of trashy pictorial stories at book stalls, in school and at home is a necessary measure for removing children from the sway of misguided and unsound entertainment inclinations and habits, because it is not easy for children to assimilate new things if old ones, instead of being exterminated, are given refuge and a chance to circulate and propagate.

POPULATION CUSTOMS, AND CULTURE

BRIEFS

RESETTLERS FROM HO CHI MINH CITY--Since liberation Ho Chi Minh City has sent 840,000 people back to their native villages or to the suburban areas and economic zones for resettlement. These people have opened up and put under cultivation tens of thousands of hectares of virgin land in various new economic zones, built 82 villages along the main highways in the eastern Nam Bo provinces, and set up 20 state farms and forestry sites around the city. [BK101205 Hanoi Domestic Service in Vietnamese 2300 GMT 6 Sep 81]

RESETTLERS FROM HA SON BINH--Since 1976 Ha Son Binh Province has sent almost 57,000 persons, 42,000 of them workers, to new economic zones in the province's mountainous districts and in Bac Thai, Son La, Song Be and Lam Dong Provinces. The province has also sent to various new economic zones 1,600 grassroots-level cadres and almost 1,000 managerial and technical cadres, teachers and health cadres. Over the past 5 years the province has coordinated with the recipient provinces to open thousands of kilometers of roads and build over 10,000 square meters of housing space and dozens of health stations and schools for resettlers in new economic zones. [BK101205 Hanoi Domestic Service in Vietnamese 1100 GMT 9 Sep 81]

GIA LAI-CONGTUM RESETTLEMENT--Since early this year Gia Lai-Congtum Province has helped more than 7,000 people of various ethnic minority groups adopt sedentary farming lives at various resettlement centers. Thanks to good preparation in all aspects, these new resettlers have been able to quickly stabilize their lives and engage in production. [Hanoi Domestic Service in Vietnamese 1100 GMT 18 Sep 81 BK]

ALPHABET FOR MINORITY PEOPLE--Although the Bahnar, Jarai and Sedang peoples in Gai Lai-Kontum Province already have their own written languages, most of the other ethnic minority peoples in the province do not yet have their written languages. The province has organized researches to compile a common alphabet for these people and to prepare it into a program to be taught in schools. Twenty-two intellectuals and teachers in Gia Lai-Kontum have studied the customs and languages of the peoples in the province and have agreed on an alphabet comprising 25 letters. FLAWS IN YEARLONG STRUGGLE AGAINST NEGATIVISM DISCUSSED

Hanoi HANOI MOI in Vietnamese 28 Jul 81 pp 1, 4

[Article: "Efforts Against Negativism in Past Year"]

[Text] On 24 July, the Municipal 79 Guidance Committee held a meeting to assess the preliminary results of the struggle that has been underway against negativism for more than a year.

Since the beginning of 1980, the entire city has set up 306 primary organizations to carry out the struggle against negativism, in line with the spirit of directives 81 and 108 of the Party Secretariat, and of directive 31 and plan 06 of the Municipal Party Committee. Among these organizations, 106 enterprises, 43 handicraft cooperatives, 24 corporations, 51 stores, 26 wards, 4 schools, 3 hospitals, 16 villages and agricultural cooperatives, 2 stations, 2 movie houses, 1 worksite, 1 state farm, etc., 5 branches including grain, commerce, transport and communications, land, and foreign trade, and 4 city precincts, considered to be important units serving important areas, began the movement early in order to draw experiences.

Compared with goals previously set, the struggle against negativism has achieved a number of initial results. The awareness of protecting state and collective property has increased. A number of instances of embezzlement and theft involving branches of grain, commerce, communications and transport, etc., have been discovered and strictly prosecuted. A number of instances of bribery involving distribution, house repairing, military recruitment, distribution of supplies, contractual purchases, recruitment of civil servants, and treatment of disease have been discovered and addressed. However, all of this is still low when compared with requirements.

The struggle to detect instances of people being oppressed is still poor and marred with difficulties. The struggle against professional crooks and thugs has taken a turn for the better, but the situation is still complex. The struggle against speculation and smuggling has recently achieved a number of good results, generating confidence among the masses.

The struggle against negativism within organizations has achieved progress. A number of cadres and party members, including those in positions of authority, have been investigated and disciplined for embezzlement, bribery, and oppression of the people. In the first 6 months of 1981 there were 557 instances of prosecution, ranging from blame and warning to dismissal, pay cuts and forced resignation--including 29 cadres in positions of authority. Moreover, a number of party members have been disciplined by the party.

These results notwithstanding, the struggle against negativism has on the whole developed slowly and is still below requirements; the negative situation in economic and social activities has not abated; and there have been no fundamental changes in the task of blocking and rebuffing the bad practices of theft, bribery, and oppression of the masses.

Concerning ways to step up the movement in the future, the report of the committee meeting clearly states that in the last 6 months of the year, while striving to fulfill the common task, each sector as well as each echelon must make the greatest efforts to resolutely concentrate guidance on bringing about real changes in the struggle against negativism in branches, echelons, units, and localities.

The meeting also heard the vice chairman of the Municipal 79 Guidance Committee convey the meaning of directive 108 of the Secretariat of the Party Central Committee and of the Municipal Party Committee's circular guiding the implementation of that directive.

MILITARY AFFAIRS AND PUBLIC SECURITY

POLICE CHECKPOINT OFFERED NUMEROUS BRIBES

Hanoi NHAN DAN in Vietnamese 25 Aug 81 p 3

/Article by Dang Minh Phuong: "Continuously Punish Bribers"/

/Text/ At midnight on 1 May 1981, truck 37A53-67 reached the Hue-Da Nang crossroads where an order to stop for inspection was given but the driver drove on. A policeman on a motorcycle pursued the truck for more than 10 kilometers before an apprehension was made. Police Third Lieutenant Ha Dinh Phi inspected the truck and found a hard object under the layers of fertilizer. He asked the driver if it was a gasoline tank.

Driver Pham Minh Quang slipped a package of money into the policeman's pocket and said, "Sir, we are going down to Ho Chi Minh City and I hope Sir you will understand and allow us to continue." Ha Dinh Phi arrested Quang, immediately took out the package of money and took Quang to the public security station to make out a report on confiscating 400 illegally transported liters of gasoline and the 500 dong bribe was turned over to the state.

A few days later, two large trucks with license numbers 52C05-14 and 52C05-92, traveling from north to south, arrived at the inspection station of Ha Dinh Phi in the middle of the day. After examining their papers, Phi asked the drivers, "Besides the 4 tons of state goods recorded in the papers, are you carrying anything else?"

"No, sir!"

The two trucks were full of large and heavy items. Phi looked under the vehicles and asked, "If you are not carrying anything else, why are springs so straight?"

Drivers Ly Van Co and Le Van Dinh became pale. The inspecting policemen discovered that each truck was carrying an additional 2 tons of tax-evasion goods. The drivers immediately changed to a ploy of familiarity, giving the policemen a package of cigarettes and 200 dong along with the blatant statement, "You work day and night and your monthly wages are low. Please take a few hundred cups of coffee and lunches."

Third Lieutenant Ha Dinh Phi resolutely refused the bribe, took the trucks to the station, forced the drivers to pay a fine of 600 dong for violating transportation regulations, confiscated the bribe for the public fund and turned over 2,000 dong in taxes on the smuggled goods to the tax agency for delivery to the state.

On the morning of the following day, Ha Dinh Phi unexpectedly received an envelope containing 1,000 dong. This money was sent by Hoang Van Bon, a partner of Ly Van Co and Le Van Dinh, in an attempt to bribe Phi to allow them to continue their activities. Ha Dinh Phi turned it all over to the state.

On 17 July, Ha Dinh Phi's unit pursued and apprehended a number of trucks from a transportation agency in Ho Chi Minh City which were illegally hauling 800 liters of gasoline. When discovered, the entire convoy of four vehicles increased speed and fled. The pursuit was difficult and dangerous. Finally, the trucks were nabbed. The drivers tried a bribe. They gave Vo Dinh Hai, from Phi's unit, 600 dong. Hai would not accept. They then gave him 800 dong and were again refused. They then used a transport bicycle operator to bring Hai 1,800 dong. None of their methods achieved results and the bribe money and all the illegally transported gasoline and oil was confiscated and turned in.

One time Ha Dinh Phi discovered two trucks, 29D09-77 and 29D09-68, transporting gasoline in excess of permissable levels by 300 liters although the individual writing the orders had intentionally written a surplus issue of gasoline in order for the drivers to escape police inspection. However, Ha Dinh Phi's unit still resolutely wrote a report. The drivers grabbed the report, pleaded and slipped money inside. When the report was opened, inside was found 400 dong. Both the bribe money and the surplus gasoline were confiscated.

On the night of 2 September 1980, Ha Dinh Phi spotted vehicle 45A52-85 transporting many illegal goods. He temporarily turned the vehicle over to the tax agency in order for the public security and tax agencies to handle the matter on the following morning. However, at 0700, the vehicle hauling illegal goods was allowed to depart by the tax team. Ha Dinh Phi saw something was wrong and had someone pursue the truck on its way toward Hue.

The vehicle was apprehended at the Hai Van Pass. The driver confessed that he had bribed taxman Ngo Van Trong with 900 dong to have the taxes reduced and allow him to leave. The police unit of Phi confronted the tax team, recovered the bribe money for the state and submitted a report to the authorities for a bribery prosecution.

Carrying out their mission in a difficult position with many vehicles passing daily, Third Lieutenant Ha Dinh Phi and the cadres and men in Da Nang Police Unit 34, consisting of Huynh Tan Hai, Pham Nhu Phong, Nguyen Dinh Long, Dang Ngoc An and Nguyen Van Ty, have night and day devoted themselves to their job, overcame many difficulties and dangers, maintained the unblemished quality of the people's police and resisted the insidious plots of dishonest individuals attempting to entice and bribe the cadres, at times ingenious, at times blatant and even many times threatening.

In only the time between the middle of 1980 and June of this year, the Hue-Da Nang crossroads police station headed by Ha Dinh Phi has 10 times discovered and punished dishonest individuals, returning to the state 12,000 liters of gasoline, 4,000 liters of oil, many other supplies and materials and more than 6,000 dong in bribes.

COUNTERFEITERS OF HOUSEHOLD REGISTRATION PAPERS ARRESTED

Hanoi HANOI MOI in Vietnamese 26 Jul 81 p 4

[Article by Quoc Toan: "Gang of Counterfeiters of Hanoi Household Registration Papers Arrested"]

[Text] Recently, with the help of the people, the Public Security Service has investigated and discovered a number of instances of bad elements taking advantage of their official positions and making phony household registration papers in order to enable people from the provinces to register as permanent residents of Hanoi.

The Public Security Service has arrested a number of persons working at Building Corporation 1 (Ministry of Building), including Le Trong Luu (Labor Wages Bureau chief), Nguyen Xuan Thuong (collective household chief of Enterprise 106), Lai Quang Ha (collective household chief of Enterprise 104), Trinh Van Phuc (formerly collective household chief of Enterprise 104, now retired), and Le Xuan Tan (administrative bureau cadre of the Mechanized Repair Enterprise). The gang has supplied nearly 100 people in the provinces with phony administrative recruitment papers, first enabling them to register with the collective household of the corporation located in Ba Vi District, and then transferring these registrants to organs and enterprises located in four Hanoi precincts.

The gang has received bribes from these phony Hanoi registrants--a maximum of 9,500 dong and a minimum of 1,500 per person--in addition to gifts and invitations to dinner, etc.

The gang members will be tried by a court of law in the near future.

In the meantime, in coordination with the Capital Military Region, the Public Security Service has investigated and arrested Co, formerly a senior army sergeant, now degenerate and dehumanized, for conspiring with a number of other bad elements to make phony demobilization certificates for sale to 69 army deserters, enabling them to register with their family households in Hanoi. Co was sentenced by a military court to 12 years in prison. The Public Security Service and the Capital Military Region are taking measures to prosecute the above army deserters one by one.

COAL STOLEN FROM INLAND WATERWAY BARGES

Hanoi QUAN DOI NHAN DAN in Vietnamese 23 Aug 81 p 2

/"Readers Write Letters" Column: "Illegal Buying, Selling of Coal, Gasoline and Oil Must Be Stopped"/

/Text/ On the Hanoi-Viet Tri inland waterway route, we regularly see from six to seven small boats waiting at the Dong Cao ferry landing in Van Quan Village, Me Linh District, Hanoi. Each time a barge carrying coal passes, someone waves their hand and these boats immediately dash out, tie up to the barge and shovel off the coal. After filling their boats, they pay the barge operator 200 dong for each boat, each carrying from two to two and one-half tons. They then tie up to the bank and sell the coal at 330 dong per ton. Thus, each boat obtains a profit of from 450 to 600 dong.

With this method of collusive trade, state property is seriously undermined by those engaged in illegal activities.

We suggest that the responsible agencies of Me Linh District in Hanoi have methods of promptly halting this illegal activity in order to protect socialist property.

PHAM BAN DONG ADDRESSES CONFERENCE ON PRODUCTION CONTRACTING

Hanoi NHAN DAN in Vietnamese 17 Aug 81 pp 1,4

[VNA News Release: "At Conference to Recapitulate Agricultural Production Contracting, Council of Ministers Chairman Pham Van Dong Affirms That Production Contracting Is a New Development of Our Country's Agriculture, a Broad Socialist Revolutionary Movement, a Festival of the Masses"]

[Excerpts] Recently, in Ha Nam Ninh Province the Ministry of Agricuture organized a preliminary recapitulation of production contracting in agricultural cooperatives, in accordance with Directive No 100 of the Secretariat of the Party Central Committee, in order to discuss the perfection and expansion of the form of contracting out production to workers on a national scale.

Participating in the conference were a number of provincial party committee secretaries; chairmen or vice chairmen of People's Committees of provinces and municipalities in the north, along the centeral coast, and in the Central Highlands, Ho Chi Minh City, and the provinces of Hau Giang and Dong Nai; leadership cadres of 82 districts; representatives of 53 agricultural production cooperatives; and more than 200 cadres of mass organizations and propaganda, press, news agency, and broadcasting organs.

Comrade Vo Chi Cong, a member of the Political Bureau of the Party Central Committee and Chairman of the Council of Ministers, and comrade Nguyen Ngoc Triu, a member of the Party Central Committee and Minister of Agriculture, presided over the conference.

Comrade Pham Van Dong, member of the Political Bureau of the Party Central Committee and Chairman of the Council of Ministers, visited and spoke to the conference.

Expressing his opinions at the conference, Vo Chi Cong, Vice Chairman of the Council of Ministers, praised the localities and the Ministry of Agriculture for having positively carried out the policy of contracting out production, and lauded the propaganda, press, and theoretical research organs for having effectively dealt with the new factors, contributed to furthering the rapid development of the contracting out of production into a seething revolutionary movement among the masses in all types of cooperatives in all areas -- the lowlands, the piedmont region, and the mountain region -- and brought about very important initial results and creating many good prospects.

The Vice Chairman of the Council of Ministers evaluated the initial results of the contracting out of production as having furthered the development of production, the consolidation of cooperatives, the effective use of the latent capabilities of labor, land, and material-technical bases, the rapid assimilation and application of technical advances, and the improvement of cooperative management, enabled the masses to truly exercise their collective mastership right, and created a basis on which the three benefits can be resolved well, united with one another, and become greater.

At present, the agricultural cooperatives are undergoing a transformation, and there are capabilities of, within a short period of time, advancing the weak and deficient cooperatives to an "average" or "good" status, while also rapidly multiplying the advanced models on a broad scale and creating a new, higher uniformity.

Vice Chairman Vo Chi Cong provided the following analysis: the reason why the broad masses welcome and strongly support the policy of contracting out production, why it has rapidly developed into a mass revolutionary movement and has brought about real results, is that the production contracting-out mechanism has made a real contribution to resolving the problems of organizing and managing production, and organizing and distributing labor in a manner appropriate to the present level of our material-technical bases and labor implements, which are still weak and incomplete, with most of the work still being done manually. The contracting out of production has created conditions for carrying out a division of labor, combining the three benefits, and causing the workers to produce enthusiastically, be concerned with the process of production and the results of production, and tie themselves in with the cooperative. Furthermore, the contracting-out of production has combined the implementation of the three revolutions in rural areas.

Vice Chairman Vo Chi Cong pointed out that in some places, due to a lack of close leadership and guidance, in the implementation process there have been such deficiencies as distributing land in a fragmented manner, using water buffaloes and oxen beyond their capacities, assigning inappropriate contracted-out quotas, and poor management of the production phases. In some places, especially during the initial period, there was also the situation of "blank check" contracting out to cooperative members.

However, in a strongly developing mass movement it is difficult to avoid deficiencies, and those are not deficiencies of the production contracting-out mechanism. In fact, many places have overcome and are overcoming those deficiencies.

Finally, Vice Chairman Vo Chi Cong once again confirmed that the policy of contracting out production has a completely scientific basis, and must continue to be perfected and implemented. During the coming period it is necessary to implement the contracting-out of production in all cooperatives and production collectives, even in the Mekong Delta and the northern mountain region.

The party committee echelons and governmental administrations, especially at the district level, must closely monitor each developmental step of the contracting-out movement, tie in contracting-out with the improvement of cooperative management in general and the development of the district echelon, and promptly correct the deficiencies, in order to attain even greater results.

The conference very enthusiastically greeted comrade Pham Van Dong, a member of the Political Bureau of the Party Central Committee and Chairman of the Council of Ministers, who arrived to visit and deliver a speech.

After listening to a report on the results of the conference's discussions and to the opinions of a number of delegates, Council of Ministers Chairman Pham Van Dong, on behalf of the Party Central Committee and the Council of Ministers enthusiastically praised the great victories of the peasants and the cadres and party members of the sectors and echelons, especially, at the base level, on the agricultural production front in general and in contracting-out of production in the cooperatives during the recent 1980-1981 fifth month-spring production season. The Chairmen of the Council of Ministers affirmed that that was a new developmental step of our country's agriculture, a broad socialist revolutionary movement, a festival day of the masses. That movement has an important significance with regard to both theory and practice, has a long-range strategic significance, and is tied in with the whole process of advance of agricultural production the developmental process of the revolution in production relations, and the creation of a new countryside. The Chairman of the Council of Ministers analyzed the organic relationship and reciprocal effect between the contracting out of production and the three revolutions, and stated that the conference had illuminated the profound significance of the combining of the three revolutions, with regard to theory and practice, and that it is necessary to combine the three revolutionary movements with the movement to contract out production and promote the rapid, correct development of the movement. We must do a better job of combining the contracting-out of production with the development of the socialist collective mastership right of the workers, and enable the masses to truly become liberated and advance to becoming the masters of themselves and the nation. By doing so we will be able to accomplish extraordinary things and bring about incalculably great results.

Analyzing the relationship between the collective and the individual in the process of organizing production and the developmental process, the Chairman of the Council of Ministers stated that in the developmental process of socialism, the development of each person will create the common development of everyone, of the collective and of society. The individual and the collective will develop and grow together. The laboring peasants of our country have been bound together with the collective whole for decades, and because of the movement to contract-out production there are certain to be many additional fresh, pretty flowers, and new socialist people will be created by respects for, and the development of, the collective mastership right.

The Chairman of the Council of Ministers emphasized the important long-range role of the district echelon, the mission of the sectors and localities in developing the district, and the mission of guiding the cooperatives in planning, in organization and management, in building material-technical bases, and in production, distribution, and circulation in the sphere of the district. He also emphasized that the contracting out of production in the agricultural cooperatives requires that the sectors and echelons, especially the district echelon (including the sectors in the district), which directly guides the bases, must improve their management structure, improve their leadership, do a better job of building the districts' material-technical bases, enable the district to become technical equipment centers for the rural areas; pay attention to, and do a good job of, developing agriculture and industry; and create for the districts a rational agricultural-industrial structure.

In the immediate future, we must concentrate all efforts of the district echelon on developing agriculture, and resolve the problem of producing food and a number of other goods that can be produced, in order to stabilize and improve the living conditions of the people in the districts. At the same time, we must fulfill our obligations to the state and contribute to building and defending the nation.

The Chairman of the Council of Ministers analyzed the important significance of building a new socialist countryside in the districts, in combination with the movement to contract out production in agriculture, and stated that "We must, by all means -- in this case implementing the contracting out of production, building up the cooperatives, and developing agricultural production, and doing a good job of building up the district echelon -- create a new countryside with regard to the material and cultural lives of the people." If that is accomplished, the rural areas will be a source of support for building socialism and defending the socialist homeland, and we will create an agricultural-industrial structure in the sphere of the district and an industrial-agricultural structure nationally.

After discussing the deficiencies of the echelons and sectors and sectors, from the central level to the base level, with regard to the redistribution of labor forces during the recent period, the Chairman of the Council of Ministers spoke of the strategic importance of the redistribution of labor forces on a national scale, combined with the carrying out of the planned parenthood campaign, during the coming period, and emphasized that that is a revolution and that it is possible to make the district the unit for organizing and guiding its implementation and the unit for labor exchanges between places which send laborers and those who receive them.

The Chairman of the Council of Ministers admonished the sectors, echelons, and cooperatives to realize more clearly the great significance of the movement to contract out production and develop the positive aspects of the movement, while also paying much attention to and promptly correcting the deficiencies and weaknesses, in order to perfect the contracting out of production in agricultural cooperatives.

Sharing the happiness over the victorious first season of carrying out the contracting out of production, Council of Ministers Chairman Pham Van Dong greatly inspired the conference. The conference warmly applauded and welcomed his opinions, expressed its confidence in the party's economic development line, and expressed determination to win an even greater all-round victory in contracting out production during the tenth-month season.

FIRSTHAND REPORT ON CURRENT CONDITIONS IN VIETNAM

Hamburg DER SPIEGEL in German 24, 31 Aug 81

[24 Aug 81, pp 110-118]

[Text] We Die but Have No Coffins.

The day no longer begins with revolutionary music from public loudspeakers; Hanoi now is awakened by the crow of the cock.

That privately owned fowl is in evidence everywhere--tied to trees or in cages, in the street, in yards and on boulevards of this once elegant, now rundown and evil-smelling city. By keeping a chicken, families assure themselves of at least one good meal one fine day--but in what period of time?

In the past, when the U.S. B-52's were still bombing the country and morale was still high, the people did gymnastics in the streets to the sound of military march music.

Now, from the window of the Hoa Binh Hotel, which has neither running water nor electricity, one only sees groups of Vietnamese gathering withered leaves for making a fire, while others are squating around small tables cooking some thin soup or nibbling at a small piece of bread.

In the center of Hanoi, at the famous "Lake of the Magic Sword" surrounded by legends and memories of a glorious past, children and grownup men are trying to assemble a meal by dipping small plastic bags into the dirty water in the hope of catching some fish.

In the neighboring park--as in all parks in the cities of Hue, Da Nang, Nha Trang and Saigon--the beggars rise from the benches by the scores in the early morning and start delousing one another.

At sunrise small boys and old men station themselves at crossroads in every village and every town of the country behind their sole means of making a living--a bicycle pump. Like millions of other emaciated and pale Vietnamese, they start the day exhausted only to resume the struggle for a little food.

Six years after the great victory, the great hopes for peace, the great speeches about the reconstruction and prosperity of a reunified country, Vietnam is the country of a people bereft of hope and marked by hunger, war and oppression.

Hanoi has made the century-old nationalist dream of the Vietnamese a reality: it rules over the whole of former French Indochina, including Laos and Cambodia, and has become the strongest military power in the Far East next to China.

But the grandiose unfolding of external power is in oppressive contrast with the misery of the country. "We eat but our stomachs are not full, we dress but are not covered, we die but have no coffins," a current saying goes.

From the misty mountains along the northern border, where Hanoi's soldiers in their trenches await the next attack of the Chinese, to the swamps and ricefields of the Mekong Delta in the south, where rebellious farmers await the next attack of the communists who want to collectivize their land, Vietnam presents an oppressive panorama of defeats.

The economy is finished, or, as an expert puts it, "there is no economy." Agriculture produces far less than suffices for feeding the people. Industrial plants, if they operate at all, operate at half capacity. The conquered south has not been integrated, and in the north the leadership has lost all respect and credibility.

Society is being shaken by old but also by new evils--unemployment, crime, prostitution, corruption. Normally the best trained citizens, tens of thousands of former political prisoners and a substantial proportion of the urban population only think of ways and means of escaping from the country.

Relations between people and government are governed by fear and distrust. The country is ruled by a military and police apparatus which consumes two-thirds of the meager government budget--communism reduced ad absurdum.

The ambitious five-year plan drafted after the victory of 1975 provided for an annual growth of 14 percent. This has turned out to be but 2 percent, while the population has shown a steady increase of 3 percent. The production of grain was to have amounted to 21 million tons a year starting in 1980, but even the most optimistic estimates for this year do not exceed 13 million tons.

"We are dealing with a country of 58 million inhibitans which is in a state of bankruptcy," says the official representative of an international organization.

While there are no reports that people have actually starved to death, malnutrition has become a visible phenomenon in communist Vietnam--visible owing to the skin diseases of children and the patent exhaustion of grownups.

"They think of nothing but food, only food," says a foreign engineer about the workers in a textile plant in whose construction he is assisting. "They do not have enough calories and therefore do not work properly."

This January, because of inadequate supply of food, amoebic dysentery broke out near the city of Vinh, and in March dockworkers in the port of Haiphong refused to load a Soviet ship with cans of food meant as payment for imported goods.

"First we have to supply the workers with food, and only then can we build up industry," says Huan Tung, editor of the party paper NHAN DAN. "Our main concern now is for people's stomachs."

The average wage is 60 to 80 dong, 1 U.S. dollar being worth 3 dong--officially, but 10 times as much on the black market. A bowl of soup costs 7 dong.

Anyone working for the government is entitled to from 13 to 18 kilograms of rice a month, at the official price of 0.38 dong a kilogram. The state-owned stores do not have enough rice in stock, however, and on the free market 1 kilogram cost 18 dong.

Every Vietnamese is entitled to a monthly meat ration of 1 pound, at a price of 3.8 dong a kilogram. If he wants to buy a kilogram of beef in addition, he has to sacrifice half his monthly wages (40 dong), and a kilogram of fish will cost him 25 dong.

The meals of most Vietnamese therefore consist only of a bit of rice, cassava, maize and a small amount of vegetables. Only on very special occasions do they get to eat the chicken lovingly raised by their families.

In Hanoi recently, a man came into a canteen, ordered some rice and salt, put a painted wooden fish on the steaming plate, ate, put the fish in his pocket again and left. The next day he returned and did the same thing. His protest being unmistakable, the police finally arrested him. His fellow citizens said jokingly that he had been awarded the title of "socialist hero" because he had invented "reusable food."

Vietnam has long since ceased to be in a position to feed itself from its own production, but as miserably as now, when the country appears to have got all it wanted politically, the Vietnamese have not lived for a long time.

During the war the country lived in part off foreign aid, the north receiving supplies from China, and the south from the United States. After the forcible reunification, those two sources dried up, and the new benefactors, the Soviets, cannot come up with everything.

"Since 1975 we have had 6 million more people and 10 million fewer dollars," says the prominent historian Nguyen Khac Vien from Hanoi; "the mere fact that we have survived is a miracle."

Yet the opportunities for the communists when they took over the south as liberators 6 years ago did not appear to be too bad. Their victory against the powerful United States had increased their prestige, they were able to lean on their hard ideology, and they had a plan providing for a solution of any situation in life.

Their greatest challenge was that the towns were overcrowded and lacked food. Their solution: Resettlement into "new economic areas" to unburden the towns. The people who had no work after the departure of the Americans were to gain new land, turning the jungle into cultivated land.

Through persuasion or force, thousands of families, particularly the relatives of former soldiers of the Thieu army, were removed from Saigon and other cities and resettled in uninhabited areas.

There they lived in pitiful conditions, with not enough water and without medical care. Many of those resettled perished, and the action was also an economic failure.

Six years later only half a million hectares of land have been made cultivable, and a large part still does not operate productively.

Le Minh Xuan, for instance, was a famous new economic area located about 30 kilometers northwest of Saigon. It was one of the first. Visitors were taken there regularly to view the model of the "future of Vietnam."

Today no visitors are admitted any longer, because Le Minh Xuan has become a desert again. The huts have been abandoned, the fields are exposed to the scorching sun, and the unpaved road leading through the place is empty.

The 4,000 hectares of land which had been made cultivable and tilled are lying fallow. No one had taken into consideration the fact that in this area, 30 centimeters below the surface, there is a layer of particularly acid soil which, when mixed with water, poisons the entire ground.

Since the plowing went to exactly 30 centimeters below the surface, and the soil below that was then used for building small ponds along the ricefields, the entire soil is now infertile.

"It would have sufficed to examine the area beforehand, to conduct a few tests and dig elsewhere," says a foreign expert who came to investigate. Now it is too late.

Those thousands of people who, family after family, sleep on plastic sheets in the streets of Saigon, on the pavement around the central market and in the railroad stations are returnees who have abandoned Le Minh Xuan and other new economic areas.

They have returned to their towns in despair and cannot now find either work or accommodations. The places where they used to live have meanwhile been assigned to others, mostly people from the north.

There is a similar fiasco in the west of the country, in the "Plain of the Reed" on the Cambodian border. "Against the warnings of the farmers, the cadres in Hanoi ordered the cultivation of rice in that area of 10,000 hectares. Not a single kilogram has been harvested so far.

Jute was supposed to be planted in the new economic area of Kieng Giang, but the seed from the north was not suited to the climate in the south.

The consequences in Saigon were devastating. Textile Plant 13 in the Fourth District--with old British machines from the forties and more than 1,000 workers--which had been reopened specially for producing 150,000 bales of jute a month now must procure its raw material from Hanoi 1,500 kilometers away.

Ignorance and stubbornness have turned the experiment with the new economic areas into a catastrophe. The towns continue to be overcrowded, there is the same unemployment as before, but the South Vietnamese have lost their faith in the ability of the communists to solve the country's problems.

At the end of the war the new rulers inherited a viable modern infrastructure in the south. For lack of funds or owing to sheer inability, they were not in a position to utilize it and at least maintain it in its existing state.

The textile plants in Bien Hoa, north of Saigon, used to have an annual production of 300 million meters of fabrics, with cotton being imported from Japan and Taiwan. Owing to the lack of raw materials, production has now dropped below one-third of what it used to be.

The cadres from Hanoi ordered the cultivation of cotton on large areas all around Saigon, but since they did not also supply pesticides, the first harvest fell victim to swarms of insects last year. In Na Dang the Knights of Malta, with German funds, erected one of the most modern surgical clinics in the country. Today the "C" Hospital is no more than a heap of junk inside--microscopes without lighting, refrigerators without compressors, an operating room without airconditioning.

The greatest waste by the new Vietnam, however, has been the use of its manpower. In the south the conquerors found many engineers and technicians trained abroad who had not managed to escape when the war ended or had decided to stay and work under the new government.

This qualified personnel almost universally lost their jobs to people who had come in from the north. The former chief engineer of the Saigon Post Office, for instance, now sits behind a typewriter, the director of the Saigon Waterworks was dispatched to become a worker in an agricultural plant, and the director of the biggest rubber plantation in the south was made a bookkeeper.

Mme Dai, a former lawyer, operates a restaurant at her residence, with people eating amid legal textbooks and a collection of ceramics.

A former high school teacher has a store on Dong Khoi Boulevard, the former Tu-Do Street, with a book by Lenin placed invitingly in the window. Actually couples can borrow there anything they may need for their wedding, from clothing to wrist watches. A huge capital of know-how needed urgently by the country is thus being squandered.

When the communists took over the south, many intellectuals offered to work for the new rulers and the country's reconstruction. This good will was gambled away, cooperation with noncommunists was rejected, and many of them found themselves imprisoned for months or years in the same prisons in which Thieu used to detain his opponents.

Cao Giao, for example, a Vietnamese journalist who among other things had worked for DER SPIEGEL, was among those who had decided to stay, for he used to say. "The revolution sets me dreaming." In 1978 he was arrested and put in the Chi-Hao Prison, spending most of the time in solitary confinement. He was never indicated and recently was released.

In the streets of Saigon, Da Nang, Hue or any other city of the south, one meets thousands of qualified persons who were deprived of their source of livelihood--high school teachers, pharmacy students, interpreters, technicians.

On the new book market in Saigon, intellectuals are selling their collections to finance their escape, or they are looking for odd jobs to earn a bowl of soup--for instance, a former parachutist who speaks English and French perfectly.

He says: "I spent 3 years in a reeducation camp. Then one day I was given a document certifing that I was qualified. Qualified for what?" Pale, long haired and toothless, he is unemployed at the age of 26 without any hope of finding a job.

Long moustaches and hair down to the neck generally identify the people who have returned from the camps. At night groups of such desperadoes gather in the somber cafes of Saigon to slowly slurp cheap lemonade and to be dazed by stereo music of days past. Nobody talks (because one's neighbor might be a spy, after all) as the lyrics of the currently most popular song pound between the walls:

"...a vacation in the tropics may be a solution this year; this is the American dream--that we now can travel without funds..."

When the communists marked into Saigon, they called everyone "brother" and promised a policy of reconciliation and concord in order that the wounds of the long civil war might heal. They have not kept their promise.

Everyone who in any way or at any time used to work for one of the former regimes of South Vietnam is stigmatized and discriminated against--as is his family.

And if someone, for example, used to occupy an important position in the south, he is not allowed to send his children to college. His life is burdened by a sin from which no confession can absolve him.

By now all directors of state-owned factories and enterprises in the south are North Vietnamese or natives who had already joined the communists in the fifties. The official justification: "They are familiar with the socialist leadership system."

The truth is that at the end of the war a completely new social stratum emerged from the jungle to demand its share in the spoils of victory. Relentlessly they took over the housing, roles and privileges of the former ruling class.

The traffic policeman in the streets of Saigon comes from Hanoi. The driver of a taxi company in Nha Trang is North Vietnamese, as is the bookkeeper of an agricultural enterprise in Beng Song, the director of museums in Hue, and the director of the Oriental Hotel in Da Nang, whose personnel was replaced entirely by children of revolutionary cadres.

The communists had even planned to remove the many thousands of graves of Thieu soldiers at the cemetery in Cong Hoa north of Saigon in order to bury their own dead there. At the last moment someone objected that this was going too far, and so it was decided to let the cemetery of those who had "died for liberty" (as they used to say then) go to seed and to build on the opposite side of the street a new cemetery for those "who died for the revolution" (as they say today).

Soldiers discharged from the North Vietnamese Army get jobs anywhere in the south. Ngo Cung Vien and Nguyen Tiem Binh, for instance, both took part in the long battle for Quang Tri in 1972. One fought in the army of Hanoi, the other in that of Saigon. I met both in the search for a bunker in which I had taken cover during the battle of Quang Tri.

Now, the man from the north has moved here with his family and has obtained a job, being responsible for the loudspeaker system of the area, while the man from the south, discharged after reeducation, is scraping among the wreckage and the burned-out chassis of trucks, tanks and unexploded grenades for salable scrap iron.

This is a dangerous kind of work. This year five persons have died in explosions of ammunition in the plain in which the town of Quang Tri was located at one time. "Aren't you afraid?" I ask Ngo Cung Vien. He shrugs his shoulders and says with a smile, "It is the only thing I can do." And shuffles along on his way with a stock of iron on his shoulder.

"We were right to fight together with them, for we could not side with Thieu and the Americans," says a 36-year-old Catholic who in the early seventies went underground and joined the revolution.

But he continues: "Only we made the mistake of forgetting that they were communists and would claim everything for themselves as soon as they got to power."

Even those South Vietnamese who spend many years in the jungle on the side of the communists as soldiers and representatives of the Provisional Revolutionary Government (PRG) are now being discriminated against and have been stripped of any influence.

Mme Nguyen Thi Binh, for example, former foreign minister of the PRG, now has an inferior job in a ministry in Hanoi. Nguyen Huu Tho, the first president of the conquered south, was fobbed off with an honorable but powerless post in the government, as was Huynh Tan Phat, former prime minister.

Those South Vietnamese intellectuals who did not join the revolution until after the Tet offensive in 1968 are regarded as not quite reliable "taillights."

"They don't trust us," says Le Van Hao in Hue. In 1972 the teacher at the renowned high school in the former emperor's city was a cause celebre. At that time he disappeared from Hue and soon thereafter on the radio, in the name of the PRG, called for a general revolt against the Thieu regime.

When I requested in Hue that a meeting be arranged with him, the answer was: "With whom? We have never heard of him."

The day after, while I was taking a walk along the "Perfumed River," a middle-aged lean man approached me saying: "I am Le Van Hao; I was sitting behind you yesterday when you mentioned my name." He would like to visit his daughter in France but cannot get an exist visa.

Among the South Vietnamese revolutionaries deeply disturbed by the rigidity and dogmatism of the new regime in Mme Duong Quynh Hoa, former minister of health of the PRG, who says, "This is my country, and I will work for it--but not within the government."

A short time ago she resigned all her offices and now works as a physician in the children's department of the old Grall Hospital in Saigon. "I cannot work together with people who think they have a monopoly on truth and virtue," she says.

When the communists took over the south, they made the well-deserved claim of being morally superior. They were heroes who had lived in the jungle, where there was no corruption. They had come to put order in the rotten society of the south.

Years of sacrifice and privation had given them a kind of natural right to rule the country they had freed from colonialism and foreign intervention and reunified. This innocence they have lost.

The evil of corruption is now as widespread in communist Vietnam as it used to be under Thieu. One has to hand over money under the table to get a permit to stay in the country, to be allowed to travel around the country, to see a doctor, to escape abroad.

Nor can it be otherwise, for only few people can live off their wages. "The state pretends it is paying us, and so we pretend we are working," say the workers, and keep their heads above water by doing business on the side and smuggling. The same goes for the policeman, the party official, the village administrator, none of whom is in a position to live off his salary.

In Saigon recently, a high communist official was summoned to appear before the party disciplinary committee because it had become known that he was operating a small street cafe. His defense was simple: "Either the cafe or corruption; 80 dong is not enough for me to live on."

The policeman in the town district asks for two packs of foreign cigarettes, now worth 100 dong, to cover the visit of a relative at the place of some Vietnamese or other. The party official in charge of the distribution of meat in the district releases a few kilograms for sale at the official price but sells the rest on the free market, dividing the profit with the people who are in on it. Today corruption is a monster dominating the entire government apparatus.

The latest joke is that Prime Minister Pham Van Dong decided for a change to see for himself how the common man was living. So he wanders incognito through Saigon. At the cathedral square he sees a man praying before the statue of the Virgin Mary, saying "Holy Mother, please give me 100 dong." Pham Van Dong looks in his pocket, finds 70 dong and gives them to the man. An hour later he returns and see the same man praying before the statue, saying : "Hold Mother, next time you send me money, please don't do so via the party; it always keeps 30 percent."

The party has long since lost the aura and prestige it enjoyed during the war even among the South Vietnamese when it was operating and fighting underground.

Party cadres now have the best housing, have access to special hospitals and live far away from the daily straits of the people. Deja-vu communism in name only. "The fish have left the waters of the people and now live in an aquarium," a popular saying goes.

A short time ago, one could read the following on walls in Saigon: "Nice house, five rooms, two baths, airconditioning and swimming pool, for rent at 32 Ngo Quyn." That is the address of Le Duan, first secretary of the communist party.

The graffiti on the walls of Vietnamese houses pronounce a truth that is not to be found in the strictly censored press. "There is nothing more precious than freedom and independence" was the motto of Ho Chi Minh which was quoted orally and in writing with particular frequency. Now the last words have often been deleted, and so the motto reads, "There is nothing."

Thieu used to warn his supporters against communism, saying, "Pay no attention to what they say but look at what they do." Without mentioning the person who said so (everyone knows who it was), this sentence can be found scratched on walls here and there.

"Their politics consist in traps," says a Catholic priest; "they promise one thing and do another." The example of "communist deceit" cited most frequently is the so-called reeducation.

Immediately after Saigon had been taken, the new communist authorities asked anyone who had worked for the military or civilian apparatus of the old regime to report for reeducation equipped with a mosquito net and a month's ration of rice.

Hundreds of thousands reported. Most of them were released after a few days or weeks. About 250,000 people vanished in remote jungle camps distributed all over the country.

In 1976 the government announced officially that the reeducation would last 3 years at most and that after that the inmates of the camps would either be released or put on trial.

Now 5 years have passed and many inmates have not returned. How many? No one is prepared to give the answer. Estimates range from 20,000 to 200,000.

"We are keeping them because they have not changed their views. We are patient and can wait until they acknowledge their crimes." So says 1st Lt Ngyuen Can Mo, commandant of the Hay Tay Reeducation Camp, 25 kilometers south of Hanoi, about his 462 inmates.

The cells are clean, there are flowers blooming in the garden, the food is excellent, the guards are smiling. Everything looks as it would in a model prison got ready for visitors from abroad. Occasionally it is too much of a good thing, with perfection becoming perversion and the smile turning into a grimace.

In a class room a prisoners orchestra plays a waltz. Twenty-four former generals, colonels and supreme court justices under the Thieu regime get up and applaud. The camp commandant checks one after another, remarking of one man that he has made great progress and that unfortunately not everyone has as yet written an entirely frank report about his misdeeds.

Materials for instruction can be seen lying on the tables--"Marx and Engles: a Stimulating Friendship." the journal LIEN XO (the Soviet Union), pictorial volumes about the war.

There is Gen Nguyen Vinh Nghi, former commander of the III Army Corps, who was taken prisoner in the battle near Nha Trang. There is Gen Pham Duy Tat, supreme commander of the forces which surrendered in Can Tho.

For 6 years they have been asked every day to write down their history, to admit their errors, to repent. Only a few have softened or broken down.

Col Loi Du Chan, a former member of the general staff, stands erect in a black uniform, with a white scarf, a black cap and dark glasses. "One of my sons is in Germany," he says; "the rest of the family is in Saigon--no, not Saigon but Ho Chi Minh City." Correcting himself, he looks embarrassed at the camp commandant, afraid that he has committed yet another crime.

Five people have died here, including the famous lawyer Senator Tran Van Tuyen. "Cerebral hemorrhage," says the commandant. "He cut open his arteries," says one of his friends in Saigon: "he couldn't stand it any longer."

Col Tran Van Tuoi got back his old uniform to welcome his wife. She came from Can Tho in the Mekong Delta, the trip costing her more than 1,000 dong.

"This camp clearly is proof of humanity," a French journalist wrote into the guest book. The authorities, however, know themselves that these camps constitute a great liability for the regime in the eyes of the population of South Vientam. The inmates include not only generals and colonels but sergeants, judges, lawyers and political opponents arrested only recently.

"We must choose the lesser of evils, though," admists a high official in Hanoi; "if we release these people today, they will work against us tomorrow, trying to overthrow the revolutionary power."

[31 Aug 81, pp 126-140]

[Text] We Are Strong in Wartime but Split by Peace

There are quite frequent acts of sabotage against the regime in the sixth year of reunified communist Vietnam, when all of Hanoi's hopes seem to have been fulfilled. Within a single month two fires broke out in the harbor of Haiphong destroying whole stocks of Soviet goods. A train has been raided in the south. From time to time a communist official is killed.

The telephone lines in the area of Saigon inhabited by the new red bourgeoisie are cut frequently. It happens that civilian buses on the way from Dalat are stopped by armed men claiming to belong to a group called Phuc Quoc (Save the Country).

The government itself tends to exaggerate such acts of resistance by former Thieu soldiers and bandits to justify the rigid controls to which it is subjecting the people. An organized nationwide resistance movement against the regime does not exist.

"The only opposition party is the 'boat people,'" says a former lawyer from Saigon. Together with one of his sons, he has already tried to escape once. "We didn't even see the sea," he says. "It was night. We were still in the woods when someone shouted, 'Police, police!' Everyone fled, and those who were aiding in the escape vanished with the money we had already paid."

To escape from Vietnam has long since ceased to be easy. You have to find a boat, tip the right policeman and sacrifice a relative to stay behind and guard the house in case the escape fails. And you have to be lucky to find the right kind of boat (above all, a seaworthy one), which then has to be picked up by the right kind of ship.

"We had been at sea as long as 15 hours when we saw a big ship. Our people began to cry with joy. We thought we were safe. Then we saw a red flag with hammer and sickle, and the ship began gathering us up." This is the story told by a writer who had spent 3 years in Thieu's prisons and 1 year in those of the new regime.

The Russian freighter detained the refugees in the bay until a Vietnamse patrol boat the Russians had called by radio showed up and took them back ashore.

South Vietnamese caught trying to escape end up in prison but are not kept there longer than 2 or 3 months, the prisons on the coast being full of people who have tried unsuccessfully to escape.

Nevertheless, thousands try their luck at sea every month. On the average about 10,000 people a month manage to escape somewhere. Many others continue to hatch bold plans of escape--particularly relatives of the former South Vietnamese bourgeoisie, Vietnamese of Chinese origin, intellectuals, soldiers and officers who have returned from the reeducation camps, but also party cadres and former revolutionaries who have lost their faith.

When they took over the south in 1975, before attacking Laos and Cambodia, the communists did not face an easy task. Huge devastation had been caused by 30 years of war. The Americans' use of chemical weapons alone had consequences that it probably will take generations to overcome.

Parents exposed to the poison with the codename of Orange (2.4.5-T) to this day produce children with a far greater rate of deformations than is normal. Farmers from the Pleiku area tell about monstrous plants in the jungle area sprayed by the U.S. Air Force with defoliants. On the other hand, one certainly was entitled to expect the communists to solve the social problems of the south, which they had blamed on the corrupt Saigon regime. It happened the other way round: many an untoward state of affairs from the pleasure-loving, corrupt south has sneaked into the hard north by now.

"Do you like Vietnamese girls?" the driver of a government limousine recently asked a foreigner in Hanoi. During the war there had been no prostitution in the north.

Now competent middlemen occasionally offer a choice between a girl for 20 dollars in Hanoi and a special deal for 100 dollars which includes a trip by car to Haiphong and dinner in a special private residence.

In the south the business continues to flourish in the streets and in the cadres, apart from a few old prostitutes who weave baskets in a special camp while singing revolutionary songs for the entertainment of visiting journalists.

During the war there were no beggars in the north; now they camp in parks and pagodas.

On the river banks in Saigon at night, old and new beggars often argue over who gets to use the cement benches (donated to the city by the Lions Club).

As in former days, there are many children among the beggars. A number of them specialize in getting money from the Soviets. Approaching them, they imitate an astronaut flying around the earth, while pointing to their empty bellies.

During the war I had got to know a begging youth who asked me shortly before the withdrawal of the Americans, "Give me some money, I am going to America."

I have seen him again now. This time we had to meet in secret for me to give him some money without the policeman at the corner demanding his share. "VC no good," says the boy--still using the old GI expression for the Vietcong.

As soon as a Vietnamese sees a foreigner who is no Lien Xo (Russian), he indulges in nostaligic reminiscences of the past. "In the past Vietnam was No 1, today Vietnam is No 10," says a women selling cigarettes in Hue.

Six years have been enough to make this tortured people forget the U.S. bombers, the hits of Russian missiles and the raids of the Thieu police. The war seems to be far in the past. One recalls less the suffering than the modern convenience, the prosperity and the accompanying pleasures.

"Even my mother says she lived better during the time of the Americans," admits a high official in Hanoi whose family used to live in the south.

The past is a heavy burden for the regime because in addition to the misery the Vietnamese suffered as a result of the presence of foreigners, this presence brought with it at the same time a special life style which many found attractive.

Hanoi continues to create the impression of a French colonial city, Saigon continues to be a chaotic modern U.S. product, and the Vietnamese of today still live in those shells of the past. The new rulers are doing their best to relegate them to oblivion.

Thus any books printed before 1975 are under lock and key in special sections in the libraries, and the biggest bookstore in Saigon carries only Vietnamese books, specialized Russian literature, and in French only a biography of Brezhnev.

Old leading revolutionaries, however, still speak French, and the young generation speaks English with an American accent. These people, resembling remnant ruins, cannot forget the past.

"Sir, I am French," says an old hobo in Haoi. In the hot tropical sun he wears a black jacket that looks as if it was 50 years old, black pants full of spots and a shirt that was white at one time. "The Vietnamese are barbarians," he says, showing a picture of his French father who was a legionnaire, and talks about his dream of emigrating to France.

In front of the Cham Museum in Da Nang, a group of boys shove a goodlooking blond boy with freckles under his green eyes toward me. "My name is Hoang, and I am 11," he says after some embarrassment in halting English. There are thousands of children like him left behind by U.S. soldiers.

A gang of such children hangs around the harbor of Da Nang, where a Russian ship from Vladivostok is unloading cement. They gather small amounts of cement from burst bags in small plastic bags and then sell them in the market.

In comparison with the standard of living of the past, the 6 years under the new regime are a step backward for the South Vietnamese. And the North Vietnamese have not made any progress in these past 6 years.

The people in the north had thought that the end of the war would also mean an end to the big sacrifices and give them a better life. They were disappointed.

"We will satisfy the people's need for fans, wristwatches, radios, television sets and sewing machines," party head Le Duan promised 5 years ago. Today Hanoi's central department store is as empty as ever, the shelves are covered with dust, the saleswomen tired, and there is almost nothing for sale.

The main park of the city, called the Park of Reunification, now bears the name of Lenin--"because the country has already been reunified and because we must rebuild socialism," a travel guide explains.

The socialist society is primarily a society of people standing in line. There are queues for buying matches, cigarettes, bread, queues for crossing on foot or by bicycle the 1.5-kilometer-long bridge built by the French in 1898 which is still the only crossing over the Red River.

The new bridge the Chinese had started building upstream remained incomplete, and the pillars of another bridge being built by the Soviets do not even protrude from the muddy water as yet.

During the war and thereafter North Vietnam received huge amounts of aid in the form of goods, primarily from the socialist countries, but not everything was used. Examples of mismanagement and waste are legion. The case of the paper mill in Bai Bang, a gift of the Swedish Government, is said to be typical.

After years of construction and endless delays, the plant finally started production this year. But the raw material has to be imported from Sweden since the wood which was supposed to supply the lumber for the mill is 100 kilometers away and no road leads there as yet.

When the first paper had been produced, half of it was immediately stolen, and there were no trucks to haul the rest away. In Hanoi it is still not possible to buy a note pad, telegrams are still delivered on primitive brown paper in envelopes made of old newspapers.

Because innumerable Vietnamese schools have no books, UNICEF has made available a plant for the printing of schoolbooks, but the Vietnamese have been unable to set it up as yet for lack of cement to build the foundations of the printing shop.

The Polish Government offered a plant for manufacturing prefabricated cement building components, but the Vietnamese rejected the advice of the Polish engineers and built the plant on unsuitable terrain. The result: The plant is under water most of the time.

The waste of socialist aid was the subject of tough discussions between Soviet and Vietnamese officials in Hanoi after a team that had come from Moscow had noted during a visit of the harbor in Haiphong that Soviet goods, partly from as far back as 1968, were rotting under sun and rain.

Some small plants donated by East European countries are still not operating, because the Vietnamese do not know where to get the needed energy. To this day they must rely exclusively on the old powerplant built by the French in the old days, and power outages may be expected to occur at any time.

One night Deputy Foreign Minister Vo Dong Giang gave a dinner in the pretty oldfashioned government house, formerly the residence of the French colonial governor. As the deputy minister was walking down the stairway under the glittering light of the candelabras and in the breeze of the humming fans, there was a sudden power outage, and the host and the guests groped in the dark as each was seeking to shake the other's hand. They then dined in candlelight.

Anything that does not work in Vietnam these days, anything that has not been finished, any promises that have not been dept--for any of this the Vietnamese authorities have but one monotonous excuse. They blame the Chinese.

"The Chinese have prevented our rebuilding the country," they say. "The Chinese do not let us enjoy peace; the Chinese are forcing us to fight."

Propaganda exhibits in every town of Vietnam brand the "Peking expansionists", allegedly bringing war and misery to Vietnam, as successors of the "U.S. imperialists" and the "French colonialists." And there is actually some truth to this.

After 1975 China at first exercised pressure on Hanoi through the Khmer Rouge, who were continuing to attack Vietnam in the south. Then in 1979 China began its so-called "defensive counterattack" along the whole of their common border. Since then Peking has kept up its threat of "a second lesson" against Hanoi, thus forcing Vietnam to spend the greater part of its rather sparse funds on defense rather than for reconstruction.

"We are unlucky to have such dumb neighbors," Foreign Minister Nguyen Co Thach told DER SPIEGEL. "They think they can make us surrender."

The Vietnamese have been paying, and continue to pay, a high price for this. Cao Bang, 275 kilometers north of Hanoi and only a few kilometers from the Chinese border, at one time a charming border post surrounded by green mountains, today is a dead town.

During the war against the Americans nothing had been destroyed here. When the 225,000 Chinese soldiers who had invaded Vietnam in February 1979 withdrew, not a single concrete structure had been left standing in Cao Bang. The department store, the middle school, the hospital, the party headquarters, the city hall and the bridge had been systematically mined and laid waste.

In Cao Bang 19 plants had employed thousands of people. None of the plants remained and in the 2 years that have passed none has been rebuilt.

The border strip on the Vietnamese side, 20 to 30 kilometers wide, where the Chinese destroyed any sign of economic activity during their brief invasion, continues to lie in ruin.

This is one of the areas of Vietnam richest in minerals, but none of the mines, including the excavation site for precious bauxite near Cao Bang, is in operation again--the fear being that the Chinese might return at any time and destroy everything once more.

The whole area is in the hands of the army today. The ricefields, abandoned by the civilians, are being cultivated by soldiers. The woods covering many mountain slopes have been burned off to give the defenders a clear view. Trenches have been dug along the main axis of a possible invasion.

In the high mountains rising from the glorious landscape of Lang Son northeast of Hanoi, entrances to dark tunnels can be seen here and there. Under the green umbrella of bamboos and the tropical vegetation one suspects the existence of underground fuel and ammunition depots and artillery positions.

According to a foreign military attache in Hanoi, "the Vietnamese to a large extent have dug tunnels under the mountains and mined them, so that they could explode them under the feet of the Chinese if these should try once more to invade the country this way."

The Vietnamese military apparatus operates well; no money is being spared to keep it in sound operational condition. While plants in the country are standing idle because they do not have enough energy to operate their machinery, dozens of MIG's and some A-37 jet fighters left behind by the Americans take off and land all day long in practice flights at the air bases of Da Nang, Hanoi and Saigon.

Altogether the enmity of the Chinese has cost Vietnam dearly. Hanoi suddenly saw itself deprived of an important source of aid. Development projects Peking had promised to undertake were stopped.

Plants built in the north with Chinese aid now are in the same trouble as are those built by the Americans in the south. The steelworkers in Thai Nguyen used to operate with Chinese coal, which now is not being supplied any more. A large chemical fertilizer plant lacks spare parts.

The continued tension at the border indeed consumes enormous funds. But if the Chinese thought they could weaken the regime in Hanoi that way, they have accomplished the exact opposite. The tension rather has strengthened the power of the communists in Hanoi by creating the prerequisites for such a regime to work best--war.

"We are strong in wartime but split by peace," says Prof Tong That Tung of the University of Hanoi. Sure, war exacerbates the economic straits in Vietnam, but at the same time the renewed threat by the traditional enemy also revives the pride of the Vietnamese and their readiness to tighten their belts even more.

"We have defeated the French, we have defeated the Americans, we have defeated the Chinese; we need not be afraid of anything." One hears this time and again and not only from official propaganda spokesmen.

Nguyen Hanh Dao, 11, from Lang Son saw his mother being wounded during the 1979 war, witnessed the Chinese entering his house.

"They were big and had no hair," he says, "but I am not afraid of them. If they come back I will kill them with a stick, kill them with a knife."

Question: "What do you want to do when you grow up?"

Answer: "I would like to become a soldier and kill Chinese."

The hate against the Chinese unites all Vietnamese, whether they live in the north or in the south, communists and anticommunists alike.

"If this government falls, we will be taken over by Peking, and nobody wants that," says a Catholic priest in Saigon. The communist campaign against the 2 million Chinese who lived in Vietnam before most of them were driven out met with no kind of opposition on the part of the population.

"We had to remove them, we could not trust them, many were spies working for Peking," says Tran Nha Qui, a shoemaker in Cao Bang.

No Vietnamese of Chinese origin now live in the border area any longer. The rich have joined the stream of the "boat people," the poor have fled to China by land. The rest were sent to work in special agricultural enterprises far away from the towns.

A few thousand Chinese have remained--in Hanoi, Na Dang and Hue--and half a million live in Cholon, the Chinese twin city of Saigon. Most keep their heads above water with small shops and black market deals, waiting for the next opportunity to escape by ship.

Until their victory in 1975 the Vietnamese communists had managed to maintain a balance between the numerous representatives of Moscow and Peking in their country and thus to receive assistance for their war from both sides. After the conclusion of peace Hanoi's relations with Peking deteriorated and soon turned into enmity.

"One cannot constantly engaged in acrobatics," says Hoang Tung, editor of the party paper NHAN DAN; "in the end we had to take one side or the other."

The Vietnamese claim that the Chinese offered Vietnam assistance in rebuilding the country, but only on condition that China would get a monopoly for such assistance. The Vietnamese reportedly rejected this. The result is that now the Soviets have that monopoly and no rebuilding of the country is taking place.

As for food, arms and fuel, Vietnam now depends entirely on the Soviet Union, and this dependence is increasing constantly. According to U.S. estimates, Moscow is pumping 3 million dollars a day into Vietnam.

The Russians are everywhere. Russians travel cheaply in the country and buy up whatever is still left over from U.S. rule--jeans, Japanese transistor sets, wrist watches, textiles. There are Russian advisers in the country reportedly a battalion strong. There are Russian security advisers working with the police, and Russian economic advisers in every province.

Heavy and awkward, bathed in perspiration in their cheap clothes under the tropical sun, these "Americans without dollars," as the Vietnamese call the Soviets, waddle around everywhere--in hotels and in airports, on the otherwise deserted magnificent beaches of Da Nang, where a new hotel was built for them, and at the old vacation spot of Vung Tau near Saigon, where a special zone is being created for rest and recuperation of the Soviets.

The Soviet Navy pays calls on all ports despite the fact that the Vietnamese have not yet installed any military bases for them. "Not yet at this time" is the comment of Foreign Minister Nguyen Co Thach, who gives one to understand that it is entirely possible that Hanoi will grant the Soviets their own bases in the future.

Soviet trawlers have a high-sea-fishing monopoly along Vietnam's shores. Now that all foreign oil companies, including the German Deminex, have been expelled from the country, the Soviets also have a monopoly for oil exploration in Vietnam.

The government in Hanoi realizes full well that its dependence on Moscow entails certain risks, and therefore is trying to create an opening toward the West.

The Vietnamese invasion of Cambodia, however, their military presence in Laos and above all the suspicion that the gestures toward the West might merely be a maneuver approved by the Soviets, in order that someone else might pay the bill which has come to be too high for the Soviets--all that now has isolated Vietnam to a large extent.

When the little men in their green uniforms came out of the jungle 6 years ago to conquer Saigon and take over the south, the world was filled with respect for these stubborn Vietnamese who contrary to all expectations had won their war against the powerful United States. It seemed as if they were starting with circumspection and energy to build an independent socialist state along the lines of, say, Yugoslavia.

Admired at one time, the Vietnamese communists are now in the dock because of their invasion of Cambodia and because they are violating the human rights of their own people by brutally letting thousands of undesirable citizens leave the country in boats that are not seaworthy. They have become outsiders in international affairs who obediently parrot Soviet policies, flaunt their military strength and ask for assistance everywhere, regardless of the source.

"Whenever I meet a high official he asks me what my country will give him," says a European diplomat in Hanoi. Their economic straits are not only forcing the Vietnamese to put up with restrictions of the political independence for which they have fought so hard for decades; they are also already finding themselves compelled to abandon, or at least put off, their plans of leading the south to socialism.

Officials who were sent to the Mekong Delta to persuade the farmers to join collectives have been recalled to Hanoi. Their propaganda work had caused a drop in production and induced the farmers to slaughter and consume their cattle rather than to bring it into cooperatives.

Thus only a small part of the ricefields in the south has been collectivized. The government claims the proportion is 20 percent, foreign experts think it is only 3 percent. To a large degree the farmers are again free to decide to produce whatever they like as long as they can feed the towns.

Instead of collectivizing the south, the communists consider it more appropriate again to promote private elements in the already strongly collectivized agriculture of the north.

A new system of agreements between the state and private enterprises, greater private shares and the reintroduction of individual stimuli in the final phase of collective production now lets the farmers market their excess production themselves as soon as they have fulfilled their quotas. One did not have to wait long for results.

Every day 200,000 tons of vegetables arrive in Hanoi. Half comes from private cultivation, is being offered by individual farmers and is being sold at dozens of open markets which have cropped up along the streets throughout the city.

Private trade, which had been virtually discontinued and had been much criticized during the campaign against the Chinese fellow citizens, is now officially allowed again, and just a few months after the new policy was introduced the picture of the country has changed.

Everywhere along the provincial streets, even in the smallest villages, private "teahouses" invite one to stop. Generally it is only an old woman with a kettle of hot water sitting under a straw roof. There are bicycle repair shops, tailorshops, barbershops, vegetable stands; also meat from private individuals keeping pigs and chickens and homemake bread.

Beside the nonfunctioning state-owned economy, beside the state stores standing empty, within a few months a private sector has developed which is in a position to supply part of those vital goods which are not obtainable otherwise.

A Vietnamese citizen may buy only one bicycle during his lifetime at the official price of 300 dong. Small family enterprises now produce "private" bicycles, of course at three or four times the price.

"The Vietnamese survive because they are in a position to circumvent the official system," says a foreign economic expert.

Government employees whose salary is only 60 to 80 dong a month earn an additional 40 dong a night by working in workshops manufacturing plastic sandals or by planting flowers in their kitchen gardens and selling them to foreigners. A bunch of gladiolas costs 60 dong.

Drivers of military vehicles (monthly wage 6 dong) employed on the road between Hanoi and the Chinese border take with them on their way to the border oil stoves which can be sold in the mountains at three times their normal price, and they bring back lizards (5 dong a piece) which yield five times their value as medicine in Hanoi.

Everyone appears to be chasing after money, with the government in the lead. In Hanoi a private restaurant pays a tax of 6,000 dong a month, while a private stand selling vegetables or hot tea pays 60 dong.

This way the strict Hanoi increasingly resembles Saigon with its joie de vivre: small shops in every entrance, children and old women selling cigarettes by the piece from small boxes, long-haired boys and girls with thick-soled shoes from Saigon, and characters engaged in all kinds of business, from offering a favorable dollar exchange in the black market to selling fake antique bronze figures.

In Hanoi, the painter Ngoc Linh is exhibiting for the first time. His pictures do not feature a single soldier, a single gun or a single battle scene--something inconceivable in the past.

Saigon, in turn, has still not become Ho Chi Minh City; nobody calls the old capital of the south by that name.

The houses inhabited by communist officials are being repainted. The Hotel Continental, rich in tradition, on whose terrace generations of colonialists, military personnel and journalists used to sip their drinks, is being renovated, with the officials from Hanoi, Vientiane and Pnom Penh, for whom the hotel is reserved, getting airconditioning.

Gen Duong Van Minh ("Big Minh"), the last president of South Vietnam, who signed the unconditional surrender, still lives in his spacious Saigon house, cultivating orchids. A request for an interview is met with the information that the general does not want to receive any foreign visitors.

The Cafe Givral is still a meeting place for old dreamers and young desperadoes.

It is an irony of fate that Saigon is surviving above all through contributions by "traitors." Immediately after liberation it was a disgrace for any family to have a member who had fled to the United States or France. Now this is considered a great privilege. Every week packages totaling 100 tons arrive via Air France containing goods sent by refugee relatives to relatives who stayed behind. Thus suits, medicine, soap and even tennis balls arrive in Saigon and are then sold at a big profit on the black market.

A man from Hue comes to Saigon every month to pick up the radio his son, who lives in the United States, sends him through friends in France. With the money he gets from selling these radios he supports his family of six.

The packages and the goods being smuggled from Thailand via Cambodia and reaching the Vietnamese coast by ship from Singapore supply the country with consumer goods, and thousands of Vietnamese who otherwise would be unemployed make a living with this trade.

Such a liberal attitude by the authorities evidently is regarded as a safety valve against possible popular unrest--as is the official tolerance now being exercised vis-a-vis the renascence of religion.

Buddhist schools may recruit new novices, and pagodas are being restored and made available for cultural events. The churches are overcrowded on Sundays, with many young people among the churchgoers.

Despite the fact the 80 Catholic priests are still in reeducation camps, despite the fact that 5 Jesuits recently were arrested and charged with counterrevolutionary activity in Saigon, despite the fact that the seminary in Hue has been closed and its director, Pater Ho Van Quy, banished to a village, the communists are making efforts to enlist the cooperation of Catholics as well.

At a bishops conference in Hanoi, a high party official recently delivered a long lecture about the country's difficulties, saying in conclusion: "In the 2,000 years of your ideology you have not succeeded in establishing paradise on earth. We have tried to do so only for a few years. Give us time. Help us to do it better."

Of course the people, particularly in the south, think that the small liberties are only a tactical move by the government, which is under pressure of economic failure and the Chinese threat. As soon as the government feels more secure, chances are it will begin anew to collectivize agriculture and restrict private trade.

"Speculators and black market dealers are getting out of control," warned L Quang Chanh, Saigon deputy mayor, in a conversation with DER SPIEGEL. "One day we will have to do something about it."

At the moment the communist authorities are exercising restraint. This year the parades and public events which normally would have been held on 30 April to celebrate the sixth anniversary of the great victory of 1975 did not take place.

Chances are this was done to avoid young recruits--as happened recently--marching behind red flags but singing in unison, not "we are marching eagerly to the front," but "we are sailing eagerly to the United States."

While in the evening of 30 April the top leadership of the city was gathering in the premises of the former National Assembly in Saigon (now a theater) to commemorate the day of liberation behind closed doors, thousands of young people assembled out front to celebrate "the occupation of Saigon" in their own way.

Dozens of Honda cycles had pulled up--the boys bent over the wheels, the girls on the seats behind them--and started a mad race.

They raced down the Tu Do, the main street of Saigon and the former Rue Catinat, then along the Saigon River, up the Nguyen Hue Boulevard and again down the Tu Do, at full speed, one round after another.

The streets were filled with exhaust smoke. Some fell from their seats, were flung into the street and were injured but got up again and continued the race, with thousands of dumbfounded people looking on--an absurd gesture of challenge and waste.

Since then this senseless merry-go-round of death has been repeated every Sunday under the eyes of the police, continuing until curfew time.

These Saigon evenings characterize one side of life in Vietnam today. The evenings in Hanoi symbolize the other side--the readiness to survive.

When the sun goes down in the thick yellowish air, dozens of houses open their doors and become cafes or modest restaurants serving a bowl of soup and cake.

And at small wooden stands along the streets selling cigarettes by the piece, hundred of people light their oil lamps, which glow like fireflies in the expanse of the whispering darkness.

PIECEWORK WAGE SYSTEMS REQUIRE CLOSE SUPERVISION

Hanoi NHAN DAN in Vietnamese 25 Aug 81 p 1

/Editorial: "Firmly, Effectively Expand Piecework Wages"/

/Text/ After more than a half year of carrying out Resolution 26-CP, nearly 2,500 units with more than 80 percent of the workers in the state-operated economic sectors have applied forms of contract and piecework wages. Many locations have actively applied these forms of wages consistent with the production characteristics and situation of each sector and unit. Initial results have created a change in the management formula from unpaid bill administration to economic profit-and-loss accounting, elevated the spirit of responsibility of the enterprise director and the collective ownership concept of the worker and public servant and encouraged the laborer to enthusiastically engage in production, increase labor productivity and practice conservation.

Not beginning with the proper supervision principles, a number of locations have expanded contract and piecework wages and cash award forms in an expanding manner without thorough preparations and therefore, economic effectiveness has been low. Specific indications are that labor productivity increases slowly or not at all while the wage funds and income level of the workers both increase at an excessive rate, creating an irrational income difference between the various types of labor in one unit or between the enterprises in one sector or between one sector and another. A universal shortcomings is the arbitrary lowering of norms while organizational and technical conditions remain the same; On the other hand, unit prices are raised in an inconsistent manner by raising the job class, raising the percentage of piecework wage stimulation and introducing subsidies which are not of a salary nature.

The further expansion of contract and piecework wages and cash award forms is a necessary method for continuing to improve management, properly achieve the principle of distribution in accordance with labor, stimulating and promoting production and assuring unity between the three interests. This expansion must be carried out in a firm and effective manner. Each enterprise has the responsibility for best preparing the necessary conditions and first of all the material conditions for production such as assuring energy, materials, labor, etc.; and preconceiving replacement methods when difficulties are encountered with the purpose of gradually leading the enterprise into a stabilized and continuous production situation, restricting to the lowest level a situation of piecework wages intermixed with time wages. Secondly, there must be economic and technical norms, labor norms and rational wage unit prices, assuring a rational level of labor and material waste and salary for each type of product. Third is to closely follow, inspect, test and audit each unit and laborer in the quantity and quality of the product and project.

Product contracts and piecework wages are closely connected with labor organization, production organization and management. Consequently, in order to carry out good product contract and piecework wage work, it is necessary to improve labor organization and correct inconsistencies in production organization and management. Each enterprise, based on production and labor organization characteristics, must select appropriate forms and systems of piecework wages aimed at truly stimulating everyone to give concern to his own labor results.

Increasing labor productivity, improving product quality, reducing production expenses, strengthening socialist production relations, upholding the role of planning and assuring unity between the three interests are principles of supervision and are also the foremost standards for evaluating the economic effectiveness of product contracts, piecework wages and cash award forms.

YOUTHS PREPARING TO LEAVE FOR NEW ECONOMIC ZONES

Hanoi HANOI MOI in Vietnamese 24 Jul 81 p 1

[Article: "Assault Youths in Precincts Ready To Leave for New Economic Zones"]

[Text] Recently, the Assault Youth Union of Hai Ba Trung and Ba Dinh Precincts and Cua Nam Ward have held a swearing-in ceremony for new members, and a rally for assault youths prior to their departure for the New Economic Zones.

At the swearing-in ceremony of the assault youth company of Hai Ba Trung Precinct on the morning of 17 July, the precinct union executive committee gave the company a traditional union banner.

Representatives of families having members volunteering to leave for the Lam Bond New Economic Zone attended the rally, held at the Ba Dinh Precinct office on the morning of 18 July.

Many youths of both sexes voiced their confidence in and enthusiasm about their new task, pledging to devote all the strength and intelligence of youth to building material bases in the New Economic Zone.

NGHIA BINH PROVINCE HAS TWO CONSECUTIVE BUMPER CROPS

Hanoi NHAN DAN in Vietnamese 25 Aug 81 p 1

/VNA News Release: "Nghia Binh Province Attains Bumper Summer-Fall Crop"/

/Text/ Nghia Binh transplanted more than 49,000 hectares of summer-fall rice, an increase over the 1980 summer-fall crop by more than 6,700 hectares. By the middle of August, the entire province had harvested more than half the area with many districts completing the harvest. According to initial data, the entire province achieved an average yield of from 26 to 27 quintals per hectare which was nearly the same as the 1978 crop, the best bumper crop ever. Many districts such as Binh Son, Tay Son, Phuoc Van and An Nhon and Quy Nhon City attained yields higher than the 1978 crop.

Thus, Nghia Binh has attained two consecutive bumper crops: the winter-spring crop achieved an average yield of more than 23 quintals per hectare, 1.3 quintals of paddy more than 1978, the best bumper crop ever, and exceeding planned levels by nearly 7 percent.

BIOGRAPHIC

INFORMATION ON VIETNAMESE PERSONALITIES

[The following information on Vietnamese personalities has been extracted from Vietnamese-language sources published in Hanoi, unless otherwise indicated. Asterisked job title indicates that this is the first known press reference to this individual functioning in this capacity.]

Trương Đình Bằng [TRUWOWNG DINHF BANGF]

*Standing Vice Chairman of the Central Council of the Ho Chi Minh Vanguard Teenagers Unit; his article "Build a Strong Ho Chi Minh Vanguard Teenagers Unit" appeared in the cited source. (NHAN DAN 21 Aug 81 p 3)

Mai Văn Bộ [MAI VAWN BOOJ]

Born 1918, prior to the August Revolution he participated in patriotic activities through the youth and student movements, from 1945 to 1949 he engaged in press work in Saigon-Cholon, from 1950 to 1954 he was in charge of "Voice of Nambo" Radio Station and simultaneously was one of the directors [Uy vien Giam doc] of the Nambo Information Service, from May 1955 to 1958 he worked on the Liaison Committee of the Vietnam People's Army General Headquarters adjacent to the International Committee for Control and Supervision of the Ceasefire, from June 1958 to 1960 he was Vice President of the Hanoi College of Medicine; between 1961 and 1970 he served, in turn, as Commercial Representative and General Representative of the DRV in France; prior to being appointed SRV Ambassador to France in January 1981, he was chief of Asia Department 2 of the SRV Foreign Ministry; from a biographical sketch published in the cited source. (Paris DOAN KET 21 Feb 81 p 1)

Đường Hồng Dật [DUWOWNGF HOONGF ZAATJ]

Vice Minister of Agriculture; on 14 August 1981 he accepted a Swedish grant to purchase fertilizer. (QUAN DOI NHAN DAN 16 Aug 81 p 4)

Cấp Xuân Diệm [CAPS XUAAN ZIEEMJ], Senior Colonel

Deputy Director of the Public Security Service, Ho Chi Minh City; his interview on the public security situation in Ho Chi Minh City appeared in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 17 Jul 81 p 1)

Trần Tự Đãi [TRAANF TUWJ DAIX], *Colonel

Of the Quartermaster Department, Rear Services General Department; his innovations are the subject of an article in the cited source. (NHAN DAN 20 Aug 81 p 3)

Lưu Minh Hiệu [LUWU MINH HIEEUJ]

*Secretary of the VCP Committee, Hung Ha District, Thai Binh Province; his article on agricultural product contracting appeared in the cited source. (NHAN DAN 17 Aug 81 p 2)

Nguyễn Duy Huấn [NGUYEENX ZUY HUAANS]

*Deputy Secretary of the VCP Committee, Phuc Tho District, Hanoi; his article "Developmental Tendencies in Phuc Tho District's Agricultural Production" appeared in the cited source. (HANOI MOI 2 Jul 81 p 3)

Trần Ngọc Kha [TRAANF NGOCJ KHA]

*Of Vietnam News Agency in Paris; accompanied by his wife, he attended celebrations of the 91st anniversary of the birth of Ho Chi Minh held by the suburban Paris chapter of the Association of Vietnamese in France in Saint-Maur on 24 May 1981. (Paris DOAN KET 6 Jun 81 p 2)

Nguyễn Nam Khánh [NGUYEENX NAM KHANHS], Major General

Deputy Head of the Political General Department; on 18 August 1981 he attended the graduation of a senior officers course. (QUAN DOI NHAN DAN 20 Aug 81 p 1)

Trần Đăng Khoa [TRAANF DAWNG KHOA]

Vice President of the Vietnam-Soviet Friendship Association; on 18 August 1981 he headed a delegation of his association on a visit to the GDR. (NHAN DAN 21 Aug 81 p 4)

Ngô Bùi Kim [NGOO BUIF KIM]

*Counselor of the SRV Embassy in France; attended Tet celebrations by the suburban Paris chapter of the Association of Vietnamese in France held in Massy on 28 February 1981. (Paris DOAN KET 7 Mar 81 p 2)

Hồ Quang Long [HOOF QUANG LONG]

Deputy Head of the Machinery Department, Ministry of Communications and Transportation; his article "Twenty Years of Building and Developing the Central Communications and Transportation Mechanized Forces" appeared in the cited source. (GIAO THONG VAN TAI 20 Jul 81 p 1)

Hoàng Văn Lợi [HOANGF VAWN LOWIJ], Deceased

Born in 1911; former Vice Minister and Member of the VCP Fraction of the Ministry of Foreign Affairs; Secretary of the VCP Party Affairs Committee for Overseas Personnel [Bi thu Ban can su Dang ngoai nuoc]; Member of the VCP since 1931; he died on 17 August 1981 following a period of illness at the Vietnam-Soviet Friendship Hospital. (NHAN DAN 18 Aug 81 p 4)

Hoàng Trường Minh [HOANGF TRUWOWNGF MINH]

Member of the Central Committee of the VCP; Secretary of the VCP Committee, Lang Son Province; his article "The Soldiers and People of Lang Son Fight and Produce" appeared in the cited source. (NHAN DAN 18 Aug 81 p 3)

Võ Văn Năm [VOX VAWN NAWM], *Colonel

*Chief of Air Defense, 7th Military Region; recently he attended the graduation of self defense anti aircraft gunner trainees. (Ho Chi Minh City SAIGON GIAI PHONG 15 Jul 81 p 1)

Phạm Quốc Tá [PHAMJ QUOOCS TAS]

*Counselor of the SRV Embassy in France; attended Tet celebrations by the suburban Paris chapter of the Association of Vietnamese in France held in Massy on 28 February 1981. (Paris DOAN KET 7 Mar 81 p 2)

Lê Văn Thân [LEE VAWN THAAN]

*Counselor of the SRV Embassy in France; attended celebrations of the 91st anniversary of the birth of Ho Chi Minh held by the suburban Paris chapter of the Association of Vietnamese in France in Saint-Maur on 24 May 1981. (Paris DOAN KET 6 Jun 81 p 2)

Ba Trần [BA TRAANF]

*Secretary of the VCP Committee, Vung Liem District, Cuu Long Province; he was mentioned in an article on economic cooperation between Cuu Long Province and Ho Chi Minh City. (Ho Chi Minh City SAIGON GIAI PHONG 10 Jul 81 p 3)

Lê Đăng Trí [LEE DAWNG TRIS]

*Deputy Head of the Motor Transportation Department, Ministry of Communications and Transportation; his article "Central Motor Transportation Enterprises Implement The Transportation Mission to the Mountains in 1981" appeared in the cited source. (GIAO THONG VAN TAI 30 Jun 81 p 1)

Vũ Doãn Uẩn [VUX ZOANX UAANR]

*Director of the Agriculture Supplies General Corporation; on 14 August 1981 he thanked the Swedish government and people for a grant to purchase fertilizer. (QUAN DOI NHAN DAN 16 Aug 81 p 4)

Nguyễn Xuân Việt [NGUYEENX XUAAN VIEETJ]

Former Secretary of the VCP Committee, Nghia Lo Province; he was mentioned in passing in an article that noted that he has since retired. (NHAN DAN 19 Aug 81 p 2)

Lê Quang Vịnh [LEE QUANG VINHJ]

*Director of the Education Service of Ho Chi Minh City; is the author of an article in the cited source entitled, "Some Thoughts on the Tasks of the Youth Union in Schools." (THANH NIEN No 5, May 81 pp 19-21)

Nguyễn Minh Vĩnh [NGUYEENX MINH VINHX]

*Chairman of the People's Committee, Cau Ngang District, Cuu Long Province; he was mentioned in an article on economic cooperation between Ho Chi Minh City and Cuu Long Province. (Ho Chi Minh City SAIGON GIAI PHONG 10 Jul 81 p 3)

NEW ECONOMIC ZONES RECEIVE 74,000 MORE PEOPLE

Hanoi NHAN DAN in Vietnamese 25 Aug 81 p 1

/Article: "More Than 74,000 Depart To Build New Economic Zones"/

/Text/ During the first 6 months of this year, 74,924 people from the provinces and cities of the Red River Delta and the provinces of former Region 4 departed to build new economic zones in the central highlands and Nam Bo. Of this number, 15,500 laborers went to rubber and coffee growing areas, 2,700 went to the rice growing state farms of the Mekong Delta, and 18,600 went to cooperatives and production collectives to simultaneously engage in both opening new land to expand the area and intensive cultivation of grain crops.

The provinces of Ha Nam Ninh, Thai Binh, Hanoi, Nghe Tinh, Binh Tri Thien, Quang Nam-Da Nang and Nghia Binh closely coordinated and discussed methods with the provinces receiving the new arrivals; consequently, the living conditions of those moving to the new zones were rapidly stabilized and the people had favorable conditions for immediately beginning production. The recruitment of labor for state-operated facilities with accompanying families was a good experience, alleviating difficulties for the state in issuing capital and materials for building a material base in the location of the new arrivals.

Nevertheless, total planning is not yet available for the transfer of people between zones and areas; and the opening of new land in these provinces and in a number of provinces in the north is still insufficient. Organization of an apparatus to transfer laborers and residents is still not perfected from the central to the primary level. The preparation of positions, survey planning and other material conditions are still unsynchronized and incomplete. Means of transporting the people to the new economic zones are scarce and slow. From now until the end of the year, it is necessary to transport 65,000 laborers and 174,000 people, including 24,000 laborers and 67,000 people from the provinces of northern Vietnam to the rubber and coffee facilities in the central highlands and a number of rice growing state farms and cooperatives in the Mekong Delta. The Labor and Population Distribution Steering Committee and the Labor and Population Distribution Directorate (of the Ministry of Labor) are preparing materials, capital and residential locations and holding discussions with the transportation sector to assure means of transportation (railroads and land and water routes) aimed at achieving the labor and population distribution norms for 1981.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

OFFICIALS CAUGHT FOR TAKING BRIBES, SEIZING PEOPLE'S PROPERTY

Hanoi HANOI MOI in Vietnamese 7 Jul 81 p 4

[Text] On 23 June 1981, HANOI MOI published the news that Trinh Tuan Phuc, member and secretary of the Cua Nam Subward People's Committee, was caught in the act of taking a bribe by the Dong Xuan Subward public security agents. In view of the illegal act of Trinh Tuan Phuc and at the proposal of the Cua Nam Subward People's Committee, on 26 June 1981 the Hoan Kiem Precinct People's Committee issued a decision dismissing Trinh Tuan Phuc from his position as member and secretary of the Cua Nam Subward People's Committee pending inquiry by the judiciary.

[Article by Q.T.: "Abuse of Power"]

At 0900 on 19 May 1981, Vu Hong Doanh, a border defense soldier, was going home to visit his family. On arrival at the Tu Lien ferry landing (Tu Liem District), he met with two so-called cadres of the Ba Dinh Precinct Trade Service who asked to inspect his baggage and then seized 1.4 kg of tea and two of the six chickens he was carrying along.

Because the seizure of goods by these two "commercial cadres" seemed too suspicions, Doanh went to the Yen Phu Subward public security post and notified it of the incident.

Though the area of the incident did not fall under this jurisdiction, Sen Sgt Luong Ba Su and Sgt Nguyen Van Dong rushed out to grasp and assess the situation. After 2 hours of investigations, they saw two men fitting Doanh's description who were about to play the "commercial cadre's" trick against a number of passersby at the ferry landing. They decided to bring these two men back to the public security post for further action.

No sooner had the two men entered the public security post than they took fright on seeing Doanh sitting there. They were then forced to say that their names were Nguyen Van Nhung and Doan Duy Hung, employees of the Tu Liem District Commercial Bureau, and to admit that they had misused their function to "seize" baggage and commodities from travelers. The illegal act of Nhung and Hung was condemned by public opinion and we believe that the responsible organs will try their case to stress the inviolability of state law.

DECORATED PUBLIC SECURITY POST MAKES MORE ARRESTS

Hanoi HANOI MOI in Vietnamese 11 Jul 81 p 1

[Article: "Hang Buom Post Makes New Accomplishment"]

[Text] News has reached us that, on 1 June 1981, the Hang Buom Public Security Post made marked headway in the struggle against big smugglers and speculators, realizing many good results. For this reason, the post received a letter of commendation from the director of the Public Security Service, who visited the unit and derived some useful lessons. Sergeant Pham Van Chuc, who surpassed all others in achievements, was promoted before full time-in-grade.

On 9 July 1981, the unit made another outstanding achievement. Based on a source of information among the people and using the professional experience of colleagues, Sergeant Bui Chinh Nghia, an area policeman, caught Nguyen Thi Tam (residing at 68 Hang Bac Street) in the act of trafficking in gold for sale. Searching Tam's house and that of Pham Thi Tam (25 Ma May--a place where Tam often went to merchandize gold and silver), officials seized much precious metals which was to be sold illegally, including 54 gold rings, 2 ounces of gold-leaf, and 25 precious stones.

Nguyen Thi Lam also committed the crime of attempting to bribe Sergeant Lam Hong Lam with gold when he booked her for dealing illegally in gold. But, like Comrade Pham Chuc before him, Lam Hong Lam exposed the attempted bribery of these dishonest merchants.

MILITARY AFFAIRS AND PUBLIC SECURITY

OFFICIALS GUILTY OF EMBEZZLEMENT CAUGHT IN THAI BINH

Hanoi NHAN DAN in Vietnamese 18 Aug 81 p 3

[Article by Le Pho, Committee 39, Thai Binh, in "Readers' Opinion" Column: "Caught in the Legal Net"]

[Text] More 8.5 million dong have been invested by the high level in the construction of the Diem Dien Fishing Port in Thai Thuy [District], Thai Binh [Province]. The Thai Binh Marine Products Service chief was concurrently chairman of the Construction Committee. In the construction process, the Port Construction Committee used the invested capital contrary to principles and took advantage of its position to embezzle hundreds of thousands of dong including the cost of feasts. The committee hired out its transportation means and cranes, sold the so-called "discarded materials and substandard products", falsely balanced up account books and used thousands of dong to raise a secret fund. Investigations have revealed that there were 149 invalid vouchers (for nearly 120,000 dong) of which 37 were receipt and payment vouchers concerning a fake provisional advance of nearly 70,000 dong while the remaining 112 payment vouchers represented about 50,000 dong. All documents and books had been tampered with and rebound in an attempt to hinder inspection.

Each time the port was supplied with any type of materials whatever, they took part of it for sale to or exchange with the people, cooperatives or organs in their own locality and even in the provinces of Son La, Ha Nam Ninh, Thanh Hoa and Nghe Tinh. They negotiated the sale of nearly 2 tons of cement and 50 tons of iron and steel, more than 10 cubic meters of lumber and 4.5 tons of black corrugated sheets. Through these sales and exchanges of material supplies, they collected nearly 320,000 dong and spent 110,000 dong. Concerning the task of leveling the ground and filling in low-lying land, the Port Construction Committee forged vouchers, paid off nonexisting expenditures and falsely increased the cost of land excavation and embankment by dozens of thousands of dong in order to reduce the true amount of cash in the budget and to preclude control by the state.

The above mentioned wrongdoings have been denounced by workers. Ta Ba Kha, chief of the Marine Products Service and chairman of the Construction Committee, Pham Ngoc Xuong, chief accountant, and their accomplices have been caught in the dragnet of the law. The court is investigating and examining their case. This story teaches a varluable lesson to economic management cadres.

COAL PIRATES REPELLED BY CREW OF SHIP DK01

Hanoi HANOI MOI in Vietnamese 3 Jul 81 p 1

[Article by Van Giap: "Crew of Ship DK01 Valiantly Protected Goods"]

[Text] On the morning of Sunday 28 June, ship DK01 (belonging to River Transport Enterprise 204) carried 600 tons of coal from Hon Gai to Hanoi. Just as the ship was passing by Khuyen Luong Hamlet, a group of bad elements followed it and asked to buy goods. They rowed their boats from the other side of the river (adjoining Bat Trang Village). Aboard each boat there were two or three of them together with the necessary equipment to scoop up coal. After pulling in their boats alongside the barge, some of them came to negotiate coal purchase while the others stood ready to scoop coal and load it into their boats. It was 0730 am when the river control police had just returned home to take a rest. After several unsuccessful wheedlings, these elements relied on their numerical strength, jumped upon the barge and shoveled coal down to their boats to turn the situation into a fait accompli.

In view of the tense situation, boatswain Pham Ba Luc ordered the [accompanying] motorboat to be detached from the barge and told three sailors [to board the motorboat] to pursue one of the boats which was fleeing after being fully loaded with the stolen coal. The motorboat caught up with the fleeing boat when it neared the riverbank. The two villians abandoned the boat, jumped into the river and ran away. At that moment, there remained only one crew man named Bui Van Hach on the six-compartment barge to defend it. Despite their numerical strength, the bad elements could not defeat Hach because he was formerly a valiant armyman recently transferred to the transportation sector. The bad elements had to retreat in disorder when the motorboat came back. The ship crewmen seized three more boats from the villains.

On the afternoon of 30 June, the director of Enterprise 204 paid a visit to the crew of Ship DK01--which was delivering goods at the Chuong Duong wharf--and praised and rewarded the 9 crewmen for having courageously protected the cargo.

BAC THAI SENTENCES EMBEZZLERS, DEALERS IN COUNTERFEIT RATION STAMPS

Hanoi NHAN DAN in Vietnamese 16 Aug 81 p 4

[Text] VNA--The Bac Thai Provincial Court recently tried Nguyen Van Pha, Nguyen Thi Thoa and 21 persons on charge of embezzling ration stamps and coupons of various kinds and dealing in large numbers of counterfeit stamps and coupons.

Taking advantage of the irresponsible attitude of a number of management organs, from 1972 to 1979, Nguyen Van Pha--whose function was to issue and keep ration stamps from coupons in Pho Yen District--made false statements on the district population; compiled bogus records of births, newcomers, registration omissions and so forth to apply for yearly and supplementary ration stamps and coupons; and sold the surplus ration stamps and coupons to dishonest traders. By conniving in a 3-year period between 1976 and 1978 with Ho Viet Doan, an employee of the district statistics bureau, he made false statement to appropriate ration coupons for 43,310 meters of fabric, 34,334 kgs of sugar, 7,655 kgs of meat, 6,400 cans of milk, 1,600 liters of fish sauce and 3,758 bars of soap. From the sale of these coupons to dishonest traders, they received more than 25,000 dong in cash and many valuable objects in kind such as gold rings, sewing machines, bicycles, radio sets, watches, etc. He and his accomplices also used "offered" many persons including a powerful district cadres ration coupons worth more than 1,000 meters of fabric, nearly 5,000 kgs of sugar and meat and more than 4,000 cans of milk.

To dispose of ration stamps and coupons, they connived with Nguyen Thi Thoa, a dishonest trader in Ba Hang Town. Taking advantage of this deal, Thi Thoa accepted large numbers of counterfeit ration stamps and coupons from other areas and used them in this district. In complicity with some employees of state stores and marketing cooperatives, Thoa disposed of counterfeit ration coupons worth over 5,000 meters of fabrics in 1978. Moreover, they set aside thousands of fabric, sugar and monosodium glutamate ration coupons already used by customers and rotated them for a second purchase of goods from the state.

The Bac Thai Court sentenced Nguyen Van Pha to 18 years in prison and a fine of 100,000 dong, Nguyen Thi Thoa to 18 years in prison and a fine of 40,000 dong and the other accomplices from 18-month imprisonment with suspended execution of sentence to 12 years in prison.

CHEMICAL WARFARE TRAINING

Hanoi QUAN DOI NHAN DAN in Vietnamese 4 Aug 81 p 3

[Article by Luong Doan: "47 of 50 Are Excellent and Good"]

[Text] The 8th Group Chemical Warfare Forces achieved noteworthy accomplishments. Inspection results showed that requirements were met in all 50 subject areas inspected with excellent or good grades in 47 of the 50 subjects. Among the many causes for these accomplishments in completing the training plan of the past six months there were two that were important. First, platoon, company and higher level cadres thoroughly understood directives and orders issued by higher headquarters and their principle points relative to branch related matters, unit administration, material fundamentals, orders, etc. Second, the unit developed the spirit of collective mastery of the cadres and enlisted personnel, took the lead in overcoming difficulties, organized the training in short phases with specific goals, conducted reviews, bestowed praise and rewards in time and always adhered closely to implementation of the five objectives of the great campaign.

HA NAM NINH COASTAL DEFENSE—The party and people's committees of Ha Nam Ninh Province recently held a meeting to review coastal defense tasks. The province has formed various fishing boats into naval units and groups to patrol and defend the coastal line while fishing. Various coastal districts and villages in the province have also strengthened training and patrol, and have recently captured many illegal escapees trying to flee abroad. They have discovered hundreds of cases of corruption and saved thousands of dong for the state. The meeting also discussed measures aimed at improving and consolidating battlegrounds for the defense of the provincial coastal areas. PHU KHANH MILITARY RECRUITMENT—As of 15 September, almost 7,000 youths had undergone physical checkups for the 1981 second phase of military recruitment. The province's party committee and mass organizations have launched a campaign to encourage youths to join the army. The province's military command has sent many cadres to various districts to help in recruiting work to fulfill the task according to schedule. THAI PAPER DISCUSSES TRUONG NHU TANG'S U.S. VISIT

BK170440 Bangkok NATION REVIEW in English 17 Sep 81 p 4

[From the "On the Road" column by Jacques Bekaert: "Ex-Viet Cong Is Trying to Muster Anti-Hanoi Forces"]

[Text] On August 25 a small group of Vietnamese gathered at the bar of a downtown Washington Hotel. Most of them were former high ranking officers from the air force.

They had come at the recommendation of their former commander, Air Marshal Ky, to meet an ex-enemy, Mr Truong Nhu Tang, minister of justice of the new defunct provisional revolutionary government, the political branch of Vietnam's national liberation front or the Viet Cong.

Truong Nhu Tang, once an important member of the Vietnamese revolution is now a leading opponent of the communist regime.

After the 1975 communist victory, as the NLF was out of the game and he retired to a little farm outside of Saigon before he decided to leave Vietnam, like so many of his fellow citizens, on a boat. He spent six months in a refugee camp in Indonesia before arriving in France where, in the 50's, he had studied law.

Truong Nhu Tang was never a communist but a strong nationalist. Jailed by the The Thieu regime after being denounced by an informer, he was tortured and later exchanged in 1968 for three American prisoners.

Since he arrived in France, Truong Nhu Tang has been very active. Last December, with Vietnamese of various political opinions (with the exception of members of the communist Party) he launched the Vietnam National Salvation Committee.

In September 1980, Truong Nhu Tang was the guest of the People's Republic of China. He met Prime Minister Zhao Ziyang and an old school mate from the Lycee Chasselout Laubat in Saigon, Prince Norodom Sihanouk.

Truong Nhu Tang strongly believed he, like many Vietnamese, has been fooled by the communists.

"They stole the revolution for narrow, partisan goals," he told me during a recent interview conducted in Washington. "I'm 60 now. I am ready to go back to the jungle one more time...for the last time."

Truong Nhu Tang arrived in the United States in July, and was in New York during the last days of the UN conference on Kampuchea. The National Salvation Committee maintains friendly relationships with Lao and Cambodian resistance groups.

While in the United States Truong Nhu Tang met Sen John Tower, a Republican from Texas, a hard-liner and the president of the Senate Commission on Defence [as published] The two men could not be more different but John Tower found Truong Nhu Tang's analysis of current world events "accurate and realistic."

According to a source close to the Vietnamese ex-minister, Tower was instrumental in getting Truong Nhu Tang to the United States.

The former member of the National Liberation Front also had a meeting with middle ranking officials at the Department of State where once again he exposed his thesis.

"We are witnessing an overcommitment of the Soviet Union in the world. It makes their system quite vulnerable. What the noncommunist world needs today is a strategy more offensive than the old-fashioned containment," he told the NATION. "We have to roll back the Soviets."

"Indochina is a key test of this new strategy. After all, the dominos can also fall in the other direction. I told American officials that China will cooperate to challenge Soviet hegemonism, but that China does not want to be alone," he said.

Truong Nhu Tang also said that China "would probably be ready to compromise in other areas" and for instance reduce even further its support for various communist parties in Southeast Asia. "China prefers independent friends, friends who have the support of the Americans and the West."

According to other sources, it was a point discussed by Secretary of State Haig during his visit in Beijing last June.

The small Vietnamese delegation headed by Truong Nhu Tang also met several members of the U.S. mission at the United Nations including Carl Gurshman, the mission number two and William Schuman, the adviser on national security affairs.

Contacts were also made at the Pentagon where Truong Nhu Tang was due to meet with deputy secretary for Asia and Pacific, Richard Armitage.

Another important point on Truong Nhu Tang's agenda is to talk to a large section of the Vietnamese community now living in the United States. Many refugees still see him as a "Vietcong," a communist.

The meeting with Ky's representatives was part of Tang's offensive to establish himself as a true nationalist. After the meeting, former Marshal Ky let it be known that he would remain neutral and do nothing that could create problems to the National Salvation Committee. Ky's passive support is somewhat important.

Among refugees, Ky still enjoys some support, unlike ex-president Thieu who is still unpopular.

To Truong Nhu Tang and his friends, the next step is clear: "We have to move the struggle closer to Vietnam. We have established our existence. It is too early to go into armed struggle but we can do a lot with just a good radio station. It is obvious the Vietnamese army in Cambodia is in trouble. A lot of young soldiers from the south would like to defect. We could tell them how to do it, where to go in order to be safe. We could help them. Some may even join us."

It is not known if Tang and his friends have received any formal promises from the United States. One State Department official told us: "We are not sure Truong Nhu Tang can overthrow the Hanoi regime. But it can add to the pressure."

WASHINGTON MARCH SUPPORTED--Hanoi, 22 Sep (VNA)--The Hanoi paper NHAN DAN today voices strong support for the march in Washington, on September 19 of more than 400,000 Americans to condemn the Reagan administration for imposing the country's economic burden on the working people. This mass demonstration, the paper notes, indicates high indignation on the part of the American public at the Reagan administration's policies concerning economic, social and foreign affairs, including the intensification of the arms race. The paper goes on: "The American working people's struggle is being spearheaded at Reagan's economic and social policies which aim to benefit only the monopoly capitalist circles. The Reagan administration is prepared to spend hundreds of billions of dollars on the production of weapons of mass destruction and to intensify its collusion with the Beijing expansionists while unhesitatingly cutting back on public welfare expenditures." "The mass demonstration on September 19 served as a stern warning to the Reagan administration," NHAN DAN says in conclusion. [Text] [OW220717 Hanoi VNA in English 0709 GMT 22 Sep 81]

REPRESENTATION AT ROMANIA CONFERENCE--Hanoi, 10 Sep (VNA)--A delegation of the Vietnamese general department for physical culture and sports led by its deputy director, Ta Quang Chien, attended the 30th conference on physical culture and sports of the socialist countries held in Romania from September 1-5. This yearly conference was intended to promote cooperation in this field among the socialist countries. [Text] [Hanoi VNA in English 1512 GMT 10 Sep 81 OW]

KAMPUCHEAN LECTURERS--Hanoi, 10 Sep (VNA)--The group of lecturers of the People's Revolutionary Party of Kampuchea led by Outnatrana, director of the party's propaganda and education board, left here today. While in Vietnam, the group visited and gave lectures in Hanoi and the provinces of Quang Ninh, Ha Nam Ninh and Thai Binh. This afternoon, Hoang Tung, member of the Communist Party of Vietnam Central Committee, head of the VCP propaganda and education board, warmly received the Kampuchean guests. PARTY ACTIVITIES AND GOVERNMENT

VO CHI CONG ADDRESS AT CONFERENCE ON CONTRACTS

BK300800 Hanoi NHAN DAN in Vietnamese 7 Sep 81 p 2

[Address by Vo Chi Cong, member of the VCP Central Committee Political Bureau and vice chairman of the SRV Council of Ministers, at a conference held in Ha Nam Ninh in August 1981 to review implementation of product contract system in agriculture]

[Text] During the past few days I have heard a recapitulative report by the Ministry of Agriculture and opinions expressed by a number of provinces, districts and cooperatives on the multifaceted impact of the implementation of end-product contracts with workers. These reports, all good, pointed out the basic strengths of the new contractual system, its specific weaknesses to be overcome and the lessons to be learned in order to perfect the system. The purpose of my address today is to confirm the correctness of these reports and, at the same time, to add some additional views.

Seven months have elapsed since the issuance of Directive No 100 of the VCP Central Committee secretariat. At this conference, many comrades have said that this directive could not have come at a better time and that it has been warmly welcomed by many peasants. It has prompted the entire party to achieve a unity of view on a new management policy and has created conditions for the mass movement to develop vigorously and expand quickly throughout the country. However, when Directive No 100 was first promulgated, the system of end-product contracts with workers had not been as fully and widely practiced as it is today. For this reason, it is our responsibility to follow and review the implementation of this product contract system in agricultural cooperatives so as to perfect it.

We have seen many similar phenomena in the realities of revolutionary activities in our country. When a party or state policy is first issued, it cannot provide for all aspects of a struggle which can have many forms and can be waged according to extremely diversified methods. But the most important thing is that once a correct policy is laid down, once the correct "button" is pushed, it will have enormous strength. Then, gradually improved through practice, such a correct policy will eventually become perfect.

It can be said that during the past few years there has been no other economic management policy on the agricultural front which has been accepted by the masses as quickly as the policy of end-product contracts with labor groups and workers in accordance with the spirit of Directive No 100 of the VCP Central Committee secretariat and with the instructions of the Council of Ministers Standing Committee. Within only one production season, the system of product contracts with workers has advanced from an experiment in a number of cooperatives in Vinh Phu Province and a relatively wide practice in Haiphong City and Nghe Tinh Province to being widely implemented in all progressive, average and poor cooperatives in the northern delta, midlands and highlands. In the south, the cooperatives and production collectives which have been through several production seasons as well as those which were recently set up have expanded the application of the system on an experimental basis. Product contracts have been applied not only in the cultivation of rice but also in the planting of subsidiary food crops and industrial crops and in livestock raising. They have been applied by basic production units as well as specialized units of cooperatives. For the winter-spring crop, product contracts were applied in 82 percent of the cooperatives in the northern delta, midlands and the former zone 4; 31 percent of the cooperatives in the central coastal provinces; 49 percent of the cooperatives in the central highlands; and 10 percent of the cooperatives in the northern highlands. In some Nam Bo provinces, a number of cooperatives and production collectives have also applied product contracts on an experimental basis. For this year's summer-fall and 10th-month crops, this contractual system has been implemented in nearly all cooperatives in the Bac Bo delta and midlands and the former zone 4; in more than 70 percent of the cooperatives in the central coastal and central highlands provinces, and in 50 percent of the cooperatives in the northern highlands. In the recent winter-spring crop, 96 percent of the cooperatives practicing the system directly entered into product contracts with workers and only 3 percent signed contracts with labor groups. For the 10th-month crop, the number of cooperatives adopting product contracts directly with workers has become even larger. Even Vu Thang, a foremost progressive cooperative, which applied product contracts with labor groups in the last winter-spring season, has signed contracts directly with workers in the current 10th-month crop.

Application of product contracts has become a vigorous revolutionary movement and has whipped up an unprecedented production fervor among the masses in the countryside. It has brought about practical results and is opening up splendid prospects for agricultural production.

The realities of the development of production, the consolidation of new production relations and the building of a new countryside are the most appropriate yardsticks of the socialist management system in agriculture.

Through the recapitulation reports of the Ministry of Agriculture, provinces, districts and grassroots organizations, and through the debates in the party paper and among cadres returning from their inspection tours, we have evaluated the splendid results enthusiastically and correctly, and pointed out severely the weakpoints and shortcomings of the contract movement.

First of all, let us talk about the results obtained through the policy of product contracts in agricultural cooperatives.

1. Product Contracts Have Stimulated the Development of Production

As you all are aware, in the recent winter-spring crop grain output nationwide increased by 280,000 tons. This is partly attributable to relatively favorable weather conditions, but the main cause of the increase in output was product contracts. Of this increased grain output, we can see that in the north, where the product contract movement was in full swing, the peasants netted 220,000 tons; while in the south, where the weather was even more favorable, only 60,000 tons were obtained. A more thorough analysis will show that in places where product contracts were given out to workers, labor output and the volume of production were higher than localities which have not yet adopted the system.

According to reports from various localities, the general increase in production in the north is 9 percent but in the provinces where the system has been broadly expanded the increase is 15 percent. Some provinces have recorded a fairly high increase. For instance, Thanh Hoa has increased production by 27.9 percent; Haiphong, 26.2 percent; Nghe Tinh, 20 percent, and Quang Ninh, 27.4 percent.

As a result of expanding the system of product contracts with workers, many districts that used to achieve low paddy output in the past have increased their production at an accelerated pace. They are Kim Son District (Ha Nam Ninh Province) which has increased its production by 38 percent; Yen Thanh District (Nghe Tinh Province), 25 percent, and Trung Son District (Thanh Hoa Province), 50 percent. Many weak cooperatives have become fairly good ones thanks to the implementation of this system.

The districts and cooperatives, which have achieved high output thanks to their fairly good intensive cultivation capabilities, are obtaining even better results in applying the contract system. For instance, Hung Ha District (Thai Binh Province) has achieved 38.6 quintals, an increase of 6 quintals per hectare; Xuan Thuy District (Ha Nam Ninh Province) has netted 33.8 quintals, an increase of 3.6 quintals per hectare, and The Nguyen Xa Cooperative (in Thai Binh Province) has achieved 54.5 quintals, registering an increase of 4 quintals per hectare as compared with the previous winter-spring crop.

The results of the contract system in cooperatives and production collectives in the coastal central provinces, in the highlands and in western and eastern Nam Bo are similar. In Nghia Binh Province, many cooperatives that applied the system in the recent winter-spring crop increased production by 17.6 percent. Among them is the Phuong Thang Cooperative which recorded an increase as high as 32 percent.

2. End-Product Contracts With Workers Have Helped Consolidate Cooperatives and Strengthen Socialist Production Relations

Some comrades are afraid that the new system will erode the new production relations. We know that in evaluating a certain kind of production, the nature of labor and the implementation of the principle of distribution. While carrying out the new contract system in compliance with the VCP secretariat's directives and the

Ministry of Agriculture's guidance, cooperatives still can control and manage essential production means closely and depend on collective manpower to function. What is different from the past is that some tasks are to be assigned to collective manpower by cooperatives, while others are entrusted to individual workers and families--which is even more profitable--in accordance with the production guidelines and plans, norms and technical regulations laid out by cooperatives. In this way, cooperatives still control products, supervise the implementation of plans and distribute their products in a unified manner in conformity with the principles of distribution on the basis of the amount of labor performed and that of closely combining the three interests (of society, of the collective and of the individual). Cooperatives and production collectives will remain socialist collective economic units in spite of their correct implementation of the new contract system.

The superiority of the new production relations must primarily be reflected in the fact that labor output is higher than when production was individual. When production is developed, when labor output is increased and when the life of cooperative members, the various funds of cooperatives and the fulfillment of paddy obligations are ensured, cooperative members will become increasingly attached to cooperatives. This certainly will not weaken cooperatives.

We have long worried about the fairly high percentage--about 70 percent--of average and weak cooperatives. This is a weakpoint of the agricultural cooperative movement. But as a result of the system of product contracts with workers, production has developed and weak, and even hopelessly weak, cooperatives have initially been reconsolidated and have become average and fairly good cooperatives. Their change for the better is reflected in various aspects of activity: plans for cultivated areas and for production norms have been fulfilled; a high percentage of manpower has been mobilized for production and the development of sectors and occupations in cooperatives; many people who left production for trade and other occupations have been attracted back to production; the income of members and the value of their workdays are high· the accumulated capital of cooperatives is fairly abundant, and the paddy obligation to the state has been fulfilled. What is encouraging is that cooperative members are now deeply devoted to their work, show great enthusiasm to cooperative activities and associate their responsibilities with their interests, thus making them truly attached to cooperatives. In some places, many persons who left cooperatives have now reapplied for membership.

I have visited the Son Ha Cooperative (Ha Son Binh)--an unaccountably weak cooperative know to have left almost 100 hectares of land or one-third of its crop area uncultivated each year. Because of the cooperative's operational decline, many of its members have given up production and turned to trading for a living. Since implementing product contracts with workers, the cooperative, however, has again been able to motivate its members to work with enthusiasm, carry out the movement for production during the winter-spring crop season, plant rice over the entire area and double its rice output over that of previous years (1976-1978), thus fulfilling its annual grain obligation to the state, markedly increasing its members' incomes and creating enthusiasm among the masses. According to the reports received from various provinces and the Ministry of Agriculture, progress similar to that of the Son Ha Cooperative is being made by others.

In former Nam Bo, the application of product contracts on an experimental basis by a number of localities has begun to develop its effectiveness in accelerating the movement for cooperativization and consolidating and perfecting cooperatives and production collectives for increased production.

3. Production Expenses Will Be Reduced if Potentials in Manpower, Land and Material and Technical Bases Are Developed

We often say that manpower and land are the two major sources of our assets and greatest potentials for agricultural production. But what should we do to develop these potentials?

The results obtained by localities applying product contracts with workers clearly show that they have been able to increase the number of workers, workdays and work hours. The number of workers has increased by 10 percent, the number of workdays by approximately 10 percent and the number of work hours by approximately 30 percent. Thus, the amount of time dedicated to productive labor has increased by 40-60 percent. Labor quality--an important factor in agricultural production--has also been improved markedly. Meanwhile, workers have been encouraged to do their work voluntarily and with a sense of responsibility, and to develop their existing experience and acquire new techniques. The question mentioned above is of special value to our agricultural production at a time when it still depends heavily on manual labor.

Thanks to the aforementioned factors, land--our most valuable asset--has been used in a more satisfactory manner. Ricefields have no longer been left uncultivated, the movement for interplanting and multicropping has developed further, land reclamation has been stepped up in many localities and the area planted with 5th month-spring rice in the north has been expanded by another 170,000 hectares.

Meanwhile, manpower--including primary and secondary labor--supplied by families has been used more satisfactorily in such tasks as soil preparation, fertilizer production and soil improvement to support intensive cultivation. All farmland water conservancy networks, seed and fertilizer supply establishments and vegetation protection and veterinary stations have also played an effective role in support of agricultural production. Many cooperatives members and their families have even obtained additional work tools, buckets, water wheels and draft cattle in an effort to ensure that crops are planted on schedule and in accordance with proper techniques. To meet the demand for increased production and to ensure the implementation of product contracts, all material and technical bases necessary for production have not been dismantled but further consolidated. In addition, the request of the masses for the construction of additional material and technical bases in order to apply advanced science and technology to production quickly and so that cooperatives can provide better guidance for the execution of various important tasks in the process of production.

Thanks to the increase in labor productivity and to the general efforts to carry out production in accordance with technical regulations while yet in the process of implementing the contract system, production expenses have reduced in both terms of manpower and materials. The practice of "randomly evaluating work and recording marks" has significantly been restrained. All cooperatives are widely adopting the measures necessary to reduce the numbers of cadres and workdays in an indirect way. Thanks to the application of product contracts with laborers, the Nguyen Xa Cooperative (Thai Binh)--a progressive cooperative--was able to eliminate the equivalent of 34,000 workdays during the recent winter-spring crop season. Cooperatives applying product contracts have usually been able to reduce their production expenses by an average of 10-15 percent. This is what we have been expecting for quite some time.

4. The District Level Will Be Strengthened if the Managerial Ability of Cooperative Cadres Is Improved

In applying product contracts with workers, it is necessary for managerial cadres, production unit cadres and technical cadres of cooperatives to observe activities in the ricefields and all the work performed by cooperative members closely.

Based on the demand for production by cooperatives, changes must also be made promptly in the leadership and management work at the district level. Many districts, prior to implementing product contracts, have been compelled to review their production and crop allocation plans and guidelines and reorganize the size of production collectives among various cooperatives. As a result, they have been able to replace hundreds of unit cadres and party chapter secretaries found to be unqualified for the management of tasks related to the supply of materials and for the supervision of the jobs performed by various professional units of cooperatives.

5. The Three Interests Are Implemented Satisfactorily

During this conference, many comrades rightly said that the fact that workers' vital interests had not received due attention was one of the causes of negativism in productive labor. Meanwhile, distribution has been carried out in a very egalitarian manner. The fact that those who worked hard were not properly paid has discouraged willing people from doing extra work and has made unwilling people lazy. Since the end results of production have not been linked with workers' interests, the workers do not pay attention to their products and adopt a negative attitude, which adversely affects production and the interests of collectives and society.

The implementation of contracts for finished products with workers has developed production and has created a basis on which to unify and uniformly promote the three interests. This has been corroborated by the concrete results obtained in those cooperatives which implemented product contracts during the last winter-spring season. In the advanced cooperatives, their members' income has increased by 15-20 percent on the average while the income of members of fair and weak cooperatives has increased by 20-30-50 percent, approximately. All other funds in the cooperatives have also increased. The obligations to the state were also fulfilled more quickly and completely. Some localities doubled the amount of produce submitted to fulfill their obligations as compared with last year's winter-spring season. Many districts and cooperatives even fulfilled their annual obligations for grain and pork during the winter-spring season. In the north, more than 530,000 tons of grain were collected within a short period of time. If the state had more goods for exchange, it would be able to collect from 100,000-150,000 additional tons. Such figures have never been recorded before.

6. The People's Collective Master Has Actually Developed

In the vital interest of the cooperative members and the system of product contracts, conditions should be created for the cooperative members to participate in discussing production projects, determining work and economic and technical norms, and distributing finished products. The meetings of cooperative members to take various decisions on awarding contracts have never been so complete and animated as they are now. In the course of implementing contracts, the people can supervise the activities of managerial cadres and production teams. Recently, the chiefs of some cooperatives and production teams and their deputies were recommended for replacement by their own cooperative members because they had delayed the implementation of product contracts, thus causing some losses during the harvest.

In those localities where product contracts are implemented, production has developed and the revolutionary mass movement has flourished, thus creating favorable political conditions for developing party, administrative and people's organizations, for fulfilling the military obligations and for reducing negative manifestations. Needy families of wounded soldiers and fallen heroes have been awarded contracts on a priority basis and have been assisted by the local people under the managerial control of cooperatives. As a result, their livelihood has been stabilized and a spirit of love and mutual assistance has flourished in the countryside.

To sum up, many localities have scrupulously complied with VCP Central Committee secretariat Directive No 100 to implement the policy of awarding product contracts in agricultural cooperatives. These initial results can be considered as very satisfactory. They prove that this policy is completely correct.

However, due either to inexperience or a lack of close leadership, guidance and supervision, there still are shortcomings, at times serious, in some localities. These include questionable allocations of land and ricefields, abuse of draft animals, impractical production volume norms (either high or too low) and poor guidance for tasks performed by various specialized teams. In some localities, nonspecific contracts have been awarded to cooperative members.

The fact that the system of product contracts has become a broad socialist revolutionary movement in the rural areas is due first of all to the correct policy of our party and state--specifically Directive No 100--and to the close guidance of the VCP secretariat and the Council of Ministers' Standing Committee. To be more precise, our party and state have first of all relied on the creativity of the people and primary production installations to formulate general policies and guidance. The sense of responsibility felt by many party committee echelons and local administrative units, coupled with a sensitivity to new factors, and the close leadership of the Ministry of Agriculture and several other sectors have helped expand the movement quickly. By the way, it should be stated that the press, radio, television and local and central education and propaganda agencies and the agencies engaged in theoretical work have contributed considerably to propagating the policy and to motivating and guiding primary production installations in implementing product contracts. I think that in the recent past our propaganda and education agencies have continuously concentrated on writing several correct and profoundly significant articles. The peasants have attentively watched and welcomed the press and radio propaganda and have acted accordingly. This should be considered a factor in expanding the movement quickly and firmly.

These reasons aside, it must be said, first of all, that the end-contract system itself is correct, conforms to the objective economic laws in the first stage of the period of transition to socialism and accords with the masses' aspirations. If the system has provided a basis for our ideological work and has found general acceptance, it is because it is correct. But in what way? In my opinion, its correctness lies primarily in two important factors:

First, it is the organization of labor. What is the suitable way to organize productive labor when production work is predominantly manual? We all know that labor must be organized and work divided according to the work tools in use. Any work that can be profitably done collectively must be done that way. Any work that can be carried out more successfully by individual laborers and families must be assigned to individuals and families. To apply end-product contracts with workers is, first of all, to organize labor in such a way as to suit the standards of our principal means of production, especially work tools. Some comrades at a cooperative in Quang Nam-Danang once asked me about the "five jobs, three jobs" system and I replied: This is only a general model. The actual number of jobs to be assigned to specialized units depends on the material and technical bases of each locality. How can a cooperative take on irrigation work if there is no water conservancy projects and if it has to rely mainly on rain water for farming? We should not be afraid that individual labor will become individualistic. They are two different things, indeed! The mode of individualistic. Production is linked with the ownership of small plots of land and with the operation of each family as a separate economic unit having its own production orientation and taking possession of all the income derived from its production work. Therefore, this mode of production totally differs from the system of product contracts with laborers which we are applying.

Second, it is the distribution problem. In the past, under the piece-work contract system, the laborer was only concerned about work points and not about the end products of his work. As a consequence, cadres took to awarding work points indiscriminately while cooperative members worked for nothing but work credits. As he was not associated with his products, the laborer could not care less about the end products and resorted to many negative practices in his production work. On top of this, distribution was carried out on an egalitarian basis, ensuring equal income for good and bad workers alike. What Lenin said, roughly, was: Equal work, equal pay. The to-each-according-to-his-work distribution system we are implementing now conforms to this principle because it links the laborer with his end products. Thus, distribution has been in fact linked with the results of the laborer's work. Moreover, this distribution system safeguards all three interests (of the state, the collectives and the laborers) and pays attention to the interests of workers. With workers enthusiastically engaged in production, the amount of social products will increase and the interests of the collectives and the state will also be better served. We can confidently say that many negative practices developed in collective production work in the past because the former distribution system failed to associate the three interests satisfactorily and, especially, to promote the interests of workers adequately.

As I have already said, applying product contracts in agricultural cooperatives is a correct policy. That is why it has demonstrated enormous strength, stirred up a revolutionary mass movement and given rise to high economic efficiency. Even so, we still have to pay the utmost attention to correcting its shortcomings and preventing them from spreading. Since this product contract policy is new, it needs to be gradually improved. Concerning this problem, I basically approve of the part of the Ministry of Agriculture report which spells out the guidelines for improving the product contract system. We should collect the opinions of all localities, especially those of the grassroots units, make necessary corrections and then disseminate them among all areas for use as guidance. Today, I would like only to express some opinions about a number of problems you comrades brought up.

What is "blank-check" contracting and how to prevent it? As I understand it, "blank-check" contracting is giving contracts without guidelines, without allocation of production work, without production plans, without economic and technical norms and without tight control of the eight jobs. Before the introduction of product contracts, a fairly large number of cooperatives practiced "blank-check" contracting. Many production units entered into "three contracts" only to back out later. So, it is not true that "blank-check" contracts have come into being only under the product contract system. As for the way to combat "blank-check" contracting, all cooperatives must adopt production guidelines, plans and norms, establish technical standards and truly manage production work.

Some comrades have asked whether we should apply product contracts with labor groups or with workers. This, according to the spirit of Directive No 100, depends on the wishes of cooperative members. During the winter-spring crop, reality showed that contracts with labor groups accounted for only 3 percent of the cases. In the current 10th-month crop season, labor group contracts have almost completely vanished. Contracts with individual laborers provide a stronger incentive and, consequently, will bring about higher economic efficiency. Phuoc Thang I Cooperative in Nghia Binh Province has reached the conclusion that application of product contracts with large labor groups would help increase output by 8 percent, with small labor groups by 16 percent and with individual laborers by 32 percent. Vu Thang and Nguyen Xa are both progressive cooperatives of Thai Binh Province. In the recent winter-spring crop, Vu Thang, implementing contracts with labor groups, increased its rice yield by 2 quintals per hectare compared with last year, whereas Nguyen Xa, which entered into contracts with both labor groups and individual laborers, boosted its yield by 3.3 quintals per hectare. From this, we can see that contracts with laborers will bring about better economic results.

Some other comrades have also asked: For how long will we apply this system? This morning, during my visit to a cooperative on the outskirts of Nam Dinh, the comrade secretary of the village party committee asked me the same question, showing his worry that such a correct policy might be applied only for a few crop seasons. First of all, we must realize that end-product contracts with laborers constitute a progressive contractual system which is being widely applied even in countries with modern industry. As to the specific forms and methods of contracts, they may be changed if the conditions of production work, especially production tools' change. But right now, with our labor being predominantly manual, we should continue to do what we are doing and this certainly not for just a short period.

Thus, we have confirmed the total correctness of the policy of applying product contracts with workers. But we still have a lot to do in the immediate future. We must satisfactorily carry out the following tasks:

1. Continue to broaden and vigorously promote the implementation of product contracts with laborers in agricultural cooperatives and production collectives in all areas, including the mountainous areas. In the former Nam Bo provinces, after reviewing the results of the pilot projects, we must broaden the implementation of contracts in production collectives and apply this system in the new production collectives and cooperatives immediately after they are set up so as to promote the agricultural cooperativization movement.

2. Promptly overcome all shortcomings in the process of implementing product contracts and perfect contractual work in conjunction with improving all aspects of cooperative management.

3. Actively train cadres for cooperatives, especially management cadres; organize production units, and deploy a contingent of production cadres capable of carrying out contractual work.

4. Strengthen the district level so as to make it capable of guiding and managing all aspects of the activities of cooperatives and production collectives. The districts must assume the tasks of providing supplies and technical guidance, guiding mass movements and promptly correcting all errors and shortcomings committed during the process of implementing product contracts.

5. Through its actual review of the winter-spring production movement, the Ministry of Agriculture should continue to provide concrete guidance to all localities so as to help them perfect contractual work and to ensure even better results for the policy of implementing product contracts with laborers.

On behalf of the VCP Central Committee and the government, once again I commend all localities, the Ministry of Agriculture and all sectors for their active contributions to broadening the implementation of product contracts in agriculture. I also commend various propaganda organs, the press and various radio stations for their important contributions to promoting new factors, guiding the broadening of the mass movement and correctly implementing the policy of the party and the government.

PARTY ACTIVITIES AND GOVERNMENT

SRV COUNCIL OF MINISTERS RESHUFFLED AS OF 23 JANUARY 1981

Paris DOAN KET in Vietnamese 21 Feb 81 pp 1, 8

[Article by P.Q.: "Changes in the Council of Ministers"]

[Text] On the basis of a resolution passed in a previous session of the National Assembly Standing Committee, Acting President Nguyen Huu Tho on 23 January signed an order to change the organization and staff of the Council of Ministers.

According to this decision, the Ministry of Power and Coal is divided into two--the Ministry of Power and the Ministry of Mining and Coal. At the same time, the Ministry of Food is also divided into two--the Ministry of Food and the Ministry of Food Industry.

With regard to the staff, the above mentioned order discharges the following six ministers: Messrs Ho Viet Thang (former Minister of food), Tran Van Hien (Home Trade), Nguyen Thanh Binh (Water Conservancy), Do Chinh (Marine Products), Tran Kien (Forestry) and Nguyen Chan (Mining and Coal).

Following are eight newly appointed ministers: La Lam Gia (Food), Nguyen Canh Dinh (Water Conservancy), Nguyen Tien Trinh (Marine Products), Phan Xuan Dot (Forestry), Pham Khai (Power), Nguyen Chan (Mining and Coal) (DOAN KET note: Same name as that of the former minister of power and coal), Dang Viet Chau (minister at the premier's office) and Vu Dai (minister, vice chairman of the State Planning Commission).

Simultaneously, the following three ministers are appointed to new posts in the Council of Ministers:

-Mr. Tran Quynh gives up his position as vice chairman of the State Planning Commission to become vice premier;
-Mr. Vu Tuan, formerly minister at the Premier's Office, now becomes minister of food industry;
-Mr. Tran Phuong gives up his position as vice chairman of the State Planning Commission to become minister of home trade.

(These changes follow in the wake of the reshuffle of the Council of Ministers a year ago and pave the way for the appointment of a new Council of Ministers to take place in the middle of this year after the election of the Seventh National Assembly on 26 April 1981.

Most of the newly appointed ministers were formerly vice ministers--or directors of departments in some cases--and are under 50 years of age on the average (the persons giving up their functions of ministers being all over 60 years of age). The promotion of these cadres is effected in the spirit of a Political Bureau resolution on organization which was made public in late December 1980. This resolution is aimed at "effecting a profound change with the objective of strengthening leadership and management, especially in the economic field"--NHAN DAN issue of 31 December 1980. Concerning the appointment of leading cadres in particular, the Political Bureau resolution states:

"The 'promotion and demotion are necessary' motto must be applied in the assignment of cadres. It is necessary to overcome conservative and feudalist views conducive to the failure to base oneself on the political task and the failure to consider the fulfillment of one's mission as a concentrated manifestation of a cadre's qualities and capacities...

"In assigning the contingent of cadres, it is necessary to take local circumstances into consideration and to know how to coordinate qualified and capable cadres with those of different age groups, to associate industrialists and agriculturists with the intelligentsia and to combine leading cadres with managerial and specialized ones. It is necessary to boldly promote qualified and capable young cadres to posts in the production organization and also to know how to exercise management according to the socialist business method. It is necessary to upgrade deserving cadres whose promotion has been delayed by old-fashioned concepts applied in evaluating and examining cadres. The average age of members of party committees at different echelons and of responsible cadres in various commissions and sectors must be lowered gradually. Retirement must be granted to cadres who have reached or are nearing the retirement age and who are old and weak and an appropriate (treatment) policy must be promulgated...")

MEKONG DELTA PROVINCES HOLD CONFERENCE ON EMULATION

BK241502 Hanoi Domestic Service in Vietnamese 1100 GMT 23 Sep 81

[Report with portions recorded on a ceremony recently held in Can Tho City by the representatives of nine Mekong River delta provinces, pledging to fulfill the 1981 state plan]

[Text] Uncle Ho said: Emulation is patriotism and patriotism calls for emulation. During the former resistance struggles against France and the United States, our party and state constantly paid attention to the patriotic emulation movement in all fields. Presently faced with the new historic mission of simultaneously organizing and mobilizing the people to build socialism throughout the country and of strengthening the national defense capability to readily counter all aggressive forces, our party and state have increasingly concerned themselves with the emulation movement.

On 14 June 1981, the premier issued Directive No 134-CP on the organization of an emulation movement to score outstanding achievements in order to greet the fifth national party congress. In this spirit, a conference was recently held in Can Tho City by nine Mekong River delta provinces--Hau Giang, Minh Hai, Kien Giang, An Giang, Dong Thap, Cuu Long, Ben Tre, Tien Giang and Long An--pledging to fulfill the 1981 state plan under the emulation movement.

In this conference, Nguyen Tho Chan, head of the Central Committee Emulation Department, was delegated by the Council of Ministers to witness the pledge. Le Phuoc Tho, chairman of Hua Giang Provincial People's Committee, presided over the conference. The representatives of the nine Mekong delta provinces reported and analyzed the disadvantages and advantages and the achievements of their localities in implementing the state plans and targets for 1981. They all voiced their resolution to score the most outstanding achievements to greet the fifth national party congress.

(Nguyen Van Khanh), Ben Tre provincial representative, said: A seething emulation movement must be launched in Ben Tre Province among the primary production installations. Only by doing so can a large and broad emulation movement take shape.

(Nguyen Van Ngo), Kien Giang provincial representative, suggested that his province would pay attention to caring for the people's livelihood along with mobilizing the people to emulate in making the most contributions to society.

(Phan Minh Thanh), Tien Giang provincial representative, reported that the people in his province would resolve not only to fulfill the assigned plan norms but also to overfulfill the 1981 state plan norm.

After discussion, the representatives of the nine provinces unanimously agreed on the pledge to implement the emulation movement. The pledge pointed out the five specific objectives to be attained until the end of 1981. Following are the scope of these five objectives read by Le Phuoc Tho, representative of Hau Giang Province.

[Begin recording] We will accelerate agricultural production, fulfill and overfulfill the 1981 state plan norms for rice, secondary food crops and animal raising. As for industrial production and handicrafts in the present difficult situation, all efforts should be made to vigorously step up the manufacture of industrial products to support agriculture and serve consumers and to immediately fulfill and overfulfill the 1981 state plan for gross production value.

Concerning the development of the armed forces and the consolidation of national defense, we will continue to strongly step up the emulation movement to enhance the armed forces' combat strength and readiness and the all-people's system of national defense. First of all, all localities should ensure the fulfillment of recruiting plan norms and the induction programs, meeting their qualitative and quantitative targets on a timely basis.

As regards distribution and circulation, we must care for the livelihood of the people, cadres, workers and civil servants. We must satisfactorily implement all the directives and resolutions of the party and government on distribution and circulation in order to care for the people, cadres, workers and civil servants. Immediate attention must be paid to ensuring the fulfillment of all the 1981 state plan norms for collecting and purchasing grain--including taxes and debts. We must strive to deliver all agricultural products to the state and distribute staple commodities to cadres, workers and civil servants in the state-prescribed rations and as scheduled.

With respect to exports and imports, all localities will correctly and scrupulously implement the Council of Ministers' related directives and guidances, by avoiding the violation of the prescribed regulations and by ensuring the fulfillment of delivery norms for exports and foreign exchange. [end recording]

Before concluding the conference, Nguyen Tho Chan, head of the Central Committee Emulation Department, made a statement. He said: [begin recording] In general, your emulation objectives are very specific. They must be implemented. I sincerely wish you--the people, cadres and combatants of your nine provinces--successes in the emulation movement. All people and associations should score the most outstanding achievements to greet the fifth congress of our beloved party. May the emulation movement of the nine provinces turn out many outstanding emulation fighters! May you record much progress and many successes! [end recording]

MISMANAGEMENT OF OIL SUPPLY CRITICIZED

Hanoi HANOI MOI in Vietnamese 2 Jul 81 p 4

[Article by Nguoi Xay Dung [Builder] in "A Story a Day" Column" "Where Did the Oil Go?"]

[Text] "Oil is out of stock" and "Oil supply has not yet arrived" are the words often seen in front of fuel shop counters. Everyone of us knows that the state has met with great difficulties in importing and transporting this commodity in order to supply it to the people. The persons in charge of oil supply must certainly have a better understanding of this situation in order to prevent oil "leakage" in the distribution process. It is regretable, however, that there have been instances of oil "going out" only but never "coming in" so that it would be useless to wait for it! The municipal workers' inspection team has just revealed that in the first 5 months of this year, the Fuel Corporation has "released" over 20,000 liters of oil through "internal distribution," "distribution to friendly agencies" and sale at the price of...oil use in lighting! After checking the document files, it has found that the corporation had allowed someone to buy more than 200 liters on a "priority" basis merely on presentation of a handwritten statement and that it had even permitted some individuals to buy twice. Noteworthy is the fact that, in May, 67 members of the corporation personnel bought oil in such a manner on a per capita average of 16 kgs. On 29 May 1981, 29 persons in the corporation bought 464 kgs.

Notice No 198-KH and Official Letter No 237-TN/KH of the Trade Service has already stipulated the way in which oil used in lighting should be sold. Instead of quoting these documents, Nguoi Xay Dung wishes only to suggest that the Fuel Corporation leaders review the situation to see how erroneously they have implemented the instructions and that they take urgent measures to compel the wrongdoers to return the stray (?) oil to the state. It is hoped that the high-level organ in the cop corporation will certainly examine this case and deal with it appropriately.

EDITORIAL PROMOTES SUBWARD MARKETING COOPERATIVES

Hanoi HANOI MOI in Vietnamese 11 Jul 81 p 1

[Editorial: "Developing Marketing Cooperatives in Subwards"]

[Text] Implementing municipal policy, many subwards have set up marketing cooperatives to serve the people in the ward. To date, some subward marketing cooperatives have succeeded in recruiting hundreds of members, nearly 600 shares of stock have generated a moderately large capital, and members have held a congress to elect management boards and control boards and to discuss and pass motions on operational orientation and open a bank account.

Nevertheless, the work of organizing marketing cooperatives in urban Hanoi has in general proceeded at too slow a pace. Out of the 32 subwards that decided to set up marketing cooperatives, only 17 have succeeded (about 20 percent of the total number of subwards in the city). The business activities of many cooperatives are still poor; the orientation of some is incorrect. Management remains disorganized and is not in line with established practices.

With the commercial service function and responsibility entrusted to it, and with an operational orientation toward the grassroots level, the subward marketing cooperative fills an important role in the grassroots organization of life for the people. Now that the drive is on everywhere to improve distribution, circulation, and market management, it is all the more important that subward marketing cooperatives develop their role of promoting public sector commerce and help stabilize market prices and prevent speculators from raising prices. Moreover, since subwards have been tasked with managing production teams and cottage industry workers in a move to decentralize management in the city, as resolved at the recently held first session of the 8th term of the People's Congress, the subward marketing cooperative can and must still render service to production, distribution, and circulation.

Thus, the growth and simultaneous consolidation of the marketing cooperative in the subward is an objective and immediate requirement that demands direct and efficient guidance from wards and from the city, along with positive efforts of each ward's people to take part.

Those cooperatives that have been established must be consolidated in organization, invigorated in awareness and perspective of service, operational orientation, and direction of management and working style. Those places lacking cooperatives need encouragement, through propaganda drives, to establish cooperatives; they also need organizational groundwork. The practical experience of subward marketing cooperatives with successful business operations, especially in the area of providing two meals and providing services, must be widely publicized as basic data for study and application. This will help unify organization, system, policy, and management of business operations; it will also prevent the appearance of certain negative characteristics regarding capital and goods in the operational cycle.

The formation of a management board in marketing cooperatives on the subward level is an indispensable key to their correct guidance and direction toward service operations and management practice that is consistent with the nature of the collective economic organization of socialist commerce of the working people.

JULY 1981 FOOD SALES LISTED

Hanoi HANOI MOI in Vietnamese 8 Jul 81 p 4

[Article: "Sales of Food in July 1981"]

[Text] 1) Meat, edible oil or fat

Square #1 and Square #2 values:

V coupons: 2.5 kg. Cl coupons: 2 kg. C coupons: 1.5 kg. D: 8 kg. IV: 1.2 kg. III: 9 kg. II and d: 4 kg. N: .1 kg.

2) Fish:

Square #10 and #11. C, Cl, and V coupons: 2 kg. Square 10, cadre and worker coupons of other categories: 1 kg.

3) Fish sauce and other sauces:

a) Fish sauce: Square #7, C and Cl coupons: 1 liter. Other cadre and worker coupons and TR coupons: .5 liters.

b) Other sauces: Square #8. Cadre and worker coupons (except C coupons): .5 liters.

4) Monosodium glutamate: Square #3. Cl and C coupons: 40 g; other cadre and worker coupons: 20 g.

5) Powdered soup: Square #12. All cadre and worker coupons, 50 g each. (Note: powdered soup will be sold at the new retail price.)

6) Salt: Square #9, all cadre and worker coupons, and Square #3, TR and N coupons: .5 kg per coupon.

Unused rations: Unused June ration of meat, fat, fish, fish sauce, and other sauces are valid until 15 July.

DEVELOPMENT OF ECONOMIC ZONES REVIEWED

OW300434 Hanoi VNA in English 0336 GMT 30 Sep 81

[Text] Hanoi, VNA, September 30--The development of economic zones in Vietnam is reviewed by Phan Dinh Phung, master-of-sciences in agronomy, in a letter to readers of the pictorial magazine VIETNAM. The article reads:

Great changes have taken place in Vietnam since the victory of the August revolution in 1945, notably the profound changes in the countryside. Agricultural transformation has resulted in collectivization. Moreover, the peasants who, for thousands of years, were used to living in their own villages, are moving to new places to build their homes.

Land reclamation, though practiced steadily for many years, has been extended on an unheard-of scale since the liberation of southern Vietnam. It falls into context with the setting up of new economic zones and the redistribution of the workforce and the population as a whole. The work is of paramount importance, but its execution is rendered difficult by a psychological factor: the peasants' attachment to their ancestral villages. There can be no coercion, of course. There can be only motivation: to make the peasants realise the benefit to both society and themselves.

In the 1976-1980 five-year plan a total of 252,000 families with more than 1.5 million persons moved from over-populated areas in the Red River delta, the coastal provinces, and crowded cities, settled down in distant areas, where they opened up the land for cultivation, setting up more than 200 state farms specializing in food and industrial crops, and almost 400 cooperatives and thousands of production collectives or teams.

Of the 700,000 newly-reclaimed hectares, 560,000 hectares--or 80 percent--have been put to use: 380,000 hectares are grown with food crops, the rest used for long-term industrial plants such as rubber, coffee, tea, etc., for short-term ones, and for fruit. In five years, an equivalent or 800,000 tons of paddy was delivered to the state.

Obviously land reclamation is part of the overall plan for economic development and social transformation. Millions of people, indeed, are building for themselves a new life which, among other amenities, is graced by 200,000 new houses, 700 schools, 400 creches and kindergartens, 22 hospitals, 400 medical stations, 300 stores, 1,500 kilometres of roads, 220 bridges and culverts, 130 dams, and 30 pumping stations.

State investments were in the form of 1.4 billion dong, hundreds of thousands of tons of food, tens of thousands of tons of cement and construction steel, and thousands of machines, not to mention investments made by fraternal countries under co-operation plans, and humanitarian aid amounting to millions of U.S. dollars.

The new lands, transformed by the hand of hard-working peasants, have all the characteristics of the traditional village, while being an expression of their builders' hope in the future. In Thanh Hoa Province, 40,222 more hectares have been opened, of which 35,588 have been put under crops. The new fields gave 22,000 tons of paddy, 4,267 tons of maize, and 32,000 tons of sweet potatoes and manioc in 1980. Darlac Province, with its 28,475 hectares, produced 520,000 tons of food in the same year.

Worthy of note are the farms run by former inhabitants of Hanoi, such as the one in Lam Dong, Song Be, Bao Loc and other areas in the south. On the Lam Vien Plateau a "new Hanoi" has been licked into shape by almost 2,000 families from the national capital. Already there are two plantations, 12 agroforest co-operatives, eight factories, and many public facilities. In three years the settlers cleared 3,200 hectares and produced 4,000 tons of food. A plan is afoot to build on Lam Vien the biggest dairy farm in the whole country.

Encouragement is given to private production alongside the development of the national and collective economies, through the allotment of land for private production.

The benefit of the new economic zones is clear. They have helped solve to a certain degree the food problem and further step up crop specialization, which has been carried out for some time in the north, and which is just beginning in the south. The setting up of new economic zones also channels manpower to where it is much needed, and peoples desert regions, thus facilitating the spread of culture and civilization.

The achievements of the past five years, however, were very modest, considering the need for as many as four million more hectares and the resettlement of dozens of millions of people. The next five-year plan, therefore, provides for the resettlement of 1 million to 1.5 million work-age people and the opening of 700,000 hectares for about 100 state farms, mostly specialising in rice and industrial crops.

This is a great deal of work, which requires still greater effort. Yet, the experiences gleaned in the past will certainly facilitate the execution of this task, which is aimed at solving both long term and immediate problems.

BRIEFS

VINH PHU RESETTLEMENT--To date 810 families of Dao tribesmen from various mountainous districts of Vinh Phu Province have moved to low land for resettlement. They have established 30 agricultural cooperatives and production teams and gradually stabilized their daily life. The province has invested 1.5 million dong in clearing virgin land, building 52 small water conservancy projects, schools, sanitation posts and trade shops for those people. Thanks to the assistance provided by the state, 34 groups of Dao have resettled in areas of low land over the past 5 years. [BK280639 Hanoi Domestic Service in Vietnamese 2300 GMT 20 Sep 81 BK]

DAC LAC RESETTLEMENT--Along with helping more than 6,600 families of the people of various nationalities to resettle in various areas, Dac Lac Province has also cleared more than 22,000 ha of cultivated land, built 44 small water conservancy projects, 117 kilometers of roads, 15 schools, 4 grocery shops and thousands of living quarters for these resettlers. In the first 6 months of this year, the province helped 13 mountainous villages claim a vast area of virgin land for cultivation. [Hanoi Domestic Service in Vietnamese 2300 GMT 22 Sep 81 BK]

ILLEGAL GRAIN STOCKS CONFISCATED--While intensifying market management, Hai Ba Trung Precinct recently conducted an inspection of grain stocks. From 15 June to 1 July, the various subwards inspected 80 percent of the total number of households and retrieved for the state 61,916 kgs of grain distributed contrary to regulations. According to statistics compiled as of 1 July, [grain distribution] norms were not readjusted though throughout the precinct there were 1,351 persons who had outgrown their age groups, 452 persons who had changed their occupations and 510 persons who had long been absent. REPORTS ON AGRICULTURAL DEVELOPMENTS

BK010745 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Sep 81

[Review of agricultural news for past 10 days]

[Summary] "During the last 10 days of September various northern provinces and cities turned to harvesting the early 10th-month rice crop so as to free the fields for the cultivation of the winter crop.

"To date they have harvested more than 20,000 hectares, or nearly 3 times as much as they did in the same period last year. Specifically, Hai Hung Province has reaped almost 7,000 hectares; Ha Bac Province, more than 6,000 hectares; and Thanh Hoa Province, more than 2,000 hectares.

"Owing to the effects of typhoon No 4 and the destruction caused by leafhoppers, the yield of the early 10th-month rice already harvested was not high. In Ha Bac Province, it was 17 quintals per hectare; in Haiphong City, 20 quintals per hectare, and in Thanh Hoa Province, 18 quintals per hectare.

"The main 10th-month rice crop in all localities is currently in bud. However, large rice areas in the Bac Bo delta and midlands as well as in Thanh Hoa Province have been hit by a shortage of water caused by the recent scarcity of rain and prolonged sunshine. According to the Ministry of Agriculture, about 100,000 hectares of 10th-month rice are being affected by drought and urgently need to be watered if the rice plants are to bud and grow ears in favorable conditions. In the provinces from the former zone 4 southward, recent heavy rainfall has helped sharply reduce the drought-affected areas, but some ricefields in low-lying areas are becoming waterlogged.

"More noteworthy is the fact that the areas of the 10th-month rice crop ravaged by harmful insects in various northern provinces seem to be increasing. According to the vegetation protection department, from early October onward third-generation brown leafhoppers will continue to hatch, and stem borers, leaf rollers and army worms will also develop strongly. These insects will cause the most serious damage toward mid-October. Therefore, all localities must continue their pest control efforts.

"The southern provinces have to date grown 1.94 million hectares of 10th-month rice, fulfilling more than 94 percent of the target. Many provinces have completed the transplanting of 10th-month rice and shifted to planting the early winter-spring rice crop. Dac Lac, Gia Lai-cong Tum, Dong Thap, Tay Ninh, Hau Giang, Lam Dong and Minh Hai have fulfilled 90 percent of their rice transplanting plan. Meanwhile, some other provinces such as Thuan Hai, Phu Khanh and Ho Chi Minh City, still working at a slow pace, have transplanted only 60-70 percent of their rice area.

"The most favorable time for transplanting 10th-month rice in the southern provinces is now already over. Those localities which have not yet transplanted all their rice area should work faster so as to fulfill their rice planting plan. Those provinces which have fulfilled their plan should continue to plant more rice if they can so as to increase their rice area. All localities must strive to complete the transplanting of 10th-month rice within the first week of October."

Various localities are now harvesting fall and planting winter-spring vegetables and subsidiary food crops. To date, the northern provinces and cities have grown nearly 20,000 hectares of winter crops, including more than 8,000 hectares of sweet potatoes, more than 1,000 hectares of corn and more than 5,000 hectares of vegetables and beans.

As all localities are lacking potato seeds to plant on all the areas planned, they should promptly shift to growing other winter crops on the land not yet cultivated.

All localities should concentrate on satisfactorily carrying out the following tasks:

The northern provinces should quickly harvest the early 10th-month rice, immediately plant early winter crops, concentrate efforts on saving the main 10th-month rice crop from drought and continue to exterminate harmful insects, especially brown leafhoppers, stem borers and leaf rollers. They should strive to complete the planting of early winter crops such as soybeans, sweet potatoes and corn and various kinds of vegetables and beans within mid-October.

The southern provinces should concentrate on completing the transplanting of 10th-month rice, harvesting all summer-fall rice and satisfactorily fulfilling their grain obligations to the state. In addition, they should prepare enough seeds for the winter-spring season, protect 10th-month rice from waterlogging and drought and take good care of the rice already transplanted.

In animal husbandry, all localities should continue to apply product contracts with individual laborers, stamp out all epizootic outbreaks and promptly vaccinate domestic animals and poultry against summer-winter diseases.

AGRICULTURE

WATER CONSERVATION FOR CROPS URGED

OW011651 Hanoi Domestic Service in Vietnamese 1430 GMT 30 Sep 81

[Text] As reported by the Ministry of Water Conservancy, at present the typhoon and flashflood period is in progress in former zone-4 provinces and in the central coastal provinces while the typhoon and flood period is over in the lowland, midland and northern mountainous provinces.

This year, the amount of rainfall in a number of mountainous localities is greater than in previous years but that in the lowland and midland localities for May-September 1981 is 70-80 percent of the average amount of rainfall in previous years and two-thirds of the amount during the same period last year. In general, the water level in rivers, lakes and reservoirs is lower than during the same period last year. As a result of this water and rainfall situation, tens of thousands of hectares of land have not been irrigated due to water shortage, although the 1981 10th-month crop in some areas has been slightly affected by waterlogging. At present, more than 10,000 out of the 100,000 hectares of the 10th-month rice which need to be irrigated are severely affected by drought.

The Ministry of Water Conservancy urges the localities to insure enough water for the riceplants which are in the blossoming or budding stages, to take preventive measures against harmful insects and crop pests, to protect the 10th-month rice crop until harvest time, to concentrate on properly protecting all irrigation networks, to properly manage and use all available water sources, to strive to save enough water for the 1981 winter crop and the 1981-82 5th month-spring crop, to inspect and grasp the water situation in all reservoirs, to insure a balance between water capacity and the volume of winter and 5th month-spring crop production, and to conserve water for irrigation and drought control purposes.

AGRICULTURE

HANOI SURVEYS AGRICULTURE FOR PAST 10 DAYS

BK211100 Hanoi Domestic Service in Vietnamese 2300 GMT 21 Sep 81

[Review of agricultural news for the past 10 days]

[Summary] Northern provinces over the past 10 days continued eradicating harmful insects and accelerating the harvest of the early 10th-month rice. Areas ravaged by brown leafhoppers were reduced, but areas destroyed by leaf rollers and stem borers were on the increase. To date, almost 400,000 ha of ricefields have been ravaged by insects, of which more than 120,000 ha have been sprayed with insecticide. Besides, due to less rainfall in the midlands provinces and the Red River delta, more than 100,000 ha of 10th-month rice were faced with water shortage.

"Southern provinces have planted more than 1.7 million ha of 10th-month rice, achieving more than 80 percent of the plan norms, or over 80,000 ha more than the same period last year. An Giang Province overfulfilled plan norms by 3 percent, while Gia Lai-cong Tum, Dac Lac, Dong Thap and Tay Ninh provinces achieved from 90 to 95 percent of their plan norms."

The agricultural season for 10th-month rice in southern provinces is almost over, but transplanting work has not been completed. This was due to drought in some provinces such as Nghia Binh, Ben Tre, Tien Giang, Long An, Phu Khanh and Thuan Hai; and floods in Dong Thap, An Giang and Dong Nai provinces which have submerged more than 30,000 ha of ricefields.

"Along with transplanting and caring for the 10th-month rice, northern provinces have begun harvesting the early 10th-month rice. To date, Thanh Hoa Province has harvested more than 600 ha, Hai Hung, 300 ha; Ha Nam Ninh, 500 ha; Ha Bac, 600 ha and Cao Bang more than 2,000 ha."

To date southern provinces have harvested more than 300,000 ha of summer-fall rice, representing more than 60 percent of the transplanted area. The pace was quicker than last year, but compared to the areas with ripening rice, it was still slow. Localities must, therefore, strive to accelerate harvesting to avoid damage which may be caused by typhoons and rains.

Concerning vegetables and subsidiary crops, the nation to date has planted almost 500,000 ha, representing a similar acreage in the same period last year. Southern provinces have completed their planned area and many localities are harvesting sweet potatoes and soybeans, while northern provinces are preparing seeds for the winter crop.

Due to natural calamities, planned allocation of rice varieties and seeds for the winter crops, especially potatoes and soybeans are still not sufficient; fertilizer is in short supply. The best period for the winter crop is from now to 15 October. Localities must, therefore, harvest the early 10th-month rice quickly and plant the winter crops as soon as possible in order to complete the planned acreage.

In the days ahead, localities must concentrate efforts on carrying out satisfactorily the following main tasks:

--northern provinces must strive to eradicate harmful insects to protect the 10th-month rice, quickly harvest the early 10th-month rice and promptly begin on winter crop cultivation in order to ensure crop schedules and complete the planned area.

--southern provinces must quickly complete the 10th-month rice acreage, care for the transplanted areas satisfactorily, accelerate the harvest of summer-fall rice and fulfill their grain obligations, and prepare sufficient seeds and material for the coming winter-spring crop.

"Regarding animal husbandry, various provinces are still experiencing livestock and poultry epidemics. Efforts, therefore, must be concentrated on eradicating contagious diseases, especially anthrax in cattle in northern provinces, and foot and mouth disease in southern provinces. Hog raising must be expanded and the product-based contractual system must be applied in animal husbandry, especially in hog raising to increase the hog population.

NGUYEN CONG BINH DISCUSSES AGRICULTURE IN TIEN GIANG

BK270937 Hanoi Domestic Service in Vietnamese 0400 GMT 25 Sep 81

["Excerpts" from statement by Nguyen Cong Binh, chairman of the Tien Giang Provincial People's Committee, in a recent interview with a Voice of Vietnam correspondent on agricultural production, grain collection, agricultural transformation, and guidelines for economic development in his province--recorded]

[Summary] "Despite the fact that it is one of the six most populous provinces throughout the country, Tien Giang has only 236,400 hectares of natural land--of which the rice area accounts for more than 120,000 hectares or 50.7 percent--and an average cultivated land per capita of 923 square meters." In addition, there are 32,000 hectares of orchards and more than 40,000 hectares of virgin land in the province still uncultivated due to various reasons.

Over the past 5 years, from 1976 to 1980, the local party organization and people have concentrated efforts on overcoming all difficulties, including such natural calamities as drought, flash floods and brown leafhoppers. "As a result, in [year indistinct], our province was able to expand its crop area by 32,500 hectares or 16.6 percent over 1976--an average increase of nearly 8,125 hectares or 4.56 percent per year--with rice accounting for more than 18,640 hectares or 10.9 percent, and to increase its total grain output by 145,000 tons compared to late 1975."

In late 1978, despite the decrease in grain collection due to heavy losses caused by natural calamities, Tien Giang was still able to deliver 22,000 tons of paddy--some 68 percent of the grain collection norm entrusted to it--to the central government to help solve the common problem facing the entire country.

"In 1980, our province collected as many as 84,590 tons of paddy, producing an increase of more than 24,263 tons over 1976. Particularly since the harvest of the 1980-81 10th-month rice crop and winter-spring rice crop, it has collected another 76,891 tons, overfulfilling the planned norm by 17 percent."

With the help of the central government, since July 1977, our province has begun to set up cooperatives on a trial basis in (Tan Hoi) village, Cai Lay District. However, due to inexperience in various aspects, we have encountered difficulties in general.

"Since implementing party central committee directive No 93 our province has established 12 cooperatives, with an average of 200 hectares of cultivated land each, and 160 production collectives, with an average of 25 to more than 30 hectares of cultivated land each. Particularly during the first 6 months of 1981, by continuing to implement directive No 93, we have been able to set up two or three more cooperatives." Although weaknesses still exist in the managerial work of these cooperatives and production collectives, their production output and their members' living standards have been improved in general.

"To date, some 3,496 production solidarity teams have also been established in our province. As many as 803 of these teams are now able to operate satisfactorily."

Implementing party Central Committee secretariat directive No 100, we have applied product contracts on a trial basis in the (Luong Binh) Cooperative, Cho Moi District, and have obtained good initial results, enabling the laborers to increase their incomes.

In an effort to develop its economy, Tien Giang is striving to turn nearly 40,000 hectares of virgin land into an industrial crop area along with planting upland rice on more than 32,000 hectares.

Our local party organization and people are determined to gradually turn Tien Giang into a comprehensive agro-industrial province in the Mekong River delta region.

AGRICULTURE

PATTERN FOR HOG, CATTLE, POULTRY RAISING EXPOUNDED

Hanoi TAP CHI HOAT DONG KHOA HOC in Vietnamese No 4, Apr 81 pp 7-10

[Article by Nguyen Van Thuong: "Develop Animal Husbandry in a Rational Framework"]

(Editorial Staff's Note: In its February 1981 issue, pages 7 to 11, TAP CHI HOAT DONG KHOA HOC published two different views on the problem of building a rational development pattern for animal husbandry and expressed the hope that further articles would be contributed by scientists and economists to continue the debate. We have received the following article from Nguyen Van Thuong, director of the Animal Husbandry Institute of the Ministry of Agriculture. With thanks to the author, we have the honor to present this article to our readers.)

[Text] Providing feed on a stable basis is one of the decisive factors that ensure the development of animal husbandry. In recent years, we have encountered numberous difficulties in obtaining grain so that the sources of food--especially ground feed reserved for animal husbandry, including hog raising--have been very limited. This situation has greatly affected the supply of food products necessary to the people's life.

Concerning the need to develop animal husbandry despite the lack of ground feed and to contribute to solving the food problem, there has been the opinion that the animal husbandry pattern should be modified and that the raising of buffalos and oxen--a species of domestic animals that live mainly on green roughage--should be upgraded in place of hog raising to strike a balance between animal husbandry and crop cultivation with the aim of solving the food problem in our country.

At present, shortage of grain is not a problem which confronts Vietnam alone; in developing animal husbandry, many countries have thought of finding some domestic animal which feeds on grass only but quickly yields products in plenty. In recent years, people in South American countries such as Venezuela and Colombia have discovered a species of water pig which lives in marshy land and feeds on various types of grass. Each year, this pig species brings forth 1.2 to 1.8 litters each of 4 to 6 piglets and if reared for slaughter, it will yield 50 to 75.8 kgs of meat [per head]; no matter whether it is fed merely on grass or ground feed, it has a higher percentage of feed transformation [into food for human consumption] than rabbits and sheep. If fed on 100 percent of grass, the feed transformation rate will be 50.5 percent among water pigs and only 39.5 and 49.1 percent among rabbits and sheep respectively. If fed on 100 percent ground feed, the feed transformation rate will clearly rise to 79.8 and 70.6 percent among rabbits and sheep respectively but will still be highest--84.7 percent, for water pigs. It follows that if ground feed is added to feed domestic animals which live mainly on grass, they will reproduce and grow quicker and their production coefficient will be higher. The same applies to dairy and beef cattle; to obtain a large quantity of milk and meat from them, we must add ground feed to their diet when it exceeds 100 volume units. On reckoning, we have found that to obtain 1 kg of milk, it is necessary to feed 0.3 to 0.5 unit of ground feed and, to obtain an increase of 1 kg in weight in the raising of beef cattle, it is necessary to provide about 8.5 to 10 feed units of which 20 to 30 percent must be constituted by starchy fodder.

Specialists from many countries have also advised us to pay attention to the raising of buffalos and cattle because these animals do not require much feed made of grain. This is a new question and the many opinions expressed must be exchanged in earnest to arrive at a sound decision. To share in the examination of this question, we are going to present some views as follows:

From an in-depth point of view, stepping up animal husbandry is to thoroughly exploit the biological potentials of cattle and poultry and to use them as "live enterprises" to transform agro-industrial products into highly nutritious ones such as meat, eggs and milk which are essential to human life. On the other hand, according to the law on the production and reproduction characteristics of each species of cattle and poultry, the main objective of hog raising is to obtain pork, that of poultry raising is to obtain eggs and, to have milk and dairy products, it is necessary to intensify cattle raising. Our country possesses not only oxen but also buffalos--the latter constituting a tropical advantage even though our cattle is not yet a dairy one.

Development of poultry and cattle raising is aimed at obtaining eggs, milk and, of course, an additional large quantity of meat. However, in the first stage of animal husbandry development, not many countries in the world have solved their food problem through developing cattle raising except for Cuba which has a traditional and prosperous agro-industrial sector based on sugarcane production.

A glance at the history of animal husbandry development aimed at solving the food problem in a number of European countries with an advanced animal husbandry sector has shown us that they have first paid attention to developing hog raising and to simultaneously producing many crossbred species of hog. Only after obtaining a steady output of pork and after a sufficient quantity of pork has been supplied to their people's daily consumption do these countries begin to partly reduce pork production and to shift to the industrial production of chicken and beef. Up to the years between 1970 and 1975 of this century, out of 18 North European countries, 10 had a per capita rate of pork consumption higher than that of beef consumption; as for the remaining 8 countries where the per capital rate of beef consumption was higher [than that of pork consumption], pork production continued to occupy a ratio of 40 to 45 percent while the beef production ratio was only about 50 percent at the maximum.

According to this common rule, for many years in our country the yearly per capita rate of pork consumption has been about 65 to 70 percent and that of beef consumption has not exceeded the 13-15 percent level even though the total herd of cattle has amounted to as much as 38 to 40 percent of the total yearly herd of hogs. The reason is that buffalos and oxen are raised in our country mainly for their draft power. But the principal reason is that since the ancient times our people have raised hogs to obtain meat, that the pork preservation method is simple, that pork can be preserved for a long period of time and that hogs produce also lard. Lard consumption meets the most pressing customary need in the life of our people who have not yet got into the habit of using vegetable oil in place of lard like the people of the European countries.

On the other hand, when considering the reproduction characteristics and productive capacities of cattle and poultry, we find that the reproduction coefficient of poultry takes the lead with 0.8, followed by 0.28 for rabbits and 0.12 for hogs. The reproduction coefficient of buffalos and oxen is lowest, only between 0.04 and 0.045. The yearly meat production capacities of domestic animals and poultry are directly correlated to their reproduction capacities: Each year, a sow gives 1.5 to 1.6 litters of 10 piglets each; with a ratio of 60 to 70 percent for the piglets that are raised and that survive, minus a ratio of 30 to 40 percent for the piglets kept for breeding purposes, the yearly output is 250 to 300 kgs of meat on the hoof. If crossbred hogs are raised, a sow can produce 450 to 500 kgs [of meat on the hoof per year] while a buffalo or cow that gives offsprings can produce only between 80 and 120 kgs of meat on the hoof per year because a buffalo or cow gives birth to only 2 calves every 3 years; when slaughtered after 24 months of raising, each ox calf yields only 150 to 160 kgs and each buffalo calf only 220 to 250 kgs of live weight.

According to the instructions issued by the central level to the agricultural sector, the primary goal of our economic development is to solve the problem of grain and food. To organize animal husbandry according to a rational pattern, it is necessary to firmly grasp the laws on the reproduction, growth and development of cattle and poultry and to rely on the land potentials and natural conditions of each region to achieve this goal soon. It is thus clear that, to rapidly obtain plenty of food, we must pay attention to developing those species of domestic animals that have great reproduction capacities and a high yearly rotation rate; these species usually have a high reproduction coefficient and include hogs, rabbits and poultry (chickens, ducks and geese).

Based on a knowledge of the biological laws governing the reproduction, growth and development of cattle and poultry and on the specific conditions, circumstances and needs, we are of the opinion that, to rapidly obtain a [sufficient] quantity of food for the time being, it is necessary to pay attention to the need to concentrate efforts on creating all conditions for stepping up hog raising in all three sectors--with importance to be attached to animal husbandry by the household sector because the latter is now raising about 90 percent of the total hog herd--; to the need to intensify the raising of ducks, with special importance to be attached to developing the seasonal raising of ducks in the two basins of the Red and Mekong Rivers deltas; and to the need to satisfactorily carry out the veterinary task to eradicate the Newcastle's disease and Pasteurellosis to save the chicken flock raised by the people from these yearly epidemics. By doing so, we will soon be able to solve the food problem to positvely help improve our meals. To say so does not mean to neglect the development of cattle raising; on the contrary, we must steadily develop cattle raising to have every year about 2 million buffalos and oxen to provide the draft power; at the same time, we must make immediate and active preparations for breeds and material-technical bases if we want to obtain beef and milk from cattle in 15 or 20 years. To firmly develop cattle raising, we must not rely entirely on natural pastures including those on hillsides because 1 hectare of these natural pastures can produce only 5 to 7 tons of grass per year which is enough to feed only 0.5 buffalo or cow; therefore, it is necessary to reserve land for intensive grass cultivation in order to have 1 grass-grown hectare feed three or four buffalos or oxen. The research made by the Animal Husbandry Institute into the situation of pastures has demonstrated that 12 to 15 tons of stable manure and 300 to 500 kgs of nitrogenous sulfate fertilizer must be applied to [each hectare of] land in the midlands and mountainous region--which was formerly grown with manioc and corn and which is now shifted to the cultivation of grass to feed cattle--if we want to cut grass four to six times a year and to obtain a yearly yield of about 60 tons of grass per hectare. "If "elephant" grass [cor voi] is intensively grown on a sandy gray soil, it is necessary to apply 15 to 20 tons of stable manure as the main fertilizer and to add 120 to 200 [kgs of nitrate fertilizer] if we want to obtain 80 tons of grass per year from this soil and possibly 120 tons on the average from alluvial or mature soil. However, we must not hope to grow elephant grass as the main crop to have 1 grass-grown hectare feed 15 head of cattle. In this connection, we must consider the practical fact that the lands that can be opened for grass cultivation are being cleared by our people for the growing of corn, potato, cassava and other subsidiary food crops.

The production experiences gained over the past years by cattle raising state farms have demonstrated that setting land aside for intensive grass cultivation to feed dairy cattle is a very necessary move with realistic economic effects. Proof of this can be found in the result of the raising of Dutch and Cuban dairy cows at the Moc Chau state farm and the Sao Do [Red Star] dairy cow center. However, if, in growing pastures, we lack mowers and fail to set up enough fences to graze cattle by rotation, the cultivated grass will not yield 50 to 60 tons per hectare per year but only about 20 to 25 tons per hectare. Under the present conditions and circumstances in our country, we are not yet able to invest enough capital in clearing millions of hectares of land and turning them into pastures in order to upgrade cattle raising to a principle animal husbandry activity because at the present cost it will be necessary to invest an initial capital of 1,500 to 2,000 dong in opening 1 hectare of new land and transforming it into pastures.

To discuss this subject matter in such a vein does not mean that we neither think it advisable nor have the conditions to develop cattle raising; on the contrary, we must boldly invest capital and eagerly apply technical progress to gradually transform our cattle herd into one which produces beef and milk; but it still is not feasible for us to do this by relying on our ability to use green roughage for cattle to shift the direction of animal husbandry so as to solve the food problem in our country through this method within the framework of the next 5-year plans.

The ultimate objective of the task of establishing an animal husbandry pattern is to satisfactorily solve the grain and food problem. Toward this end, our opinion is that, considering the specific conditions and circumstances in our country and with a view to formulating a rational pattern of animal husbandry, we must examine this question as follows: Wherever conditions are favorable for raising any species of domestic animals, it is wise to develop the raising of that species there, bearing in mind the need to comprehensively develop animal husbandry to exploit and use the natural, land and labor potentials of each region while paying attention to developing those species of domestic animals with great reproduction capacities and quick rotation possibilities so that abundant sources of food products may be rapidly created to meet the subsistence needs of our people. We must not invoke the current serious difficulties caused by the grain shortage as a reason for shifting meat production from hog raising--the principal animal husbandry activity--to the raising of buffalos and oxen and upgrading this branch to the main-force level because if we do so, our scant sources of food products will experience a more serious shortage in the next 10 to 15 years.

More specifically, we suggest that the deltas including those situated in the midlands and mountainous regions pay attention to developing the raising of hogs and ducts to quickly obtain food products essential to life and fertilizers necessary to crops cultivation, that they do as much as possible to step up cattle raising with the immediate objective of securing enough draft power for their own use and providing part of the necessary fertilizers for cultivation purposes and that they simultaneously prepare the prerequisites to enable us to take advantage of the progress in agricultural mechanization to transform cattle raising [for draft power] in these regions into cattle raising for beef and dairy products. Coastal and riverside areas must consider it especially important to develop duck breeding which is a tropical advantage of our country. In the midlands and mountainous regions including the Central Highlands, it is necessary to actively build up pastures, to coordinate this activity with forestry, to intensify the raising of breeding cattle to supply draft power to other areas and to combine this task with the raising of rabbits and geese to positively help solve the meat and milk problem to meet the subsistence needs of the people. All possibilities must also be fully used to develop hog raising, especially hog raising by individual households.

Chickens can be raised by the people everywhere, especially in the midlands and mountainous regions provided the veterinary sector supplies enough veterinary medicines and the sectors and levels concerned satisfactorily carry out animal husbandry sanitation and immunizations.

To implement the abovementioned pattern, certain suitable methods must be defined for animal husbandry: In the field of hog raising, raising by individual households must constitute the main force but attention must still be paid to developing hog raising in three sectors--state (farms at the district level), collective and cooperative members' households--which will form a structure in which breeding hogs farms at the district level together with a number of advanced collective animal husbandry farms will establish a level-2 breeding network to raise sows to obtain breeding hogs which will be supplied to other collective hog raising farms and to cooperative members' households who raise commercial sows to produce pork. In this case, district farms will act as district-level material-technical bases to enable agricultural organs in districts to guide the task of securing breeding animals within the district scope. Concerning cattle raising in the deltas, it is necessary to establish collective cattle raising and to combine it with household cattle raising into a structure; but in the mountainous regions, it is not absolutely necessary to set up collective animal husbandry farms since the state-operated sector (state farms and centers) will directly associate with the cooperative members' households into a structure. This working method is very indispensable to the organization of the raising of beef cattle, especially dairy cattle, because if it is applied, each peasant family in a cooperative may raise a dairy cow or buffalo according to the ardent wish of the party and state leading comrades. This method can also be applied to the raising of rabbits and chickens. As for the raising of ducks, it may be organized into two or three sectors to be combined into a structure according to regional conditions and circumstances; however, the task of producing breeding ducks in large numbers and in time for seasonal raising must be assumed by the state-operated sector and requires capital investment by the state; where collective farms are entrusted with the raising of breeding ducks to produce and supply ducklings for seasonal raising, the state will sponsor under the form of joint business because the raising of breeding ducks all the year round requires a fixed supply of paddy and ground feed.

We think that it will be relatively rational to arrange such an animal husbandry pattern and territorial division because this method will conform not only to the laws of nature and biology but also to the traditional animal husbandry customs of our people and because it will make it possible to fully exploit and use the potentials of each region without creating erroneous tendencies and unnecessary disruptions to the implementation organization of various sectors and localities at all levels.

For several years, the development of animal husbandry has failed to meet requirements and has sometimes seemed stagnant or retrogressive in many regions. There are many reasons for this situation but the decisive ones are the availability of feed, the economic policy and the organizational structure--the latter being of an encompassing nature because whether the sources of feed exist or not, whether these sources can be concentrated for the benefit of the animal husbandry sector and whether the formulated policy stimulates or hampers production, production, etc, is mostly decided by man's outlook, be it subjective or objective.

AGRICULTURE

BRIEFS

LONG AN DROUGHT--Due to the prolonged drought, more than 22,000 ha of summer-fall rice in Long An Province are faced with water shortage. The province has provided various districts with a large quantity of fertilizer and insecticide and has assigned cadres and technicians to rural areas to help peasants combat drought. Thanks to these efforts, Long An has to date planted almost 90,000 ha of 10th-month rice, achieving more than 70 percent of the plan norms. [BL280639 Hanoi Domestic Service in Vietnamese 2300 GMT 23 Sep 81 BK]

TIEN GIANG RICE--As of 18 September, Tien Giang Province had planted more than 32,200 ha of 10th-month rice, achieving more than 92 percent of plan norms. Harmful insects have appeared in some areas and are ravaging almost 2,000 ha of 10th-month rice. Go Cong District is faced with water shortage and peasants are striving to improve the irrigation system to bring sufficient water to ricefields. [Hanoi Domestic Service in Vietnamese 2300 GMT 23 Sep 81 BK]

BEN TRE DROUGHT--Due to the recent less rainfalls many 10th-month rice areas in Ben Tre Province have been faced with water shortage. Various districts such as Ba Tri, Binh Dai and Giong Trom have mobilized tens of thousands of workers to drain canals and ditches to bring water to the ricefields. Thanks to great efforts by the local people, Thanh Phu District has saved 6,000 ha of 10th-month rice from being damaged by the drought. [Hanoi Domestic Service in Vietnamese 0400 GMT 23 Sep 81 BK]

AGRICULTURAL PLANNING AID--The Agricultural Programming and Planning Institute of the Ministry of Agriculture over the past years has helped 37 provinces and cities in carrying out the task of zoning, programming and planning for agriculture. To date plans have been formulated for 71 specialized and new economic zones. The Soviet Union and other fraternal countries have provided assistance to a number of major industrial crop areas such as rubber, coffee, cotton and sugar cane plantations for carrying out their plans. Over the past 5 years the institute has helped 426 districts and 400 agricultural cooperatives throughout the country in formulating agricultural programs and plans. Thanks to the efforts by the institute, about 1 million ha of virgin land have been claimed in various state farms and 32 million ha have been inspected and mapped out for further evaluation. [Hanoi Domestic Service in Vietnamese 1100 GMT 22 Sep 81 BK]

NGHE TINH WATERLOGGING--During the past 10 days Nghe Tinh Province experienced very heavy downpours. The rains provided sufficient water to almost 60,000 ha of 10th-month rice, but caused waterlogging to more than 10,000 ha of rice and 2,000 ha of sweet potatoes in low-lying areas. The province has assigned cadres and workers to various localities to help prevent ricefields from being damaged by the floods. [Hanoi Domestic Service in Vietnamese 1100 GMT 22 Sep 81 BK]

HO CHI MINH CITY RICE--To date Ho Chi Minh City has planted 46,457 ha of 10th-month rice, achieving 80 percent of the plan norms. Cu Chi and Nha Be rural districts achieved from 93 to 95 percent of their plan norms. Due to prolonged drought, the pace of transplanting was slower than that of the same period last year. [Hanoi Domestic Service in Vietnamese 1100 GMT 23 Sep 81 BK]

LONG AN 10TH-MONTH RICE--As of 16 September, Long An Province had planted 87,754 ha of 10th-month rice, achieving almost 80 percent of the plan norms. Due to prolonged drought the pace of transplanting was slower than that of the same period last year. The province has assigned cadres to various districts to help peasants improve irrigation system to bring sufficient water to ricefields. [Hanoi Domestic Service in Vietnamese 1100 GMT 25 Sep 81 BK]

HAU GIANG 10TH-MONTH RICE--As of 20 September, Hau Giang Province had planted 30,000 ha of 10th-month rice, achieving almost 93 percent of the plan norms. Some areas have been ravaged by harmful insects and the province has sent technical cadres to various districts with almost 40 tons of insecticide and spraying equipment. Thanks to the province's prompt actions and the local peasants' great efforts, harmful insects were eradicated and so damage to ricefields was minimized. [Hanoi Domestic Service in Vietnamese 1100 GMT 25 Sep 81 BK]

CONSTRUCTION OF 11 PIERS AT HAIPHONG PORT COMPLETED

Hanoi NHAN DAN in Vietnamese 18 Aug 81 p 2

[Text] Haiphong Port has commissioned all its 11 piers after receiving an additional new one--Pier No 3. This pier is the last one in the plan to transform and expand the port with the Soviet aid in construction ever since the wartime years. In late 1967, workers of pile driving shop No 1 drove the first steel-plated pile into the bed of the Cam River. On 26 December 1980, workers of the same ship completed the fixing of the last pile, closing up the steel-plated wall of all the 11 piers. If put together, the 1,221 piles will have a total length equal to that of the Haiphong-Hanoi road. Construction workers have dredged up 370,000 cubic meters of mud, transported and used 1.233 million cubic meters of sand and stone, fabricated thousands of cubic meters of concrete and installed dozens of cranes with stands [caanf caaur chaan dqees]. Cadres and workers have made many innovations to rationalize production, to improve technique and to accelerate construction. Power shovels and cranes have been used instead of dredgers to dredge up mud. The handling of stones to and from barges at both ends of piers has been completely mechanized. Snatch-buckets [gauf ngoamj] have been fixed to cranes to scoop up river water to wash gravel and to sprinkle water before road-rollers start pressing down gravel on the field surface. The most rational method of installing cranes with stands has been chosen. Since the fourth quarter of 1980, the enterprise has coordinated technical measures with the broad application of the system of contract wages, product-based wages and rewards for excess of construction speed, thus substantially raising productivity in construction and materials transportation as compared with the past.

Overcoming all challenges during two wars of aggression waged by the U.S. aggressors and surmounting difficulties and shortages in the past years, the enterprise has built at the Haiphong Port 75 projects including 11 piers with a 1,700-meter length, 5 warehouses, 3 large storage fields, 5 transformer stations and 11 lighthouses and has installed dozens of cranes with stands of various types, thereby increasing the port capacity to receive and remove cargos.

The port has recently completed the building of a vehicle station and has commissioned it. The station has 45 cargo elevator vehicles [xe naang hangf] which are electrically operated and are handy, light and mobile. The network of workshops to provide on-the-spot maintenance, inspection and repair for the station has also been built completely. Once commissioned and properly maintained, these projects will contribute to raising the Haiphong Port's capacity to receive and remove cargos.

LEATHER FACTORY ANNOUNCES PRICE OFFERS FOR ANIMAL HIDES

Hanoi HANOI MOI in Vietnamese 10 Jul 81 p 4

[Article: "Purchase of Water Buffaloes, Cattle, Horses Hides"]

[Text] The Thuy Khue Leather Factory (#151, Thuy Khue Street) needs to buy untreated water buffalo hides, cowhide, and horsehide. Prices are as follows:

Untreated cowhide:

Type A: 15 dong/kg. Type B: 12 dong/kg. Type C: 7.5 dong/kg.

Untreated horsehide:

DEVELOPMENT OF RIVER TRANSPORT IN COUNTRY DESCRIBED

OW231625 Hanoi VNA in English 1452 GMT 23 Sep 81

[Text] Hanoi, 23 Sep (VNA)--Vietnam's river transport service, with a total barge freight of 600,000 tonnes and a capacity of 98,000 hps, has become the biggest and most economic transport force in the country.

From a small fleet with a barge freight of about 1,350 tonnes and a capacity of 450 h.p.s. in 1946 about one year after the liberation of northern Vietnam, the service has rapidly developed in various localities. Besides several centrally-run enterprises, it has built from one to three state or joint state-private enterprises in almost all the cities and provinces. The local river transport service in Ha Nam Ninh and Thai Binh provinces, Haiphong and Ho Chi Minh City has at its disposal a total freight of up to 20,000 tonnes. In some provinces, each riverine district has from one to three river transport cooperatives.

The river transport service undertakes 40 per cent of the country's total tonnage and 44 per cent of its tonnes per kilometre.

Last year the service's goods transport and tonnage per kilometre were respectively up by 48 percent and 44 percent over 1975 while passenger transport and passenger per kilometre increased respectively by 36 per cent and 19 percent.

River fleets have become the main forces transporting coal from the mines to thermal-power plants and industrial centres. Many huge machines and sets of equipment, each weighing up to 100 tonnes, have been ferried to major construction sites by special barges. More than 35 percent of imported goods have been conveyed from various ports in Haiphong, Quang Ninh and Ho Chi Minh City to different localities by river fleets.

The river transport service has made great efforts in modernizing its cargo boats and barges. Former motorized wooden boats, each with a capacity of only from 40 to 50 hps, have been gradually replaced by steel pushing boats and steel barge each with a total freight of up to 800 tonnes and a capacity of 135, 200 or 225 hps.

Many technical innovations have been introduced to help produce specialized machinery such as sand and stain spraying machines and conveyor systems and convert oil cranes into electric ones. Reinforced concrete boats have been built while major barge repairs have been done in river shipyards, river wharves in Hanoi and Nam Dinh have been broadened and equipped with modern machines. Thus almost 80 per cent of the cargo handling work there are now mechanized, river beds have also often been dredged.

Many shipyards have been built and are assuming more than 80 per cent of the repair work for the transport service.

With more than 41,000 kilometres of river way throughout the country, the river transport service is striving to increase its annual goods and passenger transport from 12.5 percent to 18.5 percent in the five-year state plan ending in 1985.

WARD COMMITTEES ARRANGE JOBS FOR 34 PERCENT OF VETERANS

Hanoi HANOI MOI in Vietnamese 9 Jul 81 pp 1,4

[Article: "Ba Dinh and Hoan Kiem Wards Welcome Home Soldiers Who Have Completed Their Duty and Arrange Jobs for Them"]

[Text] On 7 July, the People's Committee and Military Draft Council of Hoan Kiem Ward held a reception to welcome more than 480 men and women soldiers who have returned at the end of their enlistments.

The People's Committee of the ward directed government agencies and sectors, like the military committee and the bureaus of labor, food, trade and public security, to concentrate on quickly completing their processing.

In the first 6 months of 1981, the ward arranged introductions to agencies and enterprises for more than 50 percent of the returnees. Many were selected for vocational training in a number of allied countries. Continuing to properly fulfill the army's rear area policies, the People's Committee of the ward assigned responsibilities to authorities in subwards to coordinate with agencies, enterprises, and cooperatives to arrange jobs and rapidly stabilize living for the veterans.

Before that, on 4 July, the Ba Dinh Ward People's Committee had held a reception for veterans returning to the locality.

In a spirit of endeavoring to make the welcome home for the returning men and women as warm as the farewell bid them as sons and daughters setting out in the service of Fatherland defense, the People's Committee and all sectors and mass organizations directed 15 subwards and specialized agencies--such as public security, military, trade, and food agencies--to carry out a number of necessary actions.

The military and public security agencies endeavored to complete household registration and other processing for the young men and women within 1 week's time. Military command cadres of the ward worked overtime to receive personnel records and solve the necessary formalities and documentation requirements.

The ward met with 131 agencies and enterprises to disseminate policy themes and requested registration and placement of the veterans.

As of this moment, work has been arranged for 34 percent of all the soldiers who have returned. More than 20 percent of them have gone to vocational schools or duty in foreign countries.

At the reception, the People's Committee of the ward praised the efforts of the soldiers.

Sergeant Pham Van Cuong, in the name of all the soldiers, pledged to spread the traditions of the army and uphold the qualities of the soldier while contributing in a positive way to building up the economy and to defense in the locality.

HANOI YOUTHS LEAVE FOR NEW ECONOMIC ZONES

Hanoi HANOI MOI in Vietnamese 4 Jul 81 p 1, 4

[Article by PV: "Youths in Hoan Kiem and Dong Da Precincts Volunteer to Build New Economic Zones"]

[Text] From the beginning of July, Hoan Kiem Precinct will intensify the people's movement to go to Lam Dong to build new economic zones. Within the month of July, the precinct will help 50 young volunteers to join the General Unit of youths going to build a new homeland. The unit members will be supplied once with daily necessities (such as clothes, blankets, mosquito nets, hats and rucksacks) and the persons assigned to responsible functions (but not on the state rolls) will receive a monthly allowance of between 8 and 20 dong according to their functions. Students having graduated from elementary and middle schools who volunteer to go will receive 100 percent of the initial salary and their practical training period will be reduced by one-third. After fulfilling their mission in 3 years, these male and female students will be given jobs or allowed to resume study. Applications by cadres and technical employees (including students of elementary and middle schools and colleges) who are assigned by the administration to the General Unit of Youths or who volunteer to work in it will be considered and accepted; (those who are already on the rolls will be considered as being moved for a fixed period of time and will receive regional transfer allowances together with the initial equipment supply).

From June 1976 to end of June 1981, Hoan Kiem Precinct organized the sending of 60 households including 327 people and 222 laborers to Lam Dong to build a new homeland. Many of these families have now become much more prosperous than when they were in their former native land; they are the families of Dinh Van Nguu (Le Thanh Tong Street), Do Trong Chinh (Hang Ma Street), Huynh Ngan (Hang Bo Street), Dang Viet Dieu (Phuc Tan Riverside Field), Le Quang Han (Chuong Duong Do Street) and Nguyen Huu Phung (Hang Buom Street). Many of these families have earned each an income of 15,000 to 20,000 per year by working and producing in the new economic zones.

On the afternoon of 2 July, the Youth Union, the People's Committee and the Committee for the New Economic Zones in Dong Da Precinct organized a meeting with nearly 30 youths who volunterred to go to Lam Dong to build new economic zones.

Recently, the Precinct Youth Union has launched a movement throughout the Union chapter to emulate in producing and saving money to buy working tools and recreation devices for the benefit of the young volunteers' company. The women's and old men's organizations and the small industry and handicraft cooperatives have also bought gifts to the male and female volunteers. The subwards have set up information and propaganda stations at the principal crossroads. The Youth Union chapters have organized exchanges of views to help youths fully realize their obligation and responsibility for socialist construction. As of 28 June, throughout the precinct there have been 30 youths who had volunteered to join the young volunteers' company.

At the meeting, many male and female volunteers expressed their views on the assault role of youths and their ardent desire to contribute to national construction. A number of them voiced their worries about the organization of the daily activities, study and labor performance of youths in the new economic zones and expressed their wish that these activities would be appropriate to the youths. They also proposed that the Youth Union in the municipality and precincts pay attention to providing the young volunteers with the equipment necessary to their material and mental life.

PLANNED PARENTHOOD MOVEMENT ACCELERATED

Hanoi NHAN DAN in Vietnamese 16 Aug 81 p 1

[Text] VNA--On 12 August, the Council of Ministers issued Directive No 29/HDBT on the intensification of the planned parenthood movement during the 5-year period between 1981 and 1985. After citing the results obtained in the past 5 years--such as the lowering of the population growth rate from 3.2 percent in 1976 down to 2.23 percent in 1980 and the achievement of a population growth rate of less than 1.5 percent in 1,022 villages and 14 districts, the directive pointed out that the planned parenthood movement has not yet been conducted strongly and evenly among the masses and that the propaganda and motivation task still lacks width and depth. The Council of Minsters requests all sectors at all levels to continue to carry on the planned parenthood movement vigorously and evenly throughout the country with the following objectives: Fewer children, spaced-out childbirths and motivating newly married couples to delay the birth of the first child. It is advisable that each couple has only two children, that these children are born at a 5-year interval and that the woman should give birth only after reaching full physiological development--that is, at the age of 22 at best. By 1985, the nationwide average population growth rate must be lowered to 1.7 percent--to less than 1.5 percent in North Vietnam and under 1.9 in South Vietnam. The ratio of child-bearing female workers and office employees must be only 8 percent of the total number of female workers and employees in each unit.

To achieve the above mentioned objectives, it is necessary to implement not only the measures indicated in Directive No 265/CP of 19 October 1978 of the Council of Ministers but also the following ones:

-After consulting the Vietnam Women's Union and the Ho Chi Minh Communist Youth Union Central Committee, the State Planning Commission and the Ministry of Public Health will ask the Council of Ministers to promulgate a yearly norm of population growth for each locality.

-The chairmen of people's committees at all levels and the heads of various sectors, organs, armed forces units and production, business and professional units will be responsible for the implementation of the population growth norms assigned to their respective localities, units and installations.

After presiding over meetings with the Vietnam Confederation of Trade Unions, the Ministries of Labor and Finance and the Vietnam Women's Union to study this problem, the Ministry of Public Health will report to the Council of Ministers and ask it to decide--or may decide within its own competence--on the systems aimed at encouraging cadres and manual and office workers to satisfactorily achieve the objectives of the planned parenthood movement by granting them rewards drawn from the social security fund and the enterprises' welfare fund, and will also propose admendments to the relevant systems of allowances and distribution which have so far limited the effectiveness of the planned parenthood movement.

With regard to the collective economic sector, the Ministry of Public Health will preside over meetings with the Ministry of Agriculture, the Collectivized Peasants' Union, the Cooperative Management Committee and the Vietnam Women's Union to study and apply appropriate systems of allowances, commendations and rewards to encourage cooperative membes to implement planned parenthood.

Committees for the promotion of planned parenthood in localities and installations must be strengthened and streamlined and must include all the essential components and carry out realistic activities.

Propaganda and education must be considered very important to make every man and woman clearly understand the short and long-term benefit of planned parenthood and deeply and consciously realize the need to apply planned parenthood.

The movement must be associated with all tasks of each sector and locality, with the execution of the production development plan, with the distribution and circulation [of goods], with the life of each family and with the theme of the movement to build new-culture families.

With special regard to certain thinly populated nationalities which need to develop their own population, it is necessary to intensively aid them from all points of view to enable them to propagate, to raise their children properly and to prevent the state of "children being born but dying at an early age"--all that with a view to increasing the population of these nationalities.

IMPROVEMENT OF SCIENTIFIC-TECHNICAL EQUIPMENT REPAIRS UNDERLINED

Hanoi TAP CHI HOAT DONG KHOA HOC in Vietnamese No 4, Apr 81 pp 2-3 & 10

[Article by Nguyen Vinh Tuan: "Need and Capability to Repair Scientific and Technical Equipment"]

[Text] Over the past 5 years, our capability to provide materials and equipment for scientific and technical (S&T) activities has met only less than 50 percent of our needs. The key S&T programs of the state for the 5-year period extending from 1981 to 1985 require a better maintenance of materials and equipment. Along with the importation and domestic production of S&T materials and equipment, the problem of repairing S&T equipment has become a pressing one.

Characteristics of Equipment and Need for Repair

Generally speaking, the equipment now at our disposal is multiform and multifarious and is related, for example, to electricity, electronics, precision machines, optics, spectra and physical chemistry analyses. Most of this equipment is of an ordinary type. Meanwhile, we have begun to acquire modern types of equipment such as electronic microscopes, laser equipment, magnetic resonators and mass spectroscopes.

Importation--Our S&T equipment is imported through different channels such as foreign trade organs, aid by other countries and international organizations. A number of equipment has been given by scientists in other countries or brought home by our scientific-technical cadres on their return from abroad. For these reasons, our equipment is the product of many companies worldwide, mostly from the socialist countries and partly from the capitalist ones. Many types of equipment were manufactured prior to 1970 and a number of them are no longer produced by those countries.

Distribution--Of the total number of instruments and equipment, 62 percent is now used by production installations, 23 percent by research and testing organs and 15 percent by various schools. The majority of modern equipment is found in areas where research organs and colleges are located. Equipment is highly concentrated in Hanoi and Ho Chi Minh Cities and the adjacent areas. The number of certain types of equipment for special use such as in land surveying and public health is relatively large.

State of equipment--The breakdown rate averages 30 to 40 percent in which the electric, electronic, optical and spectral equipment occupies a high percentage. Following are the causes of this state of equipment:

--Shortcomings in the process of transportation and packing (a number of instruments including the domestically produced ones are out of order though they have just been delivered to production installations for use).

--Harmful effects of the tropical climate and the assembly and installation conditions such as inadequate housing, lack of air conditioners and humidifiers and unsteady supply of electricity and water. Added to this are the low standards of technical cadres and workers or their lack of responsibility in operating and maintaining equipment.

--On the other hand, serious shortcomings still exist in organizing the supply of spare parts and the repair to S&T equipment. If this problem is protracted, the equipment breakdown percentage will continue to rise and substantial waste will be incurred.

In short, there is a pressing need to repair the equipment used in S&T activities. A network of repair installations must be set up to coordinate repairs with the organization of maintenance and production of materials and equipment. It is especially important to quickly solve the problem of supplying the necessary spare parts.

Our Present Capability to Repair Equipment

In view of such an urgent need, a number of ministries and localities have organized a repair service for their respective sectors and areas.

The public health sector has begun to set up installations to repair special-use equipment including a Public Health Equipment Repair Enterprise subordinate to the Supply Department of the Ministry of Public Health as well as a number of supply-repair bureaus and stations subordinate to public health services and major hospitals.

The Vietnam Institute of Science has organized two scientific equipment repair installations in the capital city of Hanoi and in Ho Chi Minh City to repair certain types of scientific equipment and to produce them by the single unit. In particular, the Hanoi workshop of the Vietnam Institute of Science is an installation endowed with relatively adequate equipment.

The Ministries of Building, Communications and Water Conservancy have set up installations to repair land survey equipment and to produce certain equipment used in explorations and research. Of these installations, the Optical Engineering Workshop of the Ministry of Communications is one which has been able to repair a noteworthy amount of land survey equipment in recent years.

At the Geology Department, the State Land Survey and Mapping Department and the Meteorology and Hydrology General Department have also set up installations to repair and produce on a small scale the equipment used in basic surveys. The

Post and Telegraph General Department has a workshop to repair special-use equipment, signal and liaison equipment and some types of electronic measuring devices.

The Scientific-Technical Supply Corporation subordinate to the Ministry of Supply has--in conjunction with the Services Center including an optical equipment repair section and a warranty station--begun to repair and maintain scientific equipment, especially the optical-spectral one imported from the GDR.

Repair and service installations are emerging in Hanoi and Ho Chi Minh City. In addition, most research and testing agencies and schools also urgently need to set up maintenance and repair shops.

The overall situation in the abovementioned installations is marked by a lack of the necessary special adjustment and machining equipment and especially by a shortage of raw materials and spare parts. A contingent of skillful and experienced technical cadres and workers including those trained abroad is being formed but is still insufficient to meet demands; moreover, they are scattered and a number of them are no longer engaged in the repair task.

In general, with the existing technical cadres and workers' forces, we can repair ordinary equipment such as various types of ordinary microscopes and equipment used in theoretical mechanics, land surveys and physical chemistry analyses. Concerning complex equipment such as modern optical and spectral analytic machines, aerial photograph measuring and mapping devices, etc, we can only do minor repairs. Yet, most of these repair activities consist merely in replacing out-of-order parts by the available spare parts or in removing parts from some equipment and fixing them on another (a method which, in many cases, seems "uneconomical" but which must be applied to provide equipment for the necessary research and testing). Our ability to manufacture spare parts on our own is still very limited and this is also true with the Vietnam Institute of Science even though this institute has been equipped rather sufficiently.

What guideline must we follow in organizing the repair of S&T equipment in the near future?

On the basis of fully using and developing the capacities of the existing installations and with a view to providing service for many sectors, efforts must be concentrated on strengthening certain key installations and each type of their equipment. The duty of these installations is to repair S&T equipment by relying on their ability to manufacture by themselves a number of essential spare parts--especially those which can hardly be imported or cannot be imported at all--and to associate repairs with the production of S&T equipment by the single unit or in small series so as to fully use the potentials of labor, equipment and raw materials.

Concerning certain types of special-use equipment which already exist in relatively large quantities such as those used in land surveying, geological and mineral exploration, medical research, diagnosis and treatment and the electric and electronic equipment used by the information sector and so forth--, positive measures must be taken to concentrate the forces of technical cadres and workers and equipment on building houses and workshops with the objective of setting up a installation to take care of each of these types of equipment for the benefit of the entire sector which uses this equipment.

On the other hand, mobile repair teams must also be organized. Bearing in mind the principal duty to provide maintenance and minor repairs to equipment, it is necessary to coordinate efforts to repair the various types of equipment one by one and to strengthen the network of establishments and workshops designed to repair and maintain the S&T equipment of research organs, production installations, schools and hospitals.

Major Problems Requiring Solution

Organizing an adequate supply of raw materials and spare parts necessary to the repair task is still the thorniest yet unresolved problem. To meet the needs of the equipment repair installations, it is, therefore, suggested that, in the near future, the state increase the percentage of capital invested in importing raw materials and spare parts, that it rapidly and gradually improve the organization of supplies and that it send technical and professional cadres abroad to directly study the sources of goods and to urge on the execution of orders for goods.

It is proposed that the state and the organs concerned pay attention to the following tasks:

--Invest capital in importing certain types of special-use machining equipment and adjusting equipment necessary to strengthen the existing important repair installations; simultaneously invest capital in building a number of new installations to shape up a nationwide network of S&T equipment repair installations and further strengthen and expand a number of installations to provide warranty and maintenance services for the large quantity of equipment which Vietnam has imported from other countries such as the Soviet Union, GDR and Hungary.

--Creat the necessary conditions to preserve equipment during the packing and transportation process as well as in warehouses and assembly locations, especially with regard to expensive and highly effective sophisticated precision equipment.

--Organize the domestic training of technical cadres and workers in operating and repairing equipment and, at the same time, intensively send technical cadres and workers skillful and experienced in this field to other countries in order to raise their standards and improve their skills.

--Encourage the development of equipment repairs by studying and promptly promulgating rational systems and policies concerning cash payment, cumulative responsibilities, allowances for noxious and harmful exposures and so forth.

SECURITY FORCES OF THIEU YEN DISTRICT STRENGTHENED

Hanoi QUAN DOI NHAN DAN in Vietnamese 28 Aug 81 p 2

[Article by Van Bong: "Militia and Self-Defense Forces of Thieu Yen and the Mission of Maintaining Security"]

[Text] Thieu Yen, in Thanh Hoa Province,is a lowland district with some of its area in the piedmont region which consists of 42 villages with more than 200 population centers. Thieu Yen, six villages of which have catholic churches, is a district that is fairly homogeneous with regard to its religions nature and political-social situation.

Many people in the province, and from other provinces, pass through Thieu Yen District, which is situated between the Ma and Chu rivers and is traversed by a road from Ninh Binh and the western region to Thanh Hoa. Along the banks of the two rivers there are 15 large and small wharves.Boats and rafts coming downstream from the mountain-region districts and coming upstream from the coastal area often drop anchor and their crews stay in the villages along the banks or at the wharves. A road extends from the Kieu ferry slip to the Van ferry slip, nearly the entire length of the district, and every day nearly 100 vehicles pass by. For decades the Quan Lao market (also called the Ban market) has been one of the largest markets in the province. The market is open every fifth day. Every market day there are from 4,000 to 6,000 people who come from the coastal area and the mountain area with large quantities of consumer goods, forestry products, agricultural products, and marine products with high economic value.

Those characteristics considerably affect population management and registration, of both permanent residents and temporary residents, and the monitoring of the local order and security situation.

Between the end of 1979 and the first part of this year, due to economic difficulties, and because of the plots and sabotage acts of the enemy, at times the order and security situation in Thieu Yen District became complicated. In some villages, such as Dinh Tang, Dinh Hung, Yen Thinh, and Thieu Duong, and the Kieu market area, hooligans assembled in groups to drink and gamble and organize the stealing of property belonging to the state, the collective, and the people. At night, on some deserted roads passers-by were robbed of their property and money. Speculators and market price manipulators were always present at the Quan Lao, Van, and Kieu markets and a number of other places, which exerted an adverse affect on social order and safety and added to the difficulties in the lives of the people.

In view of that situation, at the beginning of 1981 the Thieu Yen district party committee met and issued a special resolution to strengthen the task of maintaining security in the district. Implementing that resolution, the district People's Committee convened a meeting on the task of maintaining security, evaluated the strengths and weaknesses, pointed out the reasons, and discussed ways to improve the quality of the task of maintaining order and security. What should be done to develop the role of the militia and self-defense forces in the mission of maintaining order and security? That question was posed and discussed seethingly at the meeting. The villages of Thieu Quang, Thieu Ngoc, Yen Tam, and Dinh Tuong achieved good results in military training for the militia, but incidents regarding order and security still occurred, and the militia detachments did not truly play a hard-core role in that task.

First of all, in order to strengthen the role of the militia and self-defense forces in the task of maintaining security, the district military organ guided the villages in building and consolidating strong platoons and squads, and evaluated the quality of the activities of the militia and self-defense forces on the basis of results in maintaining security. The militia unit of Dinh Tan Village and the self-defense unit of the Thong Nhat state farm were selected to be the test units for carrying out that task. During the first 6 months of 1981 the district military and security organs sent 98 cadres to more than 60 base-level units to guide and oversee the security maintenance activities of the militia and self-defense units. On the basis of the experiences of the test units, at the end of March 1981 Thieu Yen District carried out a preliminary recapitulation of experiences in order to unify guidance and unify the methods for carrying out that task throughout the district.

From the preliminary recapitulations to draw from experiences in the villages and the self-defense bases, it can be seen that wherever the militia and self-defense forces cooperate closely with the security teams and truly play a hard-core role in the task of maintaining order and security, political and criminal offenses are held to a minimum. The base-level militia and self-defense units not only serve as the hard-core in production and in combat-readiness training, but also must participate continuously and positively in maintaining political security, and social order and safety, in the locality and in the production bases, and in protecting the organ. The district military organ and the public security organ continually exchange opinions and discuss and unify plans to cooperate in defending key areas and the district as a whole. The cadres of the district military organ go to the base level to guide and oversee the implementation of plans to maintain security, while also organizing the militia and self-defense units to mobilize the masses to positively participate in maintaining order and security.

In the past, when cadres in charge of training and developing the base level went to the villages and organs they unually concentrated only on development and training. In past years, guidance of the fulfillment of development and training plans were usually separated from the results of the task of maintaining security. Therefore, there occurred distortions in the development and consolidation of self-defense forces. A number of base-level units only emphasized training in the techniques of firing weapons and throwing grenades, and did not pay attention to methods of using technical and tactical skills in mission of defending the locality. One village military cadre said, "The village public security units and the security teams in the production units are responsible for robberies and stealing in the villages."

That is a mistaken view, for it fails to take into consideration the close relationship between the militia and self-defense forces and the security forces in maintaining safety in the hamlets. In one instance, a neighbor cried out that he was being robbed but a militiaman who had just returned from night maneuvers and had a K44 gun did nothing, thinking that the public security forces had responsibility. Thus the robber escaped.

In order to develop the hard-core role of the militia and self-defense forces in maintaining order and security, 72 percent of the village security sections and organ and enterprise defense sections have been strengthened, with the participation of the militia and self-defense commanders. In Dinh Cong Village, the commanders of 55 of the more than 60 people's security teams are skilled members of the village militia unit. In the past, Dinh Hung was a village that was weak with regard to maintaining security. During the first 6 months of 1981, because it knew how to organize, guide, and mobilize the militia in maintaining order and security, crimes declined by 40 percent in Dinh Hung in comparison to the same period last year. In the villages of Dinh Tuong, Quy Loc, Dinh Tan, and Thieu Hung, every week the militia squads hold a meeting and every month the village military command cadres and the security section meet to review the security maintenance task and decide which aspects were not being carried out well, in order to discuss more effective ways to organize implementation. In the past, at the Thong Nhat state farm there often occurred thievery of property belonging to the state farm, the cadres, and the workers. The self-defense detachments usually were concerned only with practicing marksmanship, grenade throwing, and tactics, and seldon participated in protecting the state farm and its organs. But recently the state farm's self-defense detachments have cooperated closely with the defense units, continually patrol and guard according to a fixed schedule, and go on unscheduled patrols to defend the production areas and the organs. All members of the self-defense detachments of the production units are members of the mobile defensive unit. During the first 6 months of 1981, the self-defense units of the Thong Nhat state farm have contributed to uncovering, stopping, and making arrests in, 27 instances of the stealing of property belonging to the state farm, the cadres, and the workers.

Enabling all members of militia and self-defense forces to positively participate in maintaining order and security is not an easy task. During the recent period, Thieu Yen District has taken appropriate steps and has begun to create a good transformation and develop the hard-core role of the militia and self-defense units in that task. The actual situation has shown that political security and social order and safety can be maintained if there is the positive participation of all forces and people in the locality, in which the militia and self-defense units must truly serve as the hard core. The party committees and governmental administrations of the villages, the production bases, and the sector organs in Thieu Yen are continuing to gain experience in order to more strongly develop the role of the militia and self-defense units in the security task.

AGENT OF CHINESE ARRESTED IN BORDER AREA

Hanoi QUAN DOI NHAN DAN in Vietnamese 28 Aug 81 p 2

[Article by Vu Manh Tuong: "Stories of Security Maintenance: a Letter From the Other Side of the Border"]

[Text] Le Van T, commander of a border defense post, was sitting in his office when he heard someone knocking on the door. He set aside his papers and went to open the door and greet his visitor.

When the door opened he immediately recognized the person behind the unit duty officer. She was Ly Thi Chung, a cadre from village M. He happily invited her in. Looking into her deep-set eyes, he asked, "Why do you look so sad today? Is something wrong?" Ly Thi Chung slightly bowed her head and her face hardened. A moment later she said, "I've come to recommend that the border defense post apply stern measures toward the village chairman, Lu Khai Chao. He is no longer any good, for he has betrayed the people of my hamlet. He accidentally dropped a letter from the Beijing reactionaries at the door of the Village People's Committee office. Someone from the village picked it up. Now, no one in the village has any confidence in him. Here is the letter."

The post commander took the letter from Chung's hand. It had been sent from Tung Cang (in China). In precise handwriting it said, "I have received your report. The upper echelon praised it, and you will receive a big reward. There will be instructions later about the plan to request arms aid, organize forces to create disturbances, and set up a 'double agent' governmental administration. In the immediate future, you must be very careful in recruiting people for your organization, and you must not be impetuous. Before someone is selected you must check out their personal history to prevent supporters of the other side from infiltrating."

After Ly Thi Chung left, the commander of the border defense post thought, "How could this strange story have happened? No! Village chairman Lu Khai Chao could not be such a person."

Having lived in that border area for more than 20 years, T knew a lot about Lu Khai Chao. In the 1960's Chao, along with the border defense troops, endured hunger and thirst to annihilate the bandits. Chao led a platoon which struck deeply to Cong Troi and Quan Ba to open the way for our forces to come in and annihilate the bandits in the Dong Van area. Recently, there have been eight instances of similar letters being sent in the border area.

The post commander and the members of the border defense reconnaissance unit met to analyze and evaluate the local situation. Everyone reached the conclusion that "At present, in the area for which the post is responsible there is an organization members of which surreptitiously cross the border to receive letters and psychological warfare goods in order to create internal division in the border defense zone and cause the local people to lose faith in the local cadres.

According to the plan that was drafted, the reconnaissance unit members spread out to the villages and hamlets along the border to keep abreast of changes in the situation and gradually, along with the local governmental administration, rapidly stabilize the people's thinking. They arranged for the people to study the maintenance of security and the creation of new-culture families. After studying, everyone could clearly realize the insidious nature of the enemy, and many people boldly denounced the bad elements who illegally cross the border to peick up goods and letters in order to help the reactionary Beijing clique. After narrowing down the suspects the reconnaissance unit members, on the basis of information supplied by the people, concluded that the person most worthy of attention was Vang A Senh. He had often illegally crossed the border and had been bribed by the Chinese reactionaries. Once Senh brought reactionary leaflets back to the village but was caught red-handed by the border defense troops before he could spread them. Although he was educated and assisted by the cadres and people of the hamlet, he refused to change. Recently, the border defense reconnaissance forces discovered in Senh's house many psywar goods and reactionary letters to be sent to some of our cadres. He dropped those letters in public places in order to spread suspicion and carry out an "internal sabotage" scheme

Was Vang A Senh the key link in the chain? Under the guidance of the post commander, the reconnaissance troops carried out an in-depth investigation, collected evidence, and cast light on the surreptitions activities of Vang A Senh.

After carefully analyzing the situation, we decided to closely monitor Vang A Senh.

At dusk on that day, as usual Senh, on the day he had an appointment to meet with his cohorts, strapped a knife to his side, shouldered a weapon, and set out in the direction of the Then Pa jungle. When he arrived at the edge of the jungle he stopped and looked around. Seeing nothing suspicious, he went up to a large tree and picked up a package. At that time, two border defense troops an two militiamen of hamlet N arrested him and confiscated his package.

At the border defense post Senh, confronted with the evidence, had to reveal the people whom he often met to obtain the anonymous letters and psywar goods, including the letter sent to village chairman Khai Chao in hopes of separating the cadres from the people. But they were defeated. The border defense reconnaissance troops, with the cooperation and help of the local ethnic peoples, rapidly traced the whole network the enemy had created in our border defense area in order to carry out sabotage plots and disturb order and security in the border area.

MURDERERS OF ILLEGAL EMIGRES GIVEN DEATH SENTENCE

Ho Chi Minh City TIN SANG in Vietnamese 13 May 81 p 7

[Article by A. Ng.: "Special People's Court Sentences Two Murderers and Robbers to Death"]

[Text] On 12 May 1981, three defendants in a case of barbarous murder and robbery appeared before the city's Special People's Court and were appropriately prosecuted. They deceived a family of seven persons, including four small children, into fleeing the country by sea and hurled them into the sea in order to steal their belongings. The sole survivor, Miss Le Thi Bach Loan, reported the crime to the authorities and all of the criminals were arrested.

The specifics of the case are as follows:

Anh Vo Bich was acquainted with Phan Nhat Tan, a state cadre who was recently released from prison. Knowing that Bich intended to flee the country by sea, Tan fabricated various stories to let him know that he was dissatisfied with the system and also wanted to flee the country. On 3 May 1980, in accordance with arrangements made byTan, Bich took his entire family, which included his wife (Le Thi Bach Loan) and four small children (the oldest being 9 years of age and the smallest being 4 years of age) together with a niece, Dao Thi Cuc, to Tra Vinh and waited for Tan to arrive. At approximately 1600 hours on the same day, Bich's family arrived at the rendezvous point. Tan, together with his son and nephew, Phan Van Khanh and Phan Cong Dan, took everyone by motorized sampan to Khanh's house, which was located in Long Hoa Village, Chau Thanh District, Cuu Long Province, and then continued the trip to sea. They went to sea after darkness had fallen in order to avoid detection by the border public security forces. Tan told Loan, the four children and Miss Cuc to sit in the boat's cabin. Bich sat on the deck talking with Tan and Khanh. When Bich was not paying attention, the two men pushed him into the sea. Then, they called Loan from the cabin and pushed her into the sea as well. She tried to climb back into the boat but was beaten by Khanh and Tan and again thrown into the sea. Miss Cuc and the four small children were also thrown into the sea by Tan and Khanh one after the other. Because she knows how to swim, Loan drifted at sea and was picked up at 0400 hours on the next day by a fishing ship some 10 kilometers from the mainland.

After killing everyone, Tan and his accomplices took the boat back to the house of Tan's father in Thanh Phu in Ben Tre Province. There, Tan instructed Khanh and Dan to not go out and get drunk, fearful that they would reveal everything. On 5 May 1980, Tan returned to Saigon and was arrested on 23 May 1980.

In court, Tan and his accomplices denied their crimes. Tan argued that he was being prosecuted for murder even though not one corpse had ever been found. Moreover, he argued, if the motive for the murders was robbery, he never stole anything from Bich. However, these arguments were not supported by facts. The only surviving victim, Bach Loan, reported the entire crime to the authorities and all of the details reported by her were very consistent with facts, such as the characteristics of the sampan that took the family to sea, the day and hours when Tan and his accomplices were present and the incident occurred, the clothing she put on her third child (7 year old Vo Quoc Nguyen), which was found on the child's body floating at sea after the crime occurred and so forth. In addition, Tan sent a number of letters to relatives during the time he was being detained instructing them to find persons to verify that he was not at the scene of the crime between 1 and 5 May 1980.

The prosecutor analyzed the entire case in detail. According to him, the serious nature of the case arises from the insidious scheme and the barbarity of Tan and his accomplices. Taking advantage of the gullibility of persons who wanted to flee the country, Tan, his son and his nephew arranged for a trip to sea, pushed an entire family, including four small children, into the sea and then stole their belongings. The actions caused a high degree of indignation among the people and must be dealt with very harshly. In the case, Tan and Khanh were the cruel perpetrators; Dan was persuaded by Tan to pilot the sampan that took everyone to sea, thereby creating the means for his father and Khanh to commit the crime.

On the basis of the seriousness of the crime of each defendant, the city's Special People's Court sentenced Phan Nhat Tan and Phan Van Khanh to death and sentenced Phan Cong Dan to 18 years in prison.

MILITARY DISCHARGE COUNTERFEIT RING BROKEN

Ho Chi Minh City TIN SANG in Vietnamese 7 May 81 p 7

[Article by A.Ng.: "Counterfeiters of Military Discharge Papers Sentenced from 2 to 7 Years in Prison"]

[Text] The Military Court of Military Region 7 recently tried a counterfeiting organization on the crimes of violating the draft law, fraud and desertion. Approximately 800 representatives of military personnel in the various echelons attended this court session.

According to the indictment, the specifics of the case are as follows:

Dinh Van Phan was serving a sentence in prison on the crimes of counterfeiting and fraud. On 6 January 1980, Phan escaped from prison, was harbored by Nguyen Van Le and, along with him, set up their illegal operation. They were joined by three deserters, Le Dien An, Nguyen Xuan Tuan and Nguyen Duc Minh Chau, as well as a number of decadent elements in society, such as Vu Thi Tho, Tran Van Ne, Dang Van Diep, Pham Phach, Nguyen Huu Men and Dao Dinh Chien.

Between February and September 1980, Phan and his accomplices sold 30 sets of papers; the sets ranged from 100 dong to 4,000 dong in price. This illegal money was divided among the group: Dinh Van Phan received the most, 20,000 dong, and Dang Van Diep received the least, 300 dong.

The soldiers Nguyen Van Chac, Nguyen Van Son, Mai Van Son and so forth are military deserters who purchased counterfeit papers from Phan's group in order to register their discharge from the military with their locality.

Exercising his prosecutorial rights in court, the representative of the Organ of Control of Military Region 7 deeply analyzed the illegal actions of Phan and his accomplices. When they made counterfeit papers, violated the military draft law and supported backward elements in their attempt to evade their obligation to protect the country, they harmed not only the fighting strength and honor of our army, but also had a harmful effect upon political security and the safety of society. Therefore, these actions must be dealt with harshly.

After hearing the case, the Trial Council sentenced Dinh Van Phan to 7 years in prison; Le Dien An to 6 and one-half years in prison; and Nguyen Van Le to 6 years in prison. The remaining defendants were sentenced to 2 to 4 years in prison.

COFFEE HOUSE OWNERS SENTENCED BY COURT

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 Apr 81 pp 1, 4

[Article by P.V. (reporter): "The People's Court of the 1st Precinct Holds a Circuit Trial of Owners of Music-Coffee Houses Who Violated the Law"]

[Text] Yesterday, 24 April 1981, at the Theater of Culture on Tran Quang Khai Street, the People's Court of the 1st Precinct held a circuit trial of the first instance of the defendants Tran Dieu Tien (the owner of the Ha Trang Coffee House), Dao Thi My Ngoc (the owner of the Nguyen Coffee house) and Tang Thi Tuyet (the owner of the Van Hoa Coffee House), who were accused of violating the law on the storage and dissemination of reactionary, decadent cultural products and operating an illegal business.

In attendance were large numbers of representatives of the various departments, sectors and mass organizations of the city and other districts and representatives of the people of the 25 wards of the 1st Precinct. The owners of coffee houses that play music within the 1st Precinct also attended this court session.

The defendants and witnesses were present in the court to hear the reading of the indictment handed down by the 1st Precinct public security sector. The defendants responded to questions asked of them by the judge, the people's jurors and the representative of the People's Organ of Control.

All of the defendants confessed to the court to having operated an illegal business and organized the playing of illegal music, thereby sowing the seeds of the prohibited, reactionary and decadent culture of the Americans and puppets. Although they were inspected and reported to the authorities and although they signed pledges to the ward and precinct governments, these coffee house owners continued to commit the same offenses many times.

On the basis of the indictment, on the basis of Article 6 of Law 03/SL 76 dated 15 March 1976 and Article 2 of Premier's Decree Number 76-CP dated 8 April 1974 and on the basis of Notice Number 148 of the City Culture and Information Service as well as Notice Number 572 of the People's Committee of the 1st Precinct, the court sentenced the defendants as follows:

--Tran Thi Dieu Tien: 12 months in prison;

--Tang Thi Tuyet: 18 months in prison;

--Dao Thi My Ngoc: 12 months in prison.

The defendants have the right to appeal their verdict to the Court of Appeals within 15 days from the date of sentencing.

The court also warned the responsible persons within the People's Committee of the 4th Ward about the incorrectness of establishing funds to support the owner of the Nguyen Coffee House in the serious violations of the law mentioned above.

The representatives and people attending this court session expressed their agreement with the trial proceedings and also expressed the hope that the precinct court quickly bring to justice the cases that have been investigated, exposed and strongly denounced by public opinion.

COFFEE HOUSE OWNERS RESIST GOVERNMENT REGULATIONS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 13 May 81 p 1

[Article: "They Have Yet To Wake Up"]

[Text] The serious violations of state regulations by coffee houses have been dealt with harshly; we have paid particular attention to this situation and are very appreciative of the action that has been taken.

In our area, we live in An Quang, the coffee house owners are still "indifferent" and even becoming more ostentatious in order to attract young customers from the coffee shops that have been inspected, and young customers are going to them in increasingly large numbers.

A typical example is the coffee house on the corner of Block C next to the Nhat Tao School. The children of the school need a quiet environment in order to study. Teachers need to maintain their health so that they can teach their students. Nevertheless, blaring foreign music fills the air almost all day and night. Yellow music is played over amplifiers with no regard for the neighborhood residents.

The people have made their opinions known concerning this situation. The press has also reported on it but, since that time, this situation has remained unchanged and coffee house owners have yet to wake up.

We suggest that the People's Committee and the Public Security Committee of the 8th Ward as well as the responsible agencies of the 10th Precinct take steps to quickly correct this situation and closely coordinate with other places.

A number of workers, people and parents
of students at the Nhut Tao Level I School

TEACHER WHO ACCEPTED BRIBE SENTENCED TO PRISON

Hanoi NHAN DAN in Vietnamese 20 Aug 81 p 4

[VNA News Release: "Teacher Who Accepted Bribe From Student Sentenced to Four Years in Prison"]

[Text] On 18 August the Hanoi People's Court tried Trinh Quang Minh, a mathematics teacher at the Railroad-Road Transportation College in Hanoi, for having accepted a bribe, and Trinh Van Giap, a relative of a student, for the crime of bribing a teacher with 2,000 dong.

Trinh Quang Minh was appointed by the school to recruit students at the Tu Loc General-Middle School in Hai Hung Province to attend the college during the 1980-1981 academic year. Minh took advantage of his position and anthority and took the initiative in meeting with a number of students who were to be tested, discussed with them ways to mark their tests, prepared an examination in advance so that they could cheat, took the test questions and the examination papers from the room to correct them, etc. Minh accepted a bribe of 2,000 dong from Trinh Van Giap, a relative of one of the candidates. Minh bribed a teacher from the school who was helping him grade the exams in order to increase the grades of the candidates who had given him bribes.

Thanks to a control network and close monitoring ofthe examination-grading system by the Railroad-Road Transportation College, and the prompt discovery by his colleagues, Minh's dishonest schemes were exposed.

The Haoin People's Court sentenced Trinh Quang Minh to 4 years in prison, gave Tran Van Giap to a suspended sentence of 24 months in jail, and recovered the 2,000-dong bribe for the public treasury.

'NEW LIFESTYLE' WORK GROUP CONFISCATES PROHIBITED MATERIAL

Ho Chi Minh City TIN SANG in Vietnamese 15 May 81 p 7

[Article by Q.S.: "Roundup of Decadent Cultural Products Continues"]

[Text] The new lifestyle work group of Thu Duc District has confiscated decadent cultural products at book counters, coffee houses and illegally organized markets. The group has confiscated hundreds of decadent books, magazines and pictures and hundreds of tapes and records, the contents of which are decadent and reactionary.

In the work group's inspection, 104 households were prohibited from singing and playing musical instruments at market places. The group has also conducted many unscheduled inspections in order to promptly put a stop to the clandestine activities of coffee house owners and the owners of magazine stands. These unscheduled inspections led to the confiscation of 67 tapes of yellow music at 11 coffee houses that were intentionally violating the law and at 2 illegal markets.

Since the inspection, Hiep Binh, Tam Binh and Tang Nhon Phu Villages as well as the town of Thu Duc have put an end to the use of prohibited music. The new lifestyle work group is continuing its work.

MORE PROHIBITED MATERIAL CONFISCATED

Ho Chi Minh City TIN SANG in Vietnamese 17 May 81 p 7

[Our City column: "Eradicating Reactionary, Decadent 'Cultural Products'"]

[Text] In recent days, the various precincts and districts of the city have continued the campaign to eradicate the various types of reactionary, decadent music, films, books and magazines. Inspection units consisting of public security forces and forces of the local culture and information committees have been established. Many public places have been inspected and many unwholesome "cultural" products and equipment used to produce these products were confiscated for use in prosecution.

In the 5th Precinct, the Precinct Culture and Information Committee coordinated between 23 April and 10 May with the public security force to inspect 53 coffee houses, 19 stores and counters selling books and magazines, 23 places selling old books along sidewalks, 20 places selling music tapes, shops and so forth. The inspection units confiscated for use in prosecution 1,853 tapes, 500 records, 2,000 pieces of sheet music, many reactionary books, decadent books and magazines and several pieces of equipment used to disseminate music in violation of the regulations of the Precinct People's Committee. During the inspections, two places showing pornographic films from Hong Kong were discovered, complete with films and projection equipment. At present, the coffee houses and book stores that were operating illegally have been closed.

In the 3rd Precinct, the 15 wards launched coordinated cultural inspections on 8 May, confiscating for use in prosecution 550 tapes and records of music of various types, nearly 5,000 picture books, more than 6,000 pieces of mimeographed sheet music, 175 decks of cards, a number of unwholesome photographs, three 8 millimeter projectors and 56 reels of film. The precinct's 11th Ward also uncovered and filed a report concerning one place that was renting and selling prohibited books.

Also in early May, the 10th Precinct conducted an unscheduled inspection of the 21 coffee houses on the 3rd of February, Ngo Gia Tu, Nguyen Tri Phuong, Ly Thai To and Nguyen Lam Streets and confiscated for use in prosecution 100 tapes of prohibited music; at the same time, it also took educational measures against approximately 15 coffee houses that violated the law on establishing the new lifestyle.

PEOPLE JOIN EFFORT TO CONFISCATE PROHIBITED BOOKS

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 Apr 81 p 1

[Article by X.TH.: "The People of the Various Wards in Go Vap District Participate in the Effort To Eradicate Decadent Cultural Products; These Products Must Be Put on Display in Order To Expose Their Harmful and Illegal Nature"]

[Text] During the past week, the people of Go Vap District actively participated in the effort to eradicate reactionary, decadent and pornographic cultural products. The residents of many wards, coordinating with the "new lifestyle" inspection units, found and confiscated various types of decadent cultural products, such as pornographic picture books and stories that poison the minds of children and various types of mimeographed sheets of yellow music, and detective books. Some 1,000 prohibited books, pictures and pieces of sheet music were confiscated.

The residents of the district have suggested that these decadent cultural items be put on display so that everyone can see their harmful nature and denounce those decadent persons who clandestinely print and distribute them.

On the other hand, the district library and the reading rooms of the 1st, 14th, 10th, 16th and 12th Wards have increased the number of book reading hours for teenagers and youths and acquired many new books.

PRINTERS OF PORNOGRAPHY EXPOSED

Ho Chi Minh City TIN SANG in Vietnamese 15 May 81 p 1

[Article by Ba Sinh: "Binh Thanh District Discovers a Number of Mimeograph Installations Printing Pornographic Pictures and Reactionary Literature"]

[Text] Another organization printing pornographic pictures that poison the minds of teenagers and children was recently discovered in the 8th Ward of Binh Thanh District.

On the morning of 12 May 1981, the work team searching for reactionary, decadent cultural items of the Culture and Information Committee and the public security forces protecting the new culture of Binh Thanh District conducted an administrative inspection at the Thai Binh Mimeographing Shop of Nguyen Huu Hau at Number 4 No Trang Long Street in the 8th Ward. As a result, the work team discovered a number of stencils of pornographic pictures, such as "lucky Luke" and "Ho Ly Tinh," which were produced 1 month ago.

Also on 12 May 1981, the Culture and information sector and the culture protection public security force of Binh Thanh District conducted administrative inspections at more than 20 printing shops in the various wards.

As a result, at the Duc Pho Printing Shop at 91/2 Dinh Tien Hoang Street in the 3rd Ward, the forces discovered more than 200 reactionary, decadent books, which included a number of research and political books printed under the old regime that discredit and distort the Vietnamese revolution and world communism.

At the Hien Minh Mimeographing Shop at Number 51 Soviet Nghe Tinh Street in the 17th Ward, the work team discovered that the owner had printed and stored literature of an ineernational organization containing the contents of an "emigration plan."

The forces also confiscated more than 1,000 kilograms of paper used to illegally print state ledgers and lottery tickets.

/Article by L.N.: "The City Continues To Eradicate the Various Types of Decadent 'Cultural Products'"/

/Text/ Ho Chi Minh City is continuing to intensify the effort to eradicate the various types of decadent "cultural products." In the recent past, the specialized forces have conducted administrative inspections at nearly 400 coffee houses, 40 book and magazine stands, 13 printing shops and 13 music tape stands.

In the administrative inspections, the various work teams found and confiscated more than 1,850 records, more than 8,100 music tapes, 278 films and many books and magazines of various types, the contents of which are reactionary, decadent and prohibited. More than 200 persons who violated the law were warned and educated. In addition, nearly 120 coffee houses violating the regulations on the use of music were temporarily closed.

In the 3rd Precinct, inspection units conducted administrative inspections at 68 coffee houses. Nine of these were temporarily closed. The compatriots of the 3rd, 5th and 11th Wards and the inspection teams collected thousands of decadent books and magazines.

The public security troops of the 5th Precinct discovered 12 persons who rent various types of decadent books and magazines.

The public security troops of the 1st Precinct also arrested, in the process of violating the law, a gang of six persons who specialized in showing pornographic films.

DOCUMENT COUNTERFEITERS APPREHENDED

Ho Chi Minh City TIN SANG in Vietnamese 16 May 81 p 7

[Article by A.Ng.: "Seven Defendants Tried in Court for Counterfeiting Papers and Stealing Socialist Property"]

[Text] An organization specialising in counterfeiting papers in order to steal socialist property was recently tried at the City People's Court on the morning of 15 May 1981.

Aside from a number of persons who are still in hiding, the defendants who appeared in court were: Nguyen Thi Diem, Nguyen Thanh Dong, Bui Minh, Nguyen Phan Tung, Doan Huu Ngo, Nguyen Van Son and Bui Minh Thong.

In mid-1978, Doan Minh Chinh talked with Nguyen Phan Tung about organising the counterfeiting of papers to take delivery of foreign goods being delivered to the Tan Son Nhat Airport. They purchased shipment notification papers from a credentials clert and counterfeited people's identification papers and census registration papers in order to enter Tan Son Nhat to take delivery of goods, which they sold outside the airport and shared the profits therefrom. Cooperating with Tung and Chinh was Doan Huu Ngo. According to Tung's statement, between August 1978 and September 1979, Tung took delivery of goods four times and sold them for a total of 4,500 dong and was paid 550 dong by his accomplices for his work. After going with these persons only one time to take delivery of goods, Nguyen Van Son was arrested.

In order to avoid being detected, Ngo hired Bui Minh Thong but after Thong had entered Tan Son Nhat with Ngo for only the second time, both of them were arrested because shipping personnel at the airport recognised their papers as counterfeit.

When his accomplices were arrested, Chinh established a new organisation. This time, together with Le Dinh Huy and through an intermediary, Bui Minh, they conspired with Nguyen Thanh Dong, a credentials clerk at the Binh Thanh District Posts-Telegraph Office and suggested that he purchase shipment notification papers at Tan Son Nhat. In November 1979 alone, Dong sold to Bui Minh 22 notification papers, each at a price of 150 dong. Minh resold them to Chinh for a profit of 1,050 dong. During these trips to take delivery of goods, they were accompanied by Nguyen Thi Diem, the daughter-in-law of Huy. On 24 November 1979, [words indistinct]. The public security agency broke up their organization but Minh and Huy fled.

This was a large organization. They assigned themselves responsibility for each job: making counterfeit papers, conspiring to purchase shipment notification papers, hiring persons to receive goods and so forth. Because the case involved so many intermediaries, when the case was finally broken, the leaders of the group were able to escape. They made and used counterfeit papers in order to receive goods that were sent from foreign countries and were under the management of the state, thereby causing negative thinking on the part of the masses concerning the work methods of our cadres.

Within the gang, Huy and Chinh were the dangerous leaders and are now being vigorously pursued. They others were either competent intermediaries, persons who took advantage of their task of providing credentials in order to help others violate the law or persons who impersonated others to take delivery of goods and realize illegal gains. Each of their actions must be dealt with harshly. On the basis of these observations, the Trial Council sentenced the defendants Nguyen Thanh Dong and Doan Huu Ngo to 5 years in prison and Nguyen Thi Diem, Bui Minh and Nguyen Phan Tung to 3 years in prison. The two defendants Nguyen Van Son and Bui Minh Thong each received sentences of 18 months in prison.

SOVIET TECHNICIAN, VIETNAMESE WORKERS COMPETE IN BUILDING HANOI FACTORY

Hanoi NHAN DAN in Vietnamese 28 Aug 81 p 1

[VNA News Release: "Competition Agreement Between Soviet Technicians and Workers of Xuan Hoa Storage Battery Factory Construction Site in Hanoi"]

[Text] Achieving accomplishments to celebrate the Fifth Party Congress, the Xuan Hoa Storage Battery Factory construction site in Hanoi held a ceremony to sign a competition agreement between Soviet technicians and the cadres and workers of the units participating in the construction of the Xuan Hoa Storage Battery Factory, which the Soviet Union is helping us build.

In August the cadres and workers of the units constructing that project completed many project items, such as the pouring of foundation concrete and the pouring of the floor of the air compressor building, completed the installation of the ventilation systems and the non-standard equipment of the 800-meters long industrial pipe line, and turned over two buildings for the installation of milling cutters and heat-treatment machinery, along with many other project items, and increased the construction rate by 50 percent, with regard to the construction and installation volume, over July.

During the period covered by the new competition agreement, the units participating in the construction of the project will strive to complete such project items as completing the installation of technical equipment to open bags of coal and the adjustment of two groups of steam boilers, turn over and bring into use the cinder distillation station and the coke production department, and complete the construction projects in order to shift over to installing the equipment of the refrigeration station, while also going all-out to economically use such materials and raw materials as cement, iron, and steel in the construction process.

JULY 1976 SPEECH BY LE DUAN ON PARTY BUILDING

Hanoi VE XAY DUNG DANG in Vietnamese 1978 pp 357-368

/Excerpt from speech by Le Duan in July 1976, at a conference of cadres to study the resolution of the Political Bureau: "Party Building and Mass Movements"; Le Duan book "On Party Building," published by Su That Publishing House, Hanoi, 1978, 32,185 copies printed at the Tran Phu Printing Plant in Ho Chi Minh City, printing completed in October 1978/

/Text/ We all know that our country's revolution enjoys the success that it does today primarily because of the leadership provided by our party, a strong Marxist-Leninist party that has been tempered in the long revolutionary struggle and is capable of setting forth the correct revolutionary line. Our brothers and friends throughout the world have expressed admiration and praise for our party; as for ourselves, we also realize that our party has only been able to perform the great service that it has performed in recent years because it is truly competent. However, a harsh review shows that our party still has many shortcomings and weaknesses. The majority of the comrades present here today have been in the party for 3 or 4 decades and have experienced an arduous, fierce struggle. It is very difficult to forge party members such as you. However, if our party is so highly experienced, why are 10 to 15 percent of its members deficient and corrupt? Many local party committee echelons have adopted good methods of operating and have expelled from the party elements that have degenerated or are incompetent. To date, however, party building fails to insure that the party is truly pure and strong.

The party is the factor of foremost significance in determining every victory of the revolution. Whether our country's revolution succeeds or fails, whether it develops or declines is primarily determined by party building. The experience of the world has also shown that the difficulties and setbacks of the revolution frequently originate in party building. This requires that we examine this matter in a thorough manner in order to take steps to prevent and stop the possible dangers to a party in power, especially now, when our system is only beginning to be built and the economy is still underdeveloped. Once we have created a solid economic and social foundation, we need not be fearful because, once perfect socialist production relations have been established on the basis of a strong material-technical base, the socialist system will not shake or collapse regardless of the difficulties and complications that are encountered.

In the history of our party, although a few incidents have occurred from time to time that have affected the party's internal solidarity, from the time Uncle Ho returned home to personally lead the revolution, especially from the time that our party perfected its line and the corps of cadres and party members began being educated and forged much more, the solidarity and oneness of mind within the party have been constantly strengthened and increasingly consolidated even though we have had to contend with countless serious challenges, such as those experienced in the recent past. A few foreign newspaper articles have had to admit that, throughout the past several decades, there has always been unity and love within the Vietnamese party but never any internal struggles for power. We are very proud of this fine tradition! However, we cannot be satisfied with ourselves and must always be vigilant and realistically examine the situation. Recently, a number of party organizations in some provinces, districts, villages, agencies and enterprises have experienced a rather serious decline in their revolutionary will, in their qualities and ethics and have committed serious shortcomings in their relations with the masses. Why does this situation exist?

Above everything else, it is the result of the failure to build the party well, the failure to firmly grasp the characteristics and specific requirements of a party in power. Organizational, propaganda and inspection activities have not been smoothly coordinated with one another nor have they been closely linked to the tasks of building the economy and the culture or to the revolutionary movements of the masses in order to, in this manner, teach and forge party members. In the socialist revolution, the effort to carry out the three revolutions is a fight, the effort to build the economy is a fight. Party building must be closely linked to both of these fights; party building must be based on the revolutionary movements of the masses in these fights. At present, a rather large number of our cadres and party members know nothing at all about the three revolutions or only understand them on the basis of knowledge acquired from books. Of course, it is very necessary and important to open schools and classes in order to provide cadres and party members with elementary and advanced training. However, the party grows and its fighting strength is increased primarily through the revolutionary movements of the masses in economic construction, in the development of the culture and in the three revolutions. In the North, the various party organizations, although they have matured somewhat through the realities of the socialist revolution, still have many problems that must be resolved; there are many weaknesses and deficiencies that must be corrected. In the South, cadres and party members have markedly matured in recent years in the fight against the enemy; now, they must begin to carry out the socialist revolution and transform and build the economy, which is a very new and difficult task in many respects, consequently, it is even more necessary for them to study and train.

In economic construction, a rather large number of cadres and party members routinely handle materials and finances of the state and the collective; there are cases in which the houses, gardens, arable land, finances and personal interests of cadres and party members and the interests of their families are somewhat in conflict with common interests and conflict with the economic policies of the party and state. For this reason, if cadres and party members do not thoroughly understand the objectives of the revolution, do not thoroughly understand the responsibilities of the party, of the state as well as their own responsibilities, do not concern themselves with forging their thinking and ethics and lack a strict sense of organization and discipline and if the management provided by the state is not precise, not tight, corruption can very easily result. Now that the party is in power, some cadres and party members who hold official positions and have authority, because they have failed to maintain their revolutionary nature, have abused the position given to them by the state and the people, tried to get around the law and schemed to better themselves and their families, thus giving rise to conspiracy, theft, the use of public property as personal property and collusion with dishonest merchants in acts that are against the law. In the North, there are many cooperatives that are skilled in production, that provide good management, cooperatives at which cadres are conscientious, the living conditions of the people have been improved and cooperative members are enthusiastic; however, at many places, the people complain that a cooperative head or member of the management board is pilfering public materials in order to build a spacious house.

In the shift from war time to peace time, from fighting foreign aggression to building the economy and the culture, the personal interests of each person are placed within a relationship with the common interests of society, of the collective; moreover, following the war, there are still, generally speaking, many difficulties being encountered in everyday life, thus causing some cadres and party members to be very concerned about their families. These are circumstances beyond our control that easily cause some persons to fall by the wayside, to become deviant. Some comrades who fought for 15 or 20 years, fought very tenaciously without fear of sacrifice or hardship have become corrupt and deviant now that we have entered the stage of economic construction; cases such as these have occurred at one place or another. Of course, the essence of the problem does not originate in the fact that the party is in power. However, we must realize that such a decline in good qualities on the part of cadres and party members is a serious phenomenon, one that occurs to some extent in every locality and sector. Therefore, we must, on the one hand, intensify our teaching of ideology, heighten our will to struggle and maintain our fine revolutionary nature; on the other hand, we must take organizational and management measures and establish strict regulations to insure that bureaucracy and abuse of authority do not occur, thereby always keeping the ranks of the party pure and wholesome.

To accomplish this, we must first clearly define and implement the right of collective ownership of the working people. The party plays the role of providing leadership, of setting forth lines and positions and, in order to turn these lines and positions into reality, it is necessary to do so through the activities of the state and the revolutionary movements of the masses; every effort must be made to awaken and mobilize the people to observe and inspect the management work of the state government; we must make all cadres and party members deeply aware of the fact that the party struggled to win political power in order to return the right of ownership to the working people and create the conditions for them to manage society, manage the economy and manage everyday life. The masses have the right to speak their opinions concerning each and every issue: the three revolutions, economic construction, cultural development, the organization of production, the organization of labor, food, shelter, education, health care, the education of their children, etc. The party committee echelons and governments of the villages, wards, districts and provinces must, through the People's Councils and mass organizations, periodically have the people discuss important issues of the locality and tap the initiative of the masses in order to launch labor movements of a revolutionary nature with a view toward resolving the problems in production and everyday life. In socialism, we still have prices and wages and we must make appropriate use of these means in economic management. However, none of these means can replace the revolutionary movements of the masses. This is the reason why the revolution is coordinated with science, science with the revolution.

The cadres and personnel of the state must be the servants of the people and may not place themselves above the people, may not use their authority to oppress the people. The right of ownership of the working people must be defined in the form of specific regulations and rules governing daily life, defined in state law, in the regulations governing the activities of the National Assembly and the People's Councils on the various levels, in enterprise statutes, cooperative statutes, etc.

Secondly, we must take an inventory of all public property in all sectors, localities, installations and army units. This property, regardless of its origin, regardless of which agency or unit is managing it, is the public property of the people and the state. And, because it is public property, we must take an accurate inventory of it and deliver all of it to the state when required. If we take a good inventory of this property, if we know exactly how much property there is, and if we manage and use it in exact accordance with the regulations of the state, pilfering, misappropriation and waste will decline. No one is permitted to give the excuse that property should not be reported to the state, that an inventory of it should not be taken because it belongs to a certain agency or unit. Every effort must be made to overcome selfishness and the attitude of not discerning between that which is public and that which is private. We must clearly realize that these bad practices can lead us astray, can cause us to lose our good character and good qualities in order to struggle to overcome them, struggle to make our soul and thinking pure and beautiful, struggle to maintain the noble tradition of the party and the glorious title of revolutionary fighter.

Thirdly, we must be extremely vigilant and struggle to prevent and eradicate the thinking of over exultation of past achievements. When I met with Pham Hung and Le Duc Tho for the first time following the total liberation of the South I said; we have won, we have completed an important task; we must first tell the entire party and all the people that no one has the right to say he performed a service for the party, for the people; no one has the right to demand that the party and people recognize his service. Both of these are mistakes, are dangerous. Today, I feel that I must restate this to you because I feel that, at some places, there is the thinking of over exultation of past achievements. It must be forthrightly stated that this is the starting point of a kind of degeneration and deviancy against which we must be fully vigilant.

Some comrades talk about class stand, about partyhood but are not loyal to the party and always embrace the thinking of individualism. They talk about class stand but demand special rights and privileges, demand special treatment and a certain position; sometimes, they force others to obey them, to be loyal to them in the name of the party. This is now sophisticated and complex the thinking of individualism can be!

We must remind one another that the stand and ethics of the communist party member are to struggle throughout his life for the ideals of the party, to endure hardships and difficulties, to be ready to sacrifice his life for the interests of the class and the nation. A person joins the party to fulfill the noble obligation of the revolutionary fighter, not to record achievements or to obtain authority. In the several decades of revolutionary struggle, countless comrades and compatriots died in prison, died on the battlefield, countless villages were destroyed and countless families lost everything. The entire country fought, the entire country is carrying out the revolution and all the people endured hardships and made sacrifices in order to win the victory we enjoy today. The day of victory was not a feat of arms of any one unit, locality or party organization nor was it the meritorious achievement of a number of cadres or of one or two persons. Yet, some comrades do not realize this, are not aware of this fact and simply talk about their own achievements: I fought the enemy this way, I experiences such and such, I made such and such a contribution! A person who is a party member or communist fighter who talks about the achievements recorded by him on the basis of the sacrifices and losses of his compatriots and comrades has no stand when he talks about stand, has no revolutionary virtues when he talks about virtues, has no proletarian thinking when he talks about proletarian thinking.

It can be asked who among those who are carrying out the revolution has suffered as much or made as many sacrifices as the comrades who were maltreated by the enemy, were tormented and slowly killed in their prisons? Who are as great and heroic as those soldiers and compatriots who exchanged their lives for the independence and freedom of the fatherland? In fact, without those noble sacrifices, how could we have won the victory we enjoy today and say that we have recorded achievements? Moreover, the revolutionary undertaking of our party has not come to an end, but is only beginning. We have been in power for more than 3 decades and have been practicing socialism for slightly less than 2 decades but have not built much. Our party and state have not been completely successful in providing food for the working people and are not educating all children. The country is still poor, the people still live difficult lives. Why, instead of realizing this in order to heighten our will to fight and fulfill the tasks in the new stage, do we display arrogance, be pretentious and say that we have recorded achievements for the party, for the people? This is a mistake, is a dark shadow in our hearts! As for myself, I often say to myself that I am very fortunate to be living and working now, that I am very happy. When I was imprisoned on Con Dao, there were more than 100 other persons in the jail cells; nearly all of them died a slow death and, in the end, only 15 persons remained alive! The heroic war dead and the compatriots and comrades who sacrificed their lives are the persons who recorded the greatest achievements. The achievements recorded by each of us are nothing more than the fulfillment of our obligations.

In the history of the revolution, there have been various negative lessons concerning competition for the recognition of achievements that has caused confusion, instability and fragmentation. This reminds all of us, regardless of our level or sector, to be extremely vigilant, to clearly see the harm caused by the thinking of over exultation of past achievements in order to seriously struggle against and promptly criticize every manifestation of this thinking and not give it room to develop and lead to the very ugly practices of competing with one another for power and position. The greatest honor of the communist is to fight and fulfill his obligations, to contribute along with the entire party, all the people and the entire army to completing the liberation of the nation and advancing the entire country to socialism. This is the greatest achievement that our party will leave for future generations. It is also the noble award to every cadre and party member, of which we have the right to be proud.

Fourthly, we must launch a movement to study in order to deepen the knowledge of cadres and party members. They must study to understand the three revolutions, to learn what must be done to carry out the three revolutions; they must study in order to gain an understanding of economic laws, in order to learn economic management, etc.

For a long time, when accepting members into the party and selecting cadres, we have only examined political standards, ethical standards and workstyle standards. This is very important and very necessary. However, without the necessary knowledge, cadres and party members cannot become leaders, cannot fulfill their responsibilities. Some comrades have been in the party for many years but do not truly have a deep understanding of why they joined the party, of what the present tasks of the revolution are.

In order to deepen the knowledge of cadres and party members, we must establish a system of training schools and classes and periodically organize phases of study for all cadres and party members. In addition to formal classes, full importance must be attached to on-the-job classes in order to provide routine, continuous study within the ranks of cadres and party members. In both instruction and learning, we must reduce the amount of "book learning," reduce the number of formulas used and try to coordinate theory with the realities of the Vietnamese revolution, with the lines and positions of the party. Of course, we must study theory but the purpose of studying theory is not to memorize one rigid principle or another but primarily to grasp the viewpoints and methods of Marxism-Leninism and use them to analyze the socio-economic circumstances of our country and, on this basis, adopt revolutionary lines and policies. If, instead of studying in this manner, we limit ourselves to formulas and concepts, it will not only be impossible to set forth the theory on the socialist revolution in our country, but it might also lead to viewpoints that are totally contrary to the realities of our country's revolution or to deviations when guiding implementation. For example, our party says that the essence of the dictatorship of the proletariat is the right of collective ownership of the working people, the nucleus of whom are the alliance of workers and farmers, and that the right of collective ownership is implemented by means of the state under the leadership of the proletarian party. If we do not know how to use the method of historical materialism to analyze the realities of our country as well as the process of development of the class struggle waged by the working class against the bourgeoisie in the world, we cannot successfully understand the essence of the system of collective ownership; and, if we only rely upon books and sayings that make no mention of this fact at all, it is easy to become skeptical and suspicious. The same holds true with regard to the class struggle. In Vietnam at this time, it is a serious mistake to say that the class struggle lies outside the struggle to advance from small-scale production to large-scale socialist production and carry out the three revolutions, in which the scientific-technological revolution is the key revolution and socialist industrialization is the central task.

In conjunction with studying politics and theory, it is also necessary to study culture, science and technology. This is not merely an aspiration, a desire of each person, but primarily a demand of the objective requirements of this stage of the revolution, of the development and transformation of the economy... In their studies as well as in party activities, cadres and party members must practice strict self-criticism and criticism, must constantly forge themselves in order to quickly become new persons. In view of the fact that all of society is engaged in molding the new man, party members must become new persons first. The problem does not lie in restating a common model of the new man, but in setting forth specific standards for this new man at production installations, at agencies, schools, army units... In order to mold the new man, mold the laborer who exercises collective ownership, we must combat certain kinds of thinking, must mold certain concepts, mold a certain consciousness, mold certain abilities. The various party committee echelons, cadres and party members must deeply understand this and adopt a specific program of action.

In order to transform the line of the party into the will and actions of the masses, the party and state must have a skilled corps of cadres on all levels, from the central level to the basic level, with attention at this time to the cooperatives and districts, especially the districts. Every district must have a cadre organization that is fully capable of leading economic construction and cultural development, leading the three revolutions, an organization that consists of leadership cadres, economic management cadres, specialized cadres and technical cadres. Only in this way is it possible to build the districts into agro-industrial economic units and launch strong revolutionary movements on the front of economic development, cultural development and the building of the new life.

OUTLINE OF SPEECH BY LE DUAN AT 23RD PARTY PLENUM

Hanoi VE XAY DUNG DANG in Vietnamese 1978 pp 309-323

[Outline of speech by Le Duan at the 23rd Plenum of the Party Central Committee in December 1974: "Several Matters Concerning the Party Now That It Is in Power"; Le Duan book "On Party Building," published by Su That Publishing House, Hanoi, 1978, 32,185 copies printed at the Tran Phu Printing Plant in Ho Chi Minh City, printing completed in October 1978]

[Text] Dear comrades,

Today, the Central Committee is meeting to discuss party building, and I would like to present a number of thoughts for you to consider.

The victories of the Vietnamese revolution over the past 45 years, especially the victory of epochal significance of the August Revolution and the victories of the wars of resistance against France and the United States, prove that our party is a new style proletarian party, a party that is experienced in struggle and rich in revolutionary experience.

Our party has recorded the achievements that it has primarily because it firmly adheres to Marxism-Leninism, is always loyal to the interests of our country's revolution and the world revolution, knows how to uphold the tradition of tenacious struggle of the nation, knows how to selectively incorporate the valuable experiences of the fraternal parties and independently sets forth correct and creative lines. As all of you know, doing this has not been easy. The party has not only set forth correct lines, but has also known how to cause these lines to permeate the masses, has built the forces of the revolution from nothing, from small forces to large forces and has created a combined strength for bringing the revolution through countless difficulties and advancing to victory after victory.

In all periods of the revolution, our party has adhered to the basic aspirations and requirements of the masses and has mobilized and organized the masses to meet these requirements. For this reason, even though they must still endure many hardships and sacrifices, the masses are confident in and support the party.

The organization of the party has been built into a strong system extending from the top to the bottom; the basic organizations of the party have taken root in all of the cells of society. In the South, although the enemy is employing every possible extremely malicious method in order to annihilate our party, the organizations of the party still have strong roots among the masses. The party's corps of cadres has much experience in the national democratic revolution, in the armed struggle and is beginning to acquire certain knowledge of the socialist revolution. Hundreds of thousands of party members have gloriously sacrificed their lives and hundreds of thousands of others are continuing to lead the fight on the front and working hard in the fields of economics, culture, science, domestic politics, diplomacy and so forth.

Forged and educated by President Ho, our party has a very valuable tradition of solidarity; the party has never once been divided into factions.

These are the strongpoints and achievements of our party. On the other hand, our party must fully realize its shortcomings and weaknesses as it moves forward, especially in comparison to the weighty tasks in the new stage of the revolution.

As regards the socialist revolution in the North, we have not concretized the general line into precise stages of development and plans, have not built an organizational apparatus or established a management system that are commensurate with the tasks of building the economy and developing the culture. This slowness and this shortcoming are partially due to the fact that we have had to concentrate our efforts on guiding the war of resistance and partially due to the fact that building socialism in a country such as ours involves much that is brand new, much that is difficult and complex. On the other hand, they are also due to the fact that we have not promptly equipped cadres and party members with necessary knowledge of socialism, economics, science and technology; appropriate importance has not been attached to researching lines and policies and we have not fully mobilized the intelligence and capabilities of cadres for this extremely important work.

As regards organizational leadership, our shortcomings are as follows: the performance of many work programs and the conduct of many campaigns have not been thoroughly guided; work methods are decentralized and handicraft in nature; and the relationship "the party leads, the people exercise ownership and the state provides management" has not been concretely established on each level or within each unit and is not being fully supported by means of the necessary organization and regulations. A widespread problem at this time is that many party committee echelons have taken the place of the government organization while providing lax leadership in many areas. The agencies of the state are displaying many shortcomings in the management of society and economic management. The apparatus is cumbersome and ineffective; the authority and responsibilities of many agencies have not been clearly defined; work methods are bureaucratic and reflect a rather serious lack of democracy at a number of places. The mass organizations have not been fulfilling their role; their mode of operation is still heavily administrative in nature. Many party committee echelons have not been performing propaganda, educational, inspection or cadre work well, which are the keys to the guidance of implementation.

As the vanguard unit of the Vietnamese working class, the party is the most active component of society, is the center stimulating society's advance. However, the organizations of the party lack dynamism in some areas and, in some cases, certain components are unwholesome and backward. The number of basic organizations that are weak, deficient and unable to fulfill their role as the leadership nucleus is relatively high. Party members who are unqualified constitute a more than small percentage. One major shortcoming at this time is that the abilities of many cadres and party members are not commensurate with their tasks, their level of knowledge is still low and their ability to organize implementation is limited. A small number has suffered a decline in qualities and ethics, has become corrupt, dictatorial and arbitrary or are envious of the position of others.

When evaluating the strengths and weaknesses of the party, we cannot overlook the circumstances surrounding the birth and activities of our party.

Our party was born in a colonial, semi-feudal country, a country with an underdeveloped economy, a country in which small-scale production predominates and farmers constitute the majority of the population. Our country's farmers are a class that is rich in patriotism, possesses high revolutionary spirit and has been under the influence of the party from the very outset. The Vietnamese working class, although small, acquired revolutionary awareness at an early date, quickly accepted Marxism-Leninism, rapidly became an independent political force and shoulders the historic mission of the nation.

Our party was born and has grown in a country whose people have a tradition of ardent patriotism; the national salvation movement was a continuous and intense movement. As a result, the party has not only incorporated the revolutionary spirit of the Vietnamese working class and the tradition of struggle of the international working class, but has also incorporated and enhanced the nation's traditions of unity in struggle and an indomitable will in the face of foreign aggression. President Ho, the leader of our party, was also the beloved leader of the entire nation.

Our party was born after the victory of the great October Revolution and under conditions in which Marxism-Leninism had achieved supremacy within the international communist movement and the opportunism of the 2nd International had become bankrupt. Our party was founded and forged by President Ho with the wholehearted assistance of the Communist International and the fraternal parties.

Since its founding, our party has had to devote a major portion of its time and energies to leading the people in the armed struggle and leading the revolutionary war against the ringleaders of the colonialist imperialists. This process of revolutionary struggle has been long, extremely arduous and savage; not much time has been available for economic activities, for building the country.

After the August Revolution, our party became the party leading the government and, after the signing of the Geneva Accords, a socialist state was established in the North.

Over the past 2 decades, and for some time to come, our party has had to simultaneously lead the people of the entire country in two strategic tasks: carrying out the socialist revolution in the North and completing the people's, national, democratic revolution in the South and eventually achieving the peaceful reunification of the country.

In party building, we must have a full understanding of these characteristics and develop upon their positive influences while limiting their negative influences.

Party building is a science, is a component of scientific socialism. Developing upon the theory of the party set forth by Marx and Engels, Lenin set forth the theory on the new style proletarian party, a theory which contains important arguments concerning the party under the conditions of the dictatorship of the proletariat. Nevertheless, building the party when it is in political power is still something very new; it raises a host of questions concerning the theory, specifics and guidelines for building the party. For this reason, we must concern ourselves much more with reviewing experiences and researching the theory on party building in order to gradually deepen the knowledge of party work on the part of cadres and party members. For many years, we have been slow to perform these jobs and this is one of the reasons why party building has developed slowly, why the quality of party members and the organizations of the party have not kept pace with the new situation and tasks.

In the process of the socialist revolution, the worker parties in power in the fraternal countries have recorded very large achievements but, at the same time, encountered certain difficulties. Our task is to learn lessons and gain experiences in party building on the basis of the diverse realities of our party itself and of the fraternal parties so that our party always maintains the nature and characteristics of a new style proletarian party when in political power and so that the entire party is united in will and action, is very close to the masses, possesses correct lines and policies, practices thoroughly revolutionary thinking, has a strong and solid organization and has a corps of cadres who are well versed in politics, skilled in practical work and are "worthy of being the leaders and the truly loyal servants of the people."

In party building, importance must be attached to all three areas: politics, ideology and organization; these three areas must be closely coordinated in a single entity in order to insure that the political line is established correctly, is thoroughly understood throughout the party and is successfully implemented.

In order to adopt lines and policies that are correct, are scientifically based and are consistent with practical needs, it is necessary to:

a) Organize a good system of information of the party from the central to the basic levels; periodically investigate and research the actual situation; improve the quality of the collection, analysis and integration of information on the situation to insure that basic situations and important events are promptly and accurately reflected. We must determinedly combat work methods that are bureaucratic, divorced from reality, remote from the installation and remote from masses; styles of work that are general and superficial, that do not touch upon the essence of questions, the essence of work.

b) Intensify theoretical research and the review of experiences. Revolution is creative; without creativity, the revolution cannot achieve success. The specific circumstances of the country, the society and the people of Vietnam demand that we find suitable contents, methods and stages and resolve many new problems arising from the realities of the Vietnamese revolution. Without Marxism-Leninism, we have no basis for our research, have no "compass" for determining the direction to be taken by the revolution; however, there is not a ready answer to every problem of the Vietnamese revolution in the works of Marx and Lenin. The experiences of the world revolution, of the fraternal parties are very valuable to us; however, not every experience is suited to the Vietnamese revolution. Therefore, routinely summarizing experiences and intensifying theoretical research are the basic path for resolving the problems of the revolution, for deepening the knowledge and improving the leadership ability of the entire party. We must strengthen the agencies that have the task of conducting theoretical research and summarizing experiences; importance must be attached to training and utilizing specialists in the social sciences, the natural sciences and the technical sciences.

c) Thorough organize the study of Marxist-Leninist theory and the study of economic, scientific and technical knowledge by the mass of cadres and party members, beginning with the leadership cadres on the upper level and the intermediate level. Only in this way is it possible to insure that each cadre can participate in the formulation of the line, deeply understands and correct applies it, employs correct methods in his thought and action and overcomes simplistic, one-sided methods of thinking. We must harshly criticize the maladies of subjectivism, empiricism and being too lazy to study as well as the attitude of showing disdain for theory or giving light attention to researching the actual situation.

Ideological work must be subordinate to and support the political line and stimulate the completion of the political task. However, ideology can only have an effect through organization, only have an effect by becoming actions that transform society, transform man, transform nature. For this reason, we must, in our party building, closely coordinate ideological work with organizational work. The effectiveness of ideological work is manifested in an increasingly high level of awareness on the part of cadres and party members, increasingly correct methods of thinking, and an increasingly high spirit of voluntarism, enthusiasm and dedication in revolutionary actions. The requirements of ideological work are to give everyone a correct understanding of the revolutionary situations in the North and the South so that they correctly evaluate achievements and shortcomings, advantages and difficulties; give everyone a firm grasp of the viewpoints of the party when performing immediate tasks; develop upon positive factors and overcome manifestations of pessimism and vacillation; criticize negative phenomena in economic management, social management and the organization of life; and stimulate the revolutionary movement of the masses.

As a militant organization that conducts practical activities, the party can only be built within the revolutionary movements of the masses. Mass movements are the crucible that forge and purify party members, improve the quality of cadres, strengthen the party organization and strengthen the state government; the party can only become strong and forever retain its revolutionary nature and vanguard role when the masses are mobilized into revolutionary forces, when the masses truly become masters. For this reason, attaching importance to mobilizing the masses, making every effort to strengthen the mass organizations and taking every possible step to launch movements of the masses engaged in revolutionary activities must become the constant, foremost task of the various party committee echelons. At the same time, we must realize that organizing the masses to participate in party building is a requirement of the right of ownership of the masses, is an indispensable requirement of party building when the party is in power. The masses have the right to express their opinions concerning the acceptance of new party members, elect the party committees on the basic level and inspect the work and character of cadres and party members; party chapters and basic party organizations must periodically report on their work to the masses and criticize themselves before the masses. In other words, participation by the masses in party building must become a system and suitable forms of organization must be adopted for this participation.

Party building must be closely linked to building the state government; the strengthening of the leadership role of the party must be closely linked to improving the management ability of the state. The task of the party when it was not in political power was to enlighten and organize the masses to struggle to overthrow the rule of the exploiting classes in order to win political power. Once in power, the task of the party is to build and maintain political power, to thoroughly utilize and employ the power of the government to transform the old society, build the new society and suppress opposition forces. The socialist state, the state of the system of collective ownership, represents the leadership of the party and the right of ownership of the masses. The socialist state is not merely the organ of power that performs the tasks of government, but is primarily the agency that transforms and builds the new system, the new economy and the new culture and organizes the new life for the people based on the line of the party. Strengthening the party's leadership of the state is the factor that determines the strength and the management effectiveness of the state. On the other hand, an increasingly strong state that conducts effective activities is the first prerequisite to insuring the completion of each task set forth by the party, is the basic measure for strengthening the party's leadership of all of society. The party leads the state in a comprehensive manner: it determines primary policies, plans and measures; it decides important questions concerning the organization and concerning the deployment of cadres; it inspects the activities of the state apparatus; it teaches the masses to enthusiastically participate in building the government and to obey state law; it assigns a force of competent party cadres to serve as the nucleus of state agencies and fulfill the vanguard, exemplary role of party members working within state agencies. The party compels its organizations, cadres and members to respect the authority, responsibility, principles and work regulations of the state agencies and to scrupulously comply with the laws, decisions and directives of the state, considering this to be a matter of discipline of the party. Heightening the effectiveness of the leadership provided by the party organization, fully developing the power of state agencies and heightening the effectiveness of their management are the measurement of the level and ability of leadership of the organizations of the party when the party is in power. We must correct the problem of confusing the function of the party with the function of the state. When the organization of the party takes over the work of state agencies and reduces the effectiveness of the state apparatus, it actually reduces the leadership role of the party and violates the right of ownership of the people. In order to heighten the management effectiveness of the state, importance must be attached to building and scrupulously implementing the socialist system of law, upholding the power of the elected agencies, such as the National Assembly and People's Councils... Every matter regarding the national economy and the welfare of the people must be widely discussed within the National Assembly and the People's Councils. The National Assembly and the People's Councils must truly be the places that gather the opinions and aspirations of the masses, must be the persons who supervise and inspect, as effectively as possible, every activity of the government and the committees on the various levels. On the other hand, we must combat the tendency to give light attention to the role and responsibilities of the party organization within state agencies, considering it to be only an organ for propaganda and mobilization that does not play a true leadership role; we must combat the concept of assigning persons to jobs in a mechanical fashion and separating the activities of the party committee echelon from the activities of the state agency. Within the state agencies, every effort must be made to prevent and eradicate the abuse of authority, bureaucracy, deviancy and actions taken against the property of the state and collective as well as actions that violate the right of ownership of the people. The activities of the state are closely linked to the activities of the party. For this reason, the eradication of bad habits and negative phenomena within state agencies must be closely linked to the effort to build and strengthen the basic organizations of the party and improve the quality of party members. We must resolutely punish, in accordance with the law, those who abuse their authority in order to earn their livings illegally, be they members of the party or persons who are outside the party; we must promptly replace and purge cadres who become corrupt, are cowardly or lose the trust of the masses.

As a unified body, a strong party is not only one that is strong in terms of each person within it, but primarily strong in its entire organization, strong throughout the entire body. Therefore, the improvement of the quality of party members must be closely coordinated with improving the quality of the party organization; the improvement of the quality of cadres must be combined with strengthening the leadership agencies on each level and within each sector.

The party member must be a person who is aware of communist ideals, who struggles throughout his life for the interests of the class and the nation, who possesses the sense of organization and discipline, who has certain knowledge of revolutionary theory, grasps the line and policies of the party and has the ability to perform the tasks assigned to him well. The party member must be close to the masses, must respect the right of ownership and the legitimate interests of the masses. The party member absolutely has no special rights or privileges. He joins the party in order to accept arduous, difficult revolutionary tasks and, when necessary, is ready to sacrifice his life and personal happiness for the revolution. The party requires that every party member must deal with the matters in his personal life in a manner consistent with socialist law and ethics.

When talking about the organization of the party, it is first of all necessary to talk about the party chapter because the party chapter is the base of the party, is the organization that learns and reflects to the party the aspirations and opinions of the masses; is the place at which party members discuss and organize the implementation of the line and policy of the party; is the place that selects, accepts, educates and forges party members; and is the place that trains cadres for the party. To strengthen the party chapters and increase their fighting strength, it is necessary to clearly establish the nature and task of each type party chapter; build a party chapter organization that is commensurate with the political task, is governed by work regulations and employs a suitable mode of work; and establish a clear division of labor and responsibilities among party members in order to create the collective strength of the entire party chapter and tap the creativity of each party member.

The party committee is the place that concentrates the intelligence of the party organization. The members of the party committee must be the outstanding members of the party organization, must be absolutely loyal to the revolution, be politically steadfast, have the ability to contribute to leadership, have the ability to organize implementation and unite and mobilize party members and the masses. In order for party committees to be more dynamic, it is necessary to regularly replace a component of the party committee with new forces that represent the movement; at the same time, we must know how to coordinate young cadres with old cadres to insure succession and continuity in the leadership of the party.

To build a corps of cadres that is consistent with the requirements of the new stage, it is necessary to have a thorough understanding of the basic viewpoints concerning cadre work that were presented in resolution 225 of the Political Bureau. We must correctly understand and properly establish the relationship between standards and personal background, between qualities and ability, between elderly cadres and young cadres, between male cadres and female cadres, ethnic minority cadres, etc. It is necessary to accelerate the establishment of specific standards for each type cadre, formulate long-range cadre planning that encompasses the evaluation of existing cadres and establish a plan for training, assigning and strengthening cadres in a basic manner. Every echelon must find and select its own reserve cadres.

To insure that the party is always pure and is increasingly strong and stable, especially under the conditions of being in political power, we must, in the development of the party, attach importance to quality and not place sole emphasis upon numbers. We must insure that the persons who are entering the party are fully qualified and must prevent opportunists and persons seeking personal gain from entering the party. We must carefully examine each and every person and scrupulously adhere to necessary procedures. The routine development of the party and the acceptance into the party of outstanding persons in the mass movement absolutely must go hand in hand with promptly expelling from the party elements that degenerate or become deviant, which can easily occur when the party is in power.

Dear comrades,

At present, in view of the difficult revolutionary tasks that our party is carrying out, we must concern ourselves with strengthening the solidarity and oneness of mind of the party, stop every negative phenomena and vigilantly guard against the decadent influences of mistaken tendencies.

The most important base of solidarity and oneness of mind are the lines and policies of the party regarding the revolution in the North and the South, the international line of the party and the principles and regulations of party activities. We must strengthen our solidarity and oneness of mind not only on the basis of the general line, but also on the basis of the viewpoints and guidelines of development of each sector, each locality and each field of work. Studying and debating differing opinions in order to find the truth are normal occurrences and should not be considered to reflect a lack of unity. However, it would not be a good practice to allow differing evaluations and viewpoints to exist for a long time. We must listen to and respect one another's opinions; for the sake of that which is right, for the sake of the interests of the revolution, we must think, exchange opinions and hold discussions that are entirely free of personal motives and considerations of a factional nature.

Unity of thinking leads to organizational unity; conversely, a united organization insures a unity of thought. This organizational unity is established and strengthened on the basis of scrupulously adhering to the Party Statutes, obeying the principle of democratic centralism and strengthening the discipline of the party. In order for there to be unity of thought and unity of action, it is necessary to struggle against such manifestations of individualism as envy, prejudice, narrowmindedness, partialism, localism, factionalism and so forth, cultivate the spirit of sacrificing personal interests for the great cause and strengthen the spirit of comradeship among communists.

As the organizer of every victory of the Vietnamese revolution, our party has proven itself worthy of the expectations of the working people, of the entire nation of Vietnam and has also fulfilled its task in the international communist movement. "Speaking with the humility of revolutionaries, we have the right to say that our party is truly great." The new stage of the revolution demands that our party make much more progress, that our party improve its leadership ability and increase its will to fight much more. This party plenum has the purpose of meeting these pressing requirements. I am confident that, in view of its spirit of responsibility to the party, the Party Central Committee will surely fulfill this large task.

PUBLISHER'S NOTE, TABLE OF CONTENTS OF 1978 LE DUAN BOOK

Hanoi VE XAY DUNG DANG in Vietnamese 1978 pp 11-12, 404-406

/Publisher's note and table of contents of Le Duan Book "On Party Building"; published by Su That Publishing House, Hanoi, 1978; 32,185 copies printed at the Tran Phu Printing Plant in Ho Chi Minh City, printing completed in October 1978/

/Text/ Publisher's Note

/Excerpt/ The book "On Party Building" consists of important theoretical works on party building. The arguments presented in these works have not only been proven by the realities of the tremendous victories of our party over the past 20 years, but are also lighting the way for our entire party to continue to advance under the new conditions that exist in order to make our party a party that is always an ever victorious Marxist-Leninist party, a proletarian party that faithfully and fully represents the vital interests and the legitimate aspirations of the working class and nation, a strong and stable leadership nucleus of the dictatorship of the proletariat, one capable of leading the people of the entire country in rapidly building within our fatherland a highly developed society that has the most beautiful style of life in the history of the nation.

In view of its important subjects and significance, the book "On Party Building" will help all of our cadres and party members deepen their knowledge of the party, thoroughly comprehend the revolutionary and scientific thinking of the party as set forth by the 4th National Congress of Delegates of the Party and, as a result, have the theoretical foundation needed to study and scrupulously comply with the Party Statutes.

In addition to the articles printed in this book, Le Duan has also dealt with the matter of party building in very many other very interesting and profound articles; it is very regrettable that we have been unable to present all of them here. It is hoped that this book will contain more of these materials the next time it is published.

We hereby respectfully present this important work to our readers.

March, 1978
Su That Publishing House

Table of Contents

The Party (pp 13-39)
(Excerpt of the Political Report delivered at the 3rd National Congress of Delegates of the Party on 5 September 1960)

Let Us Live and Work for the Undertaking and Ideals of the Party (pp 40-42)
(Excerpt of speech delivered at the conference convened on 10 March 1961 by the Party Secretariat to disseminate the specifics and requirements involved in the political rectification program)

Heightening the Ethics and Qualities of the Communist (pp 43-52)
(Excerpt from "Molding the Thinking of Collective Ownership on the Basis of the Stand of the Proletariat," June 1965)

Making Every Effort To Build the Party Chapters and Strengthen the Discipline Within the Party (pp 53-63)
(Excerpt from speech at the Cadre Conference convened on 2 July 1965 by the Party Secretariat)

Thoughts on Inspections (pp 64-72)
(Full text of speech delivered on 17 July 1965 at the Sector-Wide Inspection Conference)

Doing a Better Job of Building and Strengthening the Rural Party Chapters (pp 73-87)
(Full text of article written in April 1966 on the occasion of a trip to the provinces of former Zone 4)

Performing Good Organizational Work in Order To Create a New Quality (pp 88-105)
(Excerpt of speech delivered on 8 June 1968 at the 1st Congress of Delegates of the Nam Ha Provincial Party Organization)

Abolishing Individualism and Forever Bringing Honor to the Title "Communist Fighter"(pp 106-114)
(Full text of speech delivered on 10 September 1968 to the Cao Bang Provincial Party Committee and the cadres of the sectors related to the provincial party committee)

What Is a Good Party Chapter, a Good Party Organization in the Countryside at This Time? (pp 115-151)
(Full text of speech delivered in the spring of 1969 at a conference to discuss the party building activities of the Quynh Luu District party organization in Nghe An Province)

The Basic Tasks of the Rural Party Organizations (pp 152-182)
(Full text of speech delivered in February 1969 to the cadres, party members and people of Ha Tinh Province)

We Must Be the Truly Loyal Servants of the People and Work Wholeheartedly for the People (pp 183-188)
(Full text of speech delivered in October 1969 at a conference of cadres of An Thuy District in Haiphong)

Our Party, the Organizer of Every Victory of the Vietnamese Revolution (pp 189-224)
(Excerpt from the book "Advancing Under the Glorious Banner of the Party To Win New Victories for Independence, Freedom and Socialism," February 1970)

Let Us Struggle Throughout Our Lives for the Ideals of the Party (pp 225-228)
(Excerpt of speech delivered on 29 March 1972 to the cadres of Tay Bac)

Several Matters Concerning Cadres and Organization in the Socialist Revolution (pp 229-289)
(Full text of article written in March 1973 on the occasion of the adoption by the Political Bureau of the resolution on cadre work in the new stage of the revolution)

We Must Perform Good Cadre Work (pp 290-308)
(Full text of speech delivered on 26 March 1973 at the conference to disseminate the resolution of the Political Bureau on cadre work to the comrades in charge of the central sectors)

Several Matters Concerning the Party Now That It Is in Power (pp 309-323)
(Full text of outline of speech at the 23rd Party Plenum, December 1974)

The Vietnam Lao Dong Party, the Leader and Organizer of Every Victory of the Vietnamese Revolution (pp 324-356)
(Address delivered in February 1975 at the formal meeting to commemorate the 45th anniversary of the founding of the party)

Party Building and Mass Movements (pp 357-368)
(Excerpt from speech delivered in July 1976 at a conference of cadres to study the Political Bureau resolution)

Heightening the Leadership Role and Increasing the Fighting Strength of the Party (pp 369-391)
(Excerpt from the Political Report delivered at the 4th National Congress of Delegates of the Party, December 1976)

Continuing To Make Sacrifices and Struggling To Fulfill Obligations to the Country (pp 392-404)
(Full text of article written in May 1977 on the occasion of a visit to Vinh Phu Province)

GOVERNMENT PROPAGANDA TAPES PLAYED IN PRIVATE COFFEE HOUSES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 29 Apr 81 pp 1, 4

[Article by X.TH.: "The Coffee Houses of Phu Nhuan District Play Inspirational Music To Celebrate the Success of the Elections"]

[Text] On each day from 16 April to 26 April 1981, the coffee-music houses that serve many customers in Phu Nhuan District participated in the effort to propagandize the elections of the National Assembly and the City People's Council by playing tape recordings of songs about the elections, of biographies of the candidates, of election rules, etc. These tapes were played for the customers of these coffee houses once an hour on 26 April. All the other days, they were played twice, once in the morning and once in the evening.

Duong Van Thanh, the owner of the coffee house at number 29 Nguyen Huynh Duc Street, said to us: "I feel that the playing of music to propagandize the elections during these days has been both correct and necessary. At first, my customers were a little surprised but, after awhile, they listened to the tapes very attentively. In addition, on ordinary days, I think that the coffee houses should turn on the Vietnam music programs (channels 11 and 13) broadcast by the Culture and Information Service. I, myself, feel that the music played on this program is very instructive..."

Many persons in the coffee houses mentioned above remarked that the atmosphere was cheerful, comfortable and polite.

IMPROVED DISCIPLINE IN BASIC LEVEL PARTY ORGANIZATION URGED

Hanoi NHAN DAN in Vietnamese 26 Aug 81 p 3

[Unattributed article: "Develop Good Discipline-Maintenance Practices in the Basic Level Party Organizations"]

[Text] Many provinces and municipalities have tied in the tasks of issuing party cards and consolidating bases with the expansion of campaign to develop good discipline-maintenance practices in the basic level party organization.

In Thanh Hoa the basic level party organizations have set forth the requirements of cadres and party member in leading production and organizing the lives of the people. The party organizations of many enterprises and agricultural cooperatives have stepped up their oversight of the implementation of principles and regulations in contracting out production to workers.

As of 5 Aughust the party organization of Nong Cong District in Thanh Hoa Province had issued party membership cards to 4,200 comrades, 93 percent of all party members in the district. The basic level party organizations have taken positive steps to educate the party members still under review. The district has tied in the issuing of party membership cards with the fulfillment of the local political tasks. During the same period, the district surpussed the 10th month season area plan and is focussing on tending and fertilizing.

In Quang Ninh the basic level party organization have set the requirements of cultivating and steeling cadres and party members, and the contents of self-criticism and criticism in party chapter activities.

The party chapters in Phu Xuyen District, Ha Son Binh Province, have paid attention to improving the quality of self-criticism and criticism and to creating good discipline-maintenance practices in the basic level party organizations. The district has also guided the task of overseeing the implementation of democracy and discipline in the party organization of the Van Diem Sugar Mill, a unit which received party membership cards during the 2 September 1980. Of the party members there, 1.2 percent had to return their party membership cards because they made mistakes regarding the organization and discipline.

By means of creating good discipline maintenance practices, the basic level party organizations have further strengthened the sense of responsibility of the party members, strengthened solidarity in the party, and prevented negative phenomena.

In Phu Khanh and Quang Nam-Da Nang provinces, nearly 80 percent of the basic level party organizations have drawn up monthly activity schedules and stressed the re sponsibility of party members with regard to specialized, professional study, maintaining discipline, carrying out resolutions, discipline in expression, discipline in reporting and in requesting instructions, and secrecy maintenance discipline, in accordance with the four contents of creating good discipline-maintenance practices.

The standing committee of the Ha Nam Ninh provincial party committee recently organized in Xuan Hong Village, Xuan Thuy District, a supplementation cycle to heighten awareness of the situation and missions and raise the organization and management levels of the basic level cadres. Some 3,850 key cadres fulfilling eight functions in the villages (secretaries and Deputy secretaries of party committees, village chairmen, cooperative directors, vice chairmen in charge of internal affairs, village unit commanders, Youth Union chapter secretaries, and women's association chapter secretaries) attended the classes.

The party committee of Duc Linh District in Thuan Hai Province recently assigned district committee members to oversee the weak, deficient bases in order to take steps to strengthen them and create for much party organizations conditions for receiving party membership cards during the year-end cycles. The district has adopted the policy of perfecting all party bases, governmental administrations, and cooperatives, which is tied in with the struggle against negative phenomena.

To date, 100 percent of the party members of the party organization of the Posts and Telecommunications Equipment Factory have elementary levels regarding Marxist-Leninist theory. Ten comrades have completed the theory courses of high-level party schools and 20 party members have graduated from mid-level on-the-job political courses.

BOUNDARIES OF NGHIA BINH PROVINCE DISTRICTS READJUSTED

Hanoi NHAN DAN in Vietnamese 28 Aug 81 p 4

[VNA News Release: "Boundaries of Some Districts and Cities in Nghia Binh Province Readjusted"]

[Text] The Council of Ministers recently issued a decision regarding the following adjustments of the borders of Phuoc Van, Tay Son, Hoai An, and Nghia Minh districts and the city of Quang Nghia.

1. Phuoc Van District is divided into two districts called Tuy Phuoc and Van Canh.

-- Tuy Phuoc District consists of the following villages: Phuoc An, Phuoc Long, Phuoc Nghia, Phuoc Loc, Phuoc Hiep, Phuoc Quang, Phuoc Hoa, Phuoc Thang, Phuoc Son, Phuoc Thuan, Phuoc Hung, and Phuoc Thanh. The district seat is Phuoc Nghia village.

The boundaries of Tuy Phuoc District are as follows: to the north it borders on Phu Cat and An Nhon districts, to the south it borders on Dong Xuan District and Phu Khanh Province, to the east it borders on Tuy Phuoc District, and to the west it borders on An Khe District and Gia Lai-Kon Tum Province.

2. Tay Son District is divided into two districts called Tay Son and Vinh Thanh.

Tay Son District consists of the villages of Binh Giang, Binh Phu, Binh Tuong, Binh Nghi, Binh An, Binh Thanh, Binh Hoa, Binh Hiep, and Vinh An and the town of Phu Phong. The district seat is the town of Phu Phong.

The boundaries of Tay Son District are as follows: to the north it borders Vinh Thanh District, to the south it borders Van Canh District, to the east it borders Phu Cat and An Nhon districts, and to the west it borders An Khe District and Gia Lai-Kon Tum Province.

-- Vinh Thanh District consists of the following villages: Vinh Son, Vinh Hoa, Vinh Kim, Vinh Hao, Vinh Hiep and Binh Quang. The district seat is Vinh Hao Village.

The boundaries of Vinh Thanh District are as follows: to the north it borders An Lao District, to the south it borders Tay Son District, to the east it borders on

Hoai An and Phu Cat districts, and to the west it borders on An Khe District and Gia Lai-Kon Tum Province.

3. Hoai An District is divided into two districts called Hoai An and An Lao.

-- Hoai An District consists of the following villages: An Hao, An Tin, An Thanh, An Phong, An Duc, An Tuong, An Nghia, An Huu, An Son, Dak Mang, and Bok Toi. The district seat is An Duc Village.

The boundaries of Hoai An District are as follows: to the north it borders An Lao District, to the south it borders Phu Cat and Vinh Thanh districts, to the east it borders Phu My and Hoai Nhon district, and to the west it borders Vinh Thanh District.

-- An Huyen District consists of the following villages: An Quang, An Trung, An Hung, An Dung, An Vinh, An Toan, and An Hoa. The district seat is An Trung Village.

The boundaries of An Lao District are as follows: the the north it borders Ba To District, to the south it borders Hoai An District, to the east it borders Hoai Nhon District, and to the west it borders An Khe District and Gia Lai-Kon Tum Province.

4. Nghia Minh District is divided into two districts called Nghia Hanh and Minh Long.

-- Nghia Hanh District consists of the following villages: Hanh Minh, Hanh Thuan, Hanh Dung, Hanh Duc, Hanh Phuoc, Hanh Trinh, Hanh Thien, and Hanh Tin. The district seat is Hanh Minh Village.

The boundaries of Nghia Hanh district are as follows: to the north it borders Tu Nghia District, to the south it borders Ba To and Mo Duc districts, to the east it borders Tu Nghia District, and to the west it borders Minh Long District.

-- Minh Long consists of the following villages: Long Mon, Long Mai, Long Hiep, Long Son, and Thanh An. The district seat is Long Hiep Village.

The boundaries of Minh Long District are as follows: to the north it borders Son Ha District, to the south it borders Ba To District, to the east it borders Nghia Hanh District, and to the west it borders Son Ha District.

5. The city of Quang Nghia is divided into the city of Quang Nghia and Tu Nghia District.

-- The city of Quang Ngai consists of the following subwards: Nguyen Nghiem, Tran Phu, Le Hong Phong, and Tran Hung Dao, and the villages of Nghia Lo, Nghia Dong, Nghia Chanh (except for the hamlet of La Ta, which becomes part of Nghia Thuong Village in Tu Nghia District) and Quang Phu (which consists of hamlets No 2 and No 3 of Nghia Dien Village).

The boundaries of Quang Ngai City are as follows: to the north it borders Son Tinh District, to the south it borders Tu Nghia District, to the east it borders Tu Nghia District, and to the west it bordrs Tu Nghia District.

-- Tu Nghia District consists of the following villages: Nghia Lam, Nghia Thang, Nghia Ky, Nghia Trung, Nghia Hiep, Nghia Phuong, Nghia Hoa, Nghia An, Nghia Ha, Nghia Thuong, and Nghia Dien. The district seat is Nghia Trung Village.

The boundaries of Tu Nghia District are as follows: to the north it borders Quang Ngai City and Son Tinh District, to the South it borders Mo Duc District, to the east it borders the South China Sea, and to the west it borders the districts of Nghia Hanh, Minh Long, and Son Ha.

ECONOMIC PLANNING, TRADE AND FINANCE

'NHAN DAN' EDITORIAL CALLS FOR IMPROVED PLANNING FOR 1982

Hanoi NHAN DAN in Vietnamese 28 Aug 81 p 1

[Editorial: "Make Preparations for the 1982 State Plans"]

[Text] In addition to going all-out to guide the implementation of the 1981 state plans, the sectors, localities, and bases are drafting their 1982 plans. The drafting and implementation of the state plans during the coming year are especially important with regard to the implementation of the economic line and the directions and missions of the 1981-1985 five-year plan set forth by the Fifth Party Congress.

The 1982 state plans, embodying the party line and based on the present economic situation and living conditions of our people, must fulfill many great, urgent tasks. In the economic sphere, the plans concentrate to a high degree the capabilities and forces of all sectors and echelons on the most important battlefield: agriculture. They must first of all promote the production of grain and food products, solve the food problem, and endeavor to develop the production of consumer goods from domestic raw materials to satisfy the need for ordinary consumer goods. At the same time, they must go all-out to rapidly increase exports in order to import, do a better job of resolving the transportation and energy problems, rationally utilize labor at the base level, reorganize labor in the sphere of the district, and gradually redistribute labor among the various parts of the country. The capital investment plans must above all concentrate on the important, urgent objectives of the economy, and stress in-depth investment in order to develop to the maximum extent the existing production capabilities.

In order to implement that direction, there must be a true transformation with regard to both the contents and the methods of planning. In some places there still exists the situation of assigning to the lower echelon planning tasks which are not in tune with actual capabilities, setting plan norms that are irrationally high, failing to correctly determine the rational needs, spreading materials and capital among too many objectives when drafting plans, or not having sufficient capability to provide the necessary facilities and means, which result in a lowering of the plan's economic effectiveness. When drafting plans, some lower echelons have the tendency to ask for too much materiel and capital. Many places do not yet fully grasp, and have not sough all ways to develop existing capabilities. Overcoming those deficiences and creating a planning stystem at all three levels -- the central level, the local level, and the base level -- which is both positive and realistic are specific requirements of the guidance task.

the 1982 state plans of each sector, locality, and base must be plans which clearly manifest progress by means of norms and measures which effectively use all existing capabilities regarding labor, land, and material-technical bases and regarding the economizing of expenditures in all activities, especially in striving to economize in the use of grain, POL, electricity, coal, and materials. All plans must meet the common requirements at present: with facilities and technical materials that are equal to or less than those in the past, do a better job of producing, create more wealth, and attain higher levels of obligatory product delivery to and financial income for the state. The key factor in assuring that those requirements are met is that we must stress the application of scientific accomplishments and technical advances to production and combine economic plans with scientific-technical development plans. Furthermore, we must tie in plan drafting and implementation with the imporvement of organization and management and the implementation of economic leverage policies. The reviewing and completion of economic-technical standards and norms, the adjustment of the price system, the strengthening of the basic studies task, and the analysis and selection of economic-technical plans, etc., are tasks which cannot be regarded lightly.

HO CHI MINH CITY POPULATION REDUCED BY 840,000 IN 5 YEARS

Hanoi NHAN DAN in Vietnamese 28 Aug 81 p 1

[Unattributed article: "More Than 840,000 Ho Chi Minh City Residents Go to Develop New Economic Zones, Return to Their Home Areas, or Go To Areas Around the City to Produce"]

[Text] During the past 5 years (1976-1980) more than 840,000 residents of Ho Chi Minh City have gone to develop new economic zones, returned to their home areas, or have gone to areas outside the city to produce. However, that task is still beset with many shortcomings and weaknesses, the most serious of which are failure to carry out economic and social planning and failure to seek all ways to develop production along appropriate lines. Therefore, many difficulties are still being encountered in the lives of the people going to develop new economic zones.

During the next 5 years (1981-1985), in addition to transferring labor to agriculture in areas around the city in order to develop areas specializing in vegetables, short-term industrial crops, forestry, and marine products, Ho Chi Minh City will continue to send workers to develop the rubber state farm in Song Be Province, the Tri An dam in Dong Nai province, the oil and gas zone in the Vung Tau-Con Dao Special Zone, the bauxite ore zone in Lam Dong, and the Dac Nong state forest in Dac Lac Province, in order to contribute to developing the on-the-spot latent capabilities, fully utilize the natural resoures in such places, support the development of the Duyen Hai area outside the city, and integrate and strengthen the relationships between the industrial areas and the areas producing raw materials and between exports and imports.

ECONOMIC PLANNING, TRADE AND FINANCE

'NHAN DAN' EDITORIAL CALLS FOR IMPROVED BASE-LEVEL PLANNING

Hanoi NHAN DAN in Vietnamese 24 Aug 81 p 1

[Editorial: "Draft Plans in the State Economic Bases"]

[Text] Drafting annual plans at the base level and synthesizing those plans at higher echelons is an important measure for improving the quality of the 1982 state plan. Under the guidance of the central plan, the state economic bases are responsible for taking the initiative in drafting all-round plans and for elucidating the tasks and legal norms assigned by the state. That method requires that all bases exercise their collective mastership right in drafting and implementing plans, make the greatest effort to develop the latent and existing capabilities, take the initiative in balancing production, fulfill their obligations to the state with regard to rapidly increasing output, economizing on expenditures, and operating at a profit, and assure the concentration of increasingly larger numbers of products and sources of taxation.

Under the circumstances of there being many difficulties with regard to energy and raw materials, since the beginning of the year many bases have begun to overcome the way of livelihood of the administrative, bureaucratic sort, are more flexible in production and commerce, and have been able to fulfill their principal product plans and produce additional secondary products. Many mining installations, local industrial enterprises, state farms, state purchasing corporations of the commercial sector, etc., have increased their production and business levels, have earned much profit for their budgets, and have improved the workers' living standards.

But a considerable number of other bases still do not correctly implement the production-commercial guidelines and violate plan discipline. Plan drafting is not yet in accordance with socialist commercial principles, and much materiel and capital, and many products, are not included in plans in order to achieve over-all balancing. Some places with favorable material conditions have not accepted all of the state plan norms assigned them. Some places are more concerned with secondary production than with their main products. The erroneous ways of drafting and implementing plans have harmed the national economy and have caused the incomes of the enterprises and workers to increase excessively, while the interests of the state have been harmed.

In drawing up the 1982 draft plans in the bases, we must pay attention to correctly determining the contents of the plans in the spirit of the decisions of the state. The enterprises must have a rational, planned product line along the lines of giving priority with regard to facilities and materials to their main products and attain or surpass the legal norms assigned by the state, especially with regard to the main products and export goods. The enterprise plans must be plans which fully exploit all existing capabilities, manifested in the form of norms which increase the utilization effectiveness of energy, raw materials, labor, land, machinery, and capital, and manifest a high degree of concentration of the products that are produced and the income earned for the state. Closely tied in with those norms, the plans clarify the implementation of measures regarding the application of technical advances, the improvement of production organization, the organization of the paying of salaries according to output and bonuses, include progressive economic-technical standards and norms in planning and production, and strengthen management measures.

In the process of drafting plans, the clear determination and balancing of the factors of production in correct accordance with the nature of each part of the plan is very necessary. The production and marketing plans must be assured by economic contracts. Financial plans, profit distribution plans, and plans for the use of salary funds and enterprise funds are drafted at the same taime as the production plans. The enterprises' observance of the planning regulations and the development of the intelligence of the cadres and workers by having them participate in drafting plans serve to enrich the contents and improve the ;quality of plans. The production plans, norm systems, methods of purchasing raw materials, plans for determining production costs, etc., of the enterprise plans must be analyzed and reviewed.

ECONOMIC PLANNING, TRADE AND FINANCE

THOT NOT DISTRICT IMPROVES COLLECTION OF INDUSTRIAL-COMMERCIAL TAXES

Hanoi NHAN DAN in Vietnamese 20 Aug 81 p 2

[Article by Tran Huy: "Thot Not District Collects Industrial-Commercial Taxes"]

[Text] Since the end of the third quarter and the beginning of the fourth quarter of 1980, Thot Not District in Hau Giang Province has discovered thousands of addditional businessmen who were unwilling to pay industrial-commercial taxes. The number of businessmen included in the tax-paying category increased to 4,331 a fourfold increase over 1979 and nearly 15 times greater than in 1976. The tax collection element in the district no longer wait for the local businessmen to "voluntarily" come to pay taxes. The district financial sector, in cooperation with the sections and sectors, set up a stationary tax collection station and a mobile organization to control the main roads, which both contributes to market management and organizes the collection of commercial transit taxes, an important source of taxes in the locality. The policy of setting aside one percent of the taxes collected to reward tax collectors who meet their norms in correct accordance with the policies, and setting aside 10 percent of the total tax collection for payment to the village and town budgets has helped the locality to develop its economy, repair roads, build schools and public health clinics, etc.

During the fourth quarter of 1980 the industrial-commercial taxes collected by the district was equal to the total collected during the previous 9 months. The total amount of taxes collected during the year rose to 3,362,800 dong, which was 15.7 percent of norm. In addition to the amount turned over to the upper echelon to meet requirements, more than 762,000 dong were paid into the local budget.

In order to get the collection of industrial-commercial taxes on the right track and advance to stablizing the sources of tax collection and balance budgetary income and outgo, at the beginning of 1981 the district concentrated its cadres and selected Thuan Hung Village as the test-point for a new tax-collection unit. After that it set up industrial-commercial tax collection units in all 11 villages and towns in the district. Those tax units helped the businessmen understand their tax obligations were and to avoid the confusion and hesitation of the past, while also res restricting negative phenomena in the implementation of the tax policy. During the first 6 months of this year the district collected more than 4,215,600 dong of industrial-commercial taxes, which amounted to 110 percent of the norm and was an increase of more than 852,800 dong over the total amount collected in 1980. Progress in tax collection contributed to balancing the local budget and helped state food purchases in the locality to surpass requirements.

Clear progress has been made in the collection of industrial-commercial taxes in Thot Not District. The units outstandingly fulfilling their missions included Thach An, Thach Quoi, Thoi Thuan, Tan Dong, and the district tax collection station. But there are still many units which have not done a good job and have not attained -- and in some cases have fallen far short of -- their tax collection norms, such as Trung An, Vinh Trinh, and Tan Tay, the urban units, etc. More than 330 installations dealing in sugar are still in arrears in the payment of merchandise taxes.

'NHAN DAN'EDITORIAL URGES BETTER CARE OF MACHINERY

Hanoi NHAN DAN in Vietnamese 28 Aug 81 p 1

[Editorial: "Maintain Machinery and Equipment"]

[Text] Machinery and equipment are principal production means and are the most important fixed property of the enterprises, construction sites, etc. Effectively maintaining and using machinery and equipment is a key, permanent task of management which is intended to achieve the good exploitation of the production capabilities of the bases and contribute to increasing labor productivity and lower production costs.

In the emulation movement to promote production and practice economy, many enterprises and construction sites have, in addition to taking steps to reduce their use of coal, electricity, POL, and the other technical materials, paid attention to meticulously caring for and maintaining machinery and equipment, and regard the full development of the capacities, and the prolongation of the life, of vehicles and machinery as the most effective means of economizing. In such places machinery is not only protected in order to avoid loss and damage but is also maintained and cleaned, and there are systems for tight maintenance and regular repairs. But in some places the situation is the reverse. In some enterprises machinery must cease operations after only a short period of time (because of the lack of energy or raw materials), and because of lax maintenance some machinery parts break down and it can no longer be operated. In the fields, a considerable quantity of agricultural machinery is left out in the open when not in use and is exposed to the elements with nothing to protect them. The same is true at construction sites. Even at some key construction sites valuable equipment is ruined before it has been assembled; some items are missing a few parts, others have become rusted, and sometimes entire machines are lost unaccountably. In a rather large number of cases, merely because some imported machines and equipment are lost or damaged the construction rate of a project in prolonged by many months. Lax maintenance is an irresponsible way of working which causes considerable harm to the state and people.

In order to promote production and practice economy, we must rapidly rectify the management of equipment and machinery. That is a problem that is posed directly for each sector, locality, and base. Each production and construction unit must, by means of continuous inventories and control, firmly grasp the quantity and quality of its machinery and equipment in order to have a plan to maintain and use them effectively. The stipulations of the state regarding the operation, maintenance, and repair systmes must be fully observed. As regards the construction sites, the stepping up of the construction rate cannot be separated from the best possible protection and maintenance of machinery and equipment, in order to be able to install all parts of the production lines of the new project. All people and bases must manifest a sense of responsibility and discipline toward maintaining state property.

ECONOMIC PLANNING, TRADE AND FINANCE

ARTICLE CALLS FOR BETTER BUILDING SUPPLY NETWORK

Ho Chi Minh City TIN SANG in Vietnamese 20 May 81 p 1

[Article by P.T.H.: "It Is Necessary To Improve the Management of the Prices of Building Materials"]

[Text] Since April, in the face of the needs of the people of the city to repair their houses in order to stop leaks, the sale of the various types of building materials, such as bamboo, boards, roofing material, cement, bricks, sand and so forth on the outside market has developed rather strongly. This business has been carried out under various forms of "outdoor markets" that buy and sell various types of bamboo, boards, sheet metal and old bricks and also the "under the table" sale of cement and various types of lumber in which private individuals do not have the permission to do business. In addition, a number of timber yards are still selling various types of bamboo, leaves for roofs, tree trunks for poles and so forth. These yards emerged late last year and have business licenses.

As a result of the emergency needs of the people to repair their houses, the prices of some building materials rose rather highly at the start of the rainy season; for example, cement is selling at 280 dong for a 50 kilogram bag and 6 dong at retail for each kilogram while the state is selling cement at two prices: 150 dong (the high price) and 35.5 dong (the supply price for persons to stop leaks in their houses); 1 piece of old sheet metal is priced at 120 dong and fibro cement sells for more than 50 dong per sheet (the state price is 12.70 dong); paving bricks cost 0.50 dong per brick (the state price is 0.15 dong); 4-hole pipe bricks are priced at 0.68 dong apiece (the state price is 0.22 dong apiece); sand is priced at 140 dong per cubic meter (the state price is from 15 to 30 dong per cubic meter); the various types of logs and stakes (which are actually small logs harvested in Long Ho) that have a diameter from 0.10 to 0.15 meter cost from 15 to 30 dong apiece and so forth. In addition, there are many other items, such as nails, paint, newly milled lumber and so forth, on display in rather large quantities and the prices of which constantly vary, are never stable and are always increasing.

Meanwhile, the state-operated commerce sector of the city has long had a network of building supply stores within each precinct and district. Each store has many sales outlets. However, the operations of these stores are still limited; the majority supply state agencies more than they participate in the market. Only a small number of persons go to these stores, and they only go once a year before or during the rainy season. The store with the most customers is the department store of the city's Building Materials Corporation in the Tax commercial area. Conversely, there are several products, especially necessary materials for the repair of housing, that the district and precinct stores do not stock.

Some products that are produced and managed exclusively by the state, such as cement, sand and lumber, are rarely sold by these stores to the people, even at the high price. As regards cement, in October and November 1980, the building supply stores put cement on sale at a high price but the supply of cement was not abundant, consequently, it did not meet the requirements of the people. Merchants purchased the cement, stored it and added many impure substances to it in order to earn a profit. When the state's supply was exhausted and it stopped selling cement, they put their cement on sale at a price many times higher. In addition, it is also necessary to mention the phenomenon of state cement slipping onto the market by the tons. Recently, at the Hai Ba Trung Bridge, public security troops arrested the driver of a truck carrying 100 bags of cement as the cement was being unloaded to a merchant.

Even with regard to sand, a readily available natural resource along the Dong Nai River, only a few agencies have the authority to excavate it and only the building supply corporations of the city have permission to do business in sand. Actually, there are only a few stores that have licenses to sell sand but virtually none of them has organized a business in sand. Meanwhile, on the outside, private merchants have been buying whole piles of sand in order to sell it at a price of 140 dong per cubic meter, 10 times higher than the state price.

Under the present guidelines for the development of the business of the city's commerce sector, many organizational and financial problems are being resolved. The people hope that the building supply business will be widely organized in order to help stabilize the market; at the same time, it is necessary to improve the management of the places that sell building materials on the outside market, especially with regard to their prices.

AGRICULTURE

EMULATION CAMPAIGN LAUNCHED TO IMPROVE TENTH-MONTH RICE PRODUCTION

Hanoi NHAN DAN in Vietnamese 24 Aug 81 pp 1,4

[Unattributed article: "Ministry of Agriculture Launches Emulation Campaign to Achieve Merit to Celebrate the Party Congress: Positively Tend and Protect the10th Month Rice, Make Good Preparations for and Win Victories in the 1981 Winter Season and the 1981-1982 Winter-Spring Season"]

[TEXT] The Ministry of Agriculture has launched throughout the sector an emulation campaign to achieve merit to celebrate the Fifth Party Congress. The main contents of that emulation campaign is to concentrate on doing a good job of guiding, and organizing the implementation of,such production tasks as attaining planting norms, doing a good job of tending and protecting the 10th month rice, harvesting the summer-fall rice rapidly and effectively, making full preparations in all regards, and winning victory in the 1981 winter season and the 1981-1982 winter-spring season.

To date, the nation as a whole has only planted 626,000 hectares of summer-fall rice, about 70,000 hectares less than during the 1980 summer-fall season and 97,000 hectares. Of the 22 localities planting summer-fall rice only four provinces -- Nghia Binh, Dong Nai, Dong Thap, and Ben Tre -- have surpassed their planting plan norms. The other provinces have not yet fulfilled their acreage plans.

About 50,000 hectares of summer-fall rice are being seriously affected by drought and about 50,000 hectares are infested by insects and disease. The localities are intensifying their tending and protection of the late-planted rice, organizing the rapid harvesting of ripe rice in order to avoid flooding, and going all-out to attain high productivity to make up for the accreage short-fall, while also positively expanding the planting of the additional third season rice.

There have been more good transformations in this year's 10th month rice planting situation than during previous years. The north essentially completed the transplanting of 10th-month rice in August. The localities have expanded the contracting-out of production to workers during the present 10th month season, the planting rate has been fast, and the intensive cultivation technical measures have been applied better than during previous seasons. The cooperatives and cooperative members are going all-out to tend the crops, prevent and fight drought and flooding, prevent and fight drought and flooding, prevent and eliminate insects and diseases, and protect the rice. The 10th month rice is developing well. The peasants are determined to be successful in contracted-out production during the 10th month season.

In the south, although the planting rate is higher during the present 10th month season than during the previous season, only about 60 percent of the acreage has be been planted and planting is behind schedule. We must concentrate our guidance, speed up the planting rate, and go all-out to fulfill and surpass the plan, while at the same time spreading supplementary fertilizer in order to increase yields by 10 to 20 percent in order to make up for the short-fall in rice output during the winter-spring season.

The winter season has become an important production season. This is the 10th winter season in the north. The cooperatives and the cooperative members have much experience in organizing winter-season production. The localities must develop those advantages and the positive aspects of the form of contracting out production, and pay adequate attention to both expanding acreage and intensively cultivating winter-season crops.

Beginning now, the localities and cooperatives must determine their areas of operation and take the initiative in preparing sufficient seedstock, fertilizer, and the other necessary conditions in order to plant 350,000 to 400,000 hectares with an appropriate crop structure that includes from 150,000 to 160,000 hectares of sweet potatoes, 80,000 hectares of white potatoes, from 40,000 to 50,000 hectares of corn, 16,000 hectares of soybeans, from 4,000 to 5,000 hectares of tobacco, 65,000 hectares of vegetables and legumes of the various kinds, and 350,000 hectares of azolla.

The provinces in the piedmont and mountain regions of the north are doing a good job of organizing and guiding the expansion of winter season and spring season production on fields that now only grow one 10th month season. They are applying the winter dry plowing experiences of the Tan Moc cooperative in Luc Ngan District, Ha Bac Province in order to plant spring soybeans.

The 1981-1982 winter-spring season will be the first season of the implementation of the 1982 agricultural production plan. We must expand the contracting-out of pr production, perfect management, and do a better job of developing the latent capabilities of labor, land, and the material bases in order to comprehensively develop agriculture, including rice, subsidiary food crops, industrial crops, and animal husbandry. The area, yield, and output during the 1981-1982 winter-spring season will be higher than during the previous season throughout the nation. The rice area will increase by 100,000 hectares, the rice yield will increase by six quintals per hectare, output will increase by 380,000 tons,the subsidiary food area will increase by 43 percent, subsidiary food output in terms of paddly will increase 84 percent, the industrial crop area will increase by 50 percent, and special attention will be paid to developing jute and soybeans.

The entire sector is doing a good job of fulfilling the following principal tasks:

Determining a rational planned production structure. In determining the production structure and drafting production development plans we must fully understand the guidance spirit of the Party Central Committee: fully developing the latent capabilities of the local labor, land, and material-technical bases in order to meet the food and clothing requirements of the local people, do a good job of fulfilling obligations toward the state, and expand exports.

We must supplement and strengthen the material-technical bases which actually serve production, especially the irrigation, draft power, seedstock, and implement tasks, and the task of protecting vegetation.

We must continue to promote the movement to produce and use fertilizer, especially organic fertilizer. Due to the increasingly greater requirements of intensive cultivation and the expansion of acreage, our capabilities for supplying chemical fertilizer during the coming period will still be very limited. The use of organic fertilizer must receive special attention and must be regarded as the principal source of fertilizer.

We must mobilize the strength of the entire sector to effectively serve the localities and bases, and raise the level of the organization, management, guidance, and command of the production process.

LIGHT INDUSTRY

REASONS FOR BICYCLE TIRE SHORTAGE DISCUSSED

Hanoi LAO DONG in Vietnamese 13 Aug 81 p 6

[Article by Thieu Mai: "A 'Fever' for Bicycle Tires"]

[Text] During the past several years bicycle tires have become scarce. Only about 10 percent of the needs of cadres and workers are met. On the market, the price of a bicycle tire has increased 10-fold in 3 years. In Hanoi, state retail stores sell a size-650 Sao Vang tire for 160 dong but people still jostle one another to buy them. On the free market the price sometimes rises to between 180 and 200 dong per tire. Why is there such a "fever" for bicycle tires?

The factories producing bicycle tires are in a difficult situation because they lack raw materials, especially rubber. That should surprise a lot of people. Our country is rich in rubber and we have immense rubber plantations in both the north and the south. Despite that fact, we lack rubber with which to produce bicycle tires.

An example is the Sao Vang Rubber Factory, a large factory which supplies bicycle tires to nearly all provinces in the north and exports some of its output. The factory has a capacity of 5.5 million tire[illegible] year. In 1981 it was assigned a plan to produce 4.5 million tires. But beginning in the first quarter of the year many components of the factory had to cease operations because of the lack of rubber. The rubber supplied by the Ministry of Supply and the Chemical General Department was insufficient. So the plan calling for 4.5 million tires was adjusted downward to 3 million (900,000 of which were designated for export). But during the first 6 months of 1981 the factory was only able to produce 1.1 million tires -- 36 percent of the annual plan -- because it didn't have sufficient production materials.

After rubber comes coal, of which there is also a serious shortage. Each month the factory needs 1,200 tons of coal to operate normally, but in fact some months it is supplied only 500 tons. Many months the factory must borrow coal from other enterprises. Because it lacks rubber and coal, its production declines. Clearly, during the past few years the production of bicycle tires has declined noticeably. Furthermore, quality is poorer than in the past. Many tires go flat or crack after being used only 6 or 7 months. Their utilization time is less now. That causes tires to become even more scarce.

During the past few years the commercial sector has done a poor job of distributing bicycle tires. That has restricted the development of production and created difficulties with regard to satisfying the need for bicycle tires. Every year a large part of the output of the factories producing bicycle tires -- except for the part exported -- is turned over to the commercial sector. A small percentage is set aside to be distributed to cadres and workers. But in nearly all localities -- from the bureaus and services to the retail stores -- the commercial sector uses such goods as if they belonged to it and distributes them in a very arbitrary manner. Anyone who has "connections" can buy many of them. Organs and enterprises with materials to exchange on a "two-way trade" basis receive higher priority. Distribution to relatives and friends in accordance with handwritten requests and internal distribution are widespread.

In Hai Phong, during the third quarter and the first 13 days of the fourth quarter of 1980, of 25,600 tires sold at the Cau Dat Bicycle Store, the Minh Khai Department Store, and the Metals-Chemicals Corporation, 6,881 were sold in accordance with handwritten requests and 1,424 were sold within the commercial sector. At the bicycle shop, each cadre, worker, and clerk bought two tires. In Hai Hung, the director of the Retail Food Corporation of Chi Linh District in a period of 1 month bought 6 bicycle tires, 28 members of the district party committee were each distributed two tires, etc. Those distribution methods have caused irrational surplusses and shortages. People who can buy many tires sell what they don't use at a profit or save them for future use. People who truly need to buy them can't, and must search for them on the free market, which causes the shortage to become even more serious.

In addition to unjust distribution, the state commercial prices are not uniform. Bicycle tires are sold according to a commercial price structure that differs from province to province. In Hanoi the price is 160 dong per tire, in Hai Phong the price is 180 dong, in Vinh Phu the price is 130 dong, etc. Thus goods flow from places with low prices to places with high prices, which creates an artificial demand. The arbitrary increasing of prices also influences the psychology of the consumers. Many people believe that bicycle tires are still scarce and that the price will increase, so although they do not yet need any they try to find the money to buy a few to save for the future, and merchants buy tires for speculation. Those factors have contributed to creating the "fevers" over bicycle tires, such as the one now taking place on the market.

At present, bicycles are regarded as a convenient means of travel for most cadres and workers. Thus their demand for tires is very great. After implementing two price systems, the state sets aside about 40 percent of the bicycle tires to sell at supply prices. That quantity is only sufficient to meet a small part of the demand. The discrepancy between the supply price and the market price is too great (about 16-fold). The supplying of small amounts during the past several years has caused everyone to tack tires. Therefore, when distributing tires the units experience many difficulties in determining who will be able to buy them. In many places, everyone thinks that they have a greater need to buy tires, so no one will give way to anyone else. Some places must resell the tires at market prices to obtain money to divide up among everyone! That is contrary to the state's distribution system. The base-level trade unions must participate actively in distribution in order to assure that the goods reach the right people and determine who must purchase tires first and who can purchase them later. The commercial sector should further examine and study the ratio of tires sold at supply prices in order to reduce the difficulties of cadres and workers. In fact, according to the present method of distribution, no one knows when he will be able to buy a bicycle tire at the supply price, and no one can guarantee that they will be able to buy one within a certain period of time.

In order to resolve the shortage of bicycle tires, we must resolve problems in many phases and sectors, in production, distribution, and consumption. Of those three phases, production is the most decisive. Thus the key problem is to provide sufficient raw materials for production. The places of production must improve their techniques and assure that the quality of tires meets the standards and steadily improves. With regard to the commercial sector, the distribution of bicycle tires must be open and the trade unions at the various levels must participate in managing distribution in order to assure that the tires reach the right consumers.

Nguyễn Thái Bảo [NGUYEENX THAIS BAOR] aka Nguyễn Thái Dũng [NGUYEENX THAIS ZUNGX]

Deputy Secretary of the VCP Committee and Chairman of the People's Committee, Tan Binh District, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Lê Khắc Bình [LEE KHAWCS BINHF] aka Mai Tấn Ngà [MAI TAANS NGAF]

*Member of the Executive Committee of the VCP Committee, Ho Chi Minh City; Deputy Director of the Commerce Sector, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Tống Văn Công [TOONGS VAWN COONG]

Editor-in-chief of the Ho Chi Minh City labor newspaper CONG NHAN GIAI PHONG; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Nguyễn Võ Danh [NGUYEENX VOX ZANH] aka Bảy Dự [BAYR ZUWJ]

Member of the Executive Committee of the VCP Committee, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Trần Văn Danh [TRAANF VAWN ZANH] aka Ba Trần [BA TRAANF]

Member of the Executive Committee of the VCP Committee, Ho Chi Minh City (in charge of agriculture); election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Trần Viết Dung [TRAANF VIEETS ZUNG]

*SRV Ambassador to the Yemen People's Democratic Republic; on 3 September 1981 he attended a reception for a visiting SRV military delegation. (QUAN DOI NHAN DAN 8 Sep 81 p 1)

Nguyễn Văn Đạo [NGUYEENX VAWN DAOJ]

*Director of the Marine Products Service, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Võ Văn Định [VOX VAWN DINHJ] aka Lê Thanh [LEE THANH] aka Sáu Thanh [SAUS THANH]

Director of the Grain Service, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Nguyễn Hữu Đức [NGUYEENX HUWUX DUWCS]

*Deputy Secretary of the VCP Committee and *Chairman of the People's Committee, Thu Duc District, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Phan Văn Khải [PHAN VAWN KHAIR]

Member of the Standing Committee of the Executive Committee of the VCP Organization, Ho Chi Minh City; Vice Chairman of the People's Committee, Ho Chi Minh City; *Chairman of the Municipal Planning Committee, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Phạm Chí Nguyện [PHAMJ CHIS NGUYEENJ] aka Venerable Thích Từ Hạnh [THICHS TUWF HANHJ]

*Deputy Secretary of Vietnam Unified Buddhist Mobilization Committee; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Nguyễn Văn Nhi [NGUYEENX VAWN NHI] aka Nguyễn Văn Phòng [NGUYEENX VAWN PHONGF]

*Director of the Building Service, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Hồ Ngọc Nhuận [HOOF NGOCJ NHUAANJ], Journalist

Member of the Presidium of the Vietnam Fatherland Front; Vice Chairman of the Fatherland Front Committee, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Nguyễn Văn Phi [NGUYEENX VAWN PHI]

Vice Minister [of Foreign Trade] and Director of the Foreign Trade Service, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Trần Ngọc Sung [TRAANF NGOCJ SUNG]

Secretary General of the Vietnam Association of Oriental Medicine; on 25 May 1981 he was appointed to a Ministry of Public Health folk medicine inspection team. (TAP CHI DONG Y May 81 p 22)

Nguyễn Thị Thanh [NGUYEENX THIJ THANH] aka Tám Thanh [TAMS THANH]

Vice President of the Vietnam Women's Association; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Nguyễn Đức Thắng [NGUYEENX DUWCS THAWNGS]

Vice President of the Vietnam Association of Oriental Medicine; on 25 May 1981 he was appointed to head a Ministry of Public Health folk medicine inspection team. (TAP CHI DONG Y May 81 p 22)

Nguyễn Văn Thắng [NGUYEENX VAWN THAWNGS] aka Nguyễn Văn Trận [NGUYEENX VAWN TRAANJ]

Deputy Secretary of the VCP Committee and Chairman of the People's Committee, Cu Chi District, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Phạm Huy Thông [PHAMJ HUY THOONG]

Editor-in-Chief of KHAO CO HOC, journal of the Archeology Institute, Vietnam Social Science Commission; his name appeared on the masthead of that journal. (KHAO CO HOC Feb 81 p 78)

Võ Văn Trà [VOX VAWN TRAF] aka Võ Văn Tòng [VOX VAWN TONGF]

*Deputy Director of the Radio Voice of the People of Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

Văn Trọng [VAWN TRONGJ]

Deputy Editor-in-Chief of KHAO CO HOC, journal of the Archeology Institute, Vietnam Social Science Commission; his name appeared on the masthead of that journal. (KHAO CO HOC Feb 81 p 78)

Nguyễn Văn Tuấn [NGUYEENX VAWN TUAANS]

Director of the Land/Housing and Public Works Projects Management Service [So Quan Ly Nha Dat va Cong Trinh Cong Cong], Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Phạm Thị Tuyết [PHAMJ THIJ TUYEETS], Doctor

*Head of the Public Health Service, Ha Nam Ninh Province; his plan for developing folk medicine appeared in the cited source. (TAP CHI DONG Y Mar 81 p 10)

Tạ Hoàng Vân [TAJ HOANGF VAAN], Electronics Engineer

Deputy Director of the Ho Chi Minh City Television Station; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Nguyễn Thành Vĩnh [NGUYEENX THANHF VINHX]

Chief Justice of the People's Court, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Nguyễn Tấn Xê [NGUYEENX TAANS XEE] aka Nguyễn Tấn Xuân [NGUYEENX TAANS XUAAN]

Acting Director of the Agriculture Service, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 3)

Đoàn Thanh Xuân [DOANF THANH XUAAN] aka Doan Van Nao [DOAN VAWN NAO]

*Deputy Secretary of the VCP Committee and *Chairman of the People's Committee, Duyen Hai District, Ho Chi Minh City; election to the 2nd People's Council, Ho Chi Minh City was reported in the cited source. (Ho Chi Minh City SAIGON GIAI PHONG 7 May 81 p 2)

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

MILITARY AFFAIRS AND PUBLIC SECURITY

OFFICIALS ASSAULTED WHILE CONFISCATING ILLEGAL GOODS

Hanoi HANOI MOI in Vietnamese 12 Jul 81 p 1

[Text] On 10 July, the Son Tay City People's Court sat to try Nguyen Nhu Lam, Do Thanh Nhan and accomplices on charge of assaulting cadres who were doing their duties.

On the morning of 11 June 1981 when responsible cadres were seizing illegal goods at the Nghe market in Son Tay City, Lam, Nhan and their accomplices reacted by closing on and beating these on-duty cadres. While they were using violence, one of them named Nguyen Nhu Son suddenly collapsed on the floor with the purpose of laying responsibility on the cadres and subsequently claiming damages. Son was carried to the hospital for examination of his alleged wounds but the hospital certified that he suffered only a minor scratch near one of his eyes. However, on return from the hospital, his accomplices launched the false news that Son was dead in order to provoke more than 10 members of their group to burst into the tax office where they broke up windows and lattices and used bricks, bamboo poles, pieces of wood and iron and helmets to hit Nguyen Xuan Die, Phung Nhat Tan and Chu Duc Cai. These three commercial cadres had to be rushed to the hospital for emergency treatment.

Lam, Nhan and their accomplices either had previous convictions or had deserted the army. They were specialized in illegal trading activities which hampered market management.

As a severe punishment to persons using violence against on-duty cadres, the City People's Court handed down the following sentences:

--Nguyen Nhy Lam, 4 years in prison.

--Do Thanh Nhan, 3 years and 6 months in prison.

--Tran Van Quan, 2 years and 6 months in prison.

--The remaining eight accomplices each from 3 months of imprisonment with suspended execution of sentence to 3 months in prison.

BOGUS MEDICINE MAKERS ARRESTED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 8 Jul 81 p 6

[Article by H.B.: "Bogus Medicine Makers Arrested"]

[Text] SAIGON GIAI PHONG--On the evening of 3 July, members of the public security, self-defense and civil defense forces in the 4th Subward, 10th District, uncovered and caught four persons named Nguyen Van Minh, Cao Van Xuan, Truong Phi Hong and Tran Le Thu in the act of counterfeiting western medicines in two houses No 8/325 and 8/327 in Ba Hat Street.

Nguyen Van Minh and his accomplices had made many types of bogus western medicines such as vitamins, "Bepanthene" and "Camphostine" vials, "Novocaine", "Solucamphre" [French names] and so forth. At the abovementioned two houses, members of the subward public security, self-defense and civil defense forces confiscated 25 bags of bogus western medicines containing thousands of vials of various types of medicine together with over 10 kgs of chemicals, the equipment used in preparing medicines, putting them into bottles and printing labels, thousands of printed labels for fake western medicines and thousands of vials ready to contain medicines. For nearly a month, these persons had made these types of fake western medicines and put them on the market. They had brought dozens of thousands of vials of various medicines to the cities and rural districts of the western provinces because most buyers there were peasants unable to detect falsity. Faced with the evidence, Nguyen Van Minh and his accomplices had to plead guilty.

HUNDREDS OF PUBLIC PROPERTY VIOLATORS PENALIZED

Hanoi HANOI MOI in Vietnamese 17 Jul 81 p 1

[Text] According to statistics by Steering Committee 79 of the municipality, as a result of the antinegativistic struggle conducted in the first 6 months of this year in conjunction with the inspection, control and inventory task, many sectors at different levels in Hanoi have dealt with hundreds of cases of violation of socialist and collective property or connivence with bad elements in violating socialist property. Proposals have been made to take legal proceedings against serious cases. Of the total number of 557 persons involved, 29 were cadres holding key positions in installations such as directors and deputy directors of enterprises, corporations and cooperatives, managers, submanagers and heads and deputy heads of shops, bureaus, boards, units, stations and so forth. The penalties handed down included the forced resignation of 116 persons, the obligation for 32 others to perform labor, the dismissal of 25 persons, the salary demotion of 1 person and the serving of warnings to 348 persons and reprimands to 35 others. The persons guilty of violating socialist and collective property were compelled to pay indemnities totaling 234,933 dong and 26,278 kgs of grain plus other commodities in kind.

SOVIET MENTIONS SRV ECONOMY IN ARTICLE ON CEMA

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 p 70

[Article by Oleg Bogomolov: "National Economic Structure Under Conditions of Economic Integration of CEMA Member Countries"]

[Excerpt] The youngest member country of CEMA, the SRV, is also solving the task of developing agriculture and light industry and strengthening export of the products of the above-mentioned sectors so as to create favorable conditions for socialist industrialization. In the years of 1976-1980 Vietnam invested 30 percent of all capital in agriculture and 35 percent in industry. In the future, it plans to speed up the development of heavy industry and to build the industrial economic structure capable of ensuring the most important needs of the national economy.

BRIEFS

WARD ADMINISTRATIVE UNIT ESTABLISHED--The Council of Ministers recently issued a decision on the functions, tasks and organization of the administrative apparatus at the city ward level. The decision points out: The city ward is a grassroots municipal administrative unit set up to cover an area of the city's main streets with a population of approximately 7,000-10,000. The principal function of the administrative apparatus at the city ward level is to conduct state administrative and social management and care for and serve the local populace. Directly under the city ward people's committee are street population cells, work teams and special subcommittees run by the people in the city ward and responsible for the management of the streets in various aspects. This decision will be implemented in all city wards throughout the country effective from the date of its issuance. In Ho Chi Minh City in particular, the decision will be implemented on a trial basis in accordance with decision No 53-QDUB which was issued by the city people's committee on 20 March 1981. All previous regulations contrary to this decision will be void. [Text] [BK041034 Hanoi Domestic Service in Vietnamese 1000 GMT 2 Oct 81]

HANOI IDEOLOGICAL INDOCTRINATION--The Hanoi Party Committee recently urged all sectors, echelons and establishments to intensify the political and ideological indoctrination in order to enable cadres and the people to realize correctly the great revolutionary gains scored over the past years. It also called for a heightening of vigilance by various sectors to cope with Beijing's counterpropaganda allegations and psychological warfare activities. NATIONAL INCOME, ECONOMIC DEVELOPMENT DISCUSSED

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 pp 1-12

[Article by Phung The Truong: "National Income and Economic Development in Vietnam, A Country of Underdeveloped Economy"*]

[Text] National income, a general economic index, reflects the level of development and economic strength of a country. It has thousands of relations with the economic activities of production installations, sectors, localities, distribution and redistribution tools, economic policies and the historical, economic and political conditions of each society.

We do not intend to discuss everything but rather suggest a few things about national income and economic development as we wish to draw the attention of our country's economists toward doing more research and having more exchanges of views.

Indeed, to help the party and state to adopt a strategy for effective economic development and to satisfy the great needs of a country having a population of about 80 million by the end of this century, the Vietnamese economists cannot afford not to be fully interested in the matters of production and distribution and redistribution of national income (at present and in the future), and therefrom to devise truly basic solutions for economic development.

---

* Collective topic of the College of Economic Planning (Hanoi) presented at the 9th All-School Scientific Conference, 5 October 1980.

Economic Analysis of National Income Production

Here is a summary and concise table showing the state of national income production in Vietnam (calculated by the U.N. method):

	1975	1976	1977	1978
Total				
- In millions of dong	18,258	19,901	20,305	20,742
- In millions of U.S. dollars	4,682	4,975	5,076	5,185
Per capita national income:				
- Dong	383	405	403	401
- U.S. dollars	98	101	101	100

Source: "Statistical Data of the SRV," Statistics General Department, Hanoi, 1979.

Looking at the extent and speed of increase of Vietnam's national income, we find we can make some analyses and arrive at some conclusions as follows:

1. The per capita national income remains too low, even lower than that of the countries considered very poor in the world.

According to the official publicly released data above, the 1978 per capita national income was only 100 U.S. dollars. This national income level, according to the classification and evaluation of many economists in the world, belongs to those countries "having not yet crossed the threshold of poverty." Today, the world has the tendency to classify the level of economic development in accordance with per capita national income as follows*:

	Per capita national income (dollars)
- Countries considered economically developed	2,500-5,500
- Countries considered having developing economies	1,500-2,000
- Countries considered very poor	450

The fact that the per capita national income remains very low in Vietnam will create difficulties for the country and considerably limit its economic development.

First of all, there are questions that must be raised as follows:

---

* INTERNATIONAL LABOR REVIEW, June 1978, "Major 1975 Economic and Social Indexes."

- With that per capita national income, can we satisfy the expression of simple reproduction and expanded reproduction as advanced by Karl Marx?

- Under normal conditions what are the difficulties to be encountered in national income distribution, according to the Karl Marx formula for distribution of gross social product and national income, when the rate of population increase remains quite high?

- Under conditions of having many parallel goals (building the material and technical base of socialism, strengthening and consolidating national defense and improving the standard of living), what are the questions to be raised in the process of organizing economic management?

First of all, studying the national income cannot be separated from the reproduction theory of Karl Marx. As we know, in his expression of reproduction, the gross social product and national income are presented simultaneously in two forms -- value and use value. The condition for simple reproduction is:

$$I(v + m) = IIc \quad (1)$$

Simple reproduction in its turn is the basis and precondition for expanded reproduction. The condition for expanded reproduction is:

$$I(v + m) > IIc \quad (2)$$

But the condition for the condition in the two expressions of simple and expanded reproduction is the same: surplus labor, whether surplus product exists or not. But surplus labor, and hence surplus product, is closely linked with the level of social labor productivity. The latter, in its turn, is the most obvious indication of the degree of development of the social production force. This production force in Vietnam remains:

- Very backward because of centuries of hindrance caused by the colonial and feudal production relationships in the past.

- Continuously and seriously undermined after a long period of bitter war.

The elements of the new production force, now in the process of being formed or rearranged (production tool system in industries and transportation, means of production in agriculture and sources of social labor), are not yet capable of satisfying the need of the reproduction expression, particularly the expanded reproduction expression.

In the meantime, the rather high rate of population increase sets up new barriers beyond the ability of national income to overcome: the annual rate of increase of national income is about 2 percent while that of population is about 3 percent.

The formula for calculating the rate of per capita national income increase is:

$$\left(\frac{100 + \text{rate of national income increase}}{100 + \text{rate of population increase}} - 1\right) \times 100$$

The rate of per capita national income increase in Vietnam at present is equal to:

$$\left(\frac{100 + 2}{100 + 3} - 1\right) \times 100 = -1\%$$

The population increase has had direct effects on the per capita national income increase. We are facing the situation in which the high rate of population increase does not allow any increase of the per capita national income. Meanwhile, in the countries having developed industries, a population increase of about 1 percent has allowed a high rate of capital investment; this rate in its turn has allowed an increase of the rate of national income increase (which varies between 2 and 10 percent a year).

We agree with a number of economists in the world and say that in our studies we should not rely solely on the "population-economy" model but also pay attention to the "economy-population" model (also called the model that combines many interactive relationships between economy and population) or the kind of model that includes studies of all three factors -- "society-economy-population." However, the two latter models have not yet been quantified positively, and instead have led to this preliminary conclusion: matters related to population cannot be separated from economic planning. In the meantime, in our own opinion, the effects of the speed of population increase on the per capita national income as expressed in the "population-economy" model are still significant.

We have arrived at these few conclusions:

- Since the Vietnamese economy, which is inherently poor and backward as reflected through the national income level, has to cope with a considerably fast speed of population increase, the difficulties that are encountered in the economic development and standard of living are unavoidable. Since these difficulties are far from few and in some cases have serious aspects, we must have a realistic mind to evaluate them correctly.

- The conditions for simple reproduction, especially for expanded reproduction, sometimes do not exist; the reason is labor productivity, the major source of surplus product, is very low and increases very slowly (this is shown most clearly in the per capita national income indexes and the rate of increase of these indexes). The capital investment coming from an accumulation of national income does not reach the necessary level to guarantee expansion of production.

- There can be only a low level of consumption, which is hard to maintain, while the population increases at a fast rate and after the country has just emerged from a long and bitter destruction of the war.

The Vietnamese economists must consider them very difficult problems for development so as to seek every possible means to overcome them.

2. The pattern of national income production in Vietnam still leans much toward agriculture.

This situation can be seen in the following table of pattern of national income in the SRV (percent):

		In which			
Year	Total	Industry	Construction	Agriculture-Forestry	Commerce
1975	100	24.	6.2	46.8	13.5
1976	100	24.3	7.1	48.6	12.2
1977	100	27.6	7.1	40.1	15.9
1978	100	28.7	7.8	39.3	16.4

Source: "Statistical Data of the SRV," Statistics General Department, Hanoi, 1979

Agriculture still plays a very important role in national income production. If we consider the use value, the national income in agriculture includes sector II products, which besides grain and foods for use in society also include some products that become raw materials for light industry. But on the other hand, the fact that the national income pattern still leans toward agriculture also indicates that our social production has not yet reached a definite degree of maturity. This level is reached when the role of the natural means of production (land) has decreased while the labor tools produced by man (machinery) play a more and more important and larger role. In other words, in the pattern of national income production the industries in Vietnam have not yet become the main character. Vietnam's present national income pattern is similar to Russia's in the years following 1913 (industry: 34 percent; agriculture: 48 percent). Russia then had a population of 139 million and a national income of about 14 billion rubles, or a per capita level of 100 rubles. That figure was considered an indication of its poverty and backwardness as compared with other countries in the world at that time. We can have the same conclusion in the case of Vietnam as we look into the national income pattern and per capita figure (which is actually lower than Russia's per capita figure of 1913).

3. The basic factors that contribute to the increase of national income in Vietnam have done poorly in showing their effects, particularly with the war and poor organizing capacity and economic management having adversely affected an effective use of these factors.

The rate of national income increase depends on three factors: increasing the number of workers entering production, raising the social labor productivity and practicing thrift in the use of the means of production. Let us examine the state and effects of each of these factors in the Vietnamese economy as they have shown in the past:

a. About the number of working people: Vietnam always has an abundant source of labor that can be mobilized for production to create the social product and national income.

On the basis of the usual percentage of working people being 50 percent of the population, the social labor force in Vietnam today is about 26 million strong and each year acquires about over 1 million additional people. If conditions are favorable for combining labor and other basic factors in the work process (tools and object of labor), the labor factor will surely be of greater effect than it is now.

Since the labor factor that is used is a function of many variables, the degree of using it depends on the conditions of the variables:

$$L_{s.d} = f(x, y, z \ldots n) \quad (3) \text{ where:}$$

$L_{s.d}$ = amount of labor used

x, y, z = quantities of tools of labor, land, capital, etc. created for drawing labor into production.

Conditions, regretfully, have not been as we wish. Because of the low national income capital, which is scarce, increases slowly; in addition to it, weaknesses in organization of economic management are the reasons for the sources of social labor remaining greatly stagnant. In other words, our economy does not have as yet the ability to provide enough jobs for the need to draw labor into social production. This phenomenon takes place in many forms, but it can be seen intuitively, in both cities and rural areas. It is necessary to see the full degree of seriousness of this phenomenon, which does not exist only at this time but tends to last long. The supply and demand situation of the sources of labor has a functional relationship with the national income (through capital invested in economic development, creating jobs in society).

In the countries where the population increases at a high pace and the sources of labor quickly increase, although the rate of increase of their national income may be 4-8 percent per year, it still cannot keep pace with the need for jobs as created by such population and labor increases (unlike the countries where the rate of population increase is low and the rate of national income increase is high, there is no lower supply than demand in terms of jobs).

The situation of job supply and demand in Vietnam is more tense because of two reasons:

- After the war, especially after the U.S. forces had to withdraw from South Vietnam, there have been a few million unemployed people.

- The national income which was pushed backward by the war has been increasing slowly, with limited capital for investment, and hence is still incapable of drawing all of the sources of social labor, old and newly increased, into production. (This does not take into consideration the fact that the distribution and use of invested capital of late has been separated from the characteristics of the sources of social labor in our country, thus unnecessarily making them even more stagnant.)

We consider it a socioeconomic matter that badly needs to be sriously studied.

b. About labor productivity: This is a very basic factor that plays a more and more important role in modern society and helps to raise the national income. But in Vietnam, labor productivity remains quite low, a fact that concentrates to a large extent in the products-making work force. For decades the level of social labor productivity has either remained the same or decreased. The amount of lafor required to produce 100 kilograms of paddy still is 12-15 man-days. To produce 1 quintal of paddy, Vietnam needs 100-120 man-hours while the economically developed countries need only .5 man-hours. If we calculate on the basis of another norm, we can see our labor productivity has increased slowly. Several years ago the economic planning organ set the norm of a laborer in agriculture taking care of 2 hectares of cultivated land. But so far in many cooperatives and localities, we have evaluated that he has been able to take care of only .5-.68 hectares of cultivated land. This fact shows that labor productivity in Vietnamese agriculture has increased slowly.

In industry and other sectors, labor productivity has either remained the same or declined as the result of the war and supply of energy and raw materials.

c. About practicing thrift in the use of the means of production: From the aspect of helping to increase the national income it is understood that on the basis of mobilizing and fully using every means of production of society for creating the gross product and national income, decreasing c in the value of product will lead to increasing the newly created value, or v + m.

The realities of organization and management of the economy, regrettably, have not occurred as expected. We find this situation:

- Land, the major means of production in agriculture, has been left idle up to tens of thousands of hectares (not only during the war but also under normal conditions).

- The coefficient of use of machinery, equipment and means of transportation has been too low (nearly 50 percent or lower).

- The rate of consumption of materials (raw materials and fuel) and use of live labor for each unit product has often exceeded the authorized one. And so forth.

Thus all three basic factors that help to raise the national income have done poorly in showing their effects. Particularly, the war as an additional factor caused heavy damages to the national income (not only was the national income reduced but many material and technical bases were also destroyed by the war). In the past, during the time of war in the Soviet Union the same situation had existed. The following table shows that the national income in the Soviet Union in the period of war and civil war had been decreasing for many consecutive years. It took the Soviet Union 14 years (i.e., until 1926) to return to the 1913 national income level.

National income changes in the Soviet Union from 1913 to 1930

Year	Millions of rubles	Percentage as compared with 1913	Year	Millions of rubles
1913	21.			
1917	16.8			
1920	10.5		1927	23.
1921	9.4	less than 50%*	1928	25.
1924-1925	16.8		1929	28.9
1926	21.7	100%*	1930	35.

---

* Rounded figures. Source: M. B. Konganof, "National Income," National Political Publishing House, Moscow, 1959.

As we see, because of the imperial war and civil war, in some years like 1920 and 1921 the national income in the Soviet Union decreased by more than half as compared with 1913. That was because production in the national economic sectors had decreased considerably.

As compared with the prewar period, its industrial production in 1920 decreased by 20 percent. The decrease in labor productivity resulted from the fact that enterprises had closed down because of lack of fuel and materials. Academician S. G. Strumilin pointed out that in 1920 a Soviet worker worked only 220.3 days and had 86.7 days for vacation. The area of crop growing in agriculture dropped from 105 million hectares in 1913 to 97.2 million in 1920 (a decrease of 7.8 million hectares). In the period near the end of the imperial war, the railroad sector was described as being "in a disastrous state," while in the years of the civil war it was evaluated as "tragic."

In short, through a few economic analyses of the state of the national income production in Vietnam, we conclude as follows: the national income in Vietnam (a country of poor and underdeveloped economy), which normally is low, has lately suffered from the adverse effects of the war and poor economic organization and management and thus has created and will be creating many problems for Vietnam's economists.

National Income Distribution and Redistribution

While the national income is low and the rate of increase of per capita national income still bears a negative sign, the question of distribution, redistribution and use of national income is one that must be strict, correct and effective. Being otherwise will lead to distribution and redistribution failing to play an active role and even becoming a hampering factor. In theory, we know that a given mode of production has a mode of distribution suitable for it. Distribution on the one hand is affected by production, but on the other hand it acts on production just as strongly.

However, at the present time, between theory and practice in the economic life there is a relatively wide gap. We think that attention must be paid to these few aspects:

1. About the interaction between production and distribution and vice versa.

The present situation indicates that national income production is too small to be enough for distribution and satisfying many needs at the same time. This is a fact that stands out relatively prominently in the present national income distribution process. From there we notice that national income production has limited distribution within a narrow scope. Basically speaking, in order to widen distribution we must find every means to expand national income production. But for many objective and subjective reasons it has not grown as we expected. What deserves our interest is the fact that the economic laws have not yet been correctly used and have shown little effect. The economic laws expressed in political economy remains only possibilities from the theoretical standpoint. Moreover, they seem to be possibilities for a relatively developed economy, instead of an economy that has developed slowly and has just emerged from terrible destruction by the war.

For instance, as we consider the labor productivity increase law, which greatly affects economic growth, we find that social labor productivity has had the tendency to remain the same or even to drop, rather than to increase ceaselessly. This law is reflected in the norms in saving labor time and obtaining economic results. In these regards, it has not been properly used yet, nor has it shown its true effect. For instance, under the conditions of the national income remaining small, the size of the accumulation fund taken from the national income to be used has been not very large, but the results of distribution of invested capital and the economic effectiveness of this capital have been poor. There are many different reasons behind the time for recovery of capital being prolonged and the coefficient of effectiveness remaining small. (Invested capital being used in a scattering manner; many projects being duplication and taking too long to start production; investment being far from concentrated in conformity with the policy on economy with key areas adopted by the party and state, etc.) Naturally, such a development of social labor productivity will bring about appropriate consequences for the social reproduction process.

The value law also has not yet been used in an appropriate manner and to benefit economic stability. For instance, prices, which express value in terms of money; must reflect value and at the same time fulfill other functions, such as stimulating production and national income distribution and redistribution. In some cases, while the factors that contributed to product value have changed, prices which should be sensitive to such changes have been slow in changing. Intentionally or unintentionally, sometimes prices still hampered and even held back production; at the same time, there were shortcomings and lack of sensitivity in distribution and redistribution of national income. For instance, as prices in the international market continued to rise, they brought about disturbances in the economies of many countries (especially within the capitalist economic system). These countries had to fight fiercely against the price whirlwinds and the topsy-turvy condition of their economies caused by unexpected price changes. But Vietnam kept the same prices in the country of many kinds of imported products, which caused great losses for the state budget and at the same time created false conditions in the economy. The question, as it boils down to, remains one of using the value law in Vietnam under the conditions and with the background of price fluctuations on the international market.

For other economic laws, such as the one about planned and balanced development of the national economy, the law of distribution on the basis of labor, etc., a similar situation has also prevailed.

On the other hand, distribution is having a weak effect on production: in some areas it fails to stimulate development of production and in others it hampers the growth of production. In short, there are matters that need to be studied in terms of reevaluating the role and effect of distribution and, from there on, reorganizing the multifaceted economic relationships between production and distribution, and vice versa.

2. About the need to change the income of social classes through national income distribution.

In the transitional period, one of the basic needs in national income distribution is to raise the incomes of socialist character and to consolidate the socialist distribution methods while doing away with incomes resulting from exploitation of private owners of the means of production.

Doing away with the income of bourgeois and landlords has been and will be done, but transforming small business people and small owners along the socialist line still remains a matter that has not been basically resolved. This large group of people, who always aim at having high income without doing work in the socialist way, to some extent has been causing difficulties for the socialist distribution and even creating disturbances in the latter. We encounter a situation in which the real working people (workers, civil servants and farmers in natural calamity-stricken production areas) have low income and difficulties in their daily life while those who do illegal business, speculate and disrupt the market have high income, even very high income. It is obvious from the economic standpoint that we need adjustment and redistribution to prevent illegitimate incomes and to make distribution beneficial for the working people.

In addition to the above-mentioned types, in the transitional period there still exist remnants of the old society that now become a force harassing and undermining the socialist distribution. They are thieves, lazy people who refuse to work, people who receive bribes, those who secretly seize other people's products in many ways, etc.

Thus the reality of changing distribution and income of different social classes through national income distribution in Vietnam indicates that even if we have basically completed the socialist transformation among the capitalist industries and commerce and the organization of cooperatives in agriculture, many complicated situations would still remain. There are aspects of the organization of new distribution based on the socialist principle that are even more complicated than transformation.

3. About the need to carry out the principles of distribution under socialism.

The application of the principles of distribution of the social product and national income in full compliance with Karl Marx' scheme to Vietnam's conditions after the war has encountered many difficulties. With the national income being small and surplus product being negligible (or bearing a minus sign), this situation prevails:

- If accumulation, reserve and public interest funds are to be set up (for the collective and society), what is left for agricultural cooperatives will be negligible, and even not enough for reproduction of labor (this can be clearly seen in the value of man-days in cooperatives in the past -- only 0.20-0.30 dong in quite a few localities -- and the amount of paddy distributed each month to each person as the result of his labor -- about less than 10 kilograms).

- If on the contrary distribution is effected in advance for the benefit of the working people enough to have reproduction of labor in accordance with the "v plan" factor (as in the recently introduced formula), after subtracting a portion of m as it is commonly used for society, there is not much left (or none left) in terms of accumulation for expanded reproduction, product used as reserve and product used in the public interest fund. If this involves a single crop season, it can be acceptable; but if it involves many crop seasons and many years, this product distribution formula has a very obvious weakness as it assumes in advance there is no expanded reproduction as yet. About the order of distribution of social product to different funds, according to the principle advanced by Karl Marx, it has not been correctly carried out either. Again the question that remains still is how to find a solution to open the way for distribution.

Socialism is the initial stage of communism in which the production force does not reach a very high level of development. Therefore, distribution on the basis of labor is an economic necessity. Furthermore, as Vietnam enters socialism as an economically underdeveloped and backward country while the production force in society has been heavily destroyed during the war, the gradual fulfillment of distribution based on labor must be considered a correct principle necessary for the economy. However, we find in our analyses the following situation:

- Some people who have lived lazily and have not taken part in true labor still are recipients of distribution of a certain number of products as other people. Even there are people who have sought to seize the product of collective labor (receiving bribe, being corrupt, stealing public properties, etc.), but in organization and management we have not yet widely imposed supervision, control and inspection on participation in labor, labor productivity and income of every member of society as a basis for product distribution. And thus there will exist a situation in which distribution on the basis of labor cannot be achieved as long as the phenomenon of seizing other people's labor product continues.

- There was a period when, in the harsh life of war, distribution was by quotas to satisfy the basic needs of many members of society, which led to contradictions in the effort to achieve distribution based on labor (mainly in agricultural cooperatives). From then on, as distribution was stuck with averaging, it restricted labor enthusiasm and created nonchalance and a lack of desire to work, with labor discipline being heavily violated.

Meanwhile, some localities sometimes wanted to pattern distribution after the principle of distributing on the basis of need and to use a part of the newly created product (normally not very much) in the effort to quickly increase the collective welfare. The collective fund was to cover the part that was supposed to come from individual contributions, which should come from the fruit of their labor brought about by distribution based on labor. The phenomenon of being hasty in distribution will be detached from the real economic situation of weakness of today.

Our historical experience indicates that we cannot hastily speed up distribution in accordance with the communist principle while lacking the economic prerequisite.

In addition, we must also think of the very useful tools that assist the socialist state in directing the national income distribution and redistribution process. They are the budget, prices, taxes, funds set up by the state, wages, bonuses, etc. As compared with the need, these tools in many ways have appeared not very effective and even weak, backward and old-fashioned, which explains why they have not yet contributed very effectively to implementing the economic policies of the party and state, thus making distribution act poorly (or negatively) on production and consumption.

In short, about the present question of national income distribution and redistribution, we think that attention needs to be paid to the following points (only within the limits of economic development):

- We have not yet carried out Karl Marx' expression of reproduction.

- We have not yet been capable of carrying out Karl Marx' gross product distribution scheme as mentioned in his work, "Critique of the Gotha and Erfurt Program."

- Distribution has not yet exerted positive effects on production (it is in some cases restricted and held back). On the other hand, poor production has led distribution to even narrower limits.

- The socialist principles of distribution are still violated and upset by negative factors as there are "reactions" in distribution; at the same time, there are weaknesses in organization of national income distribution and redistribution.

- The distribution and redistribution tools have not yet become truly sharp ones to assist the party and state in leading and directing the economy.

Improvement of National Income Production, Distribution

Because of peculiar historical, economic, political and social conditions and for reasons of economic organization and management, there still arise many questions in the fields of national income production, distribution and redistribution in Vietnam that need to be studied so as to continue to improve them and make them closer to being perfect. We have some ideas to offer as follows:

1. Under the conditions of a country where the economy is underdeveloped, the population increases quickly, the abundant source of labor is not yet fully used and remains stagnant, labor productivity is low, capital for investment is limited, etc., how to raise the question of applying economic theories in order to truly overcome many difficulties, for the purpose of developing the economy?

In our opinion, this is a matter that economists in Vietnam must clarify. Economic development in Vietnam has many characteristics that are close to the realm of an underdeveloped economy. This is an economic phenomenon of modern character. Many countries which had been enslaved by colonial and imperialist rule in the past all faced the conditions of economic underdevelopment. In the light of the party line, Vietnam has been developing in the direction of building a socialist economy. This is a totally correct direction to take. However, the economists' task is to try to apply the theories of political economy in an effective manner to the conditions of an underdeveloped economy in order to fulfill the goals set by the party.

Why have the economic laws under socialism as expressed in political economy failed to exert their effects in the recent period as we wished?

The major proportional relationships in the national economy in the case of an underdeveloped economy do not occur in the same manner as in a developed economy. On the contrary, there are many strains that require a different application of economic theories in order to cope with many difficulties in the transitional period.

The factors that facilitate or restrain economic growth in Vietnam must be considered and handled by the economists with all of the characteristics, advantage and difficulties of an underdeveloped economy. And so forth.

In short, a very heavy and difficult task that is put in front of Vietnamese economists is to make it very clear how to apply the theories of political economy to the conditions of Vietnam, an economically underdeveloped country, to be able to develop its economy.

We wonder whether the economists in Vietnam have not yet shown an appropriate interest in the phenomenon of economic underdevelopment. This is a matter that many economists in the world have been studying with great interest as they are seeking very basic solutions.

2. Under the present conditions of the economy having many components, it is necessary to use the goods-money relationship and to create more favorable conditions for development of production force.

Theoretically speaking, we find that once we have achieved public ownership of the means of production (we have not yet achieved this on a nationwide scale), labor would have a direct social character (according to F.Engels' view). However, labor under socialism, even direct social labor, is not yet totally direct (within the full meaning as F. Engels wrote). For under socialism there still is production of goods. And the basic reason for the existence of goods production under socialism is that labor is not yet identical economically and socially (it is most evidently shown in the difference still existing in the division of social labor). The time of labor is not yet the only and common yardstick to measure the necessary social labor expenses. People still widely use a kind of indirect, relatively, measuring stick that is money to express the value of product. Thus under socialism there still are goods-money relationships that need to be used in a conscious way in the reality of economic life.

Moreover, Vietnam starts from a small-scale production of goods as it carries out the socialist construction. One wonders whether this proves that the goods-money relationships inherently exist in the heart of the small-scale goods production. In this production, small producers produce goods not for their own consumption but for sale. It is also called simple production of goods based on private ownership and individual labor. It consists of the economic activities of farmers and handicraftsmen who do not exploit the labor of others. So far in Vietnam simple production of goods remains and covers many population groups (individual farmers, handicraftsmen, etc.). This means that in the economy there still exist two prerequisites of production of goods: division of social labor and private ownership of the means of production (and hence, ownership of product). Under socialism, the state does not seize the fruit of labor of small producers of goods but rather seizesthe important national economic arteries, the means of production in the hands of the exploiting class, and therefrom guides these small producers toward taking the road to socialist development. But that is an entire process; at the present time, small producers still exist, to some extent in rather large numbers, and are not organized in cooperatives nor transformed yet.

Saying we move from small-scale production to the socialist large-scale production and bypass the capitalist development stage means in general, in terms of socioeconomic development, not restoring the capitalist production relationships, but is it still necessary to use the goods-money relationships to develop the production force? Thus, in particular, under certain actual socioeconomic conditions, it is still possible to promote development of the goods-money relationships in a way to benefit socialism.

We must raise the following question to answer when we analyze and evaluate the real economic situation in Vietnam:

- In the Vietnamese economy prior to moving toward socialism have the goods-money relationships been developed yet? We think they have not. In fact, the old Vietnamese economy was basically a self-supplied and self-sufficient agricultural economy in which there were practically no developed goods-money relationships as in some countries before entering capitalism. And thus is it necessary to go through a period, a stage, to make the old economy transform itself into the new socialist economy? In this period it is still necessary to use the goods-money relationships. Then there will be two effects taking place at the same time: on the one hand, it encourages development of the production force and creates favorable conditions for raising the gross social product and national income (this effect is very needed for our economy today). On the other hand, it will also encourage and open the way for a spontaneous development of capitalism. But the proletarian state is in a position and has the power to control and guide this development and to shape it in any way it likes.

V.I. Lenin was the person who applied the Marxist economic theories to Russia's conditions in many fields, including the field of using the goods-money relationships to restore the exhausted production force. Everybody knows how he had been using such relationships as he did away with the system of requisitioning surplus grain in the countryside, as he advocated state capitalism, as he let farmers bid for coal exploitation, as he demanded the state-operated enterprises to follow the principle of business, etc. He used the goods-money relationships under the conditions of Russia "having encountered a deep economic and political crisis in 1921," after the war and civil war. That was an economic strategic move aimed at saving Russia from the obstacles that had been holding back the development of its production force. He had, of course, clearly set the time limit and carefully calculated the conditions for using the goods-money relationships.

3. Change a number of economic policies to make them suitable for conditions in the new period and at the same time use more effectively the tools of management in the hands of the state.

In the new period many factors have changed and conditions are also different. On the other hand, the economic management needs required by the party and state are also greater. Meanwhile, some economic policies that were born long ago (even more than 20 years ago) need to be changed to be suitable. We suggest that attention is paid to the policies about prices, wages, taxes, funds of all kinds, recruitment into regular staff, mobilization of laborers, distribution and sharing in cooperatives, credit, use of invested capital, etc.

The tools of management in the hands of the state must also be used in a more effective manner. V.I. Lenin demanded that we "manage without a bit of vacillation, manage in a more resolute manner than the capitalists in the past. Otherwise we will not be able to defeat them." Under Vietnam's present conditions, we need to use all administrative, economic, organizational, legal and educational tools at the same time. But the economic tool nevertheless plays its important role in the economy.

About the policy of using invested capital, we must pay more attention to agriculture, with immediate interest in two areas:

- Investing in water conservancy and fertilizer in the key crop-growing areas to resolve the grain problem.

- Investing in new economic zones along the line of mechanizing opening of new land and extending crop-growing areas for industrial crops for export and grain crops on a large scale. Such an investment at the same time helps to resolve many problems, including extending crop-growing areas, attracting more social labor and satisfying the needs for grain and export.

We must consider agriculture the economic sector we must first pay attention to so as to concentrate invested capital, energy and priority economic policies on it, for the purpose of gradually pulling the economy away from the greatest difficulties (grain, foods, raw materials for industry and products for export). Is it true that under the conditions of an economically underdeveloped country, the process of industrialization must be understood as starting with agriculture first? Is it true that one of the reasons for inflation, price rises and reduced wages is the fact that the relationships between sector I, sector II, industry A and industry B and agriculture are not yet suitable and are separated from guaranteeing proportional increases of agricultural products, especially grain, foods and raw materials? This is the situation encountered by a number of economically underdeveloped countries when they entered industrialization at a fast pace but their agriculture was then still very weak.

In addition, the invested capital in the new period must also fulfill the task of building the material and technical base of socialism in other industrial sectors. The latter include the ones that should draw our attention first, namely, electric power, coal, building materials, etc. Under Vietnam's conditions, as the source of social labor is abundant and remains stagnant, we must pay special attention to the relationship between the capital used for investment and the capacity to draw labor sources into production. Thus there will be the question of selecting the different technologies at the time capital is invested so as to attract more or less labor. We must seek different investment plans in order to satisfy also the need for creating as many jobs as possible in the economy at the time capital is invested.

The capital invested in capital construction normally accounts for a rather large share in the state budget. In this area there usually appear problems of wasting capital; investing excessively without great socioeconomic results; creating tensions about money, goods and social labor; and leading to new imbalances, sometimes unnecessary ones. Therefore, a unified system of management of invested capital is necessary to coordinate the invested capital in the budget with the capital invested in capital construction through bank credit.

About management of the use and effectiveness of invested capital, the state must study and set the time for capital recovery and the coefficient of effectiveness of invested capital for different sectors in the national economy so as to avoid excessive stagnation of invested capital.

About the collecting and spending activities of the state budget, we must raise these questions:

- Reforming the collecting policy along the line of raising the level of tax collection in the collective and individual economy (both agricultural and industrial-commercial taxes), avoiding deficient collection and increasing the proportion of national income put into the budget.

- As to spending, we must find every means to avoid the system of compensating for losses and at the same time to spend more effectively and rationally.

Spending for consumption must be directed toward encouraging increases of labor productivity and achieving distribution based on labor.

As to prices, we think that we must pay attention to these matters:

- We must reexamine the system of prices under the new conditions (inside and outside of the country) to let prices fulfill correctly and fully their functions, including that of distributing and redistributing the national income.

Our price system in many ways is no longer suitable for the reality and need of the new stage of national economic development. The party resolution has affirmed the shortcomings of the state price system. If we still retain the present price situation, we will prevent it from being an effective economic tool taking part in the process of redistributing the national income in the whole of society. Basically changing and perfecting the state price system to suit the new need requires that we carry on many complicated, active and meticulous jobs. In the redistribution of national income, there also is a specific need that the state price system has to fulfill, with the following points deserving attention:

- The state price system must reflect the necessary social labor expenses and ensure fully achieving the social value created from different sources. The social labor expenses necessary to make a unit product tend to keep going up. Production factors, especially raw materials and energy, have become absolutely expensive. Price explosions have been taking place in the capitalist world. In this trend of continuous internationalization of economic life in all countries on the earth today, it is difficult for any country to avoid the effects of price changes on the world market. Thus our domestic prices must be able to reflect the changing trend of world prices.

- The state price system must ensure a balance between distribution of value and distribution of material resources. As we see, the bank currency has changed in terms of purchasing power, as it has clearly shown; as a result, the price standard has undergone many changes. Labor productivity, social product value and monetary standard are no longer what they used to be. Meanwhile, the state price system remains stationary; consequently, between distribution of value and distribution of material resources there is no longer any suitability.

- Prices must play the role of being the effective economic tool to encourage production development, by making those working people who really produce wealth for society clearly see their contributions and by overcoming the situation of some enterprises which, as they achieve value, cannot cover all of production expenses by themselves, in spite of the fact that their production and business activities are relatively normal, and constantly need assistance from the state budget. This situation makes these enterprises lose self-sufficiency in business activities and creates a hampering force for production.

- Prices must help to readjust the irrational difference between the income level of workers and civil servants and that of some other classes in society in favor of the actual wages of workers and civil servants (especially those who get low and average wages).

About wages and bonuses, they also need to be reformed, for they have lagged much behind the standard of living and at the same time contain conservative factors. However, as an immediate job, the question remains how to make sure the real wages do not continue to go down. The objective relationship between reproduction of working capacity and increase of labor productivity has long been violated. Therefore, it has adversely affected both production and life.

Stable wages consist of wages for different grades based on a system of wage scale, technical ranks and wage rate. The fact that they are called stable is because the basic wages change only when the wage system is improved and there is a new policy about raising wages and applying new wage procedures and policies.

Variable wages consist of bonuses to be determined on the basis of the wage fund (or wage fund-based bonuses for short). The source of bonuses normally comes from about 10 percent of the wage fund. Cash is taken from the material encouragement fund. This fund in turn varies with the state of profit of an enterprise.

Under our present conditions, as we wait for improvement of the wage system, in our opinion we can widen and actively use the variable wage component to affect production and to ensure restoring the working capacity of workers by:

- Raising the proportion of bonuses based on the wage fund (there should be a distinction between heavy and light industry).

- Between the material encouragement, welfare and production development funds determining now a rate of distribution in favor of the material encouragement fund, for the purpose of creating additional conditions for enterprise directors to use more freely various forms of bonuses.

- As both sources of bonuses are put to use in production, enterprises have the right to select the form of bonuses that is most suitable for the production and business characteristics of their enterprises without any restrictions and limits.

- The percentage of wage fund-based bonuses awarded to workers and civil servants can reach 40 percent (in some individual cases as much as 50-60 percent) of the basic wages. As to bonuses taken from the material encouragement fund, there are no such limits but they have to follow the principle of having good economic grounds.

Meanwhile, we must assist enterprises in correcting the phenomena of deviation as they have occurred in some places, i.e., they tend to lean toward the interests of the working people as individuals while showing no attention to the interests of the state and collective (lowering the labor norms to increase unit price for calculation of wages; paying progressive piece wages on a permanent(?) basis rather than for the weak link and on a temporary basis only; letting product quality "float," etc.). In addition, we must also carefully guide and disseminate the ways to organize and use various forms of bonuses and, in connection with sources of bonuses, appropriate forms, criteria for awarding, percentages and calculation of economic effectiveness of bonuses.

The basic point, of course, remains how to improve the wage system under the conditions of other factors (prices of materials and services, consumer goods, money in circulation and purchasing power of money, etc.) having undergone many changes.

As to the distribution of products in agriculture, we must reconsider the newly-suggested distribution formula (distribution based on "plan" after payment of taxes and fulfillment of obligation) to make sure we can overcome the weaknesses that have been expressed: accumulation, reserve and public interest funds have not yet been established for cooperatives; only individual working people and the state have been recipients while it is not clear yet about distribution to the cooperative collectives.

However, in regard to distribution in agriculture, the question that is urgently raised and has an important meaning is this: can we use the principle of encouraging individual interest to greatly affect the restoration and development of the agricultural production force in Vietnam? We think that we perfectly can. This is a question that has been proved by both the theory and reality of socialist construction in the fraternal socialist countries for our country. Naturally, there can be unavoidable deviations in the real organizational process, but we will improve and continue to make things closer to perfection.

4. By every way and every measure, create more jobs.

To create jobs for tens of millions of working people is a very great and very important matter in order to carry out the Fourth Party Congress resolution. But this is a complex economic matter having to do with many factors ranging from the strategy for economic development and the direction for investment in technology and labor to the economic alliance policy in CEMA aimed at expanding the division and cooperation of labor. We must study policies of investment in the population and in labor for a long period, for the purpose of using better the labor factor in economic development. As an immediate need, in our opinion, we must consider agricultural development both in breadth and in depth and redistribution of labor in agriculture as the most suitable field of activities where we are in the best position to fulfill and where the demand for expenses and capital invested in labor is the smallest as compared with other sectors in order to use more labor.

Along with creating jobs in the country, we must extend jobs also beyond the country for the localities where there exist favorable conditions for labor cooperation; on the other hand, we must reform the managerial machineries to make them more capable of fulfilling effectively the economic functions assigned by the state. Reduce the size of staff in the case of those managerial machineries that have proved themselves too cumbersome, bureaucratic and isolated from the main economic function assigned by the state; at the same time, we must renew the working method and aim more vigorously at business leadership, commercial activities and economic organization and management (primarily reconsider the staffs of managerial ministries, committees, general departments and local managerial machineries, along the line of reducing the size of staff there, strengthening those that directly do productive work or directly serve production and at the same time raising the quality of such machineries).

5. Do a good job of reviewing and drawing experience.

Find lessons of success and lack of success; find the major reasons for effective and ineffective direction of the national economy in the period of the second 5-year (1976-1980) plan. On that basis, prepare more carefully in terms of theories of organization, economic management, policies, methods, etc. to make the new period (1981-1985) more effective and suitable for the conditions of Vietnam, a country whose economy is still underdeveloped.

RENEWING CAPITAL MANAGEMENT IN CONSTRUCTION SUGGESTED

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 pp 13-20

[Article by Pham Hoc Lam: "Some Ideas About Renewing the Management of Capital Invested in Capital Construction"]

[Text] Investing in capital construction for the purpose of creating the material and technical base for a large-scale production that gets more modern everyday and the social labor productivity that gets higher everyday is a significant undertaking and greatly affects development of the national economy and the cultural and social life now and for a long time to come.

Our country is still poor and moves from small-scale production directly to socialism without going through the stage of capitalist development; its economy seriously lacks balance in many aspects, such as production being not enough to feed the people, income failing to cover expenditures and to provide accumulation in the country, export being insufficient for import, etc. Therefore, we must attach even more importance to economic effectiveness of invested capital, mostly to make sure how to obtain many results and to increase the national income with little investment.

In the past years, our party and state had been putting aside considerably large amounts of capital to invest in capital construction for central and local sectors to build the material and technical base for socialism and to contribute to stepping up production, improving the standard of living and defending the fatherland.

In 5 years (1976-1980), although investment in capital construction was increasing slowly, the total amount of capital was very large as it accounted for nearly 50 percent of the total income in the budget and about 90 percent of all of the capital invested in 21 years (1955-1975) to build the material and technical base for socialism in North Vietnam.

The management of capital invested in capital construction, from preparation for investment and planning to execution of investment, still had many shortcomings and weaknesses leading to a situation in which the amounts of capital, labor and materials expended were excessive but the number of construction projects completed becoming productive and being put to use was few; the volume of capital construction remaining incomplete was very large and increased everyday; waste in investment and construction was excessive; and economic effectiveness of invested capital was very poor. The shortcomings of investment in capital construction were seen in many aspects:

- Plans for investment were too big and went beyond the capacity of our economy to bear. We have been at fault in determining the direction for investment, making plans for investment and failing to fully understand and carry out the party line on economic construction as expressed in the Fourth Party Congress resolution, namely, to concentrate our energy on agricultural production and on exploiting the potential of labor and land, as well as to draft economic and technical plans aimed at fulfilling the tasks, both basic and urgent, in the state plan every year.

- As the anticipated yearly investment level had been much higher than our ability to attain it, the annual plans for investment in capital construction were only partially carried out -- 80.7 percent in 1976 and 87.5 percent in 1977 and 1978.

- Investment plans were scattered, were spread too thin and lacked concentration. Capital investment planned by the central administration was divided among from 3,000 to 3,500 projects, and by different localities from 6,000 to 8,500 projects; thus there were 12,000 construction projects throughout the country and many of them, naturally, were listed as receiving investment of only from 5,000 to 10,000 dong.

What deserves attention is that although the yearly capital investment was small, many sectors and localities did not put the right capital into the projects that had a productive nature and instead mainly invested in the nonproductive and not-truly-urgent ones.

- As the volume of unfinished construction was increasing everyday, the percentage of incomplete volume (the relationship between the volume of construction still incomplete or complete but still inoperative and the capital investment made in a given year) was actually as follows: 1976,113 percent; 1977, 120 percent; 1978, 132 percent; 1979, 168 percent; 1980, 207 percent. In the Soviet Union, meanwhile, the normal percentage of incomplete volume was 65 percent.

What deserves attention is that of the very large volume of incomplete construction as mentioned above, a considerable number of projects was totally irrational, such as equipment being imported from abroad before any policy or plan for investment in capital construction; foreign equipment being sent over too early as compared with the building and installing capacity in the country; hundreds of projects remaining unfinished for decades, instead of being completed possibly several years ago.

- At present, there are throughout the country 548 central and local construction and installation units totalling about 500,000 cadres, workers and civil servants, with 370,000 construction and installation workers among them. The man-days actually worked by these workers reached 76 percent of the norm, with the days of work being stopped and absence amounting to 24 percent. Labor productivity in the past years was declining everyday and by now has gone down to only 54 percent of the plan. That was the reason for overspending in wage payment in the capital construction sector: according to the norm wages were to account for 18.8 percent of the value of output, but they have gone up to 27.7 percent. A combined calculation of the actual number of workers and the value of output actually obtained has shown that there currently is a surplus of from 30,000 to 100,000 workers in the capital construction sector.

- Because of poor preparations for investment and construction, there had to be changes in policy, scope, output, planning, location, etc. resulting in waste costing tens of millions of dong.

In the execution of work, there were serious wastes of materials and machinery. As prices of raw materials bought in the free market were high, estimates and costs had to be increased. In the case of some projects, the quality of work was so poor that the constructed structure collapsed and had to be rebuilt after it was torn down. As a result, the final costs of all construction projects after completion were much higher -- generally more than 30 percent -- than the initial estimates.

- Due to a lack of full planning for both construction work and supply of raw materials for production, although some construction projects were completed, there was a shortage of or no raw materials for production, resulting in the use of only a small part of the planned producing capacity.

About the reasons for such shortcomings, they can be summarized as follows:

- The concept, understanding and application of the party line in the initial steps during the transitional period have not yet been correct and total, which was reflected in the preparations for investment, selection of investment plans, etc.

- The mechanism of management and the system of management of investment in capital construction, which had been set up at the beginning of the period of economic restoration in North Vietnam, were improved too slowly to be suitable for the new stage of our country's revolution. This mechanism of management is heavily administrative and all-inclusive in character and does not attach importance to economic measures and effectiveness, nor to economic levers and cost accounting so as to link responsibilities with interests and managerial performance of sectors, echelons and units in connection with preparations for investment, investment policy, production and supply of building materials, preparations for equipment and execution of construction and installation, and use of the completed projects.

- The state financial management machinery at all levels (finance and banking) has not yet really mastered the sources of capital and has not yet been consolidated and strengthened to fulfill the management task and need in the new stage.

We are continuing to step up the socialist construction and to concentrate our energy on overcoming difficulties, developing production, practicing thrift, stabilizing the standard of living, gradually building the material and technical base of socialism, strongly defending the socialist fatherland, creating a vigorous economic and social change and moving toward successfully fulfilling the third 5-year (1981-1985) plan. As we invest in capital construction, we must renew this mechanism of management. It must be a combination of managerial measures and tools to be used on the basis of applying the economic laws to affect investment and construction and to direct these activities toward the goals that have been set along the party line.

To renew the management of investment in capital construction, we suggest that we resolve early these major problems:

1. About planning for investment in capital construction.

The direction for investment in capital construction is: to aim at projects that will have great effects on the national economy, be quickly and neatly executed and bring about realistic usefulness and great results. The formula is to concentrate capital and every capability on executing the work until full completion of each project or each category of project so as to start production and to put it to use and to avoid executing the work in many locations at the same time and spreading capital, materials and the construction and installation force.

The resolution of the 9th Plenum of the VCP Central Committee (4th term) clearly states:

"Continue to build, with the key point first, the material and technical base of socialism."

"...Make rational preparations for investment to be aimed at rearranging the economic structure along this line: to have high concentration in favor of the agricultural front, first of all to serve the task of producing grain and foods, to attach importance to investment in production of consumer goods and goods for export, to have surveys done for finding and exploiting gas and oil; at the same time, to invest appropriately in such sectors as electric power, coal, communications and transportation, engineering and production of chemical fertilizers and building materials for the purpose of satisfying better the needs of agriculture and light industry."

"...In capital construction firmly stop the projects that go beyond our building capacity and are not really necessary so as to invest capital in a concentrated and synchronized manner and to quickly complete the key projects. Pay attention to investing in depth, with priority given to projects that require little capital but bring about quick results."

In principle, investors are responsible to the state for the entire capital invested in their projects (no matter whether this capital comes from the budget or themselves or is borrowed from the bank). Investors must calculate to make sure capital is invested correctly where there are realistic benefits, the least amount and source of capital and time of investment are involved and results are obtained to a maximum degree and most quickly; supervise and inspect the execution of work, push for completion of their projects in time; organise preparations for production on schedule and fully so as to put them into production and use them right after completion of construction work; and make estimates of income and final calculation of costs after their projects are completed and organize good management and exploitation of the newly-increased assets resulting from the completed projects. The units that execute the construction work must be managed just as any other production and business enterprises. These units have their own fixed and liquid assets and can borrow from the bank. Their product is a project or a component of project being completed and put into production and service. They have the task of developing every capability, fully using the output of machines and equipment, ceaselessly raising labor productivity, saving materials and capital and concentrating on working until total completion and completing any projects quickly, with good quality and decreasing costs. They can enjoy the system of encouragement through material benefits as any other state enterprises when they overfulfill the plan and especially the system of awarding bonuses for completion of project ahead of schedule and with good quality.

The issuing of capital for investment in capital construction (capital supplied by the budget, coming from investors themselves or borrowed from the bank) must ensure using capital to channel labor, materials, machinery and equipment into building the material and technical base for production and other activities and must encourage and require the sectors, echelons and units in charge to concentrate energy on building until full completion each project or component of project to put it into production and service and to ceaselessly strive to raise labor productivity, to increase output of machinery, to save materials, to lower construction costs and to improve work quality.

The issuing and management of capital for investment and construction must make a distinction between capital issued by the financial organ and short-term loan from the bank for the construction units to make a product (liquid capital for construction) and capital issued by the state, self-provided capital or long-term loan from the bank for investors to invest and to pay construction units (capital invested in the project). The basis for proceeding with the issuing and management of capital for investment and construction (no matter whether it comes from the budget, is self-provided or is borrowed from the bank) consists of norms, standards, unit prices, capital construction code and regulations and state principles and procedures.

2. About the formula for issuing and lending capital for investment in capital construction.

a. Widening sources of capital for investment in capital construction.

All sources of capital for investment in capital construction (self-provided capital, credit capital or capital coming from the budget) come from the national income, including capital borrowed from foreign countries (for repayment will later come the national income also). Distribution of sources of capital actually means application of methods of issuing capital (repayable and nonrepayable) to investment in capital construction. The percentage and amount of capital that each source gives to investment in capital construction in a given period depends on the state of economic development, national income and managing capacity.

To let economic sectors and units use their self-provided capital to invest in capital construction and to widely use the credit lever in capital construction investment in addition to capital coming from the budget is necessary, but we have to make sure we both let the units that use capital and the organs that issue and manage capital get some practice and create actual favorable conditions for encouraging these units to heighten their responsibilities while ensuring unified state control over investment plans, plan execution and use of invested capital. In the past, since accumulation was limited, the material and technical base was still small, the managing capacity was still poor and investment was primarily in new in-breadth construction, it was rational for the state to issue capital for concentrated investment from its budget. But at the present time, since the managing capacity has been heightened, the material and technical base has become more developed than before and investment in capital construction must correctly combine in-breadth and in-depth investment, it is necessary to widen the sources of capital so as to create favorable conditions and to raise the sense of responsibility of all sectors, echelons and units in the use of invested capital. Recently our state has widely adopted the measure of granting credit for investment in capital construction to a number of projects of production and business nature. However, this widening of capital construction investment credit is not yet linked with the widening of the sources of self-provided capital of economic sectors and units put aside for investment and, with the greater part of credit invested in capital construction still being transferred from the state budget, does not fully exert its effects yet. Since the self-provided capital of economic organizations put aside for investment in capital construction is quite negligible, it does not help to heighten the self-rule right of sectors and units in connection with investment; at the same time, it also limits the sources of capital borrowed from the bank for investment in capital construction.

Therefore, we suggest that the sources of capital for investment in capital construction consist of self-provided capital put aside for investment, capital coming from the budget and capital borrowed from the bank.

- Self-provided capital used for investment by production and business organizations consists of a part of the capital taken from capital depreciation, a part of profit, money from sales of selected fixed assets for investment in development of production and business and a part of welfare fund put aside for investment in welfare-related construction.

- Nonproduction and nonbusiness construction projects of state management organs and scientific research, cultural, artistic, public health and educational organs, and public welfare projects get capital for investment from the budget.

- Projects of production and business organizations consisting of new construction, extension, remodeling, technical renewal, restoration, etc. get capital for investment from self-provided capital and bank credit.

- Projects of productive nature and large-scale new construction of special nature get capital for investment from the budget by decision of the Council of Ministers.

b. Adopting the system of lending capital for making preparations for investment and doing away with the system of financing from the budget investigation, exploration and survey as preparations for investment.

Careful preparations for investment are the prerequisite for making any decision about investment policy, investing correctly and obtaining great economic results.

Preparations for investment consist of many complicated jobs ranging from investigation, study, survey and exploration of economic and technical aspects and location of construction to drafting and selection of investment plan. The capital to be spent for these preparations is a considerable item in the capital invested in capital construction of a project. Preparations for investment in a project must be completed within the specified time to allow making a timely decision about investment policy and arranging for investment plan in time. Therefore, issuing, managing and using capital must be rigidly carried out and controlled in order to encourage the process of making preparations for investment and saving invested capital right from the beginning.

Until now expenses for investment preparations have been covered by the state budget and have come from occupational expenses; as they are of an across-the-board nature, they are far from strict:

- As occupational expenses are limited, the sectors and units being short of capital both fail to make full preparations for investment for each project and find it difficult to actively arrange for and carry out preparations for investment in the case of necessary projects or ones that have been set for being studied prior to investment.

- Investors are not obligated and pushed to make calculations of effectiveness, to manage and use capital strictly and to save money while making preparations for investment.

- As expenses come from the common occupational expenses, financial organs do not follow up and control rigidly and cannot evaluate the results of preparations for investment.

Consequently, many projects still received decisions about investment policy and orders to start construction even without prior investment preparations or with poor, superficial and careless preparations without any calculations and selection involved. As a result, in the course of construction, changes had to be made in regard to production line, product plan and construction site; capital for investment had to be increased, with more difficulties and waste in the execution of work and more time needed for construction.

To push forward and to create favorable conditions for sectors and units to make good preparations for investment, we must investigate, study, survey, calculate and select, carefully weigh the good and the bad; at the same time, stress the responsibility for managing capital, using capital in an economical manner and raising the effectiveness of capital investment right from the beginning; and adopt the system of lending capital to be used in making preparations for investment, thus doing away with the system of the state budget providing occupational expenses for investigation, exploration and survey as preparations for investment.

Lending capital to be used in making preparations for investment is carried out on the basis of:

- A decision of the state to permit preparations for investment in a project to be started (approval of planning for investment preparations).

- Contents, nature and necessary requirements of preparations for investment.

Since expenses for investment preparations are an investment item in the total capital invested in a project, after the completion of these preparations investors must make a final balance statement on these expenses and pay the principal and interest of the loan borrowed from the bank fully and on schedule.

When the project is approved for investment:

- If it belongs to the group of projects to receive capital from the state budget, its investor must get money from the total invested capital to pay the principal and interest of the loan borrowed from the bank that covers expenses for preparations for investment.

- If it belongs to the group of projects for which capital is to be borrowed, its investor must request a part of the borrowed capital to pay the principal and interest of the loan borrowed from the bank that covers expenses for preparations for investment.

In the case approval of investment is denied after preparations for investment have been completed, investors must clearly state the reason for this denial and request issuing of capital from the state budget as an investment item being disapproved to pay the principal and interest of the loan borrowed from the bank that covers expenses for preparations for investment (if the state has decided about making preparations for investment in the projects), or enterprises must use their own self-provided capital put aside for investment to pay the principal and interest of the loan borrowed from the bank that covers expenses for preparations for investment (if the enterprise directors have decided about making preparations for investment in the projects).

c. Adopting the system of lending money for purchase of equipment to prepare for capital construction investment projects and doing away with the system of the state budget issuing capital for purchase of equipment.

Capital for purchase of equipment is usually very large and accounts for 50-60 percent of the capital invested in a project. Every project that includes investment in equipment must have preparations running from ordering of equipment to installation and transfer of equipment for use by the production side after its completion.

Equipment capital must be rigidly calculated and managed from the time of ordering equipment to the time it is transported, stored, maintained, used and installed in a project, particularly at the present time when most of our equipment has been imported with loans borrowed from foreign countries; one day this equipment is not yet put to use is one more day we have to pay interest and face additional losses because it can be lost and damaged easily, capital is stuck, storage space is taken and there are more expenses involving storage, maintenance, repair, replacement and, even worse, obsolescence due to fast scientific and technical progress.

Until now capital for purchase of equipment has been issued by the state budget in accordance with the need of the ministries, general departments, investing sectors and project investors to pay for their purchase. This way of providing capital does not link the purchase of equipment with investment and construction plans, nor does it push and compel the echelons, sectors and investors concerned to raise their responsibility for saving capital, particularly with regard to imported equipment, as in many cases such a purchase does not fit the progress of construction, is made too early or without time consideration and is made while no construction is to start. The rather serious situation in which equipment is lost, damaged, left idle and taken apart for partial use has led to considerable waste and great losses of materials and equipment and has lowered the economic effectiveness of capital invested in capital construction.

To stress and encourage fulfillment of the responsibility of capital-using units for making careful calculation, selection and consideration of purchase or import of equipment for their investment projects, we suggest that we adopt the system of lending capital for purchase of equipment and do away with the system of the state budget issuing capital for purchase of equipment, both complete and single equipment and both equipment requiring assembly and already assembled equipment.

The bank lend investors 100 percent of the capital needed for purchase of equipment for their project, including purchase costs, expenses for transportation, storage, maintenance and use of equipment.

After the equipment that does not require assembly and installation or the equipment that requires assembly and installation has been assembled and installed, after the project has run on a trial basis and has been transferred for production and use to be started, and after the payment of the entire investment has been made, the units that have borrowed capital for purchasing equipment must pay both principal and interest to the bank. The interest paid on the loan that has been used for the purchase of equipment is added to the total capital invested in the project (as value of equipment).

d. Adopting the system of issuing capital and lending liquid capital to construction and installation units and doing away with the system of issuing capital and lending capital for material reserves and expenses incurred while construction is still unfinished as temporary advances.

The units that execute the capital construction work must be managed just as any production and business enterprises. They have fixed capital and self-provided liquid capital and can borrow capital from the bank.

In addition to the system of issuing capital for investment and paying the total invested capital for a completed project or a completed component of project after its production and use have started, we must guarantee the minimum necessary capital for construction units to maintain production reserves and to cover production expenses until product is paid (the project or component of project has started producing and being used).

Until now a small part of the liquid capital of construction units, which is called small liquid capital, has been issued from the state budget and the rest has been provided by the Bank of Construction as loan for material reserves and expenses incurred while construction is still unfinished; this loan is issued by the bank in set amounts to be paid back all at once without interest.

This way of issuing capital and lending liquid capital, which actually is an across-the-board action, lacks stimulating effects and fails to strengthen the responsibility of construction units and their initiative in the management and use of liquid capital, nor does it encourage them to calculate carefully the maintaining of material reserves, to step up work until completion, to lessen the work that is left unfinished and to step up turnover and saving of capital while executing their construction work.

To guarantee the minimum necessary capital for construction units and at the same time to stress their responsibility for management and use of materials, labor and capital and for doing work until completion, we suggest that from now on they are issued capital and can borrow liquid capital as any other business enterprises.

Due to the characteristics of capital construction work, the liquid capital of construction units consists of the kinds of capital necessary for completing an assigned project within a reasonable period. On the basis of the nature and structure of each type of project and the assigned task and rate of progress of construction and installation as performed by construction units, the financial and banking organs in coordination with the managing sector control, consider and approve the level of annual liquid capital for these units.

The approved level of annual liquid capital consists of two parts:

- The normative liquid capital consisting of reserve and turnover in connection with the yearly work execution cycle (including the liquid capital of secondary production units supporting the construction units). The state budget issues 50 percent of this part of liquid capital and the other 50 percent is borrowed from the bank by construction units.

- The liquid capital for production while the project is still unfinished and for payment for importing materials from abroad along with the complete equipment. This part can be borrowed from the bank 100 percent.

Construction units must pay interest set at a fixed rate to the bank. If they strive to shorten the time for completing the project, hence the time to pay interest to the bank, they will be better off, and vice versa.

3. About the formula for obtaining the product of construction: issuing capital for investment when the completed project or component of project after a trial run is transferred for production and use to start, and doing away with issuing capital for investment on the basis of the volume of work completed by conventional stages.

The product of capital construction investment is the project or component of project being completed and put into production and use. The capital issued for investment must be closely linked with the product obtained.

To guarantee economic effectiveness of invested capital and at the same time to encourage sectors and units to make investment calculations, to do construction work steadily until total completion to quickly put the project into production and use and to save capital, we must issue capital for investment when the project or component of project being completed and run on a trial basis is transferred and put into production and use.

At present, the way capital is issued for investment in capital construction by regulation is based on the "capital for investment in completed capital construction" norm which includes all of the volume of construction work under way and only partially completed and still to be put into production and use, which is called "volume completed by conventional stages" (with construction lasting a month or less and value ranging from 5,000 to 20,000 dong). This way of issuing capital and paying for volume of investment completed has led to the following harmful effects:

a. Invested capital is used to make payment, but it does not in reality buy any product having a use value but rather an unfinished product of construction and installation, with capital remaining idle for years and its effectiveness being low.

b. It has encouraged units to pursue volume, to do work in part just for getting paid, to do work at scattered places without any real interest in working until total completion to quickly put the project into production and service; it has led to a situation in which work in a project is not uniform, it is easy to start a project but it is hard to give it up, the finishing work for each project is done very slowly, the time to execute the construction work is prolonged and the volume of investment remaining unfinished is great, with a lot of materials, labor and capital being expended but the material and technical base put into production and use each year being negligible.

c. Financial and banking organs cannot follow, control and correctly evaluate the capital invested each year to see how much use value and economic effectiveness it has brought about.

To guarantee economic effectiveness of invested capital, at the same time to encourage concentrated investment and execution of work until total completion to put projects into production and use early, to ensure invested capital being closely linked with product having good use value (completed projects or components being put into production and service) and to strengthen the responsibility of investors, construction units and capital-issuing organs in terms of management and use of invested capital, we suggest that from now on we issue capital to investors for payment of the volume of investment completed only when the completed projects or components after a trial run are transferred to be put into production and use.

4. Implementing the interest rate policy for capital borrowed to invest in construction.

The credit interest rate policy is an important matter aimed at developing the levering effects of credit; on the one hand, it stresses the responsibility of the borrower units for using capital strictly and effectively and, on the other hand, guides and encourages investment with borrowed capital in the right direction of economic development as set by the party and state for different periods.

Until now credit interest rate has not yet been officially adopted because the scope of credit has not yet been widened. The credit interest rate in investment and construction that is being temporarily used is an average ineffective one; all projects of investment with domestic and foreign capital are charged an interest rate of 3 percent per annum while the projects that use capital borrowed from foreign countries must pay higher interest rates (7 percent per annum or higher), but borrowed liquid capital in construction as mentioned above does not pay any interest.

To develop the levering effects of credit in the field of capital construction investment and to help to push and encourage investment in the right direction, economical use of capital, execution of construction work until total completion to quickly put projects into production and use and to raise the responsibility of the bank in charge of investment and construction, all loans used for investment and construction must be charged interest. All units having borrowed capital from the bank in charge of investment and construction must be responsible for paying principal and interest fully and on schedule to the bank.

Interest rates do vary with different types of loan and project:

- The interest rate used for capital borrowed for investment is lower than the one for loans used as liquid capital in construction work.

- The interest rate used for capital invested in any projects that the state encourages to carry out is lower than the one in other projects.

Interest rates applied to different types of loan for investment and construction should be temporarily set at levels ranging from 1.8 to 3.6 percent per annum. For investment with loans borrowed from foreign countries, interest rates consist of the set rate to be paid to them plus 1 percent per annum of service charge taken by the bank of investment and construction.

If borrower units pay off their loans before the due date, they are to get a 50 percent reduction of interest based on the amount of the loans for the period between the payment and the due date; on the other hand, if they pay them off after the due date, they will be charged additional interest at twice the set rate based on the amount of the loans and for the period between the due date and the date of payment.

5. Adopting a new system about profit, profit distribution and bonus awarded to capital construction units for completion of projects ahead of schedule.

Production and business units in capital construction must ensure making more and more profit for society. Profit and profit distribution norms are closely related and aimed at correctly combining the three interests of the state, enterprise and producer. Profit and profit distribution are closely linked with the production characteristics of each sector and must be aimed at encouraging doing profit-and-loss accounting, raising labor productivity and reducing costs of product.

The characteristics of product of capital construction projects are large capital, complicated execution of work, coordination of many sectors and units, high quality requirement and long duration.

Since reducing construction time to quickly put projects into production and use with good quality is an important goal aimed at obtaining good results from invested capital and bringing about realistic benefits for society, there must be a system of material encouragement applicable to the cases of completion and transfer of projects ahead of schedule.

Until now the profit norm has been set at 2.5 percent of the estimated value of construction and installation of a project. As to profit distribution, only a part of the profit has been required to be put into an enterprise fund to be used as bonuses for emulation, but the system of using profit to set up three funds has not yet been implemented. Bonuses awarded to projects completed ahead of schedule have been set to equal 2 percent of the value of construction and installation if the time saved is less than a month and 3 percent if more than a month.

The level of profit, the amount of bonus awarded for completion of a project ahead of schedule and the extent and level of profit distribution as mentioned above are not enough to encourage and push construction units to raise their concept of collective ownership, to step up profit-and-loss accounting and to steadily execute construction work until completion to finish their project ahead of schedule.

To promote the collective ownership right and to stress the responsibilities of production and business units in the management of capital invested in capital construction, we suggest that we adopt the following new system:

a. Profit and distribution of profit of construction units.

Profit of construction and installation units consists of:

- Construction and installation profit: the difference between actual costs of the work done and the estimated construction and installation costs of project, which are higher. The profit norm (set in the plan) in the estimated value of construction and installation is now set at 5 percent of the production expense norm for construction and installation.

- Other profit: profit brought about by other production and business activities of construction and installation units.

We suggest that construction units divide their profit as follows:

- To make payment into the state budget at the fixed amount.

- To pay loan interest to the bank.

- To establish with part of the profit three economic encouragement funds.

- To add to the self-provided liquid capital of the enterprise.

- To pay the rest into the state budget.

b. System of bonus awarded to projects completed ahead of schedule.

Bonuses are awarded construction units and related units having contributed to completing projects ahead of schedule. Conversely speaking, completing projects after the scheduled completion time is subject to fines. Bonuses are added to the profit of these units. Fines are deducted and taken from their welfare fund in accordance with current regulations. Since bonuses are paid by investors, they are included in the invested capital of projects. Since fines are paid to investors, they reduce the invested capital of projects.

6. Unifying investment and construction credit organizations to establish an investment and construction bank.

Back in 1957, as our state had seen the necessity to have a bank specialized in the management of investment and construction capital, it set up the Vietnam Construction Bank within the Ministry of Finance. This bank has made many efforts and has acquired some experience in issuing and managing capital, lending and paying in the field of capital construction. However, because of our country's economic conditions and numerous limits in the mechanism of capital construction investment management, it has not yet been able to truly function as a bank.

In recent years, the government adopted a policy of further extending credit to capital construction investment and temporarily assigned the State Bank to lend money for investment in a number of projects, while the Construction Bank was in charge of issuing capital for those projects being within the state budget investment group, lending money for investment and providing liquid capital to the central, provincial and municipal state-operated construction and installation units. Due to the fact that the management of capital investment has been divided to two banks, management and supervision of execution of work from preparations for investment and planning to investment itself have become untimely and have been lacking concentration and tightness. In addition, since the management of invested capital is shared by both banks, the managerial measures adopted are far from unified, which to some extent has created unnecessary difficulties for sectors and echelons, and the management of invested capital itself lacks coordination between different jobs (between preparations for investment and investment, investment and construction-installation).

To overcome that situation, to ensure a tight unified management of capital invested in capital construction and, along with that, to adopt right away a number of improved procedures about lending and payment in investment and construction and to carry them out with the existing Construction Bank machinery and the accumulated experiences, we suggest that we change the present Vietnam Construction Bank into a Vietnam Investment and Construction Bank in charge of both investment and construction.

The new bank's task is to lend investment capital to units for construction projects, to lend liquid capital, to take care of payment for production and business organizations in the field of capital construction through its lending service and control the use and management of capital sources as performed by units and their implementation of economic and financial management policies and procedures in the process of investing in capital construction.

The bank will operate on the basis of the all-sector profit-and-loss accounting system and have the material responsibility in economic relations toward customer units doing business with it by depositing money, borrowing capital and paying back.

EDITORIAL CALLS FOR GOOD MANAGEMENT OF SERVICE ACTIVITIES

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 10 Jul 81 p 1

[Editorial: "Good Management of Service Activities"]

[Text] Like other large and densely populated cities, ours requires a great deal and a large variety of service activities to meet the people's daily life requirements.

Service activities competitively and strongly developed in our city prior to the liberation day when the population increased disorderly and continuously according to the law of the war of aggression and to the life style of a neocolonial consumer society. While these service activities provided many conveniences to the consumer's life, a large segment of them--by the very nature of the capitalist regime which created them--was brimful with negative manifestations. Since the liberation day--except for a number of persons who have adopted the correct method of collective business--, the situation has been marked by competitive, disorderly and quick development, dishonesty, exploitation of customers, tax evasion, failure to apply for registration and so on. These are bad practices which have not yet been eradicated.

Taking advantage of the recent price fluctuations in the city market, the prices of private service activities, especially those in densely populated precincts and districts, have simultaneously risen, creating more difficulties to the laborers' life. Many kinds of service activities have mushroomed especially in the eatery sector. Certain people have misused service activities to stealthily engage in vile professions which badly influence social life and human dignity. A number of service activity installations have served as places to dispose of commodities and products brought in by thieves and so forth. Through its activities, part of the servicing sector has made a great profit and has thus brought about an irrational income situation unacceptable to our society.

In view of this situation, our city has the responsibility to further strengthen the management and organization of service activities and to bring the diverse service activities into the socialist orbit in order to help develop production and heighten the material and cultural living standards of the laboring people. Right now, it is urgent to try to lower the prices of service activities--especially those vital to the laborers' daily life such as haircut, hairdressing, tailoring, bicycle and motorcycle repair, parking-lot keeping, catering trade, etc.

To successfully carry out the abovementioned tasks, it is necessary to educate persons engaged in service activities to make them clearly realize that their activities are aimed at promoting the people's life in the common interest of society and also for their own benefit. Following the example of dishonest traders and raising service charges is tantamount to attacking the laboring people in their livelihood. On the other hand, the laboring people need join the administration and market management organs in regularly inspecting service installations to see whether they implement the newly promulgated decision of the Municipal People's Committee on the obligation to post up price lists and to charge according to the posted prices. Severe administrative measures must be taken against installations which deliberately raise prices, exploit customers, refuse to post up price lists, charge more than the posted prices or take advantage of their service activities to do unlawful things. Installations which have made false [income] declarations and evaded taxes must pay taxes in full to the state according to the policy in force.

Simultaneously with struggling to stabilize service charges, we must reexamine the registration of occupations in order to prevent the disorderly expansion of service activities of various kinds. He who has not yet been issued an occupational license is not allowed to carry out activities. In certain trades, the person engaged in service activities will be allowed to exercise his profession only after fully meeting the essential criteria on professional skill, material facilities, health and so on. In particular, the catering trade must fulfill the necessary hygienic conditions according to the regulations promulgated by the state.

In conjunction with the struggle to manage the private service sector, the collective sector and the commercial and catering units of the state must expand their service and business network or draw up a plan to cooperate with and employ the private service forces according to the guidelines and price lists indicated by the state. The expansion of the state-operated network of tailors, dressmakers, barbers, hairdressers and so forth in the First, Third and Fifth Precincts is an interesting move which must be developed because, by carrying out business and serving the people, these installations have clearly manifested the superiority of the nature and goals of the socialist economic organization.

To properly manage and organize service activities is to contribute to stabilizing the people's life and to simultaneously materialize a civilized aspect of the new society which we are building.

PRICE OF GOODS SOLD BY STATE TRADE SECTOR ANNOUNCED

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 18 Jul 81 p 5

[Text] The Industrial products General Corporation in the Fifth Precinct is offering the following merchandises for unlimited sale to cadres, manual and office workers and the people:

—Soap bar, 32 percent [oil]	Price:	1.30 dong each.
—"Bic" ballpen refill	-	0.85 dong each.
—Baby's bottle teat	-	1.50 each.
—Student scissors	-	0.63 dong a pair.
—Set of plastic buttons	-	0.06, 0.08 and 0.13 dong per set.
—Bicycle spoke	-	0.25 dong each.
—Case for paint brushes	-	0.15 dong each.
—New Year card	-	0.20 dong each.
—Coat hanging hook	-	0.03 dong each.
—Bicycle mudguard	-	0.15 dong each.
—School bag	-	11.00 dong each.
—"Thong Nhat" ink	-	0.56 dong a pot.
—"Tan Quang" electric light socket	-	1.50 dong each.
—Bicycle front brake cable	-	0.50 dong each.
—Student book label	-	0.05 dong each.
—Pen nib (for use with ink)	-	0.04 dong each.
—Penholder	-	0.20 dong each.

Prospective buyers including public agencies, cooperatives and the people are invited to contact the corporation office at 314 Tran Phu Street, Fifth Precinct (Professional Planning Bureau), on the groundfloor, telephone No 56-900.

Payments may be made by checks or cash according to the customer's category.

MORE SECONDHAND GOODS SHOPS SET UP IN HO CHI MINH CITY

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 18 Jul 81 p 5

[Text] To extensively serve consumers and to contribute to stabilizing the market, in addition to 25 secondhand goods shops and stations which are doing business in the city, the Ho Chi Minh Municipal Secondhand Goods Dealing Corporation has just set up the following shops to do business at agreed prices and to make immediate cash payments:

1. The Secondhand Goods General Shop in Dan Sinh market, No 104 Yersin Street, First Precinct

—Sells: All types of motorcycles and modern bicycles; all types of spare parts for motorcycles, bicycles and automobiles; all types of electrical appliances; sewing machines in their entirety and parts; all types of wooden, aluminum and chinawares; cups, dishes, tea-pots, bowls jars and so forth.

—Buys: Used items of the abovementioned types and also discarded materials. The shops also accepts used and new merchandises in consignment for sale.

2. The Secondhand Goods Shop, 126 Nguyen Tat Thanh Street, Fourth Precinct

—Sells: All types of radio sets, cameras, wall clocks, electric transformers, fruit blenders, sewing machine motors, electric appliances and earthenware.

—Buys: All types of used merchandises such as television sets, recorders, microphones, loudspeakers, amplifiers, etc. and discarded materials.

3. The Secondhand Modern Merchandises Shop, 135 Nguyen Hue Street, First Precinct (on the groundfloor and first floor)

—Sells: All types of refrigerators, radio sets, cassettes, fruit blenders, computer parts, organs, pianos, drums, medical equipment, lacquer paintings, carved figurines, high-quality wood furniture with mother-of-pearl carvings, etc.

4. The Secondhand Goods and Discarded Materials Shop, 342 Hai Ba Trung Street, First Precinct.

—Buys: All types of used merchandises and discarded materials including television sets, tape recorders, cassettes, radio sets, microphones, loudspeakers, amplifiers, electric guitars, organs, pianos, antiques and so forth.

COMMERCIAL CADRES INSPECT POSTING OF PRICES

Hanoi HANOI MOI in Vietnamese 15 Jul 81 p 1

[Text] On the afternoon of 8 July, a group of market management cadres of the Trade Service went out to inspect the posting up of prices and the sale of goods according to the posted prices in busy commercial centers including the Dong Xuan-Bac Qua and Hang Be markets.

The group found that the obligation to post up prices was fulfilled by the shops dealing in dried foods such as onion, garlic, beans, sesame and peanuts in the abovementioned two markets. In the hardware department of the Dong Xuan market, the price lists previously posted above individual compartments reserved for each kind of goods had been removed and only one comprehensive price list written in small letters was hung at a place where it could hardly be read.

In the Hang Be market, price lists which were previously posted up by sellers of shrimp, fish, meat and eggs were not seen by the group during the inspection.

For a month since the city concentrated on market management and ordered the posting up of prices and the sale according to the posted prices, the prices of many kinds of goods in the free market have been stabilized and the prices of a number of commodities have fallen as compared with the past. This is an initial achievement.

Experiences have demonstrated that the struggle against negative practices in the free market will be effective only if it is carried on regularly, continuously, persistently and resolutely.

To preclude the state of "good beginning, unhappy ending", inspection units and management committees must pay attention to promptly correcting and firmly dealing with the tricks played in the food department of the Hang Be market and in the hardware department of the Dong Xuan-Bac Qua market.

Speaking on the consumers' behalf, a cadre of the Lawyers' Association told our newspaper on the afternoon of 9 July 1981 that price lists were not posted up above the majority of goods, especially food products, in the Nguyen Cao market at the end of Lo Duc Street, Hai Ba Trung Precinct. This situation has affected buyers who can hardly avoid buying goods at high prices. We have come to the spot to take a look-see and have found that what the cadre said is true. We wish to convey our finding to the local subward and the market management board of the Hai Ba Trung Precinct for consideration and solution.

On 12 July 1981, the Hang Trong Subward public security post caught three women named Vu Thi Giao (89 Hang Dieu Street), Le Thi Hao (An Duong Collective Residential Area) and Vu Thi Loi (6 Nguyen Bie Street) in the act of carrying more than 50 kgs of modern medicines for illegal sale in South Vietnam.

PRIVATE SHOPS CONTINUE TO OVERCHARGE CUSTOMERS

Hanoi HANOI MOI in Vietnamese 14 Jul 81 p 4

[Articles in "Readers' Opinion" Column by Le Thu, 128 Dai La Street, and Thai Van Hoanh, Cong Vi Subward: "Posting up Prices and Refraining from Selling Goods above the Posted Prices"]

[Text] The posting up of prices by private shops and the simultaneous tightening of market management are contributing to stabilizing prices and to ensuring the life of cadres and people. To our knowledge, the obligation to post up prices and to refrain from selling goods above the posted prices is legally compulsory and no one is entitled to freely choose between fulfilling and ignoring it. However, in certain areas such as alongside Hue Street, there are a number of private shops dealing in bicycle spare parts which have either refused to post up prices or sold goods above the posted prices like the fish and meat shops in various markets. It is suggested that the precinct trade bureaus make regular inspections and take the necessary measures to deal with this situation.

It seems that the obligation to post up prices has not yet been carried out by the watch, bicycle and electric instrument repair sector. At present, many shops, especially those belonging to the bicycle repair sector, are raising prices at will. They charge 1.5 or 2 dong for repairing an inner tube puncture. Bicycle repairmen have raised to 0.5 and even 1 dong the price for minor repairs such as tightening screws and so forth.

It is suggested that the responsible organs immediately order the posting up of prices by repair shops, especially those which repair bicycles.

OVERCHARGE, TAX EVASION BY RESTAURATEURS MUST STOP

Ho Chi Minh City SAIGON GIAI PHONG in Vietnamese 10 Jul 81 p 5

[Article by T.L.: "Eating Costs Must Come Down"]

[Text] As a manual or office worker who feels tired and needs a refreshing drink after accomplishing your task, you sometimes drop in at a fruit juice inn or stop beside a vehicle on the roadside which sells pennywort infusion or sugarcane juice. That is quite convenient but beware! You have to carefully check the price list (if it is posted up) or to ask the price in advance or else...

At the beginning of each month or at weekends, do you want to "invigorate yourself" with a bowl of noodles-and-beef soup, noodles-and-pork soup or soft-noodles-and-beef or a dish of fried noodles? That is surely necessary. But it is advisable that you look again at your pocketbook. Before entering a restaurant, you must have at least a sum of money greater than the price you paid last time for a bowl of noodles-and-beef soup, noodles-and-pork soup or soft-noodles-and-beef...

We have to remind you of the need to take such precautions because many persons including ourselves have fallen "victims" to "unexpected price hikes". On going home the other day, we dropped in at a teahouse beside the Thang Long theater, Cao Thang Street, Third Precinct, to have some glasses of cold yogurt at the price of 2 dong each. The next day I met with a friend of mine and, because I had 5 dong in my pocket, I invited him into the same teahouse and ordered two glasses of yogurt. After a cordial talk, I asked for the bill and was dumfounded when hearing:

--7 dong for two glasses.

Thinking that I did not hear clearly, I asked again. The teahouse owner replied distinctly: "Two glasses of cold yogurt amount to 7 dong." To raise enough money to foot the bill, I was obliged to "beg" my friend to "supply" me with 2 dong!

Too Great a Profit!

If you voiced your discontent under such circumstances, you would hear a string of "complaints" about skyrocketing prices, state tax increase, business losses and so forth.

Is that due to price hikes? Over the recent past, the prices of certain commodities have risen a little bit in the free market. However, the discrepancies will be found too great if we compare the rising prices of a number of raw materials with the price increases charged by restaurants and teahouses. To our knowledge, the abovementioned teahouse needs only 1 kg of powdered milk and about 0.6 kg of sugar to make 56 yogurt bottles (of the size usually sold at food shops). From 22 dong a kilogram a few months ago, powdered milk now costs 55 or 56 dong. Sugar is sold at various markets for 20 dong a kilogram--an increase of about 2 dong over the past. It follows that the manufacturing cost of a bottle of yogurt is about 0.7 dong and that it will come to 1.5 dong--an increase of about 0.2 dong over the past--if the cost of ice and other overheads are taken into account. However, customers have to pay as much as 3.5 dong, which means that the teahouse owner pockets a profit of 2 dong for each bottle of yogurt. It is clear that a number of business households have used the "market price hike" as a pretext to "grab" more money.

Is that due to a state tax increase?

It is true that the state has increased the tax levied on a number of shops and business households but this is merely a rational tax adjustment and not a raise in the tax rate. According to an estimate by business registration teams, most business households have declared about anly 50 to 60 or at most 70 to 80 percent of their real turnover. For this reason, adjusting the tax to be levied on business households according to their actual turnover is necessary to put their irrational and too high income in harmony with the common level of income of the entire society. However, a number of business households have deliberately ignored this necessity but have taken the tax adjustment by the state as a pretext to increase their prices and profit manifold.

In reality, how have these households done business and fulfilled their tax obligation?

Beginning with 6 dong a large bowl of noodles-and-beef soup, shop H. in the Thirteenth Subward, Third Precinct has subsequently raised it to 8, 9 and 10 dong. But the shop owner still complains that he "cannot make a profit" because the states "levies too high a tax". During our investigations, the responsible comrades in the Thirteenth Subward told us: In the past, noodles-and-beef shop H. declared a monthly turnover of only 8,000 dong but gradually raised it to 10,000, 20,000 and 35,000 dong following the assessment by the business registration team. Because the comrades in this team insisted that the shop owner truthfully declared his monthly turnover, he finally set it at 42,000 dong. Over the past few months, the subward tax team has collected business and income tax according to his declaration.

Is his declaration correct? People in the neighborhood said that noodles-and-beef soup shop H. sells each day 15 "Yen" [formerly equivalent to 6 kgs, now to 10 kgs] of noodles and not only 5 to 7 "Yen" as declared by the shop owner. In our reckoning, this shop sells about 500 bowls of noodles-and-beef soup a day. If each bowl is sold at the former price of 6 dong, the monthly turnover of this noodles-and-beef soup shop will be three times as much as what the owner had declared. If each bowl is sold at the current price of 10 dong, we need only to make a multiplication to immediately find the discrepancy between the declared 42,000 dong and the true monthly turnover of shop H. We will also find that the business and income tax paid by this shop to the state is still very low in proportion to its real turnover.

Some Suggestions

In our city, how many are there large, medium and small eateries owned by business households and how many of them are still improperly doing business and fulfilling their tax obligation as in the abovementioned case? The few cases mentioned suffice to show that we have failed to tightly manage the catering trade activities and the relevant prices and tax. This has induced private catering units to freely raise prices to exploit customers and to cause losses to the state.

The Municipal People's Committee recently issued a directive on the obligation to post up commercial prices and service charges and to sell goods according to the posted prices. A few precincts, districts and subwards have begun to implement the directive but most of them have only focused on commercial activities in various markets while neglecting all kinds of service activities, especially those in the catering trade.

Since the present situation is still rife with difficulties, we think that the prices asked by the catering trade have a direct effect on the people's life. Therefore, the administration at all levels, especially at the grassroots, must intensively direct business households to register and to post up price lists and must also make sure that these households and even the itinerant ones sell goods according to the posted prices. At the same time, it is necessary to grasp the business situation of these households including their nature, scope and turnover and, through this, to readjust the tax rate in accordance with their real turnover in order to preclude income irrationalities and too great income discrepancies between various strata. It is most important to ensure that the allowances increase recently granted by the state to cadres and manual and office workers has the real effect of stabilizing their life and does not fall into the pocket of a small number of dishonest businessmen.

On the other hand, commercial organs--especially and primarily the catering sector--need expand the network of state-operated restaurants which will be organized and will apply business hours in accordance with the daily activities of the laboring people. Only by doing so can they help manage the market and successfully struggle on the goods distribution and circulation front at the present time.

BRIEFS

CUU LONG ECONOMIC PLANNING--The Cuu Long provincial people's committee and the agricultural and water conservancy sectors recently held a conference of scientific and technical cadres to discuss measures to accelerate economic and social development program in the Mekong River delta and in Cuu Long Province. The conference heard almost 20 reports on agricultural production, many of which have provided new methods for the increase of rice production. [BK071337 Hanoi Domestic Service in Vietnamese 0400 GMT 27 Sep 81]

MINH HAI NEW ECONOMIC ZONES--Minh Hai Province recently sent cadres to Ha Nam Ninh Province to discuss plans to receive 2,500 families from the latter for resettlement in various new economic zones. Authorities in Phu Tan District, Minh Hai Province has decided to provide each of these families 1,500 square meters for living quarters and 3,600 square meters of ricefields for cultivation. This is aimed at helping the new resettlers to embark on agricultural production upon their arrival. [BK071337 Hanoi Domestic Service in Vietnamese 2300 GMT 30 Sep 81]

AGRICULTURE

MINISTRY OF AGRICULTURE REPORT, FOURTH INSTALLMENT

BK270256 Hanoi NHAN DAN in Vietnamese 8 Sep 81, p 2

[Fourth installment of an "excerpt" from the Ministry of Agriculture report at the conference held in Ha Nam Ninh in August 1981 to review the implementation of the product contract system in agriculture--passages between slantlines denote boldface as published]

[Text] Faced with the demand for increasing agricultural production for the years ahead and with a state in which material and technical capacities are still limited, the concentration of efforts on exploiting managerial potential will be of paramount importance. Facts obtained from the 1980-81 winter-spring crop show that the system of product contracts with groups of workers and individual workers is an effective managerial measure to tap the existing potentials in manpower, land and funds of cooperatives and cooperative members' families. Remarkable manifold results have been obtained by all those cooperatives which, operating in different productionareas, have practiced the product contract system. Therefore, what we have to do now is to expand and perfect quickly the product contract system at all cooperative in accordance with the following requirements:

--Expand the system of proudct contracts with groups of workers and individual workers in the 1981 10th-month crop at all cooperatives in the lowlands, the midlands, the (former) Region 4, the coastal area in Central Vietnam and the lower mountainous regions (including the Central Highlands) in conjunction with testing this system at cooperatives in the upper mountainous regions. Cooperatives and production collectives in Nam Bo must expand the application of the new system after reviewing its implementation at various experimental sites.

--Along with product contracts in cultivation and animal husbandry, we must expand the application of this system to the various services and professions in cooperatives; that is apply it in all production services of cooperatives.

--Experiment with the task of linking cooperatives' production results with those of various sectors serving agriculture, especially those sectors which are directly involved in production such as: tractor stations, farmland irrigation corporations, supply corporations, seedling stations, vegetable production stations and so forth. We must closely link the product contract system at cooperatives with efforts to improve the organization and management of various district-level economic sectors.

In product contracts with groups of workers and individual workers, we can attain good results only on the basis of dealing satisfactorily with all problems regarding reorganization of production and improvement of the managerial skills of cooperatives in conjunction with efforts to carry out district-building activities. Attention must be paid to the following points:

I. /As for the Reorganization of Production and the Improvement of the Managerial Mechanism of Cooperations/

1. We must determine, revise and perfect our orientation for production, must have a rational production structure, and must consolidate and strengthen the system of collective ownership over land at various cooperatives.

We must have a correct orientation for production suitable to the economic, natural and zonal conditions and to the production plans of various districts. Only with a correct orientation for production can cooperatives link their immediate and long-term production activities, and can they move forward firmly and steadily.

Orientation for production at cooperatives must be applicable to the main production sector, the supplementary production sector and the support service production sector and must be formed by fixing norms for production volume and for the rate of development of each crop plant, each animal and other products. Depending upon the actual situation in each cooperative, we must determine, readjust, revise and eventually perfect the orientation for production. In cooperatives without a clear orientation for production, we must try to clear-cut orientation. As an immediate task, we must base ourselves on the needs of cooperatives and cooperative members and on the grain obligation toward the state in making necessary calculations for production, permitting no upheavals in productionnor contradictions to the long-term development plan to occur. Orientation for production at cooperatives will be changed only when there is a change in the production task as a result of a discussion or a decision by a congress of cooperative members with the approval of the district people's committees concerned.

Based on the production guidelines, cooperatives should established a rational production pattern to secure balances between main crop cultivation and animal raising and secondary crop cultivation and animal raising, between rice and subsidiary food crops, between short-term and long-term crops, and between main and companion crops on each ricefield and for each crop season. A rational production pattern should reflect high economic results in production in terms of cropyield, heads of animals raised and the value of profits from each unit of cultivated area and per worker. Moreover, the crops cultivated and the animals raised under this pattern must serve the role of supporting one another for mutual development. The pattern must ensure the intensive cultivation of main crops and animals while developing other secondary crops and animals. It must use manpower fully, ease the tension caused by the unnecessary demands for manpower, help protect and improve soil, and create favorable conditions for building and perfecting various water conservancy projects, roads and embankments of rice plots and other fields of concentrated, specialized and intensive cultivation. Only by establishing a rational production pattern can we secure plans for the cooperatives to turn out products uniformly and harmoniously, implement their tasks, carry out crop cultivation schedules and create favorable conditions for the planting of companion and overlapping catch crops by production teams and cooperative members.

Along with determining, completing and perfecting the production guidelines and establishing a rational production pattern, it is necessary to strengthen and consolidate the system of public ownership over land in the cooperatives. In the course of developing and consolidating cooperatives, cooperatives' land has been collectivized generally, but management of its use has not been satisfactory. In many cooperatives, illegally occupied land has not been detected and recovered. Meanwhile, in many other cooperatives, the collective management of land and ricefields is too rigorous. Although much of their land is left uncultivated, their members cannot borrow it for cultivation. There have also been cases in which cooperatives intentionally failed to report their cultivated land in order to share the yield therefrom among the production teams or small cooperatives. These negative phenomena have been detected through the application or product contracts with groups of workers and indiviudal workers. As a result, along with determining anc completing the production guidelines and patterns, we must expand the system of new contracts in order to control the situation of land and ricefields firmly, consolidate and strengthen the system of public ownership over land and ricefields in the cooperatives, ensure tight management and effective use of all types of land and ricefields, and fully develop the cooperative members' collective mastery over all vital production means, especially those of the cooperatives.

/2. Improve and Enhance the Tasks of Planning and Profit-and-Loss Accounting in Cooperatives./

Planning is a tool of management according to the principle of centralized and unified management in cooperatives. Cooperatives can manage well only on the basis of a good plan. The system of product contracts with groups of workers and individual works is designed to ensure that production can be carried out as planned and that the principle of distribution according to labor can be implemented more satisfactorily. The distribution and production plans of cooperatives therefore must be combined closely to ensure the proper payment of cooperative members in accordance with the distribution plan on the basis of correctly implementing the production plan as specified in directive No 400-CP dated 15 November 1980 of the Council of Ministers concerning the policy of distributing income within cooperatives and production teams. The experiences of those cooperatives which adopted the product contract system in the last winter-spring crop season show that their members have delivered their products quickly and adequately to the cooperatives. This was due mainly to the fact that the cooperatives had unified production and distribution plans at the very beginning of the crop season. Based on these plans, the management committee and production teams mobilized the cooperative members to participate actively in the intermediary labor tasks and to fulfill the assigned tasks well.

We must proceed from the actual production means of each locality to improve and enhance the planning tasks of cooperatives by properly computing all necessary balances and by relying on the cooperatives' workforce. If we change seed allocations, increase the number of man-days to produce fertilizer and apply technical innovations to production, and so forth, we must also increase productivity and upgrade plans accordingly. If the means of production are reduced, plans should also be downgraded. Nevertheless, all cooperatives should make every effort to increase their means of production in order to increase their productivity and upgrade their plans. We must formulate distribution plans well along with production plans in order to ensure the three interests of the cooperatives, their members and the state correctly.

We must ensure that the agricultural obligations to the state are fulfilled adequately and that more agricultural products and goods are turned out, thus contributing to promoting the division of labor and the formation of a new economic structure in districts.

We must ensure proper standards of monetary and food income for the cooperative members and simultaneously obtain some profits to increase the capital accumulation of the cooperatives.

We must create a firm basis on which to calculate the assignment of product contracts of various production sectors to production teams and individual workers.

In order to meet those requirements mentioned above, when formulating plans for cooperatives we must ensure a rational relationship between various requirements, including those for improving the livelihood of cooperative members and for increasing the capital accumulation of cooperatives and their contributions to the state. We must adequately determine all sources of income, all kinds of expenditures for materials and technology (c), all kinds of expenditures involving the payment of labor services (v) and of profits (m) when formulating plans for each year, each crop and each production service. This is to ensure a balance between income and expenditure. We must calculate rational bonuses for cooperatives and production units on this basis. We must utilize production and distribution plans for cooperatives in readjusting essential contractual quotas and in rebalancing the incomes within each production service and between various production services of cooperatives in order to ensure that all these services can earn profits and that the daily wage incomes of cooperative members are not too different and are constantly increased. Therefore, production and distribution plans for cooperatives must be truly democratic-oriented, be free from manifestations of inflexibility and commandism and simultaneously be calculated on a scientific basis in conformity with the actual production conditions of cooperatives and be arranged in such a way as to be able to prevent all manifestations of working at ones' convenience without taking into account the economic results. The norms assigned by the state to cooperatives should be focused merely on these two major issues: namely the obligatory delivery of products to the state, and the materials supplied by the state.

Improving the planning task for cooperatives requires us to create the proper conditions for cooperatives so that they can carry out their planning activities, stabilize their production guidelines and obligatory contributions to the state, establish a system of economic and technical norms, satisfactorily make property inventories and production estimates on an annual and crop-by-crop basis, and train service cadres in planning, and so forth. We must, however, create the proper conditions for them while they proceed with their work without having to wait for the proper conditions to arise. Only through practice can cooperatives draw on experience in order to improve their performance. Areas having work norms available must utilize these norms in making calculations and balancing. Aread having no work norms must utilize the standard norms, (if any), of the districts concerned in making necessary calculations. Depending upon the capabilities of cooperatives, we must provide proper guidance for their planning activities. As for cooperatives with poor managerial skills which are unable to plan activities for their various production services, we must first of all help them to formulate production plans for their cultivation service so as to use these plans as a basis for the giving out of contracts for products of various crops to individual. laborers. The remaining plans for other services will be formulated later.

Improvement of the planning task for cooperatives must be carried out systematically, starting from the plans for cooperatives to those for production units and cooperative members' families. Emphasis must be placed on ensuring that all planned works are balanced--manpower, fertilizer and so forth--in the process of production, and that the collective economy and the economy of cooperative members can develop simultaneously. In keeping with the contractual plans of cooperatives, the plans formulated by production units must detail contractual norms for crop varieties, crop output and productivity to be attained, for fertilizer and other necessary expenditures to be spent in the course of production, and for the labor to be used for each piece of land, each crop and each year. Plans formulated by cooperative members must ensure the proper balance between the areas to be contracted and the amounts of fertilizer to be invested and the number of laborers to be employed each month, for each crop and each year if animal husbandry is to be increased and beyond-schedule jobs are to be undertaken. This will enable cooperative members' families to satisfactorily participate in developing not only the collective economy but also the family economies.

/3. Increase the Material and Technical Bases of Cooperatives and Quickly Apply the Technical Innovations to Production./

Through the implementation of product contracts during the 1980-81 winter-spring season, many shortcomings have been detected in quite a number of cooperative, such as shortages of material and technical bases, draft forces, seeds, water conservancy projects, and fertilizer and insecticide facilities. In several cooperatives the production teams and even the cooperative members' dependents must cope with these shortages on their own. This is an aspect of poverty in the cooperatives for which their members are not responsible. As a result, we must make every effort to fully use and develop what we have on hand and to get new material and technical bases as necessary in order to maintain production and create favorable conditions for groups of workers and individual workers to accept contracts. Listed below are the matters to which we must pay attention:

We must enlarge and improve the irrigation system in the cooperatives. We must coordinate with the water conservancy authorities in establishing plans for levelling hills and upgrading low-lying areas to provide more surface area in order to expand the cultivated area, reduce the difficulties in irrigation and drainage of cooperatives, and gradually advance toward becoming self-sufficient in water conservancy. Along with expanding and improving the water conservancy system (ponds, lakes, dams and ditches and so on) we must get more water supply equipment, such as pumps, norias and buckets. We must consolidate and strengthen irrigation teams and farmland water conservancy groups in cooperatives so that they can fulfill their tasks, which must be associated with the production results of the cooperatives.

We must survey the draft force of the cooperatives in order to fill up shortages, if any. We should institute a system of contracts on raising draft buffalo and cattle to cover the following points: Using time and plowing norms, proper quantities of feed and raised costs, and so forth in order to extend the working life time of buffalo and cattle. If there are no problems in the division of labor and the implementation of product contracts on cultivation, we may link the plowmen with the raising of buffalo and adopt the following appropriate form of contract: Those who are for the buffalo and cattle well and can extend their working lifetime are entitled to profits from this extended period of working lifetime. Conversely, if they abuse the animal draft force and let buffalo and cattle die before the expected lifetime, they must pay for the loss. Cooperatives must calculate the balance of the draft forces in order to formulate plans for initiating contracts on hiring tractors. In those localities where cooperatives have a limited draft force and their members own some buffalo and cattle, contracts can be drawn up with these members to have them plow certain ricefields at rational costs in order to ensure profits for both the cooperatives and their members.

Seed teams must be organized will in cooperatives to ensure enough good seeds--especially rice--for the cooperatives. A rational system of contracts with these teams should be instituted in order to encourage them to produce good seeds for the cooperatives. In those localities where these seed teams cannot be organized, good production teams which maintain stable conditions can be relied upon to produce seeds for the cooperatives. Necessary incentives can be established to promote the exchange of good seeds, work credits and fertilizer production so that the cooperatives can become self-sufficient in seeds. Along with seed production, cooperatives must have adquate seed storage facilities to avoid mixing seeds by mistake while being able to ensure a high degree of germination. In case these storage facilities are not available, cooperative production teams can be entrusted with the storage of seeds upon harvesting. Some of the cooperatives members' familites can also be assigned by production teams to store seeds. Those seed preservation teams which can store the seeds well and promptly put into cultivation the new strains of high-yield seeds may use part of the increased yield resulting from the use of such seeds as a reward for participation in preserving seeds for the cooperatives.

Vegetation protection teams must be strengthened and consolidated by giving them more equipment and the necessary facilities to prevent and control diseases, such as insecticides and sprayers.

Green manure--especially duckweed--production teams must be organized by cooperatives in order to increase the source of fertilizer. Wherever these teams cannot be organized, contracts may be awarded to some families which have experience in producing green manure for the cooperatives.

More plows and such improved tools as improved carts and foot-operated threshers can be procured in order to ensure that all production tasks can be fulfilled quickly, completely as scheduled and to create conditions for increasing labor productivity.

MINISTRY OF AGRICULTURE REPORT, FIFTH INSTALLMENT

BK060430 Hanoi NHAN DAN in Vietnamese 9 Sep 81 p 2

[Fifth installment of an "excerpt" from the Ministry of Agriculture report at the conference held in Ha Nam Ninh in August 1981 to review the implementation of the product contract system in agriculture--passages between slantlines denote boldface as published]

[Text] Along with increasing the common material and technical facilities for cooperatives, attention must be paid to making available necessary material facilities for production groups, such as granaries and drying yards. Cooperative members' families now bring their crop harvest from ricefields to their houses for drying. But many families, who have no drying yards at home, have to use those of production groups. In some places, the delivery of products by cooperatives members is slow, partly because production groups have no dumping grounds and granaries to store the collected products. It is necessary to encourage and create conditions for cooperative members to buy individual tools such as hoes, sickles, bailing buckets, improved carts and so forth.

While strengthening their material and technical bases, cooperatives must apply technical advances to production quickly and guide all members in carrying out these technical measures satisfactorily. In the recent winter-spring crop, many cooperatives increased their production twice the norms provided for in the contracts. This is thanks to their initiative in using some new seed varieties and training members to apply technical regulations in production correctly. In a cooperative where all members used the same seed variety in cultivation, some of the families failed to achieve the contract norms because they did not apply set technical regulations correctly. Therefore, in introducing new technical advances into production, we must train cooperative members to be familiar with and to carry out correctly relevant technical regulations.

Many cooperatives, which have applied the product contract system with groups of workers and individual workers, have overfulfilled the contract norms. This is because these cooperatives were able to limit difficulties in production with the help of their material and technical facilities, and know how to apply new technical advances to production broadly. Some people maintain that since the workers, under the new contract system, have performed everything entrusted to them satisfactorily, there is no need to strengthen the cooperatives' material and technical means. This is completely wrong. On the contrary, cooperative members will be required to understand and solve new technical problems in the course of implementing the contract system. With the cooperatives' material and technical bases being further strengthened and with the opportunities for applying new technical measures being ever greater, the new contract system will be even more effective, and the crop output will increase considerably.

/4. Strengthen and Consolidate Labor Organization Forms in Cooperatives./

The basic labor organization form in cooperatives is the production unit. Production units must be strengthened and consolidated in all respects so as to ensure satisfactory implementation of the new contract system. The production units, which recently overfulfilled the cooperatives' contract plans and fulfilled the grain delivery norms set forth by cooperatives, have the following qualifications:

--Their scale is reasonable, and they are entrusted with sufficient manpower, land, farm implements and draft power, enabling them to fulfill independently the production tasks assigned to them by cooperatives. Under the present circumstances, each production unit should, every year, take charge of about 20 hectares for cultivation and have 40-50 workers so that the unit leader and deputy leader can control and supervise the work of all unit members and the cultivation of each plot of land.

In places where the cultivated land is limited and the various sectors and occupations have not yet developed fully, the size of a production unit in terms of manpower may be larger, but it should not exceed the supervisory capabilities of the unit leader and deputy leader. In the mountainous regions, natural conditions and the local population must be taken into account in organizing appropriate production units.

Generally speaking, the scale of a production unit in the mountainous region must be smaller than in the plain and midland regions, and it is reasonable to organize one unit for each locality or village.

--Unit leaders must have firm control of the work of units, know how to supervise members and show enthusiasm in their tasks. Unit leaders and deputy leaders necessarily must improve in terms of their organization of manpower, their drafting of plans, their assignment of work and their organization of profit-and-loss accounting and distribution among members under the new contractual system. Cadres who lack supervisory abilities and who do not enjoy the members' confidence must be replaced.

--Production units must shape a system of working in an organized and disciplined manner. With all unit members daring to struggle against negativism in productive labor, developing a high sense of responsibility in carrying out the assigned tasks and being ready to help each other in production.

Along with strengthening and consolidating various production teams, we should depend on the specific situation in each locality to organize and consolidate specialized service teams and groups practically, without being imitative and mechanical. Generally speaking, all cooperatives must strive to organize seed units, water conservancy units No 202, vegetation protection teams, green manure production teams and farmland irrigation teams well (if the cooperatives share the same water conservancy project with others). Specialized groups should be organized in various production units to plow land, using buffalo, and to produce and process fertilizer.

Specialized service units and teams should be assigned specific tasks and necessary material and technical bases, and should have a clear cut by-law and a rational system of contracts. The appropriate forms of contracts will be applied depending on the assigned tasks. The product of seed units is the quantity and quality of seeds to be produced in each crop season and each year. The product of water conservancy units No 202 is the volume of dirt and stone to be dug. The product of vegetation protection teams involves the area to be protected from insects. The product of green manure plant teams must be the quantity of duckweeds to be raised in each crop season or the quantity of sesbania seeds to be turned out annually and so on. We must proceed from the demands for products to establish quotas of work credits and expenses and to formulate rational rewards and punishments in order to hold the cooperative members' responsible for the production results of their cooperatives or production units.

We must combine the expansion of various forms of product contracts with groups of workers and individual workers with the reorganization of production and the comprehensive improvement of management in the cooperatives. This must be carried out simultaneously and uniformly. Nevertheless, we must know how to control the expansion of various forms of contracts in order to help resolve other problems. Facts have shown that all categories of cooperatives can conclude product contracts with groups of workers and individual workers if the cooperatives know how to proceed from the requirements and scope of the new contractual work to complete the correction of weaknesses in the organization and management of the cooperatives.

/II. With Regard To Strengthening the Building of the District Level/

We must link the reorganization of production, the improvement of cooperatives management and the implementation of the new contractual system in cooperatives with the strengthening of the district level. We must build districts gradually into an economic agroindustrial structure, an area for the organization of production, life and distribution and circulation; a stronghold for carrying out the three revolutions in the countryside and building a new rural area; a center of technical equipment for cooperatives and an effective level of economic management. The building of districts and the district level is a matter of very great strategic importance to the development of our economy and the consolidation of our national defense. We must scrupulously implement political bureau directive No 33-TW and Council of Ministers resolution No 33-CP. To support the reorganization of production and the improvement of cooperatives' management in combination with the expansion of various forms of product contracts with groups of workers and individual workers in all cooperatives immediately, the district level is required to perform necessary organizational changes and provide appropriate guidance:

1. The district level must check, adjust and complete plans which serve as bases on which to determine the production guidelines for cooperatives. Generally speaking, the district plans have been formulated but have not been completed. Specific measures for implementation are not mentioned. Through the assignment of product contracts to groups of workers and individual workers in cooperatives, the district level can see more clearly the potentials in terms of labor, land and existing material and technical bases. At the same time, he also can be better aware of his responsibilities and obligations to the cooperatives and state. On this basis, he will check over and complete the distict plans and provide guidance for cooperatives to complete and improve their production guidelines. The large surplus

work force resulting from the implementation of product contracts in cooperatives calls for a redivision of labor in districts and throughout the country. Apart from the work force sent to the new economic zones outside the districts, the district level should know how to employ the remaining work force to build the necessary material and technical bases, and how to use the local sources of raw materials in developing handicrafts as appropriate to districts. The first step in forming an economic agroindustrial structure in districts is to establish a rationally developed agriculture which will enable us not only to establish a rationally developed agriculture which will enable us not only to ensure the balance of grain and food and to fulfill the agricultural obligations to the provincial and central governments, but also to create more sources of agricultural products and goods for economic trade and export. We must link this step with the development of various handicraft and industrial jobs in order to promote the development of agricultural production and the accumulation of capital for further development in the future.

2. We must improve the drafting and the organization of the implementation of district agricultural plans so as to simultaneously ensure a high degree of unanimity between the district and the cooperative on the targets to be achieved and to guarantee sufficient supplies of seed, capital, manpower and technical means placed under the management of districts. The three interests to be served in implementing product contracts also represent three responsibilities which the state, the cooperatives and their members must fulfill. The district, as the level where the state directly manages cooperatives, is duty bound to satisfactorily organize the signing of contracts so as to promptly carry out important tasks in production such as seed preparation, plowing, irrigation, fertilizer supply, pest control, and so forth.

3. We must provide districts with more materials and equipment, especially those necessary for fulfilling the above-cited important tasks, and give more hand-operated tools to laborers. We must institute a close association between the material and technical bases of districts and those belonging to cooperatives and incorporate the material and technical bases of cooperatives in each specific production area into joint systems so as to closely coordinate their use and to fully exploit the material and technical bases at the district level.

4. We must strengthen the leadership of the district in each cooperative and each specific job so as to help the grassroots units overcome their difficulties on the spot and promptly rectify all deviations in the production process. To achieve this aim, we must satisfactorily implement the system of providing guidance for important localities; strengthen the system of economic information between cooperatives and districts and vice versa; establish systems of discipline in production for various sectors and cooperatives; and formulate strict regulations on the supervisory work of each sector in the district. The district must hold periodic meetings with various sectors and cooperatives so as to discuss and resolve new problems in production. District agricultural committees must be consolidated and strengthened so as to be capable of assisting district party and people's committees in exercising leadership.

In broadening the implementation of the system of product contracts with labor groups and laborers, cooperatives located in different areas have to carry out different tasks.

In the Bac Bo delta and midlands and in the former Zone 4, the cooperative movement, generally speaking, is stable, and many cooperatives have become highly experienced in agricultural production. In the process of reorganizing the scale of cooperatives, the organization of labor, and so forth, have been basically resolved. The main problem now is the inequality in land distribution, in the material and technical bases and in the level of intensive cultivation between districts as well as between various kinds of cooperatives. At present, cooperatives exist in all provinces which have a very low average per capita land allocation, production areas which are still unable to overcome waterlogging and drought, and seriously lacking in draft power. Although many cooperatives have satisfactorily planted the winter crop and effectively practiced intensive cultivation, many other localities have developed this crop at a slow pace, demonstrated a low level of intensive cultivation, and achieved an annual rice yield of just over 3 tons per hectare. For this reason, in conjunction with broadening the implementation of product contracts, we must step up the movement for water conservancy work, improve and develop the fields, increase the draft power of cooperatives, vigorouslydevelop the winter crop, and provide adequate incentives for investments in intensive cultivation so as to promote new developments in productivity and volume of production. At the same time, we must redistribute the labor force within each cooperative and district and redeploy it outside the boundary of each district so as to stimulate the development of labor in other localities.

In the mountainous region, the development of the cooperative movement varies greatly with each area. In the low-lying area, the movement is more stabilized that in the highlands. Because the highlands are still encountering many difficulties, the scale of cooperatives there must, in general, be reasonably small. However, the managerial abilities of cooperative cadres are still limited, and many cooperatives are just nominal. Land is relatively vast, including both agricultural and forest lands. Land management is lax. In many places, only valley land, but not hilly land, is under management. The practice of destroying forests to provide land for cultivation is widespread. Draft power is fairly abundant but it has not yet been used satisfactorily. Irrigation still relies heavily on nature. The intensive cultivation capabilities or cooperatives are limited. A vast area of fields has been left uncultivated. The cultivation of many crop varieties and the breeding of many animal species are still proceeding on a small scale, even though they can be developed. Therefore, the important thing here is that the contractual system in agriculture must be associated with that in forestry so as to encourage cooperative members to engage in afforestation and in protecting forests. On the basis of scrupulously implementing the contractual system, we must strengthen land management, reorganize production and cooperatives to suit the conditions of production development in each place, and implement production-stimulating policies in order to simultaneously accelerate agriculture and forestry and develop the cooperative economy and the economy of cooperative members' families.

In the central coastal areas, the cooperative movement has just been initiated, but it has initially been tested and has stabilized. Even though great efforts have been made in the cooperative management, it still leaves much to be desired in many respects. Cooperative members are diligent in productive labor and have made progress in intensive cultivation and in increasing the number of yearly crops. However, many places are encountering numerous difficulties, especially in irrigation, resulting in quite a big difference in the economy and lifestyle in comparison to other places. The material and technical bases of cooperatives and the socialist enlightenment of cooperative members in many places are still limited. That is why we must combine the expansion of the system of product contracts with efforts to improve the overall management skills of cooperatives, to increase the awareness of socialism among cooperative members, perfect the collectivization of essential means of production and step up the building of material and technical bases for cooperatives so as to expedite the growth of cooperatives, consolidate them, have them adopt advanced management systems in keeping with great socialist production and keep them from repeating shortcomings previously displayed in the cooperativization movement.

In the Nam Bo lowlands the agricultural cooperativization movement is not only quite new but also poor. Organizational activities there are not uniform (solidarity teams, production collectives and cooperatives). Generally speaking, in many production collectives and cooperatives, the system of collective ownership of production means has yet to be consolidated; the managerial system is loosely organized; and the awareness of socialism among cooperative members is still not high enough. Many production collectives cooperatives, the system of collective ownership of production means has yet to be consolidated; the managerial system is loosely organized; and the awareness of socialism among cooperative members is still not high enough. Many production collectives and cooperatives have yet to be stabilized. A fierce struggle for choosing between the two systems of collective and private ownership is taking place in the rural areas. Therefore, we must combine the application of the product contract system with efforts to force production up, and strengthen production collectives and cooperatives in all respects. On the basis of ensuring the increased production of various production collectives and cooperatives, we must properly deal with the privileges in distribution among cooperative members, the collective and the state and with the relations between manpower and production means in such a way as to suit the collective nature of each form of organization. This is to gradually develop the superiority of the collective work system over the private work system, and to step up the building of various production organizations in order to advance to collective production by gathering peasants into production collectives and cooperatives. Experience obtained from experimental activities in Ho Chi Minh City and in various provinces such as Dong Nai and Hau Giang show that applying the new contractual form is instrumental not only in consolidating existing collectives production and cooperatives, but also in promoting the establishment of more production solidarity teams, production collectives and cooperatives.

The purposes and principles for awarding product contracts as well as the other aspects of management in agricultural cooperatives are stipulated in directive No 100 of the party Central Committee secretariat. We should thoroughly understand and correctly implement this directive.

A. Purposes: We should consider each purpose comprehensively and the relationship between the three purposes in order to evaluate the true nature of the new contractual form. We should not draw any conclusion by considering each event by itself. When speaking of production results, we should of course pay attention first of all to the area norms, productivity and the increase or decrease in production volume. In production we cannot belittle the quality and economic results which are manifested by various productive labor norms, material expenses and production costs.

When making an assessment to see whether the production relationships are consolidated or not, we must pay attention to the scope of production relations (system of ownership over the production means, workers' position in the process of production and the principle of product distribution). When checking whether all the three interests are guaranteed or not, we must check their mutual relationship and see whether they improve or decline. At present, if the interests have been emphasized, it is obviously necessary. If the cooperatives can develop production and guarantee the three interests, it can be said that they have been consolidated. Only by developing production can we ensure an increase in the income of cooperatives and their members, who will be then linked to the cooperatives, thereby actually consolidating the cooperatives.

B. Principles: We must also thoroughly understand the main scope of each principle. In considering the principle of closely managing production means, we must look into the nature of collective ownership over all the production means and not only the ricefield, buffalo and machines, which have been assigned to an individual or a group of people. Depending on the requirements, the assignment of production means to a few people or a large group of people will be made in order to achieve the greatest results. In considering the principle of work cooperation and labor division in cooperatives, we must see whether workers in cooperatives fulfill the production plan targets or not, and whether the labor organization is appropriate or not to the material conditions for achieving work cooperation and labor division. We should not draw any conclusion by merely looking into the method of using the workforce in a concentrated or scattered manner and into the shortcomings in controlling manpower. When considering the programming and planning principle, we must check the facts previously achieved by the cooperatives against the present situation. We should not only look at the weaknesses of the cooperatives in their advance to conclude that the cooperatives have not observed the principle for development in a programmed and planned manner. The effective implementation of the principles specified in the secretariat directive lies in the fact that it must be applied in a manner to suit the production conditions for each type of crop and each type of animal, the material and technical conditions of each locality and the management standard of each category of cooperatives in order to ensure the achievement of all the prescribed purposes of the new contractual method. All implementation of these principles in a mechanical, unchanging manner is incorrect.

If the purposes and principless are scrupulously adhered to, the shortcomings in methods will be gradually overcome. We should not treat shortcomings lightly, but neither should we erroneously evaluate the essence of the new contractual system simply because of the concrete shortcomings in its methods of application. The interests of cooperatives and their members will prompt the cooperatives to overcome rapidly the shortcomings in implementing the new contractual system.

III. The Method of Implementing Product Contracts With Labor Groups and Laborers in Cooperatives

An important problem in implementing product contracts with labor groups and laborers in crop growing is to determine the contracted volume of production and the cost of materials and labor needed for fulfilling contracts, to determine the contractors clearly and to organize satisfactorily the allocation of land to cooperative members for use in fulfilling their contracts.

/1. Concerning the determination of the contracted volume of production and expenditures for materials and labor:/

The volume of production contracted out to laborers in a production unit must be based on the volume of production which the cooperative contracts out to the unit. The volume of production contracted out to laborers must be determined according to the conditions of each specific class and plot of land. The size of the contracted volume of production depends on the following economic, technical and managerial conditions:

--the soil quality, which is determined on the basis of the actual average crop yields obtained during the last 3 or 5 years;

--the amount of materials and labor invested for an area unit, which is determined according to the reasonably-set economic and technical norms for a production year;

--the advanced technical and managerial measures applied in a production year and the technical processes involved in the cultivation of different crops. For instance: the contracted volume of production for high-yield new rice varieties must be higher than that for the old varieties. Improvement in the organization of labor and application of the new contractual system will certainly help reduce the waste of materials and manpower; crop yields, therefore, must be higher than those achieved under the old management system, even if the material and technical conditions are unchanged. If companion cropping is practiced (for example, rice is interplanted with sesbania, corn with beans, and so forth), the yields of the main crops will be lower than when they are grown alone.

The contracted volume of production must be determined in such a way as to serve the three interests--those of the cooperative members, the cooperative themselves, and the state. Both to lower the contracted volume of production unjustifiably or to set it too high is wrong. Our experiences in the recent winter-spring season have shown that a reasonable contracted volume of production is the average volume of production over the past 5 years plus a fixed percentage increase (between 10 and 15 percent depending on the decsion taken by each cooperative in accordance with the new advanced technical and managerial measures applied there).

We must base ourselves on the contracted volume of production in order to calculate reasonably the expenditures for seeds, fertilizers, labor, and so forth. This is to ensure that the contracted volume of production will be achieved according to the technical regulations and labor norms applied for the masses of cooperative members. On the basis of the results obtained in the winter-spring season, we must readjust and amend the economic and technical norms to render them more suitable and to ensure even better results in implementing the new contractual system.

/2. Concerning contractors and the organization of allocation of land under contract:/

The contractor who executes product contracts given by the cooperative is the production unit. Within the production unit, the contractors can be laborers or labor groups, depending on the economic and technical requirements and the production processes applied for each different crop, animal and trade. For rice and various short-term crops, the form of product contract with laborers is the most suitable.

Land set aside for production purposes under contract must be mainly allocated to laborers specializing in crop growing, including both principal and supplementary laborers. Cooperatives must use the working capacity and labor obligations of each laborer as well as the amount of manpower they are to invest in the cultivation of one area unit as the basis for determining a suitable amount of land to be allocated to laborers for production work under contract. Village, cooperative and production unit cadres must also be allocated, for production work under contract, an amount of land corresponding to the number of days they would be obliged to spend in direct production work under the old system. They should not be given more land than they can handle within this number of working days so that they may have enough time for their other official duties. Laborers engaged in other trades than crop growing may be allocated a specific amount of land for cultivation under contract if they are up to it. However, they should not allow this rice planting under contract to adversely affect their regular work. Labor obligations must be taken into consideration in determining the amount of land to be allocated to members of cooperatives so as to compel even lazy persons to fulfill their labor obligations toward cooperatives. The amount of land allocated to such people, however, must not necessarily be equal to that given to other laborers specializing in crop growing in cooperatives. On the other hand, adequate incentives must be given to laborers who are strong and good at intensive cultivation so as to fully exploit their production abilities by allocating to them a specific additional amount of land for production work under contract. Land allocation in contractual work must be based on the working capacity of laborers. It must absolutely not be used as a means to resolve the problem of income distribution for each family, nor should land be equally allocated to each family according to the number of its members.

The allocation of land to contractors must be carried out in an orderly and logical manner to facilitate production work. Differences in the quality of land must be chiefly resolved through the setting of contractual norms. In case it is necessary to scatter laborers during busy seasons, the land reserved for winter crops and both early and later rice, land located in elevated or low-lying areas, and so forth, should be allocated to several members in a family so as to limit the division of ricefields into too many small plots. Priority must be given to war invalids and laborers in the families of war martyrs or soldiers' families who have done meritorious services for the revolution, and so forth, by allowing them to receive land under contract before others, thus ensuring favorable conditions for them to fulfill their contracts, and by giving them assistance in the process of production.

/3. How to organize the management of various tasks in the process of production./

To ensure the satisfactory implementation of the product contract system, close guidance by cooperatives is a must. As cooperatives must carry out production work according to a master plan, both they and their production units are dutybound to provide overall guidance in all and not only in a few specific tasks in the process of production. Members of cooperatives are obliged to participate in all tasks of this process and not only in the tasks which they undertake to fulfill under contract and which are directly linked with the end products. To say that cooperatives and production units must organize manpower to satisfactorily carry out five tasks and that they must contract out the three remaining tasks in the production process to laborers is only to provide a general "model" of labor organization and division for cooperatives located in rice producing areas and equipped with the necessary material and technical bases. How this "model" is to be applied in each cooperative depends on its actual conditions. To say that cooperatives and production units must organize manpower to perform five tasks does not mean that these tasks must be "jointly" carried out. Whether a job is to be done jointly or individually depends on the techniques involved in the cultivation of each crop and the material and technical bases as well as the work tools put to use.

Managing various tasks in a cooperative also does not mean that every job should wait until it can be done by large numbers of people on a plot of land. It only means that the organization of manpower and the division of work must be done in such a way as to suit each specific task and each time limit within which one or many must finish a task. It also means that everyone must work according to the plans of cooperatives, labor norms and credit-computing standards, and that they must work under control and supervision both during the performance of their tasks and after these are completed. In this way, even if individual laborers were assigned to certain jobs, their labor still remained collective and not individualistic in nature, and the performance of such jobs still stayed under the management of cooperatives and production units and did not constitute a case of blank-check contracting.

SRV MINISTRY OF AGRICULTURE REPORT, CONCLUSION

BK071654 Hanoi NHAN DAN in Vietnamese 10 Sep 81, p 2

[Sixth and "last" installment of an "excerpt" from the Ministry of Agriculture's report at a conference held in Ha Nam Ninh in August 1981 to review product contract work; part dealing with the "Expansion and Perfection of Product Contract From in Agriculture"--passages between slantlines denote boldface as published]

[Text] Proceeding from the problem formulation method mentioned above, we can organize manpower to do the five jobs as follows:

A. Soil Preparation: It is vital for cooperatives to have a unified plan and a clear division of labor in the course of implementation. If soil is prepared with the help of machinery (including heavy-duty and small tractors), cooperatives must control this machinery and direct it to work in predetermined areas. If soil is prepared with the help of buffaloes, cooperatives must assign this job to production units. Depending upon the actual situation regarding the number of draft buffaloes and cattle they receive from their parent cooperatives, and upon the capabilities of plowers they have in hand, production units must organize a soil preparation team or must assign soil preparation work to their production teams in accordance with a fixed by-law.

In case lands are swampy or are to be plowed with the help of hoes due to a shortage of draft force, cooperatives must give plowing contracts to people who are assigned to cultivate these lands. With regard to those cooperative members who own some buffaloes or cattle, cooperatives, when necessary, can contract them to plow certain pieces of land under the unified control of the production units concerned.

Plowing can also be contracted out to other people. Depending upon the tools to be used for plowing, we must establish contractual quotas correctly and must fix the time for completing the plowing of each piece of land and each area. We must link the norms for soil preparation with those for caring for and protecting buffaloes, cattle and machinery. We must also devise concrete internal regulations for the use of the draft force which people involved in soil preparation will have to observe. Whoever violates these internal regulations will be fined withworkpoints or will have to compensate for the damage caused to cooperatives.

B. Seed-related tasks: It is essential for cooperatives to ensure the quantity, quality and allocation of seeds in each production season. As for the use, germination and sowing of seeds, production units must organize the collective carrying out of this task. They may also assign this task to cooperative members in accordance with a set production schedule.

The care, uprooting and transplanting of rice seedlings must be assigned to cooperative members. We must avoid a situation in which production units and cooperative members are compelled to take care of the seed problem. We should not indiscriminately assign the handling, germinating and sowing of rice seeds to cooperative members (because there are people who are not qualified for that). We should also not have production units organize the care and uprooting of rice seedlings. This is because we are not sure if they can do better than cooperative members. Contracts must also be given out for seed preparation in various phases as follows: Give product contracts to seed-producing teams which must observe the norms for quality and losses prescribed by cooperatives; contract the job of handling and germinating rice seeds in accordance with the norms for the development and quality of rice sprouts; contract the sowing and care of rice seeds in accordance with the norms for the number of kilos of seeds to be sown in an acre of land, for the extent to which rice seedlings will be transplanted on an acre of land, for the quality of rice seedlings at the time of transplanting and for fertilizer, labor servies and so forth. Whoever overfulfills the norms will be allowed to keep the surplus. Whoever fails to fulfill the norms without legitimate reason will be fined.

C. Fertilizer preparation: Cooperatives must have laborers link their duty to produce fertilizer with efforts to fulfill the quotas for areas under contract if the adequacy of fertilizer is to be ensured for areas under contract. Facts show that all cooperative members, after accepting contracts, have actively increased the production of fertilizer in order to overfulfill their contracted quotas for productivity.

However, there have been a number of families facing difficulties because they have not participated or have inadequately participated in animal husbandry and have therefore suffered from a shortage of fertilizer. Cooperatives must take necessary steps to ensure adequate supplies of fertilizer for those areas already contracted out to these families. They may take such steps as giving more contracts for them to produce green manure (if they are physically able to do so), organizing the maximum collection of all sources of fertilizer from the collective in order to supply these families, helping them develop family-sideline animal husbandry and so forth.

D. Water preparation: We must distinguish those cooperatives having collective irrigation works from those which still face irrigation difficulties and are still dependent primarily on natural water flow and on water baskets to channel water into their ricefields. This is to ensure that rational work assignments are made. Areas with an irrigation system used collectively by many production units must place water preparation under the control of the farmland irrigation teams of the cooperatives concerned. Areas with an irrigation system used by a single production unit must place the system used by a single production unit must place the system under the control of the unit concerned. Areas which are still dependent primarily on the natural flow of water or on water baskets to channels water into their ricefields must have cooperative members in charge of water preparation. Farmland irrigation teams of cooperatives and production units must also give contracts to their people for the quotas of water to be channeled to level-3 irrigation canals and or areas to be irrigated in accordance with the irrigation programs of cooperatives concerned for each kind of crop in different phases. It is necessary to link the responsibility of farmland irrigation teams to the final development results of production units as well as to the protection and minor repair of various water conservancy works.

E. Pest Control: It is necessary to distinguish between ordinary control measures involving the use of leaves, lime, soot, and so forth, according to experience, and control by toxic chemicals, which requires the correct mixing of various ingredients and the use of sprayers for the prevention of contamination. Pest control through ordinary measures should be contracted out to members of cooperatives, while control by toxic chemicals should be carried out by the common pest control forces of cooperatives or production units. It is not advisable to turn insecticides over to members of cooperatives and to let them handle the spraying by themselves.

Specific norms must also be set for pest control teams working under contract. Cooperatives must see to it that these teams are provided with adequate means for carrying out their jobs.

The above-cited tasks must be closely associated with the final results of production work through the setting of rational labor norms and credit-computing standards, through strict control over the quality of products delivered by contractors, and through the judicious application of penalties and rewards for entire cooperatives and for each production unit and each labor unit and labor team in charge of a special task.

/The management board of a cooperative/ is responsible for the overall guidance of all tasks, from the stage of plan drafting to that of plan implementation. It must pay attention to satisfactorily carrying out the following tasks:

--Satisfactorily guide the drafting of plans for contracting out work to production units and ensure that they are provided with the materials and equipment controlled by cooperatives.

--Closely guide the determination of a pattern of production for each crop season and the implementation of special production procedures in the cultivation of various crops.

--Organize the coordination between service units and service teams and production units as well as among production units themselves in carrying out various tasks in the production process; satisfactorily guide the performance of special tasks assigned to production units.

--Control the performance of production units and watch out for any error they may commit in the production process; concentrate on satisfactorily guiding the performance of major tasks for specific periods of time as well as the performance of weak production units.

--Promptly settle differences between members of cooperatives and production units, among production units themselves, and between cooperatives and service organs who have signed contracts with cooperatives.

--Conduct surveys so as to gain a firm knowledge of the results of production units' production work; ensure that products are collected in sufficient quantities as prescribed by contracts; and satisfactorily organize the distribution of products within cooperatives.

/A production unit/ is responsible for satisfactorily organizing its laborers to scrupulously fulfill plans for production work under contracts assigned to it by a cooperative and strictly adhering to the production procedures and technical standards established by the cooperative. It must concentrate on satisfactorily carrying out the following tasks:

--Satisfactorily organize laborers to fulfill each task in the production process and ensure that the products of its labor units and labor groups are of the required quality and that they are delivered on schedule to those laborers in the production unit who have contracted to turn out end products.

--Closely follow all changes in the work forces and the status of the daily contractual work of each laborer, especially his difficulties, so as to promptly guide and assist him in overcoming them.

--Acquire a firm knowledge of the amount of fertilizer in the possession of each family so as to promote the production of fertilizers and to guide their application in strict accordance with the needs of various crops for their development.

--Control the quality of work performed by laborers under contract and promptly resolve any problem that may arise in the production process, such as rice seedlings being washed out by rain water, ricefield embankments bursting, filling newly-transplanted ricefields damaged by landslide, appearances of harmful insects, waterlogging, drought, and so forth.

--Control the results of its own production work and see to it that its products have the required quality and are delivered to the cooperative on schedule; satisfactorily organize the distribution of products within its ranks.

4. /Correctly Implement Penalties and Rewards as Well as Distribution in Cooperatives./

Only by adquately and judiciously applying penalties and rewards can we bring into full play the positive effects of the new contractual system. The 1980-81 winter-spring production season has shown that if members of cooperatives are given bonuses which are equal to only 80-90 percent of their extra products, they will not be strongly encouraged to boldly make more investments in intensive cultivation. It is necessary to apply a uniform penalty or reward rate of 100 percent on the shortfall or surplus of products turned out by laborers under contract. Adjustment or reduction of contract production norms should be done only in cases of serious natural calamities, when cooperatives and their members are unable to control their effects, or in the event materials are not supplied in quantities required by contracts or the exact kinds of crop seeds needed by cooperatives are not provided. Adjustments of contract norms, however, must be done on the basis of specific calculations concerning each specific crop, each rice planting, each production unit. Across-the-board reduction of contract norms must be absolutely avoided. Any reduction must be proposed by the cooperatives and have the approval of the district agricultural committee concerned. Along with giving rewards for surplus and applying penalties for shortfalls in the amount of products turned out by laborers under contract, we should consider rewards or penalties for the success or failure of production units and cadres of cooperatives in fulfilling their plans.

In this connection, specific consideration should be given to:

--Production units: If the units fulfill the assigned norms for production volume to be delivered to the cooperatives, they will get rewards amounting to not more than 5 percent of the production volume which they have achieved to fulfill the plan norms (depending on the differences in land rent among units). A portion (from 15 to 20 percent) of these rewards will be given to the unit chiefs and deputies. Another portion (approximately 35-40 percent) will be used to reward teams in charge of the specialized tasks in the units. The remaining part will be distributed again to those workers who have received and fulfilled their assigned quotas for finished products for the production units. The rates of rewards computed for the production unit chiefs and deputies and for teams in charge of other tasks may change a little bit depending on the specific conditions of each locality. They will be discussed and decided upon by the cooperatives in observance of the following principles:

--The amount of rewards to the production unit chiefs and deputies will depend on the number of cooperative members who have fulfilled more or less their assigned quotas. In those production units where all the members have fulfilled their assigned product quotas, the unit chiefs and their deputies each will receive a reward of which the highest amount cannot exceed the bonus prescribed for a skilled worker in the units, and only those who have been recognized as fulfilling their duties, will be rewarded.

--The largest quantity of rice given as a bonus to each worker doing specialized tasks will not exceed 30 percent of the grain income distributed as wages by the cooperatives.

--Those who receive product quotas and fail to deliver sufficient products to the production units, will not be entitled to bonuses.

Bonuses awarded to those who have fulfilled the plan norms are actually taken from the cooperatives' profits after the production costs have been recovered and the cooperative members' daily wages and other items of distribution have been properly covered as planned. As a result, in connection with the production plans, the cooperatives' distribution plans must be specifically calculated and announced at the very beginning of the crop season so that the cooperative members can know and use them as guidelines for their struggle.

The production units must therefore deliver at least 95 percent of their contracted production volume to the cooperatives, otherwise, they will be punished. The punishment will be shared equally by all workers on the same distribution plan of the production unit involved.

With regard to the cooperatives, if the 95 percent norm can be secured from various production units together with the planned profits, their plans can be considered as fulfilled. The cooperatives may take approximately 0.5-1 percent of their achieved production volume to reward their cadres for having fulfilled the plan and to make incentive sales to those sectors and workers involved in bringing about the planned profits for the cooperatives, according to the following principles:

--The amounts of bonuses given to cadres of the cooperatives depend on the number of production units which have fulfilled their product quotas and the prescribed norms for delivering products to the cooperatives. The highest amount awarded will not exceed the biggest bonus given to a cadre of production units. Bonuses will be awarded only to those cooperative cadres who have been recognized by various production units as fulfilling their assigned duties.

--The largest quantity of grain sold as an incentive to a worker of any sector or job will not exceed the bonus given to a worker laboring in the cultivation sector. The incentive sales to various sectors and workers are made in direct proportion to the monetary incentives given to those sectors and workers.

If the cooperatives fail to fulfill their income--both grain and money--plans, their cadres will be punished. The punishment will be based on the percentages of unfilfilled plan which result in the losses in percentages of the daily wages and allowances paid to each of the cadres. Nevertheless, they will not exceed 30 percent of the total wages paid to cadres.

Coupled with a rational system of rewards and punishment, it is necessary to implement correctly the principle of distribution according to labor as specified in Council of Ministers decision No 400-CP dated 5 November 1979 and Ministry of Agriculture Circular No 008 dated 5 May 1980. There are some differences here concerning the proportions of rewards and punishments and the use of bonus funds. Workers of the cultivation sector will be rewarded or punished for the full amounts of increase or decrease in grain as compared to the plan norms. The production units and cooperatives will also be given bonuses in kind (grain) for fulfilling theplan norms. As a result, there will be two bonus funds in cooperatives: one for the cooperatives and one for production units. The bonus funds in production units are mainly in grain while those of cooperatives are composed of both money and grain.

To ensure the implementation of this system for rewards, punishment and distribution, we should study and complete all the financial auditing and accounting items as appropriate and we should get some guidance for unifying bookkeeping.

5. /Strengthen and Perfect the Management Apparatus of Cooperatives and Step Up the Training of Cooperative Cadres./

As the product contract system is a new form of management, we must examine this system before trying to strengthen our management apparatus to suit it. The differences between the new contractual form and the former mode of management require that we further strengthen the role of production units, streamline specialized elements of cooperatives and select those cadres who are well informed of the new contractual form and who have a high sence of responsibility for running the leadership apparatus of cooperatives. We may also reduce the number of leadership cadres in those large-scale cooperatives where the management apparatus has been perfected.

Along with perfecting the organization, we must pay attention to training the cadres of cooperatives and production units. We must formulate immediate and long-term training plans. As an immediate task, we must concentrate on providing training to cadres of cooperatives and production units to make them fully aware of the purposes and principles of and the ways to practice the product contract system so that they can effectively guide their cooperatives in applying the product contract system. Training methods must suit each target, each area and each type of cooperative. Trainees must be given theoretical and on-the-job training simultaneously. While in training, cadres must be taught to prepare typical activity reports satisfactorily and be taken on fact-finding tours. We must rely on district cadres to provide training for the cadres of cooperatives and production units.

In order to ensure good quantitative and qualitative standards for the training of cadres from cooperatives and production units, we must set up and perfect cooperative management schools for each province and city. These schools must operate separately from all management or technical schools run by the provinces or cities concerned. The central training school for cooperative management cadres must quickly perfect its training program for cooperative cadres coming from different areas if unified and large-scale training is to be provided to cooperative cadres in 1982.

6. /We must rely on the substance of the product contract system applied in cultivation in order to adapt this system in animal husbandry and in the many services and professions of cooperatives./

A. With regard to animal husbandry, we must correctly observe circulcar No 13-TT/CN, dated 23 June 1981, of the Ministry of Agriculture.

As for various handicraft services and professions, depending upon the nature of these services and professions, we must determine final products for them. Also, depending on the industrial nature and the working methods of these services and professions, we must organize the assignment of contracts to workers, linking them with their final products. Attention must be given to the following points:

--Closely manage the raw materials of various product manufacturing sectors and, based on the rational norms for the consumption of raw materials, organize the assignment of product contracts in a suitable manner. When a product contract is given out, in addition to quantitative standards, we must be strict in establishing qualitative standards.

--Prepare uniform plans for the consumption of products, depending on the nature of the products of the various production services and professions, we must draw up specific consumption plans in order to control simultaneously the manufacturing of products, stimulate the development of production and ensure the correct observance of the state's policies regarding circulation and distribution.

--The products of a service or a trade should not be necessarily regarded as a means with which to reward or impose fines on that service or trade. Instead, we must be flexible in choosing the means with which to reward or impose fines, making sure that the means we choose (including the partial use of grain as stated above) can encourage workers in production.

IV. Intensify Guidance for Implementation.

The product contract system with groups of workers or individual workers in cooperatives is a new form of management which is being expanded. As the application of this system has just been expanded and is still imperfect, the positive effects of this system have not yet developed fully and there are still many shortcomings and weaknesses to be overcome. Therefore, we must intensify close guidance from top to bottom, making sure that the expanded contractual form will be increasingly improved.

The results obtained from various cooperatives that applied the product contract system for the 1980-81 winter-spring crop show that a good contract method is not sufficient to secure maximum benefits from the new contractual form. Rather, there are many relevant economic and technical problems to be tackled simultaneously. At present, the new contractual form is posing four problems to be studied and solved, namely:

1. Continue to build models for the implementation of the new contract system for various species of crops and animals (except for rice, subsidiary food crops and hogs) in different production areas. Typical of this are the application of the product contract system in the cultivation of long-term industrial crops in the Bac Bo midlands, the eastern Nam Bo region and the Central Highlands; the application of the product contract system in large-scale afforestation and animal husbandry in the mountainous regions; and the application of the product contract system in the breeding of draft cattle and in the various handicraft production services in the lowlands. We must build models for the application of the new contractual form among technical supply sectors serving agriculture and among tractor stations, material supply stations, seedling stations and farmland irrigation corporations in order to ensure that cooperatives can achieve good results in their efforts to attain final products.

2. Problems concerning the building of material and technical bases and the introduction of new technical progress in production must be solved in order to ensure greater effect of the new contractual form, especially in the preparation of seeds, the prevention and eradication of epidemics and diseases, and providing the necessary tools for workers.

3. Problems concerning the policies on purchase and requisition, pricing, economic contracts and so forth must be dealt with in order to develop the cooperatives right to free trade business and to create a strong impact capable of stimulating increased production in various production areas.

4. Problems concerning organization and cadres must be tackled in order to ensure smooth leadership from top to bottom; the rapid dissemination of good experiences; the prompt detection, prevention and correction of various shortcomings; improved leadership and guidance; and expansion and improvement of the movement.

CSO: 4209/27

AGRICULTURE

RICE-GROWING COOPERATIVES TO BE CONCENTRATED IN DELTA

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 pp 41-45

[Article by Le Nghiem: "Concentration of Agricultural Production in the Delta"]

[Excerpt] In the course of organizing cooperatives in and developing agriculture, the scale of agricultural cooperatives in the (Red River) delta has been being enlarged. Prior to 1965 it was mainly closely linked with the need to gradually collectivize farmers. Most cooperatives were organized on a hamlet scale, with a few on a small-village scale. Production basically remained scattered in ricefields that had not yet been delineated again. Between 1965 and 1971, the scale in terms of both area and volume of production was enlarged. Through the second phase of the campaign for technical and managerial improvement and the campaign for democratic development in cooperatives, the efforts to bring agricultural cooperatives to the all-village scale and higher scale were basically completed in two districts, N and K, and in the delta in general. However, production in the cooperatives was not yet reorganized, nor was it heading toward specialization and intensive cultivation; labor was not yet put through new division and a higher degree of cooperation. As a result, enlarging their scope in this period was like an addition -- in average the value of production of a cooperative increased only proportionally to the extent of the average increase of its cultivated area.

In the period from 1971 to 1974, the agricultural cooperatives in the delta still remained at the scale of more or less than 200 hectares and did pay attention to going more deeply into intensive rice cultivation. N and K Districts boosted the average rice output per hectare of cultivated land from 5.7 tons in the 1971-1973 period to 6.2 tons in the years of 1974-1976. But that intensive cultivation was still a scattered effort in the fields by individual production units. Production of cooperatives was not yet executed on the basis of a common plan. Specialized cultivation and intensive cultivation ricefields were yet to be built. Except for the rice crop, other production aspects like subsidiary food crops, animal husbandry and other occupations were not yet organized on an all-cooperative basis.

The enlargement of scale of the agricultural cooperatives in N and K Districts in terms of area was mainly achieved in the 1975-1977 period and was closely linked with the campaign for reorganization of production and improvement of management in agriculture, along with an experiment to promote mechanization in the entire districts. By 1977 in N District almost all cooperatives were of the size of 300-500 hectares, with the ones exceeding 300 hectares numbering 4, or 12 percent of the total number of cooperatives, and one of them, D.S. Cooperative, exceeding 1,000 hectares. A number of other districts in the delta underwent a similar enlargement.

Enlarging the scale of cooperatives in the campaign for reorganization of production and improvement of agricultural management in the direction of the socialist large-scale production was necessary to quickly bring them out of a small-scale, scattered, self-supplied and self-sufficient production and to move them toward a highly specialized production with large ricefields where specialized and intensive cultivation and mechanization would take place and with large pigsties where hogs would be raised in herds and by advanced and mechanized feeding system. However, since the previous unifying process had not been carried out very effectively, the material, technical and managerial conditions for this round of unification were rather limited.

As we look back, the recent enlarging process, mainly with respect to area, did not closely link agglomeration and concentration, nor the growth of cooperatives and their joining together. Therefore, when we proceeded with unifying such conditions as the material and technical base, systems, means and method of management, as well as the ranks of leading, technical and specialized cadres, we have had no proper preparations.

Considering the reality of N District, a typical district in the delta, we find that the factors affecting the scale of agricultural production cooperatives have only reached the following levels:

- The size of rice production units mostly is 40-50 laborers working 15-20 hectares -- this category accounts for 53 percent. The category of units having 100-200 laborers working 41-70 hectares of cultivated land is very small -- only 9 percent.

- The size of ricefields specialized in rice growing is in average only 5-10 hectares in each area.

- The means of transportation within districts and cooperatives in most cases still are improved vehicles and vehicles drawn by buffaloes and cows.

- Processing and consumption of products are negligible and do not require yet anything big in terms of cooperation or joint enterprise.

- As to the level of managerial competency, for unit chiefs now managing manual labor it is just right for them to handle about 15-20 hectares and 40-50 laborers; for directors and members of cooperative management boards, 7-8 crop-growing units and 200-300 hectares of cultivated land.

With such factors and conditions, the fact that the scale of many agricultural cooperatives in the delta was enlarged too excessively has made them confused as they were used to working in the style of small-scale production, with some cooperatives even neglecting and becoming totally disorganized in large-scale operations. Indeed, for those cooperatives having more than 500 hectares of land, they have often encountered big problems which have not yet been properly resolved. On the one hand, with the manner of production remaining scattered, if units were unified to enlarge the scale to 50-70 hectares and 100-200 laborers to make "neat management" for directors, unit chiefs would not be able to handle their units. On the other hand, if the size of units were to remain the same, the number of production units would be too large -- about 20-25 crop-growing units, not including other specialized units -- which would increase the sources of difficulties and make it more difficult and complicated for directors and management boards to handle.

In that situation, the secretariat has adopted a correct policy calling for stabilizing the cooperatives having 300-400 hectares, guiding them toward pursuing in-depth production and strengthening the agglomerating process; at the same time, for the cooperatives having 400 hectares or more, consolidating all aspects of their activities to improve the factors that would contribute to better quality. We should be able to build large ricefields for specialized and intensive cultivation and mechanization and to train unit cadres capable of managing and directing production in accordance with the needs of these ricefields; from there we could enlarge the scale of production units and raise the managing capacity of cooperative directors to smoothly handle the day-to-day production and business activities through those two levels of management. As to those cooperatives of scale being too large to be provided within a short time with the necessary favorable factors and conditions, we should divide them into smaller ones of more appropriate scale.

To develop the strength and economic effectiveness of those cooperatives having just been enlarged, we must take a number of measures.

First of all, we must concentrate on building ricefields for specialized and intensive cultivation and mechanization. These are relatively large and flat fields having relatively uniform soil quality, where production is carried out in accordance with a specialized-cultivation formula and an advanced intensive-cultivation technical plan (one kind of seed, one watering system, one fertilizing system) and both production and transportation are partly assisted by machines. They constitute a combined material and technical base, the basic requirement of large-scale production in agricultural enterprises, first of all in the crop-growing production sections of these enterprises. They include many aspects of the material and technical base and many advanced scientific and technical measures that are condensed and put together. They are the results of the development of the entire productive force and the whole of material and technical factors in the crop-growing production of cooperatives.

For such ricefields, construction and transformation cannot be simple, but instead there must be unified and rational plans, a necessary amount of investment by cooperatives and a definite assistance from the state.

On the basis of the common production plans of districts, cooperatives should plan the transformation and construction of their own specialized-cultivation ricefields by doing the following major work: to determine a rational crop-rotation formula for each ricefield, to adopt only one formula for specialized cultivation and to try to have the same planting and the same variety for each kind of crop within the crop-rotation formula. To have combined planning (not only to put together) covering many aspects -- irrigation, ricefield transformation, mechanization, communications, etc. -- for ricefields and make perfect ricefield plans in accordance with the needs of the crop-rotation formula, the needs of the intensive-cultivation technical plan and the need to proceed with production by machine. To concentrate the energy of cooperatives, with appropriate assistance from the state and first from the district level, on fully and neatly transforming and building each ricefield, each area of many ricefields, from easy to difficult areas, in order to develop early productive effectiveness of ricefields. To draw up and carry out seriously advanced intensive-cultivation technical plans for different crops and for entire crop-rotation cycles. To make arrangement and adjustment for the places to use tractors and agricultural machinery, tractor stations and the network of service stations to repair machines and farm implements to satisfy the need for mechanization on already-transformed ricefields at an increasing rate and in a more combined manner.

Secondly, on the basis of transformation and construction of such ricefields, to rearrange the scale and organization of production units along the line of ensuring productive activities being guided toward specialized cultivation and concentration while making them convenient and suitable for the scope of operations of machinery. At present, the land areas and distribution of land to production units must be suitable for the organization of manual labor to properly carry on the intensive-cultivation technical plan on the specialized-cultivation ricefields while satisfying the need to mechanize the soil-preparation program with high machine output. So the right area for a unit should be about 20-30 hectares to fit a labor collective of about 50-60 people. However, the area of land for each unit should be divided into about 3 ricefields (in each crop season 10-15 days for one variety and 3-5 days for one planting), with each ricefield being adjacent to the next and covering about 7-8 hectares. In the future, when many production programs are done by machine, with the tractor station units being in charge, improved tools and small machines are used in larger numbers and labor productivity of production units gets higher, the area each production unit has on each ricefield can be increased and the total area it has can be increased and reduced to two and then one ricefield.

Thirdly, to let production units seriously carry out the technical plan and work effectively on the specialized and intensive cultivation ricefields, we must perfect the wage system and, as an immediate thing to do, perfect the forms of contracting in agricultural cooperatives. The contract issue in cooperatives presently remains a very complicated one. It is obvious that after cooperatives give three contracts to production units, the form of piece-work contract with labor groups and laborers within these units shows its weaknesses right away. It does not make laborers have enough concern about the end-result of production and the quantities of products made and easily leads to "being too easy about work and too generous about work points" and other negative phenomena. Therefore, it has been a necessity for the VCP Central Committee Secretariat and the Council of Ministers to extend the form of "product contract" to labor groups and laborers in production units. However, to properly carry out the directive of the secretariat, in our opinion, we should pay attention to the following matters:

- The product contract system must be counted among all of the managerial measures of cooperatives, and along with further developing it we should properly carry out planning and economic accounting. Through these two jobs we can adjust anything irrational while carrying out the product contract system.

- To carry out the forms of contract in agricultural cooperatives must satisfy both needs in Directive 100CT/TU of the secretariat, namely, "We must properly organize the management and direction of labor, develop the superiority of cooperation with division of labor and at the same time stimulate the hard-working quality of collectives of cooperative members and individual laborers, on the basis of making everybody be concerned about and adhere to the end-result of production."* Thus we cannot think that making product contract for a certain job in connection with some crops or animals with each laborer is enough or is the most primary thing to do, but we must instead move toward building a product contract system consisting of many positive forms suitable for each sector of production, namely, crop growing, animal husbandry and occupations, for different kinds of production teams and units and for specialization on the basis of products. These forms are closely linked together in a system and reflect the richness and diversity in the organization of production and labor and the flexibility, reality and effectiveness in management. This system is also linked with the system of reward and punishment applicable to cadres of cooperatives and production units.

- Units must necessarily be the basic contract-receiving units of cooperatives and properly organize the forms of contract in their own units. Making contract in units must also satisfy the two above-mentioned needs. As for crop-growing production units, because of the production characteristics of their sector (production programs are long, consist of many jobs that do not follow one another and are conducted in a mobile relatively flexible manner within a relatively large space), it is not easy to combine the two needs in the organization of labor and paying for labor expended; therefore, they must try to look for positive forms.

---

* Directive 100-CT/TU, see NHAN DAN, issue of 20 January 1981.

In the progressive cooperatives, for the concentrated production projects and the specialized and intensive cultivation ricefields, especially for rice crops, we should take the forms of contract that combine the volume of work with the end-result of production with the groups specialized in soil preparation, irrigation, seeds, plant protection, etc., and the form of product contract with fixed groups doing jobs that last many days, such as seeding and transplanting, caring and harvesting. Groups should not have too many laborers -- normally 4-6 laborers are right. The rice-producing fixed groups currently can have 2-3 hectares and 4-6 laborers; and rice-producing units, 20-30 hectares and 50-60 laborers. As to the crops that have scattered production or require very meticulous care, after the units have done a number of jobs through the specialized-job groups, generally speaking they must be assigned on contract to laborers.

In the weak cooperatives which currently have product contract mainly with laborers, units must properly carry out contracting with specialized-job groups and preparing favorable conditions for moving toward having product contract with mainly labor groups, for the purpose of gradually developing the superiority of cooperation with division of labor, specialized-crop production, concentration and intensive cultivation in units and cooperatives. The cooperatives which currently have nonspecific contract with their members must quickly return to the correct product contract system and, along with production units, must necessarily grasp the major factors as mentioned in the directive of the secretariat.

Fourthly, with the scale of cooperatives ranging from 300 to 400 hectares and even more than 400 hectares, to carry on business and production on the ricefields built for specialized and intensive cultivation and mechanization in accordance with a positive plan, good reasons and effective calculations requires that cooperatives show a clear quality improvement in their managerial work. Programs must be under control and leadership as they are carried out everyday in each ricefield, down to every production unit. Plans must be drawn up from production units up and maintain a science-based balance among many aspects and components, with the assistance of many complicated balance tables and relying on a well-based system of economic and technical norms. About economic accounting, we must move toward setting an orderly pattern in the cooperatives: hundreds of items, thousands and even tens of thousands of operations must be done for accounting and final accounting everyday, every phase, every month, every crop season, etc. for each production job, each production project, each section and the entire business and production activities of cooperatives. Economic accounting and planning must be closely linked together. Although they are difficult and complicated, we must carry them out at any cost. Our dear experience shows that these two major jobs in business management have not drawn the right attention lately and have thus made the production of cooperatives develop more slowly and become less effective. The more cooperatives are enlarged, the more they have to heighten planning and accounting; otherwise, with the scale getting more enlarged, management will bear an administrative and bureaucratic character and poorer results will be obtained from business and production. Therefore, directors and deputy directors of cooperatives, chief engineers and chief accountants must move forward to reach college-level education. Knowledge of technical matters and accounting-financial affairs plans must be improved, along with good professional knowledge. Such material and technical means of management as calculators, vehicles, telephone and wired-radio station must receive proper attention and be allocated. In addition, we must gradually build the economic information component to assist directors in making timely decisions about directing production.

In addition to stabilizing the scale of the present cooperatives in the delta, many aspects of production and many projects now require organization beyond the limits of individual cooperatives. The appropriate form of concentrating such production aspects and projects is jointly-operated production. It allows extending the scale of production without extending the scope of management and making it cumbersome and complicated. In many provinces and districts, many forms of joint operations have been developed quite commonly, such as those for the production of building materials like lime, bricks and tiles; processing of agricultural products like jute and hemp; production of feed; raising of cows, fish, etc., among agricultural cooperatives, between the latter and handicraft cooperatives and between cooperatives and state enterprises. What deserves attention is that we should develop some forms of joint operations only when cooperative production has gone beyond the limits of agricultural enterprises and technical and managerial conditions necessary for such joint operations have been prepared -- in this case, independent business and accounting can be started right after the establishment of the joint enterprise. To develop different forms of joint operations is aimed at creating favorable conditions for the later appearance of higher forms of concentration, the forms of agricultural enterprise federation. As of now we should not hastily organize high forms of joint production in the agricultural cooperative sector.

To speed up concentrated production of agricultural cooperatives and to make production gradually reach the all-district scale, the building of a network of economic and technical centers throughout a district is necessary.

This is a network of econotechnical central points being planned to closely link with a district's entire production and agroindustrial structure projects, built and formed to be closely linked with the production process gradually taking place on an all-district scale and with the gradual appearance of the agroindustrial structure throughout the district. At each point there are definite numbers of production, business and technical service installations, the shapes and sizes of which will be determined on the basis of the district's interests. These econotechnical centers in turn are joined together and complement one another to form a system of perfected econotechnical centers throughout the district, a backbone and nucleus of the entire network of its material and technical base (including that of cooperatives). These centers should not be the same, nor enclosed in a given area consisting of a fixed number of cooperatives lying around it. To do so means we unintentionally enclose production in an area and fail to pay proper attention to the all-district sphere, which the central administration believes is the best place to combine industry and agriculture and to join all-people ownership and collective ownership, the state and cooperatives in a unified agroindustrial structure. We should replace the words, econotechnical "clusters," with the words, "central points," if "clusters" is understood as "central points." Do not understand "clusters" as enclosed production areas in a district.

AGRICULTURE

BRIEFS

DELTA ENLARGEMENT RICE CULTIVATION--Implementing the Council of Ministers' resolution No 148 on strengthening and developing agricultural production in the Mekong River delta, the Ministry of Agriculture and the provinces of An Giang, Long An, Dong Thap and Kien Giang recently held a symposium on planning economic construction in the alkaline soil areas in Ha Tien, Kien Giang Province; Thoai Son, An Giang Province; Vinh Hung, Long An Province and Dong Thap Muoi, Dong Thap Province. Some 400,000 ha of fallow land in Ha Tien, Thoai Son, Vinh Hung and Dong Thap Muoi will be developed into rice cultivation areas. More than 200,000 ha are in Ha Tien and Hon Dat of Kien Giang Province. The symposium heard reports on research by various economic branches on the land, weather conditions, hydrology, water conservancy and capital construction. The initial survey findings are of great help in defining production plans for each area. These figures also help concerned organs to establish a correct economic and technical basis for economic development programs in these areas. [BK021025 Hanoi Domestic Service in Vietnamese 0400 GMT 2 Oct 81]

HANOI WATER CONSERVANCY--The Hanoi water conservancy sector has provided sufficient water to almost 6,000 ha of 10th-month rice in drought stricken areas. Thanks to its system of conserving water from rainfalls, the sector has sufficient water to cope with the current drought which is also beneficial to the eradication of harmful insects on 27,000 ha of ricefields. [BK071335 Hanoi Domestic Service in Vietnamese 0400 GMT 28 Sep 81]

NORTHERN FLOODS--Due to heavy downpours during 15-20 September, provinces from Thanh Hoa to Binh Tri Thien experienced waterlogging in many areas, but the floods did not cause damage to ricefields. On the contrary, the downpours provided sufficient water to 65,000 ha of rice in Nghe Tinh Province, 19,000 ha in Binh Tri Thien and 25,000 ha of 10th-month rice in Thanh Hoa Province. [BK071335 Hanoi Domestic Service in Vietnamese 0400 GMT 30 Sep 81]

BINH TRI THIEN RICE--As of 20 September peasants in Binh Tri Thien Province had harvested 36,000 ha of summer-fall rice, achieving 73 percent of the cultivated area. Due to the recent heavy downpours about 546 ha of ricefields in various districts have been submerged and peasants are working hard to save the paddy. [Hanoi Domestic Service in Vietnamese 2300 GMT 28 Sep 81 BK]

CUU LONG 10TH-MONTH RICE--As of 25 September Cuu Long Province had planted more than 163,000 ha of 10th-month rice, achieving 92.2 percent of the plan norms. Along with the transplanting work, peasants are actively taking care of the planted ricefields and have saved 5,000 ha from being ravaged by harmful insects. [Hanoi Domestic Service in Vietnamese 1100 GMT 29 Sep 81 BK]

HAU GIANG SUMMER-FALL RICE--In the first 16 days of September, Hau Giang Province delivered to state granaries 6,560 tons of summer-fall paddy, thus bringing the total amount of its grain obligation to the state since the beginning of the crop to 16,510 tons. Ke Sach and Thot Not districts took the lead in the grain obligation task, each delivered to the state more than 3,000 tons of paddy. [Hanoi Domestic Service in Vietnamese 2300 GMT 29 Sep 81 BK]

HEAVY INDUSTRY AND CONSTRUCTION

ECONOMIC PROBLEMS FACING INDUSTRIAL CONSTRUCTION DESIGNS

Hanoi NGHIEN CUU KINH TE in Vietnamese No 2, Apr 81 pp 21-25, 34

[Article by Luong Xuan Hoi: "Some Economic Problems in Designing Industrial Construction Projects"]

[Text] Every year we invest billions of dong in capital construction to build the material base for socialism, with capital put aside for industry accounting for 35-40 percent of this figure. In recent years we have designed hundreds of new construction projects and dozens of repair and extension projects for enterprises, mines, etc. If we can make our own industrial equipment, the capabilities of the central institutes will be increased to include making designs for all kinds of industrial construction projects.

At present, the force of project planning cadres is concentrated in the central institutes and is very weak, both quantitatively and qualitatively, in local areas. At the central level this force is also concentrated in the ministries that manage production and have large volume of capital construction, such as power and coal, engineering and metals, building, communications and transportation, water conservancy, etc. The nonproductive ministries have only a few project planning cadres organized into offices to design repairs or projects below the ministerial level. The force of the institutes is not yet a balanced one, in terms of the relationships among cadres designing industrial, architectural and structural plans, as we still have a shortage of industrial project planning cadres. And yet only on the basis of selecting advanced rational assembly lines it has the capability of selecting the most economical designs for the protective parts of buildings.

To successfully complete construction plans we must correctly organize project planning, which is the necessary preparatory stage before construction. The basic matters of construction and project economics must be studied and resolved in advance to a certain extent in the planning stage.

Production task, style of construction and technical solutions of a project are determined by planning designs. Work volume, time of construction and economic norms are matters within the economic and technical solutions that have been approved in the planning stage. Construction design drawings are documents that put together the economic and technical norms of construction projects we intend to carry out.

Blueprints for new construction or remodeling and extension of factories and enterprises must ensure the lowest costs and shortest construction time to quickly put the newly-increased producing capacity to use. All of the expenses incurred in the course of construction must fully cover the volume of work outlined in the plan. Designs must reflect the most advanced technical and industrial solutions and take into consideration the highest economic and technical norms of the factories being built.

Designing is a job of foremost importance in capital construction as it determines primarily the quality and costs of projects and other aspects of investment effectiveness like quality and costs of product, labor productivity, etc.

Of the jobs of preparing for investment, designing and organizing construction and installation work, designing can save 20-30 percent of the estimated costs of construction projects. Meanwhile, in the execution of work itself, to strive to save 5-10 percent of the estimated costs in an extremely difficult thing to do.

While designing, attention must be paid even more to economic problems, for a small mistake can cause losses amounting to hundreds of thousands of dong or require tearing down and reconstruction. The 800-seat Nguyen Trai Theater (in the city of Ha Dong) had to be rebuilt at an additional cost of nearly 1 million dong as its roof totally collapsed after construction had just been completed because of miscalculations during designing of the roof-supporting structure. The Van Dien (Hanoi) phosphate fertilizer warehouse, also because of a mistake in designing, had to be torn down and rebuilt after its total collapse following the completion of construction, with additional costs amounting to few hundreds of thousands of dong.

Economic matters in designing industrial construction projects are complicated ones involving from selecting and designing industrial assembly lines to selecting locations and designing construction. We hereunder offer only some ideas about economic problems in connection with a few jobs in the project designing task.

Selection of construction locations and designing of total work area of projects.

The selection of construction locations must be based on many needs: economic zoning plan, communications and transportation, product consumption radius, sources of supply of raw materials and fuels during operations, sources of supply of building materials during construction, etc. To facilitate supply of building materials, to reduce transportation costs and to reduce losses of materials due to transportation, we should select locations that are close to sources of exploitation and production of local materials, such as sand, gravel, cut stone, broken stone, laterite, etc. In selecting locations we should also pay attention to the natural ground level so as to have the least volume of earth to fill and foundation to build. Many projects, because of careless selection of locations, encountered difficulties as sand later covered the work area and just materials used to build the foundation already accounted for 25-30 percent of the final costs of construction (as in the case of the Haiphong gas turbine plant and the refrigerating facility of Ha Long State Fishing Enterprise), thus unnecessarily raising the total amount of invested capital.

Any projects are closely linked with and related to construction locations. If the latter are not carefully compared and selected, it will usually lead to adverse consequences: the technical aspect of the work becomes more complicated; construction takes longer to complete; at the same time, the operations and management of the plant may later encounter difficulties, such as shortage of water to cool engines, poor evacuation of water in rainy season, etc. The weaknesses of projects resulting from selection of wrong locations normally are not reparable and surmountable.

We should build a number of factories in one area so as to let them cooperate with one another in the production process; share the same sources of energy and raw materials, roads, gas and water pipes, internal ways of communications, etc.; reduce the volume of construction of secondary structures, administrative buildings, buildings for on-duty staff members, garages and storehouses; at the same time, fully use discarded materials to make secondary products.

We should avoid selecting locations only on the basis of immediate conveniences like building on a high flat ground, being close to sources of building materials and construction work being easy to execute while overlooking such difficulties as power and water supply, communications and pollution of the environment around such locations. The fact that the soda plant and insecticide factory of Viet Tri have been built near residential areas has had adverse effects on the living conditions there.

Arranging the total work area greatly affects the economic character of the design of a factory. Making this arrangement this way or that way actually means reflecting the basic economic and technical norms about construction and use of the design.

One of the combined norms about saving the total work area of a factory is the building coefficient expressed by the ratio between areas of different parts of the construction project and area of the entire grounds. Raising this building coefficient means the total work area of the factory has been rationally and tightly arranged, a fact that will later help to reduce expenses in connection with its construction and use. There are construction projects having total work areas that have been arranged very "generously," with the building coefficient being only 0.25, as in the case of Thanh To Chicken Processing Enterprise (in Haiphong) which has an annual production of 600 tons of chicken meat but occupies as much as 60 hectares of crop-growing land of the state farm there.

Designing total work areas must be able to reflect the scientific and technical progresses in production and modern industrial construction. We must apply operations research to calculating most neatly and strictly total work areas, internal ways of communications and pipes to evacuate water in an emergency making them the shortest possible, thus saving land and raising the building coefficient.

Since a factory is built for production, not for being viewed as a cultural and artistic work, we must avoid including in the total work area any excessively large gardens and green plots that lower the building coefficient, as in the case of a number of factories in Ha Nam Ninh, Hai Hung, Thai Binh and other provinces. As we design the work area, we should not be too concerned with the look of the factory and design reluctantly. For instance, to try to conceal such energy-producing parts as steam furnace, concrete tanks and reserve generators all in the back or to put everything architecturally attractive in the front without paying attention to the rational aspect of the assembly line, the wind direction carrying dust into other shops or the elimination of waste water into the environment.

We should design the total work area in such a way as to put components into a whole mass so as to reduce the area of construction and the lengths of gas and water pipes, electrical wiring, etc. and at the same time to save materials in construction. Only the shops that cannot be put into a mass are to be built separately, such as casting, forging and stamping, boiler and engine shops. If these shops are to be put among other shops, they will generate too much noise and raise the temperature within the factory.

After the total work area design has been approved by the organ in charge, the organ responsible for executing the work cannot change it by rearranging the approved work area. As we design the total work area of a factory, we should not have too much land put aside for future extension of the factory. Any future increase of output requiring land can wait until the time it is necessary to apply for appropriation of land.

Designing projects.

The quality of design depends on the task of designing, basic investigation data and rational technical plans being applied to actual designing. There must be a clear and accurate description of the designing task and correct investigation and survey documents before we can make the most economical design and ensure the technical requirements of the construction of a factory. The principal contents of the designing task are to determine construction location, size and output of the factory, product plan, sources of supply of raw materials and fuels, costs of product, annual profit and to analyze capital and expenses, effectiveness of investment in construction and requirements of economic sectors in regard to construction of the factory.

In the past, we had no experience and no forecast of development of sectors in the national economy, nor did we plan full economic zoning and clear-cut industrial zoning, as well as any good exploration and survey. As a result, since the data supplied to the planning organs were not very accurate and uniform, many construction projects did not truly satisfy our country's economic development needs. A number of feed processing enterprises having capacities of 5 tons/hour and 3 tons/hour in Hai Hung, Haiphong, Thai Binh, Ha Nam Ninh, etc. did not have raw materials after construction had been completed. In the case of Bim Son and Hoang Thach cement plants, because of poor geological surveys resulting in the "caster" phenomenon, corrective technical measures had to be taken at the additional cost of 20-30 million dong.

Other factories, after completion of construction, failed to run at full capacity and had to face high costs of product, poor quality and lots of discarded materials. The Hai Duong porcelain factory, the Viet Tri and Van Diem sugar refineries, the Ha Long fish canning factory, etc. were constantly short of raw materials and had to operate at only 60-80 percent of their designed capacities. The feed processing plants were able to develop only 25 percent of their capacities at the most. The Dao Tu (Vinh Phu) concrete factory faced the cost of production of a cubic meter of concrete rising to 4-5 times that of other factories. On the other hand, a number of grain and food processing plants, within only a short time after they had begun to operate, had to expand, to raise output or to replace their equipment with equipment of larger capacity. The Chua Boc and Nghia Do (Hanoi) vermicelli and bread factories, the Cau Niem (Haiphong) vermicelli factory and Thang Long Tobacco Factory have so far quadrupled their manufacturing capacities; the Tuong Mai (Hanoi) fruit enterprise has raised its output by 3.5 times. Many other factories, mostly the ones under local management, had to manufacture other lines of goods different from the ones the designing task that had been approved called for. Still other factories have so far manufactured 24 lines of goods, instead of 5 as the approved designing task would call for. Although Ha Long Fish Canning Factory is to produce canned fish as its main product, the latter accounted for only 30 percent of its output after the completion of its construction, and now it must manufacture canned meat and fruits, processed seaweed, etc. as its additional products.

The economic aspect of designing construction projects depends on the results of resolving a series of different problems in the designing process. Industrial solutions, architectural plans, space-arranging solutions in factories, selection of structural calculation plans, solutions of technical equipment, etc. all affect the economical character of the overall designs of factories.

Rationally resolving all of the above-mentioned problems is a necessary condition for a design to be consider economical in general.

a. Architectural designs.

After a rational industrial line plan has been selected, designing the architectural part must rely on this industrial line to avoid designing unnecessary parts, height exceeding the standard one or excessive usable areas.

In designing the protective parts of factories, we should fully use local materials and materials available in the country and limit the use of foreign materials; only the components or structural details that require such materials should be designed with imported materials. For factories being built where natural materials requiring no kilning, such as cut stone, broken stone, laterite, shells, etc., are available, or where conditions are good for making unbaked bricks and silicate bricks, we should fully use unbaked materials to build the protective structures upon which no stress is exerted. Partitioning walls of shops must be designed with unbaked bricks, shavings, sawdust, pressed bamboo mats or grade B baked bricks.

In making architectural designs, we must pay attention to the tropical climate and monsoon in our country. In summer it is very sunny and warm, with the temperature reaching 40°C on certain days, and there are frequent rainstorms and typhoons, sometimes heavy rains reach the rate of 120-125 millimeters of water per hour. With such climatic characteristics, in designing construction we must pay attention to air circulation, ventilation, water drainage system capable of working quickly and antilightning system suitable for construction projects in different areas.

In designing the protective parts of factories, we must ensure convenient production, easy work for workers, high productivity and the least capital investment to be needed. Avoid complicated decorative details that are hard to execute and expensive to have. Use colors inside and outside in a way to suit the nature of production of individual factories and the natural climatic conditions in the areas where construction projects are located.

The concept of beauty in architectural designs is arranging various parts of projects to harmonize with one another and the work area to look neat and clean. If the total work area is in disorder and the open spaces that accommodate discarded industrial waste are disarranged, any decorations, no matter how much, cannot make the factory under construction look beautiful.

In factories do not use concrete and reinforced concrete everywhere, but use this kind of material in the major parts and production shops instead. For the secondary structures like administrative and on-duty personnel buildings, use local materials and simple types of structure for easy construction as the first preference.

The parts that provide protection from rain and sunshine and windows that admit light must be designed in such a way as to be practically useful rather than to be ornamentally attractive and thus to require unnecessary additional expenses. Limit the use of fixed glass panels, which are not suitable for our country's climate. A factory was actually designed to have glass covering almost all of the wall areas to admit light, but the overuse of glass was later calculated to be 10 times the areas supposedly to be covered by windows and affected the work of workers by causing too much reflection and brightness inside the factory.

Generally speaking, the architectural designs of factories were still too heavy, with shapes resembling more the structures in cold-weather countries, while they had to include the protective parts to overcome the sunshine and rains of the tropical monsoon region.

b. Structural designs.

All solutions in connection with structural calculation plans of projects or components have a great significance to economy in structural designs. This solution or that solution of a structure normally directly affects the related structure; for instance, a solution for wall structure is dependent on the foundation structure and for roof structure, on the frame structure. Therefore, as we design any structural detail, we must think and calculate carefully to avoid waste and poor effects, hence, additional costs in the construction of other related structures.

In structural designing, we must unify all structural solutions and select the most advanced and rational plan and calculating method to save building materials but also ensure the lasting quality of projects in terms of later use. Structural forms must be designed to suit the working conditions of each component of projects and its later use. Do not design structures being excessively safe as compared with their working conditions.

As for industrial projects, since we do not have model designs, we must while designing rely on the standards and patterns adopted by the state and avoid designing at our convenience and selecting too large incremental and safety factors, which will raise the necessary capital investment in construction. The selection of safety and incremental factors is closely related to using more or less materials. Therefore, it must be based on the patterns that the state has adopted for different types of projects. Although the foundation of a chicken enterprise is to support people and improved vehicles moving on it and no other impulsive force, in some cases it has been designed with the 1 x 2cm gravel concrete, mark 150, with 6cm steel mesh at 20 x 20cm distance between the wires. In this case, we need to design it only with broken brick concrete, mark 75, covered by a layer of cement mixed with yellow sand mark 100 to get sufficient safety. In the case of the same reinforced concrete beams supporting the same transporting capacity weight, some designs used beams of cross section being 1.5 times larger, with concrete having greater strength and 25-30 percent more steel bars in it. In the same factory, for the same type of roof beams 12 meters long and bearing the same stress, one was designed at the rate of 140 kilograms of CT5 steel per cubic meter of concrete, and another 190 kilograms.

For buildings and shops having large openings (over 15 meters), we should not design reinforced concrete frames to be made on the spot, for this will require a lot of lumber to make forms and supports, more time and greater quantities of steel rods for every cubic meter of concrete, hence, higher costs. In this case, we should design the roof-supporting system with preformed structures to be assembled, which will be more easily executed and at the same time possibly reduce the costs of construction by 15-20 percent.

For the reinforced concrete structures where stress will be exerted on, we should design prestressed concrete ones to be assembled. Such structures reduce their own weight by 10-20 percent and thus save 20-25 percent of building materials.

Try to find ways to reduce weight by designing light structures, thin covering structures and using materials of great strength, which will reduce the volume of foundation construction and costs of projects.

Foundations are closely related to the use and life of projects. As we design foundations, we must pay attention to the mechanical and physical characteristics of the earth at the foundation and avoid reducing the strength of earth so as to avoid designing excessively safe foundations, which will boost the costs of construction. Foundations of industrial projects normally account for 20-25 percent of their costs; in special cases, with earth strength being less than 1kg/cm^2 as in Haiphong, Thai Binh and other coastal areas, they can account for up to 35-40 percent of such costs.

For structures built on weak earth foundation, do not design brick or reinforced concrete foundations, but rather ones using piles to save building materials and to be more economical.

The use of materials of greater strength and new materials also saves technical materials, lowers costs of assembly and installation and reduces overall weight. Using steel of greater strength reduces spending on steel by 30-40 percent. Using steel tubes reduces spending on steel by 35 percent and steel structure costs by 20 percent. Using reinforced concrete of high mark also saves cement and steel.

c. Application of typical designs.

Designing units must pay attention to studying and applying various types of economical and typical designs and structures. Making typical designs is one of the important preconditions for industrializing the construction sector in order to apply to construction advanced techniques and more progressive and economical architectural and structural solutions.

According to the experiences of the countries having large volume of construction work, such as the Soviet Union, the German Democratic Republic, Poland, etc., applying typical designs is a decisive condition for ensuring timely supply of designing documents for execution of construction and installation projects and considerably reducing their costs. Making typical designs, as compared with making individual designs, reduces construction costs by 17-20 percent in the case of metallurgical works; 15-28 percent, enterprises in the chemical industry; and over 20 percent, sugar refineries and paper mills.

Applying typical designs also saves 35-40 percent of the survey costs. It must be combined with applying the structures and assembly and installation details as produced in factories, along with applying advanced work execution measures.

At present, we do not have many typical designs of industrial projects, except for the ones for local cement factories of different annual manufacturing capacities of 2,500, 5,000 and 10,000 tons; bricks and tiles-manufacturing factories capable of making 7 and 15 million pieces per year; district machine works, etc. Project planning institutes must organize forces of experienced cadres to study popular structures and structural details so as to gradually standardize and typify them. As we move forward, we must study and popularize typical designs of other industrial projects. We will then be able to facilitate the industrialization of the construction sector, to reduce costs of materials in the production of structural parts and at the same time to shorten the actual work at construction sites. The more types of typical designs we have, the greater our ability to save materials and to reduce construction costs in designing will be.

As the scope of construction increases everyday, the need to heighten the rate of technical progress in construction in industry and other economic sectors and the task of striving to reduce construction costs require us to switch more vigorously from making individual designs to making typical ones.

Basic measures to make solutions in designing more economical.

In the recent past, in making construction designs for industrial projects we had many shortcomings as mentioned above, but there were very many cases in which project planning cadres had not paid full attention to studying and analyzing the economic norms in designing, which led to a separation between technical and economic matters and restricted the application of advanced and economical solutions in designing. As a result, considerable waste existed in construction and the use of projects.

Analyzing the construction designs of our factories and enterprises in recent years shows great possibilities to improve solutions in designing and to make capital investment in industrial construction more economically effective. To exploit such possibilities we can mention these basic measures:

- The State Planning Commission, Zoning Committee and State Capital Construction Commission, in coordination with different ministries and sectors, are to carry out the plan for industrial and economic zoning throughout the country to have a sound basis for rational selection of locations and zones for construction projects.

- To organize geological exploration, survey and zoning on the basis of strength of earth and rocks. To concentrate on the State Capital Construction Commission geological project, hydrogeological and climatic documents and data to facilitate management and supply of original ducuments to project planning organs. This way we can reduce geological and terrain exploration and survey expenses prior to the start of construction projects.

- The sectors concerned are to further strengthen their economic and technical arguments to prove the construction projects they are planning are sound on the basis of designing and industrial zoning.

- To determine on a correct economic and scientific basis the maximum productive capacity of factories and enterprises to be built.

- To use in project planning modern advanced production industries and equipment of great output. To put industrial enterprises of related purposes like production, consumption of certain products, etc. in industrial complexes in the same zone.

- To apply the most economical solutions to structural calculations, but at the same time to improve shapes and to raise durability and safety in production and use.

- In the process of reviewing for approval and checking designs, to pay more attention to the economic norms of project planning and designing.

HEAVY INDUSTRY AND CONSTRUCTION

IRRATIONAL SUPPLY, MISUSE OF ELECTRICITY REVEALED

Hanoi HANOI MOI in Vietnamese 17 Jul 81 p 3

[Article by Quang Ca: "Supply and Use of Electricity Are Still Bad"]

[Text] There has not been any major change in the supply of electricity. Though Hanoi is classified in the priority category, it is far from being able to supply enough electricity to meet the requirements of production and daily activities. Moreover, electricity is to be supplied for use in many new locations and, worse still, the habit of squandering and stealing electricity has a tendency to increase. As a result, the shortage of electricity is worsening. In the past, there were times when electricity intended for daily activities was supplied for a week at a stretch. No sooner had the people rejoiced at the situation than the electricity supply was again cut off in daytime recently. In nighttime, it has been intermittent and has now and then been cut off in each subward or precinct. Since the summer weather is hot, the living conditions of the people have become harder. Most revolting is the fact that while the electricity supply is short, the persons who steal electricity to make ice cream and bicycle tires have stepped up their activities. Though the Electricity Service has dealt with a number of such cases of theft, the move is only the tip of the iceberg. Since the treatment reserved for these persons is not thorough, they will resume their activities with great subtlety. By making direct connections with the main wires without going through the meter, tightly closing the main doors of their houses and bolting the staircase doors, they have been able to use electricity to make ice cream in nighttime and to deliver it to customers at 0400 am. Their trick has been reported by the people to certain competent organs but no action has been taken...

The practice of making direct connections to obtain electricity seems prevalent in localities adjacent to the urban areas of the city. Because they do not have to pay for it, people are more inclined to recklessly use electricity to boil water, to cook bran to feed hogs, to make ice cream, ice cubes, vermicelli and cakes and to refrigerate flowers to keep them fresh until the 1st and 15th day of each [lunar] month when their price goes up, etc. As a result, a transformer of the Electricity Service sometimes burns out because the use of electricity in such localities have overloaded the fuse. The electricity wires in some collective residential area burned out more than a week ago but have not yet been reconnected because of a serious shortage of wires and materials.

Has action been taken against how many of the more than 10,000 households in Hanoi who use electricity illegally? Certain collective residential areas are applying the system of rating electricity fees on the basis of such-and-such a percentage of the residents' salaries. Because it makes no difference to them whether they use little or much electricity and because they have to pay only such-and-such an amount of money, the cadres and workers living in these areas have freely used electricity. In addition, electricity fees cannot be collected in many areas because meters have not yet been installed.
